Accomplishments of U.S. Space Exploration Under the Republican Administration

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the very distinguished Senator from California and the Republican whip, Mr. KUCHEL, on the accomplishments of U.S. space exploration under the Republican administration.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ACCOMPLISHMENTS OF U.S. SPACE EXPLORATION UNDER THE REPUBLICAN ADMINISTRATION

(By U. S. Senator THOMAS H. KUCHEL, of California, Senate Republican whip)

The accomplishments of the U.S. space exploration program under the Republican administration can be divided into the following sections for a clear-cut picture of what the United States has done and is doing:

1. Organization and resources.
2. A scorecard detailing competition with the U.S.S.R.
3. A brief survey of the U.S. space program as evidenced in the successful shots in that program.
4. A delineation of important milestones in the National Aeronautics and Space Administration's 10-year plan.

ORGANIZATION AND RESOURCES

When NASA declared itself to be ready for business on October 1, 1958, it began work on:

(a) Completing the several programs which were initiated by the Advanced Research Projects Agency of the Department of Defense.

(b) Developing a sound but bold and imaginative long-range plan with specific projects for the next 2 years calling for concentrated attention to the need for more powerful launch vehicles and a program of satellite and deep space flights that will approximate 26 major flights in each year.

(c) Integrating the efforts of the 8,000 people inherited from the great NACA organization with the 2,400 fine people of the jet propulsion laboratory and the 5,500 people who made up the famous Von Braun group at the NASA Marshall Space Flight Center, and developing 2,000-man operation at the new Goddard Space Flight Center at Greenbelt, Md., and drawing together a headquarters staff of more than 550 people in Washington.

(d) Creating this new organization when the eyes of all the world placed the United States in the spotlight of the space race.

As of July 1, 1960, the NASA will be operating at $911 million annual rate as compared with a $33⅓ million annual expenditure rate 21 months earlier. (The grand total of all U.S. missiles programs from an obligational standpoint for fiscal year 1961 is estimated at $6,962 million, subject to revision.) With a total of more than 18,000 people—one-third or more of them professional people—NASA represents the Government's greatest research organization and, in many ways, its most unique. Its product is new knowledge and the development of the techniques necessary to acquire that knowledge and apply it for the benefit of mankind.

COMPETITION WITH THE U.S.S.R.

The U.S.S.R. appears to excel the United States in the thrust of its rocket-powered launch vehicle system. Their substantially higher thrust level has permitted them to undertake spectacular missions requiring the carrying of relatively advanced guidance equipment in addition to the payload instrumentation—a combined weight substantially beyond that which we have been able to fly.

In spite of this advantage, it seems clear that the United States has clearly bested the Soviet Union in the breadth and depth of its program development and particularly in the quality, quantity, and importance of the scientific results of its flights.

It is reasonable to believe, however, that the steady growth of the U.S. program, the obvious willingness of the United States to share its information and competence with other nations, and the beneficial and, at times, striking information being derived from the U.S. experiments is beginning to make itself felt as a positive counterforce to any Soviet propaganda.

Highlights of the Nation's space exploration program (with some remarks about results of the U.S.S.R. program). The direct exploration of space by means of unmanned vehicles traveling in space began on October 4, 1957, with the launching of Sputnik I by the U.S.S.R. In the intervening 30 months there have been launched successfully 22 additional earth satellites which have yielded much scientific information about the space environment by radio telemetry of data to the ground. Three satellites were launched by the U.S.S.R. on November 3, 1957, May 15, 1958, and May 15, 1960.

The United States has launched 19 satellites, the first on January 31, 1958, and the most recent on May 24, 1960.

Five were called Explorers, launched by Jupiter C's in three cases, Thor-Able II in one, and Juno II in one.

Three were Vanguards.

Seven were Discoverers, launched by Thor-Agena A's.

One used an Atlas for the communications experiment, Project Score.

One, the meterological satellite of Project Tiros, was launched by a Thor-Able IV.

One, the navigation satellite Transit, was launched by a Thor-Able Star.

One, the missile early warning satellite Midas, was launched by an Atlas-Agena.

Seven space probes have been launched since October 4, 1957, three by the U.S.S.R., four by the United States.

All of the U.S.S.R. space probes were directed toward the Moon; one launched on January 2, 1959, was claimed by the Russians as having passed within a few diameters of the Moon, and went into an orbit around the Sun.

The second, launched on September 12, 1959, hit the Moon, or so the Russians said.

The third, launched on October 4, 1959, passed close enough to take pictures of the far side of the Moon and was deflected by the gravitational field of the Moon to return toward the Earth.

The first U.S. space probe, launched on October 11, 1958, traveled to a distance of 70,700 miles.

The second, launched on December 6, 1958, traveled to a distance of 63,580 miles.

The third, launched on March 3, 1959, went into orbit around the Sun, communication with it being maintained to a distance of 407,000 miles.

The fourth was launched on March 11, 1960, inward toward the orbit of Venus, and on May 8 was at a distance of a little more than 8 million miles from the Earth with data still being received by telemetry.

Each of the satellites and space probes has produced much information on various aspects of the space environment itself and of environmental conditions within space vehicles. Many of the missions have been directed toward scientific objectives relating to the Earth and its atmosphere and ionosphere. To illustrate the types of information returned, you may consider the return from Sputnik II, Lunik III, Pioneer V, and Tiros I.

Sputnik II was launched into an elliptical orbit with initial perigee of 140 miles and initial apogee of 1,038 miles inclined at 65 degrees to the equator. It carried the dog Laika for measurement of physiological reaction of an animal to space flight. Its instruments measured cosmic rays, solar ultraviolet, and X-radiation. Temperature and pressures within the satellite were measured.

Significant solar influence on density in the upper atmosphere was noted from measurements of fluctuations in satellite drag which were directly correlated with solar activity. Cosmic ray counting rate increased with height, not understood at the time, but later found to be associated with the Van Allen radiation belt discovered with the instruments in Explorer I.

Lunik III apparently produced the first pictures of the far side of the moon. Lunik III demonstrated maneuverability in a large spacecraft, the successful storage of pictures on film and their later transmission back to Earth, according to the Russians. Apparently no further scientific data were obtained because of early failure of the power supply or transmission system.

The Pioneer V space probe, weighing 94.8 pounds, was accelerated to a velocity of 24,869 miles per hour in an orbit about the Sun inclined inward toward the orbit of Venus. Its period is about 311 days. Its perihelion is about 74,700,000 miles, which is about 18 million miles closer to the Sun than the orbit of the Earth.

Long-range projection of the trajectory forecasts that Pioneer V will be farthest from the Earth—183 million miles—in September 1962 and that the Earth and probe will approach within 16 million miles in November 1965.

Because of the eccentricity of the probe orbit, the probe again will come within 15.6 million miles in April 1966. A closer approach than this will not occur until 1989, when the two will come within 2 million miles of each other, according to present estimates.

The probe carries instruments to measure charged particles in space—i.e., an ionization

INFORMATION
GPO

chamber and Geiger-Mueller tube to measure total radiation—and a triple coincidence cosmic ray proportional counter. The probe also carries a micrometeorite counter, a magnetometer, and instruments for measurement of temperatures and attitude. Power is furnished by solar cells mounted on paddles. There are two transmitters, designed to permit communication at distances up to 50 million miles, although there are now indications that degradation of the batteries may halt transmission between 10 million and 20 million miles.

Tiros I is a 270-pound satellite which carries two television cameras to observe cloud formations and transmit the pictures to stations on the ground.

It was launched in a nearby circular orbit with perigee of 435 miles and apogee of 468 miles, with a period of 99.15 minutes. It is stabilized by spinning, thus maintaining a fixed direction in space. Pictures are obtained when the satellite is in that part of its orbit where the camera sees the sunlit portion of the Earth.

The satellite is provided with tape recorders which can record as many as 32 pictures for later transmission to the ground stations.

Thousands of pictures have been obtained of cloud formations.

Tiros promises a major forward step in observations of major storms and frontal systems.

On the basis of this and future meteorological satellites, it is hoped to develop within a few years an operational system for routine use in weather forecasting.

SPACE TRAVEL BY MAN

For present purposes, the NASA is interested in the bearing of the information obtained on the prospects for space travel by man. The data obtained on the pressure, density, and temperature are required for rational design of any spacecraft, whether carrying man or instruments. Similarly, data on the ionosphere are of interest because of the electrical charging of the vehicle and its effects on radio communication from the vehicle and on its drag.

One of the major results of the first satellite launchings was the discovery by James A. Van Allen and his colleagues of a belt of charged particles trapped in the magnetic field of the earth which produced radiation on striking a space vehicle.

Further studies have shown that the structure of this region is quite complex and the outer zone varies in extent with solar activity.

We have learned considerably about outer space, but much basic information is yet to be obtained before man ventures very far away from the earth. Specifically, there are formidable technical developments needed to assure the success of manned journeys to the moon and to the planets of the solar system.

THE U.S. LONG-RANGE PLAN FOR SPACE EXPLORATION

Listed below are the highlights of the 10-year plan developed by NASA and presented to the Congress early in 1960. It is to be noted that forecasting research and development activities for many years in the future is a questionable procedure.

What can be undertaken 2 years from now depends on what is learned in experiments to be undertaken in the intervening 2 years. Nevertheless, in a rapidly moving technology involving long leadtimes, it is possible to identify objectives which should be possible of accomplishment given normally accelerated advancement of the technologies involved and assuming an adequately paced funding program.

Under these ground rules, the following listing represents certain long-range objectives of the U.S. space exploration program.

NASA MISSION TARGET DATES

Calendar year 1960

First launching of meteorological satellite.
First launching of a passive reflector communications satellite.
First launching of a Scout vehicle.
First launching of a Thor-Delta vehicle.
First launching of an Atlas-Agena-B vehicle (by the Department of Defense).
First suborbital flight of an astronaut.

Calendar year 1961

First launching of a lunar impact vehicle.
First launching of an Atlas-Centaur vehicle.
Attainment of manned space flight, Project Mercury.

Calendar year 1962

First launching to the vicinity of Venus and/or Mars.

Calendar year 1963

First launching of two stage Saturn vehicle.

Calendar year 1963–64

First launching of unmanned vehicle for controlled landing on the moon.
First launching Orbiting Astronomical and Radio Astronomy Observatory.

Calendar year 1964

First launching of unmanned lunar circumnavigation and return to earth vehicle.
First reconnaissance of Mars and/or Venus by an unmanned vehicle.

Calendar year 1965–67

First launching in a program leading to manned circumlunar flight and to permament near-earth space station.

Beyond 1970

Manned flight to the moon.

A New Mask for Big Government

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. CEDERBERG. Mr. Speaker, during the weeks ahead the citizens of this country will hear a lot of oratory as we approach a great national election which will decide which of the two major political parties will be in charge of our Government during the next Congress.

In the opinion of the editors of Fortune magazine the 1960 campaign largely boils down to one word and that word is "growth." In an article under the the heading of "A New Mask for Big Government" by Max Ways, the April 1960 issue of Fortune presents the author's views as to the different interpretation placed on the word by the two parties. The article clearly points out that one of the issues of the campaign ahead of us will be whether voters wish to transfer to the Federal Government more and more powers reserved "to the people."

The comparison of the two positions with respect to the catch phrase "growth" is well worth reading and Fortune's presentation is submitted for the consideration of readers of the RECORD.

A NEW MASK FOR BIG GOVERNMENT

(By Max Ways)

In this presidential election year, as in any other, there's a lot of gabble; but is there a debate? Sometimes it's hard to tell whether a Democrat or a Republican is talking, or how one dismembered argument fits with another. If the confusion continues, the public may forget about issues and let the 1960 campaign degenerate into a personality contest, second only to the one that chooses Miss Universe.

That would be a pity, for beneath the drifting verbal sandstorm the parties are widely divided on the most important kind of question that can enter politics. The half-hidden issue of 1960 is nothing less than the nature of government itself in a free society. Will the U.S. Government remain a creature of great but limited powers, laying down general rules and laws within which men can live their own lives, make their own decisions, and pursue their own ends? Or will government become responsible for seeking everything that men hold good and wielding whatever power can serve that unlimited responsibility? Will it write the rules of free economic life? Or, instead, give the specific commands to advance the Nation toward specific economic goals and plans? Will it be judge—or architect? Umpire—or manager? On the answers to these great questions the future of our society turns.

Piecemeal examination of most of the specific economic issues now kicking around would disclose in the end this profound constitutional conflict. Republicans take pride in the fact that, by painstaking exertions, they have reduced Federal expenditures to something less than 20 percent of the gross national product. But Democrats denounce these efforts and propose more spending on so many fronts that they seem to have abandoned entirely the idea of limited government. The administration has taken grave risks in an election year to carry out sovereignty's unique obligation to provide a stable currency. But the Democrats ridicule this concern about sound money and insist that anti-inflation measures conflict with more important functions of the state. In their attitude toward the farm issue and other matters, party lines have tended to blur. Yet research would show that in fact the parties are using different definitions of the fundamental nature of government.

A MAGIC WORD BOBS UP

Up until a few months ago, it looked as if any serious effort to get down to the skeleton of the 1960 campaign would have to go through such an analysis, issue by issue. Then a word began to be heard more and more often from the lips of such Democratic spokesmen as Hubert Humphrey, John Kennedy, Paul Douglas, Leon Keyserling. It works magic—in ways intended and unintended. It pulls together all the specific issues into a hub of coherence. But it also discloses—plainly and without drudgery—how all the issues add up to the great constitutional question about the nature of government.

The magic word is "growth." In the past it has appeared many times on that side of the constitutional argument which holds that the responsibility of goverment should be limited to those necessary functions that only government can perform. The original American assumption was that if government established a firm structure of essential order, then the economy would grow through the free decisions of its citizens. Famously, it grew. But now some Democratic spokesmen have given the word "growth" a very special meaning. For them, "growth" signifies a conscious assumption by the Federal Government of responsibility for seeing to it that the total U.S. economy, measured by the amount of goods and services produced in a year, shall grow at a predetermined target rate.

Now this definition of growth, cast as it is in terms of material production, bypasses a concept of development that relates primarily to men, not things. True economic growth is more than the piling up of goods and services: it is the widening of man's options over those goods and services. The goal of expanding the range of choice is consonant with the goal of political freedom; but if the Government sets specific goals of performance for the economy and acts to see that those goals are reached, then the citizen's range of choice about his work, his property, and his purchases must be greatly constricted. It is legitimate for the Government to foster development through wise fiscal and credit policy, and it is essential that government preempts through taxation a part of the national product for defense and other functions that only government can perform. But if the Government is made responsible for setting and realizing a predetermined rate of growth for the entire economy it must do more than create a climate. It must plan. It must set priorities. It must substitute for the decisions of the free market the decisions of the growth "expert."

The current insistence on growth curiously twists discussion of every public issue away from the merits of the case. Is defense adequate? Never mind the hard questions of how well military power is tailored to political goals. Instead, quantify the thousands of complex defense problems into aggregate military expenditures: assume that U.S. defense would be better if the sum spent were greater; then note triumphantly how much more could be spent if the economy grew faster. Does communism threaten to take, without war, world political and economic leadership? Ignore the great issues of political philosophy and the diplomatic skill involved in this challenge, and reduce it all to the standing of the teams in the international growth-rate league. Is it difficult to determine how much foreign aid to direct where? Aim it at growth on the assumption, utterly unproved, that the faster a nation's gross national product gains, the more resistant it is to communism. At home, does inflation threaten individual savings and distort economic decisions? Ignore inflation's causes, including heavy Government spending, and instead warn that growth may slow down unless Government activity whips the economy along at an unflagging pace. Is American education under belated scrutiny? Forget all question of its quality; bypass local community responsibility and demand $1 billion in Federal aid on the ground that this will serve economic development. Are cities blighted? Let's grow—with Federal funds for urban renewal.

Many of the specific proposals now put forward under the rubric of growth are proper and necessary functions of government. The Eisenhower administration, although deeply committed to limited government, is forced to an $80 billion budget by the necessities of the cold war, by irreversible prior commitments, and by public demand. If these pressures can generate an $80 billion budget with Republicans sitting on the spending lid, what would be the limit under an administration that saw every issue in terms of an alleged government responsibility for directing the whole economy toward target growth rates?

President Eisenhower and the other top Republican leaders have not been panicked into going along with the vogue of the growth drive. They have stated clearly that the rate of growth should depend upon the aggregate of decisions in a free economy, the Government's responsibility being to maintain an orderly framework. They have marshaled impressive evidence that the old formula of limited government still works, that the economy continues to grow. But the Republicans have not succeeded in getting over to the public the significance of the constitutional question raised by growth. They behave as if the growth issue was an embarrassment, instead of embracing an opportunity to make directly and dramatically a case that they would otherwise have to make piecemeal and tediously.

THE STONE REJECTED BY THE BUILDERS

As matters now stand the responsibility is on the Republicans to lift the 1960 campaign out of the ruck of stale issues, and to rise to the great issue. In doing so they would have a wealth of material to draw upon. For the fact is that the Democrats' espousal of the new growth theme has been mothered not by high principle but by necessity. They used to consider growth a Republican idea, belonging to the national adolescence and no fit preoccupation for citizens in an age of maturity. Understanding of the relation between the growth slogan, as now used, and the idea of expanding government will be increased if we trace the outlines of an ironic story of how a stone rejected by the New Deal's builders became the cornerstone of the 1960 Democratic edifice.

The rejection occurred on September 23, 1932, when Franklin Roosevelt, at the Commonwealth Club in San Francisco, made one of his choicest speeches. "Our industrial plant is built," he said. "The problem just now is whether under existing conditions it is not overbuilt. Our last frontier has long since been reached, and there is practically no more free land." During the years when America was growing, initiative and the pioneering spirit had served it well. But "our task now is not discovery or exploitation of natural resources, or necessarily produring more goods. It is the soberer, less dramatic business of administering resources and plants already in hand • • • of meeting the problem of underconsumption, of adjusting production to consumption, of distributing wealth and products more equitably, of adapting existing economic organization to the service of the people." Since growth had ended, government's new role would be to "bring the scheme of things into balance, even though it may in some measure qualify the freedom of action of individual units within • • • business."

The Commonwealth Club speech, based on the matured economy thesis of Rexford Guy Tugwell and others, makes strange reading today amidst all the hubbub about growth-at-any-price. Nevertheless, the thesis served Roosevelt well by providing a historical interpretation for tasks, such as the redistribution of wealth, that government had not previously performed. New times, new methods was the mood that needed to be created; and having created the mood, Roosevelt proceeded to construct the New Deal upon three patterns. The first, as old as the Republic, was a set of specific promises, each designed to appeal to an economic interest group—farmers, union labor, etc. The second pattern, which had once disgusted such Democrats as Al Smith, was the class struggle. The third pattern, presented merely as instrumental to the first two, was big government.

TRUMAN NO LONGER COMES CLEAR

Politically, this combination was brilliantly successful. But inexorably time and changing circumstances undermined at least two of the New Deal's props. In recent years economists and sociologists have been calling attention to profound alterations occurring within American society, but political analysts have been a little slow to recognize how drastically these changes would affect politics. We are familiar with the idea that Americans are becoming more alike—not regimented but homogenized. This trend has undermined New Deal pattern No. 1, because regional, ethnic, and economic groups have become weaker, either through loss of numbers as with the farmers or through loss of esprit as with the union workers. Both parties still make promises to such groups, as parties always have and always will; but the game of the interest groups is losing its political zing.

Meanwhile, New Deal pattern No. 2 is in similar trouble. U.S. society, like all others, used to be in the shape of a pyramid, with the majority living under or at or barely above the subsistence level. Fluidity saved the United States from class struggle, until the depression offered a great but transitory opportunity to pit the poor against the rich. Since then, however, the shape of U.S. society has changed to that of a diamond, 43 percent of the people having entered the $5,000-to-$10,000-a-year income bracket. History's first diamond-shaped society is no place for the politics of class struggle, and when the Democrats today dutifully cheer Harry Truman's old-style forays against the gluttons and in favor of the common man, they know he isn't coming in clear on the channels to well-fed, well-clad, and newly housed suburbia.

The erosion of groups and classes helped lose the Democrats two presidential elections. Eisenhower's 7-year emphasis on being "President of all the people" makes these older appeals even more awkward to use. What remained of the New Deal combination was big government, a pattern with certain peculiarities. No doubt big government itself has a powerful attraction for many anxious and bewildered 20th-century voters, but, as with alcohol, the taste has to be masked. Any vintage speech from the caves of the Hyde Park connoisseur always had a bouquet of group or class justice or historical necessity to perfume the full-bodied big government base. Now that patterns 1 and 2 had been weakened, what could become the necessary companion to pattern 3?

TWO SOLUTIONS; ONE RESULT

One answer to this question has been provided by John Kenneth Galbraith, member of the ADA, and economist for the Democratic Advisory Council. In his "The Affluent Society," Galbraith argues that our present concern for expanding production is a hangover from our necessitous past. In this he is close to the fundamentalist "matured economy" thesis of the Commonwealth Club speech. But Galbraith is vitally interested in the Government's assuming a larger role in improving the quality of American life, and his ideas have been echoed by Adlai Stevenson. It is not always clear just how Stevenson wants Government to go about improving the quality of life, but it is quite clear that his conception requires a lot of scope for Government. Galbraith is more explicit. In a recent Saturday Evening Post article he calls for large "investment" in human beings through increased Federal aid to education, and in general he wants the Government to take an even larger bite of the national resources than it does today, using taxation to change and channel national tastes. In the end, this consumer approach might well entail a greater proliferation of Government activities and controls than old proposals that Government control the means of production.

However, the quality-of-life goal for big government is not well attuned to another great change—this one external—that has come over the United States since early New Deal days. Galbraith brushes off the cold war by assuming its most urgent issues could be negotiated out. Most Americans do not believe this, and the Democratic leaders generally do not buy it. They assume that the United States must continue its leadership of the non-Communist world in a desperate struggle. And they have drawn on this prospect to construct a way very different from Galbraith's of answering the question of what big government is for. After all, the two world wars had done more

than anything else to bring unlimited government to the forefront of men's minds. The influence on American political values of the long contest with totalitarian nations has been ambivalent: on the one hand, Americans detest unlimited government more than they ever did; on the other hand, they are attracted by the strength that seems to accrue when a nation puts all its resources and vital decisions under central political control. This ambivalence could be resolved by presenting the idea of an enlarged government at home as the best or the only way of combating unlimited government abroad. If done crassly, the contradiction in values would be too obvious. Some term had to be found to substitute for "enlarged-government-at-home." Obviously, the old growth-has-ended premise was not suitable for this purpose. But the contrary premise, growth-must-be-faster, would serve beautifully. All that had to be explained away was an inconsistency, and in politics that is not an unusual task.

Observe how the New Deal's sympathetic historian, Arthur Schlesinger, Jr., went about it a few years ago when the New Dealers were quietly transiting from growth-has-ended to growth-must-be-faster. In "The Crisis of the Old Order" he noted that the passage quoted above from Roosevelt's Commonwealth Club speech had been written by Adolf Berle and might reflect Berle's thought, not Roosevelt's. Then Schlesinger pointed to another passage in the same speech where Roosevelt had said: "America is new. * * * It has the great potentialities of youth." Schlesinger opined that this latter passage "seemed to express Roosevelt's élan more truly than the calm assertion that growth was over." Finally, Schlesinger finished his bridge between the two contradictory promises by stressing that the conclusion, rather than the premises, was what counted. "Still, the Commonwealth Club address," Schlesinger, "provided impressive reasons for enlarging the role of government. For Roosevelt, who was more interested in results than in systems, this was probably more important than the basic framework of interpretation."

In addition to being a historian, Schlesinger is a maker of current Democratic party doctrine. His bridge has put him in position to use the growth-must-be-faster slogan and to combine the motive of fighting Communism and the quality-of-life motive into one brilliant blend. Writing in the January, 1960, Esquire, Schlesinger found the fifties a decade of "torpor," "inertia," "sterility," of "private opulence and public squalor." The average annual increase in the gross national product between 1953 and 1958, he said, was only 1.6 percent, while the Soviet economy continues to roar along at an annual growth rate of 9.5 percent. Having studied Roosevelt's life not in vain, he also denied that he favored big government for its own sake. "The object of strengthening government is to give force to the idea of the public interest and to make possible to allocation of resources to necessary public purposes. There is no other way to meet the competition of communism. There is no other way to bring about a higher quality of life and opportunity for ordinary men and women."

Nor will Adolf Berle be left behind, a scapegoat in the growthless wilderness beyong the last frontier. In January he contributed to the New York Times magazine an article called "Why Our Economy Must Grow Faster." The social objectives and political methods therein set forth do not seem to differ greatly from those advocated by Berle in the 1930's, when he thought that these measures ought to be undertaken because he believed the period of rapid expansion was permanently over.

THE 5 PERCENTERS

The operation of reversing the attitude toward growth and then using it as a mask for unlimited government has been so successfully performed that Democratic spokesmen now employ growth with increasing frequency and enthusiasm. The Democratic advisory council's policy statement in December said that the Republican administration had reduced our long-term national economic growth to a very low rate. It said the Soviet growth was two or three times that of the United States. The Democrats blamed lack of bold and creative political leadership for this condition and urged that we, as a nation, roll up our sleeves. The AFL–CIO in February of this year called for a sustained growth rate of 5 percent a year. Senator HUBERT HUMPHREY, who blames Republican complacency and flaccid ease for the erosion of our national power and prestige, also comes out for a 5 percent rate. Meanwhile, Senator JOHN KENNEDY says we are in a period of stagnation and retreat. He demands expanded economic growth—rate not specified.

The extent to which growth dominates Democratic Party thinking can be seen in the report of the Joint Economic Committee on Employment, Growth, and Price Levels. The Democratic majority, led by Senator PAUL DOUGLAS, comes to seven fundamental conclusions about the U.S. economy, of which six are concerned with growth. Government policies are to be so shaped as to produce a 4.5 percent a year growth rate. Most of the Democrats, including Senators SPARKMAN, O'MAHONEY, and KENNEDY, signed this report. All of the Republicans, a wide band ranging from Maryland's JOHN MARSHALL BUTLER to New York's JACOB K. JAVITS, rejected the majority's insistence on government responsibility for growth rates set at a particular level.

The Democrat who most explicitly spells out what "growth" really means for our political system is Leon Keyserling, a lawyer who became chairman of President Truman's Council of Economic Advisers. (If the Democrats won in 1960, Keyserling would deserve, as the most consistent and persuasive of the growthers, an even higher post in their next administration.)

Keyserling skillfully weaves together the two main strands of Democratic thought on the growth issue. He cannot, of course, agree with Galbraith that the United States is placing too much emphasis on the growth of production. But Keyserling does agree that "our sense of values, in using what we now produce, needs to be greatly improved." He asserts that a high growth rate (his figure is 5 percent) will make for better values. If, as he promises, the GNP can be raised to $600 billion by 1964, then "this huge increase would be available for wise utilization, in accord with our priorities of need." Unlike Galbraith, Keyserling does not insist that a greater proportion of GNP be spent by Government. He thinks the Federal budget for 1964 need be only $96 billion, or 16 percent of his target GNP. But both wings of the Democrats should be happy with this sum: Galbraith's followers would have available money for all sorts of public purposes; Keyserling's adherents would get growth; and both would get what they really want—expanded government.

TOWARD A NEW NRA?

Much more Government control is, indeed, Keyserling's recipe. He proposes that the President in his Economic Report each year "set forth a national prosperity budget, furnishing short-range and long-range overall targets for production and employment." The "National Prosperity Budget" would, Keyserling emphasizes, "have no mandatory force upon the powerful private groups in our economy. But it would necessarily contain overall advisory targets for private investment and consumption." Would the "National Prosperity Budget," then, be just a pep talk to industry? By no means, because Keyserling wants representatives of industry, labor, and agriculture to be intimately involved in setting the targets, and he wants these groups to cooperate with each other under Government auspices to meet the targets.

Such cooperation, involving repeal or disregard of the Sherman Antitrust Act, would imitate one of the New Deal's most disastrous experiments, the NRA. Keyserling's system would run into a dilemma as soon as some business or union made a decision contrary to the official plan of cooperation. If government did not coerce the maverick into compliance, then cooperation would break down. If government did enforce cooperation, then we would have a corporate state.

Yet despite this, Keyserling's ideas have extraordinary appeal even to businessmen. In January of this year, speaking in Philadelphia, he made his case for growth as the central theme of government policy and concluded: "Nobody need worry about what his taxes or what his job or what his profits are going to be 5 years from now; the only thing we need to worry about is where we, the American people, are going to be 5 years from now." Warm applause followed this extraordinary proposal to abandon individual responsibility in favor of collective responsibility. Perhaps it is a measure of the growth argument's emotional appeal that Keyserling's audience on this occasion was the Chamber of Commerce of Greater Philadelphia.

IN MOURNFUL NUMBERS

Like a drumbeat through Keyserling's speech, and through the jeremiads of other growthers, runs an evocative echo of war. In wartime, we are reminded, our Nation was muscular and intent. Then the Government was a font of economic decision and a focus of productive strength. Now, soft and aimless, we loll among the fleshpots. But, again, an enemy is at the gates.

What usually comes next is a mournful count of United States versus Soviet growth rates. Keyserling, for instance, says that "since the Korean war" the U.S. economy has been growing at only a little better than 2 percent a year while that of the U.S.S.R. has been growing at more than 10 percent.

Because such comparisons form a large part of the growth argument, it is important to examine these figures with some care. Four sets of growth figures are involved: (1) the Soviet rate, (2) the "Truman rate," (3) the "Eisenhower rate," and (4) the projected U.S. rate beyond 1960. The first three, as used in the Democratic case, are distorted by a common error of trying to extrapolate long-term trends from a short—and specially selected—span of years.

The widely accepted notion that the Soviet economy is growing faster than the U.S. economy has been exploded by Colin Clark, the distinguished British authority on productivity (see Business Globe, Fortune, March 1960). The high Russian figures are mainly derived from the period 1948–53, when the U.S.S.R. was recovering from the devastation of war. Germany, Japan, and Italy show similarly high annual growth rates under similar circumstances. Clark uses a striking analogy to explain the exaggerated U.S. projections of Soviet growth: "A child recovering from a serious illness shows, for 2 succeeding weeks, a rapid gain in weight. The doctor plots these figures on a logarithmic diagram, and deduces the conclusion, which he tells to the parents,

that in a little more than a year the child is going to weigh more than its father. If any doctor acted in this manner he would be regarded as not qualified to practice."

Growth in total production must reflect either growth in population or growth in man-hour productivity. The Soviet population is almost certainly growing at a slower rate than the U.S. population. That leaves man-hour productivity, where the Russians made enormous, but not startling, gains in the postwar recovery years. As reconstruction came to an end, Clark says, the Russian productivity increase expectably slowed down and now approaches the long-range Russian rate. For the period 1913–56 that rate was 1.2 percent a year as against a long-term U.S. productivity rate per man-hour of 2.3 percent. Allowing for population increases, the long-range growth of the Russian national product has probably been at a rate of only about 2.5 percent, while the comparable U.S. figure has been 3.5 percent.

Clark's emphasis on long-term trends has an obvious bearing on recent U.S. experience. The so-called "Truman growth rate" of 4.5 percent is for the years 1947–53, and was accepted by the majority of the Douglas committee. The Republican minority replied that the base year 1947 was deliberately selected to give a high annual average for the Truman administration. By contrast, the period 1945–53, which begins in a year of booming war production, shows an average annual growth rate of less than 2 percent.

Similarly, the "Eisenhower rate" of 2.3 percent used by the Democrats is low because it begins with 1953, the peak of Korean-war production. In a word, these short-range growth calculations can prove whatever the calculator wants to prove, depending on his choice of base years.

The final set of figures, relating to the future growth of the United States, are not so much subject to statistical correction as to caution in how they are used. The 4.5 percent rate selected by the Douglas-committee Democrats is not wildly out of line as a projection. The U.S. population is now growing at 1.8 percent a year; this increase, joined to the long-term average productivity increase of 2.3 percent, would produce a better than 4 percent growth in annual product.

What it all boils down to is this: the only growth-rate figures useful for measuring political performance are long-range figures, and the long-range figures indicate that the United States probably will continue to widen its advantage over the U.S.S.R. The danger in the Douglas committee's conclusion is not so much its arithmetic as the fixing of a preconceived government target.

THE DEEPER CHANGE

For even if the figures ran the other way and it could be shown that the Russian economy was overtaking ours, the United States would only handicap itself by making a fundamental change in its relationship between the Government and the economy. There is no danger that the United States will go Communist. There is danger that it will be frightened into a half-planned system that would have some of the disadvantages and none of the advantages of communism.

The chief Republican spokesmen, resting their case on the superiority of the American system of limited government, although they are obviously for economic expansion, have so far refused to accept Government responsibility for reaching target rates of economic growth. Both President Eisenhower and Vice President NIXON have made clear how they think growth does and does not relate to politics. In his 1960 Economic Report, Eisenhower said: "Excessive reliance on government machinery may not only frustrate the quest for steady growth and reasonably stable prices, but may also have undesirable consequences for our economic system and for our freedom." Then Eisenhower had a key sentence: "In a free society, Government makes its major contribution to economic growth by fostering conditions that encourage and reinforce the efforts of individuals and private groups to improve their circumstances." This is in direct contrast to Keyserling's statement that "nobody need worry about what his taxes or what his job or what his profits are going to be five years from now." Eisenhower is against transferring private economic worries and hopes to the shoulders of Government.

The President's Cabinet Committee on Price Stability for Economic Growth, of which NIXON is chairman, spelled out why. "Ours is a nation in which idealism, not materialism, is fundamental, a nation in which the Government is the servant, not the master, of the people. * * * Economic growth is not an end in itself but a means of advancing to more fundamental ends." It follows that "our economy * * * must provide expanding opportunities for every individual to realize his own potentialities to the utmost. * * * It must encourage initiative, independence and integrity. It must preserve and enlarge the dignity and moral worth of the individual."

When it employed the words "advance, expand, encourage, and enlarge," the NIXON committee was using a traditional American standard for measuring the worth of a society primarily by what its pattern of organization does for the strength of men, rather than by what men can be made to do for the strength of the state.

THE PRACTICAL DIFFERENCE

But what about the strength of the State? It is a conspicuous part of the growth crusade to charge that the Eisenhower administration so limits the role of the Government that it cannot fulfill its military and other responsibilities to the society. Walter Lippman writes that the President adheres "to a principle that puts private comfort ahead of national need." Keyserling rams this thought home by charging that, although "every military expert" believes present defense levels to be inadequate, the administration holds down defense expenditures because it is unwilling to stimulate the economy to higher levels of production.

What the Lippman and Keyserling arguments do is confuse a legitimate debate on defense levels with an entirely different debate on whether the Government should control the private economy. After all, the present level of defense spending is approaching $50 billion, the highest ever in peacetime. Defense costs the average American family about $1,000 a year, which scarcely suggests that Washington today is being run by pacifists or hedonists. Comfort-loving Americans have again and again shown their willingness to pay for whatever level of defense their situation requires. The Eisenhower administration, knowing this, has set a level based on its conception of U.S. military need. Naturally, this is lower than the aggregate of all the estimates of all the experts in each ramification of defense spending. Perhaps on the merits, defense spending ought to be higher, but the point here is that the administration is not using defense as a backdrop for the glorification of the State and the shackling of the free economy; many of its critics are using the defense issue in just that way.

A similar cleavage can be seen on other policies. Eisenhower believes that the chief nonmilitary responsibility of government is to establish the general framework and climate in which the free economy operates. The vigorous record of the Eisenhower administration on antitrust prosecution reflects its concern for setting the framework. So does its position as regards sound money and the maintenance of economic stability. The Eisenhower record in combating inflation is one of substantial success. Moreover, the Eisenhower administration has promoted economic stability by devices that interfere less directly than do specific controls with the day-to-day decisions of individuals. It has relied on both monetary policy as practiced by the Federal Reserve Board and, to a lesser degree, on fiscal policy to level off the business cycle. But it is just this general approach that is under attack from the Democrats. The attack takes several forms. Contending that tight money inhibits growth, the Democrats would emasculate credit policy. Such experts as PAUL DOUGLAS would rely mainly on the budget as a stabilizer. Fiscal policy, however, is far more cumbersome to operate than credit policy, is always late in action, and tends to become a one-way street for more spending. Secretary of the Treasury Anderson has observed dryly that "experience in the postwar period indicates that it is much easier to achieve a deficit in a recession than a surplus in a boom."

This dispute about government's relation to the economy is sharpened still further by Galbraith. He would go all the way to direct price-wage controls—and he would use these controls not only to affect the price level but also to shift the allocation of national resources toward a higher quality of American life. In a less candid form, other Democratic leaders share Galbraith's deep distrust of the whole market economy. To them the market stands for waste and drift, just as government stands for growth and aim. They refuse to face squarely the fact that in one way or another resources have to be allocated if society is to function. The market makes the allocation by relating production to the desires of individuals. The alternative to the market is full-scale government planning over the whole economy.

THE MORAL ISSUE UNDERNEATH

In terms of U.S. political theory and in terms of practical policy, the Republicans' case appears to be solidly based. But their job in the 1960 campaign is much more difficult than it looks, because growth has an emotional appeal deeper than material practicalities. Although the Nixon committee truly said that idealism, not materialism is the foundation of this Nation's character, it is not clear that the Republicans understand that in growth the Democrats have got hold of a moral issue to which the statistics are only incidental. Democratic speeches on this ostensibly dry subject are somehow filled with idealistic passion, and there is reason to believe that they are finding an emotional response in the breasts of many citizens.

This Nation knows that it is both prosperous and in mortal danger—a combination that conjures up visions of the decline of the Roman Empire and other great civilizations whose social health and military power were really weakened by a concentration of luxury at the top. The bulk of the new U.S. prosperity, however, has gone to raise a huge group of Americans from the level of subsistence to a level that is still far short of luxury. Continuing mass prosperity is no doubt an important factor in defending the Nation against an external danger from an aggressive Communist system built on the claim that a free economy cannot bring mass prosperity. But an ingrained—and basically wholesome—American characteristic generates a deep distrust of mere prosperity. Hence Americans do listen guiltily to those who interpret the increased volume of consumer goods as waste, and softness, and luxury.

Thus the Democrats have a popular cause when they demonstrate unnecessary consumer spending, and argue that our mili-

tary power would automatically multiply if we got rid of signs of luxury. Today, tail fins are the devil's gauds, as TV sets were at the beginning of the Korean war, as jukeboxes were in 1941, as silk shirts on steelworkers were in 1918. "Abundance," meaning a decent life for most of the people and a widening choice of goods, is hard to get used to—although nobody really proposes that we do without it. Many comfortable Americans will applaud denunciations of luxury, so long as they think that it means no paint off their tail fins. "Growth" as a national ideal is not merely or mainly a program for more goods; it is a much more subtle promise that we can keep the goods and at the same time not feel guilty about those consumer spending figures. A recent U.S. Chamber of Commerce booklet observed, "The growth bandwagon is crowded with planners, but it also hast its complement of Puritans."

If the Republicans are to make their case for limited government really stick, they must take account of this Puritan characteristic, which ought to be on their side of the argument. They will have to offer a better slogan than "peace and prosperity." They will have to get over to an idealistic nation the moral content of their case against big government. At bottom, the idea of limited government turns on a belief in ethical values held to be higher than political power. The State's role is to provide certain protections to individuals as they go in freedom about the pursuit, through their own decisions, of their own values. Freedom has made the U.S. prosperous, but freedom's highest value is that it leaves on the citizen's shoulders the burden of responsibility for working about his taxes, his job, his profits, and many another element in his daily life. The 1960 campaign will begin to have some shape and clarity if the Republicans will try to show that, for Americans, the ultimate softness, the ultimate smugness, the ultimate waste would be transferring to the Government, in the name of "growth," powers reserved to the people.

Annual Meeting of Valley Electric Membership Cooperative, Natchitoches, La., June 25, 1960

EXTENSION OF REMARKS

OF

HON. HAROLD B. McSWEEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. McSWEEN. Mr. Speaker, it was my privilege on Saturday, June 25, 1960, to address the members of the Valley Electric Membership Cooperative at Natchitoches, La. I appreciate the privilege of inserting this speech in the Appendix of the RECORD:

Ladies and gentlemen, I am grateful for the invitation to be on your program today at the annual meeting of Valley Electric Membership Cooperative. I am particularly glad to be able to have a role in celebrating the silver anniversary of the REA loan program, 1935 to 1960.

Notwithstanding the popularity of this great program which has done so much for rural America in the last 25 years I find that many persons would like to know more about it.

The Rural Electrification Administration is a lending agency of the U.S. Department of Agriculture. It makes loans to finance electric systems and telephone service in rural areas. Congress annually determines the amount of funds that REA may lend. In this regard I am happy to report that there will be a carryover from the current fiscal year to next fiscal year which begins next month of $110 million which has not been needed for REA loan applications during the past fiscal year. We in Congress have appropriated an additional $190 million plus a contingency fund of an additional $120 million, if needed, to meet loan applications during next fiscal year, 1961.

REA ESTABLISHED IN 1935

Established in 1935 by Executive order of the President, Congress gave REA permanent status in 1936 as an independent agency. The program was extended indefinitely in 1944. REA has been an agency of the Department of Agriculture since 1939, when Congress made this change.

WHAT REA DOES

For rural electrification REA may make loans to qualified borrowers. Loans cover the full cost of constructing powerlines and other facilities to serve persons in rural areas. These loans bear 2-percent interest and are repaid over a maximum period of 35 years.

The REA telephone loan program is operated much in the same way.

REA itself operates no electric facilities. Its main functions are to lend money and assure repayment through appropriate loan-supporting activities. Loans are repaid from operating revenues of the locally owned, locally managed systems it finances. Part of each consumer's monthly payments for electricity goes to pay off the Government loans. In short, your Federal Government, through the REA agency, operates as a bank to assist rural electric power facilities.

GROWTH OF FARM ELECTRIFICATION

The first central electric generating system in America went into service in 1882. When REA was created in 1935 only 11 percent of all farms had electric service. Now 96 percent of all farms are electrified; 98 percent in Louisiana. More than half of these farms get power from REA-financed systems.

About 93 percent of REA's electrification loans have been to cooperatives. These cooperatives, such as the Valley Electric Membership Cooperative, are local, independent, private enterprises. It should be made clear to all that this is not public power; this is not socialism, although some misinformed persons confuse cooperatives with public power. In fact, some of the National Rural Electric Cooperative Association's officials often confuse the public by using the cooperatives' money to support public power and fight private power. In my humble judgment this is a mistake which hurts the cause of the co-ops and of rural consumers. I know full well that co-op members and rural electric consumers in Louisiana are believers in private enterprise and that they are opposed to socialism.

As of January 1 of this year, REA had approved over $4 billion in loans to 1,085 borrowers. They included 984 cooperatives, 50 public districts, 27 other public bodies, and 24 electric companies. These borrowers are serving over 4.7 million consumers in 46 States, the Virgin Islands, and Puerto Rico.

The monthly average power consumption per farm is now 350 kilowatt-hours, more than double that of 1950. Electricity is a production tool for farmers. There are now more than 400 farm uses for electricity.

RECORD OF REPAYMENTS

As of January 1 of this year electric borrowers had paid to the government a total of more than $1.2 billion on their loans. This includes $669 million repaid on principal, $397 million paid in interest, and $154 million paid ahead of schedule. One borrower was overdue in payments amounting to $97,600.

You can thus see that the record of REA and of REA's borrowers, such as VEMCO, is an impressive one. It is a record to build on, and I am sure that the next 25 years of the REA program will be even more outstanding.

AGRICULTURE COMMITTEE

I am proud to be a member of the Committee on Agriculture of the U.S. House of Representatives, which has legislative jurisdiction over farm credit programs, such as the Farm Home Administration, Federal Land Bank, and REA. The members of the Agriculture Committee have the best interests of farmers at heart. I was interested to learn that I am the first Louisianian to be a member of the Agriculture Committee since the late Congressman James B. Aswell.

HUMPHREY-PRICE BILL

During the last session of Congress there was before us a legislative proposal dealing with REA, known as the Humphrey-Price bill. It was introduced in the House by Congressman MELVIN PRICE of Illinois and in the Senate by Senator HUBERT HUMPHREY of Minnesota. It was a reorganization bill. It proposed to leave REA in the Department of Agriculture but clip the wings of the Secretary of Agriculture by not permitting him to have the authority to review the loan applications. This proposal would have created a hybrid situation, leaving REA half in the Department of Agriculture and half out. It would be best either to leave REA like it is and has been since 1939 or take it completely out of the Department of Agriculture and make it an independent agency as it was before 1939.

I voted against this Humphrey-Price bill. The fact that only four of us in the Democratic Party voted against it suggests that it was a party-line issue. It was a political slap at the Secretary of Agriculture which I personally did not feel justified in supporting. My party had not been able to beat the Secretary of Agriculture on farm commodity questions. Because of the popularity of the REA program it was felt that an REA bill could gather the number of votes sufficient to embarass him. I felt that it was a shame to carry the farm fight to the REA battleground and a shame to get REA into politics.

When the President vetoed this bill I voted to sustain his veto for the same reason. (Later last session I voted to override the President's veto of the public works appropriations bill, which had in it money for all of our flood control and drainage projects.)

Because of my vote on this bogus issue, I received both praise and criticism. I was disappointed to receive criticism from the hands of the LECA newspaper (which you help support), which said that my vote was a vote against REA. But I was proud to receive commendation for this vote from many rural electric consumers, who appreciate the fact that I was willing to use my judgment and not follow the mob. If my vote was a vote against REA, how can it be explained that the REA program has had its greatest success and growth under its present organizational structure—in the Department of Agriculture and under the Secretary of Agriculture—which was recommended by President Roosevelt and passed by Congress in 1939?

STATES RIGHTS

Individuals are often right, while associations and pressure groups are often wrong. I am sure that all of you are for States rights and believe that it should be the law of the land. I certainly believe in States rights and shall fight for it as long as I have the honor and privilege of representing you in Congress. Let me tell you about another bill we had before us last session. It was a States rights bill, called H.R. 3. It was for the purpose of curbing the power of the U.S. Supreme Court by overruling a

decision which gives Federal laws the preemption over State laws. Under this Supreme Court decision it was impossible for States to try seditionists under State laws. I was a strong and active supporter of H.R. 3. It passed the House, but did you know that Mr. Clyde Ellis, the manager of your parent cooperative organization, NRECA, opposed this States rights bill? This illustrates the fact that associations and pressure groups can be wrong.

Before I close I should like to mention briefly several other important legislative matters and serious problems facing our Nation.

It seems as if the entire world is in a state of turmoil. The riots in Japan, Turkey, Korea, and in Africa have been most serious. And there are revolutionary causes and plots brewing in many other nations at this very minute.

BLASTS CASTRO

The most serious question facing the United States at the present time, however, is just off the coast of Florida on the island of Cuba, where a young dictator has ridden to power dishonestly on the cause of freedom and liberty. Fidel Castro is nothing but another Latin American demogogue. I take that back. He is more than a demogogue. He is also a Communist, who has tossed aside over 60 years of friendship and good relations between the peoples of Cuba and the United States. He is now making alliances with Soviet Premier Khrushchev that are detrimental to the best interests of the United States and of the American hemisphere. In fact the prospect of the possibility of Russian missile bases located in Cuba is the most serious threat to the security of this Nation in all our history. It is high time that we take off our gloves and deal with this despicable Communist dictator in any way that may be necessary.

OPPOSES FOREIGN AID

Speaking of trouble in the world, we do not seem to be accomplishing much with our extravagant foreign aid program. As you know, I have opposed foreign aid at every turn; the authorization bills as well as the appropriation bills. In opposing foreign aid I have advocated that our foreign policy be recast in the light of disappointing results of this costly program for over 10 years. Western Europe and Japan have recovered, and they are beating us over the head with their cheap imports. Nevertheless, Congress has just appropriated almost $4 billion again for foreign aid, but not without a fight from many of us who do not believe in it. We shall continue to fight this outdated program, and our ranks are increasing every year.

TOLEDO DAM

Let me say a word to you about the Toledo Bend Dam project on the Sabine River. As one of the Louisiana and Texas Congressmen bordering on the Sabine River who who was contacted in Washington last year by the Sabine River Authority and members of the Louisiana Legislature I have cooperated in having the Federal Government step up its study of the Sabine River in the event the assistance of the Federal Government is desired in the development of this project. Moneys have been provided as requested.

Several weeks ago I mailed a newsletter to the residents of Vernon and Sabine Parishes giving complete facts on this project in an effort to answer the many inquiries about the scope of this project that I have recently received. In this newsletter I pointed out the great value that this project could have for western Louisiana.

Sponsors of this project have been reluctant to have the Federal Government build it for several reasons, such as the ownership of the shoreline, use of the water rights, control of the electric power project by the Federal Government, and the loss of water to Texas if the project should be built by the Bureau of Reclamation.

Because of the excellent progress being made during this session of the Louisiana legislature it appears that the Toledo Dam project is now nearer to reality than ever before. The members of the Sabine and Vernon Parish delegations to the legislature are to be commended for their excellent work as is Governor Davis and the State administration for supporting it.

I note that certain political candidates are now embracing this popular project, although they have never before now ever lifted a finger themselves to do anything about it.

I thank you again for this privilege of being with you today. I extend to all of you my very best wishes for another successful year.

Twentieth Anniversary of the Occupation of Baltic States

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FEIGHAN. Mr. Speaker, on Sunday, June 12, 1960, it was my pleasure to address a large rally held at Ciurlionis Hall in Cleveland, commemorating the 20th anniversary of the Russian Communist takeover of the Baltic States. The chairman of this rally was Mr. Julius R. Smetona, who is the son of the last legal President of Lithuania. Much has happened during the 20 years of Russian occupation of the Baltic States. I felt the major events of this period should be examined in terms of whether or not they advanced the emancipation of Lithuania, Latvia, and Estonia from the ycke of Russian imperial communism. By so doing, I believe we can best evaluate national policy, past and present, and find the guideposts for our policy of the future.

Under leave obtained, I insert in the RECORD my address on the 20th anniversary of the occupation of Baltic States:

My Lithuanian-American friends, I deem it a privilege to be here with you today to play a part in this sad commemoration of the 20th anniversary of the Russian occupation of the Lithuanian, Latvian, and Estonian nations. This is the anniversary of one of the blackest chapters in the history of civilized mankind. It marks the days when the true colors of the Russian Communists were exposed for all to see, the days when the Russian imperialists were the happy allies of the tyrant Hitler. It also marks the days when the peace-loving people of the Baltic States were forced to accept, by treaty, peaceful coexistence with the Russians which turned out in reality to be military occupation. These long 20 years which have elapsed since have provided undisputed evidence of what the Russians mean by peaceful coexistence. Let us look, briefly, at the record of these past 20 years.

We see that all the Baltic States are still occupied by the Russian Communists. They are in these countries in violation of solemn treaties of peace and mutual understanding entered into between these countries and the U.S.S.R. They are not welcome. They remain there by military force alone.

We recall the brutal mass deportations carried out by the Russian Communists—deportations which violate the genocide code and shock the conscience of all mankind. Today loyal sons and daughters of Estonia, Latvia, and Lithuania are scattered throughout the Russian Empire against their will. Thousands and thousands have died at the hands of the Russian slave masters.

We remind the people of the world that these mass deportations were directed by none other than one General Serov, an NKVD specialist in crimes against humanity. This same General Serov is Czar Khrushchev's favorite executioner. He accompanied Khrushchev on his tour of London a few years ago, serving as chief of security for the Russian dictator and his entourage. Khrushchev selected him to succeed Beria as head of the dreaded MVD. These two are real buddies in crime, inseparable partners. This, by the way, is the same Khrushchev who was invited by President Eisenhower to be his guest in the United States.

We can never forget that the people of Lithuania, Latvia, and Estonia have been fighting these past 20 years to preserve their national identity, their rich Christian cultures, their historic values. These are the things the Russians have been attempting to destroy in their plan to make the people of these countries into Soviet peoples. We all know what they mean by Soviet people—they mean Russian Communists, people without love for their fellow man, people who live on hate, people who worship tyranny and despotism and reject all thoughts of God and the divine plan for mankind.

We are constantly reminded that the people of the Baltic States remain dedicated to human liberty, to freedom, and to the political ideals of the West. They are prepared to fight for the restoration of their national independence if the United States and its allies will take the political initiative against the Russian imperialists who are their oppressors. This spirit, this desire for liberty and national independence by these captive people constitutes a powerful deterrent to war. The Russians know that if they start a war the captive people will seize this opportunity to fall upon them, to destroy the chains which bind them to the empire, to dismember once and for all this empire of fear. This is a fact, an inescapable fact, of contemporary international political affairs. It is time the American people were awakened to this fact and the present administration in Washington did something to help keep this flame of freedom burning ever brighter.

This is the record of the past. Now what is the record we are going to make in the future? We have several choices as to the course of action we shall take. Let us look at them.

1. We can accept a status quo which the Russians have been attempting to force down the throats of free people. The Russians say that if we will recognize their empire of captive nations as final and unchangeable, they will not drive us out of free Berlin. They ask us to close our eyes to the genocide of nations going on behind the Iron Curtain. They ask us to join with them in killing the aspirations for freedom in the hearts of several hundred millions of non-Russian people. They ask us to turn our backs on our proven allies, the captive people, in return for which they promise not to throw us out of Berlin until they are ready for an all-out war against the free world. This, then, is the certain course to war and it must be publicly rejected by both political parties in the United States.

2. We can continue to engage in the Russian instigated plan of coexistence, as the present administration has been doing these

past years. We are now censored to speak no evil aganist the Russian tyrants, which throttles the truth. We are admonished by Vice President NIXON to receive the arch criminal Khrushchev with courtesy and consideration. The Voice of America has been reduced to a faint whisper, daring not to even echo the call to freedom. We are speaking over the Voice of America to the people of many captive nations in the Russian language, the mother tongue of communism and the language of their oppressors. On all sides the caution is urged "Do not provoke the Russians"—which has come to mean moral and political paralysis for our Nation. The time has long passed when we should have stepped out of this Russian bear trap. We can be sure the people are going to demand a new administration this November, which will remove these chains from our national honor.

3. We can continue to allow our Nation to be dragged into and out of so-called summit conferences. This device is nothing but the stage for the "mirage of peace" which the present administration has attempted to foist upon the American people. Our people were thoroughly brainwashed into believing some good could come out of such propaganda exhibits. But the complete collapse of this ill-conceived balloon at Paris a few weeks ago has awakened the American people to the Disneyland in which our leaders have been living and into which these same leaders sought to entice them. Summit conferences and personal diplomacy with the Russians have been exposed as the road to appeasement and the road to appeasement is the course to war. The only way anyone can do business with the Russians is to concede to them all they demand—and this is peaceful surrender.

4. We can look honestly at the nature of the Russian Communist empire. If we do we will find the road to peace with justice and freedom. We will find that the empire is tottering, that the 70 million Russians cannot possibly hold it together much longer, that the several hundred million non-Russians in the empire—the people of all the captive nations—are anxious to work with us in bringing about the dismemberment of this unholy empire. If we take the time to look close enough we will find abundant evidence that a great political explosion is in the making, an internal explosion, an explosion caused by the powerful desire of enslaved people to be emancipated. Look what is happening again in Tibet, recall what happened in Turkestan a month ago, see what is now happening in Poland, remember what happened in Hungary and East Germany but a short time ago. This is the march of freedom, the march which our Nation must lead with courage and boldness.

This brings us to the Captive Nations Week observation under Public Law 86-90, which will take place this year from July 17 to 23. I am proud of the part I played in introducing this law in the House and in helping to bring about its enactment. This law forms the foundation for the foreign policy our country must pursue if we are going to win the struggle for a just and lasting peace.

Allow me to point out that 1 month from now the Democratic Party will hold its convention in Los Angeles. Immediately following the Republicans will gather in Chicago. Now I ask you—what are your plans for informing both parties of what you believe our foreign policy toward the Russian Communists should be? Both parties are moved by what the electorate demands. This is the strength of our democratic system—it is the duty of informed citizens to make their demands known.

How should our country observe Captive Nations Week this year? This is my second question leading to citizen action. I have recommended to Mayor Celebrezze that he appoint a civic committee here in Cleveland to make certain we make the most of this opportunity. I am sure that all present here will want to play a part in the work of that committee.

If we do these things, not just once a year, but in spirit and dedication every day of the year, the record for the future will look much brighter and more hopeful than the record of the past. We must not wait another 20 years for Lithuania and her sister republics on the Baltic Sea to be free and independent. We must act now. This is my wish for the gallant people of Lithuania and all other nations behind the Russian Iron Curtain.

Defense Budget

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DERWINSKI. Mr. Speaker, I am in basic agreement with the statements and explanation by the distinguished gentleman from Texas [Mr. MAHON] as he presents to us the conference report on the defense appropriations bill. I especially concur with his premise that the Communist threat is certainly not greater or more dangerous than it was 6 months ago. Certainly we do have the responsibility, fortified with the realization that the cold war will be with us for many years, to maintain our world military position and present armed superiority must be maintained and, of course, increased. This $40 billion defense budget provides basically for the necessary improvements we continue to make in our military program, and gives our Armed Forces the ability to deter war because of our overwhelming strength as compared with the boastful, but much exaggerated, Soviet military machine.

However, Mr. Speaker, I feel very strongly that we have an obligation to the American taxpayer to study all details of the defense budget, since spending, as it does, half the Federal annual expenditure, the possibility of waste and extravagance is obvious.

I do not wish the statement that I will now make to reflect upon the competence, loyalty, or devotion to duty of our military leaders, but the plain facts are that there is as much, if not more, careless administration and waste in the Defense Department than in any other governmental agency. Frankly, one of the hangovers of World War II and the Korean war has been the pampered state of our top military officials, who hold themselves above civilian criticism of their spending.

Mr. Speaker, we must, as I pointed out, in our duty to the taxpayers we represent, insist that our military leaders provide us with not only the strongest force in the world, as they have done, but, equally important, do so with the utmost efficiency and conservation of a greatest resource: the American dollar. In my humble opinion, we could, today, save 10 percent of the dollars to be spent and provide completely for our Nation's defense if the military leaders would practice true economy in all phases of our Military Establishment. Mr. Speaker, may I repeat, my statement is one that I am sure a great majority of my colleagues concur in, since we have received in communications from our constituents, a clear mandate that whenever possible we must reduce the back-breaking tax burden that rests upon the American public. It would be a tragic thing to yield to the false theory advocated by the pseudo-liberal leftwing element here who believe that their duty is to recklessly spend as much of the American public's money as they can lay their hands on. We are determined, as we pass this defense appropriation to battle communism abroad. We cannot surrender to socialism here. This defense appropriation worked out so carefully by Members of both bodies provides each of our armed services with the weapons they need to continue their stalwart defense, not only of our Nation but of free people throughout the world. It is true that the interservice rivalry continues, and that the differences of opinion within this appropriation remains, but overall this is a sound, practical defense appropriation maintaining and increasing our military superiority over the Soviet Union.

Japan and American Purpose—Our Ultimate Goals Should Range Behind Decision To Defeat Communism First

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of an editorial appearing in Life magazine recently:

JAPAN AND AMERICAN PURPOSE—OUR ULTIMATE GOALS SHOULD RANGE BEHIND DECISION TO DEFEAT COMMUNISM FIRST

The mob explosion in Japan was the gravest setback for the Eisenhower foreign policy in 7 years. It was far more serious than the collapse of the Paris summit. In Paris, naked at stage center, Khrushchev insulted the President from obvious weakness,

frustrating our policy but not hurting our position. In Japan, though personally invisible, Khrushchev humiliated Eisenhower with a show of strength. It took us by surprise and advanced the cause of communism throughout Asia.

It was strength, moreover, of a kind we have scarcely bothered to contest: organized revolutionary strength among the youth of a prosperous, democratic, major allied nation, the strongest free nation in Asia. It was the strength of a loaded and pointed political gun that checked us last week but may eventually force us to retreat across the Pacific. It was the strength of a clear purpose long pursued—the Communist purpose of communizing the world. Have we a purpose to match it?

Life has just published a series of articles on the American National Purpose. We did so to stimulate the kind of debate that might help fill a vacuum in that area, palpable to many for quite a while. This debate has barely started and can last for years. It should certainly not be settled in a panicky frame of mind. Nevertheless, the defeat in Japan is a proper context for reviewing what our eight distinguished contributors have proposed so far about the American purpose, and for rehearing their proposals through what one of them (David Sarnoff) called "the loudspeakers of events."

First let us note three points of agreement among all eight contributors. None argued that survival was an adequate national purpose. Albert Wohlstetter was most explicit on why mere survival is a formula for surrender, and why a larger purpose, such as extending democracy, is not just a nice thought; it is vital. Judging by the mail response, some of Life's readers (mainly the women) would settle for survival. We urge such readers to follow their narrow instinct by at least taking Governor Rockefeller's advice and building themselves some fallout shelters.

Another point of agreement is implicit even among those contributors who most criticized the mood of the American people—that selfish mood of vulgar materialism that Archibald MacLeish called our sluggish, sunoiled sleep, and Adlai Stevenson our pervasive mystique of privacy. The agreement is that the American people, whatever their mood, have not failed to respond to any demand or sacrifice seriously urged by their Government. They certainly responded when Ike got serious about his balanced budget last year. It can be assumed—as Lippmann insisted—that they would also follow the lead of a more vigorous and purposive foreign policy.

A third point of agreement is that an American purpose must have worldwide application. No contributor proposed to divide the world with Russia or advocated those defensive loops setting a strategic periphery for U.S. interests that were being suggested and refuted a decade ago. There is no natural periphery on the map for American purposes; the great globe itself is their arena. Those who still find our chief purpose in the Declaration of Independence, notably MacLeish, still underwrite Jefferson's claim to its universality. And Clinton Rossiter, who proposed that the cause of peace should be our great second American mission, envisioned it as a step-by-step approach to a worldwide government.

The main contrast in emphasis among our contributors was between those who, like Billy Graham and John Gardner, were concerned with the American as an individual, and those who looked chiefly at the rest of the world. Gardner's admonition that all of us should pursue excellence and Billy Graham's reminder that only good men can make a good society, and his summons to individual courage and spiritual health, deserve a hearing by all men at all times. In selecting national goals, however, there is the problem of costs and priorities emphasized by Wohlstetter. The Japanese disaster is merely the latest reminder that one of these priorities may involve our national life or death as a free people.

David Sarnoff's article was the most explicit summons to battle and call for victory in the cold war. It was therefore, on our view, the most relevant to America's world situation today. The paramount challenge of this epoch is indeed the struggle between communism and freedom; and as he says, the cause of freedom conspicuously lacks both a strategy as massive and a will to win as clear and purposeful as the Communist cause. Theirs is the vocabulary of confidence, ours the semantic timidity; theirs is the choice of weapons and battlefields, ours the defense of static and passive arrangements which can't last. Our fear of nuclear war leads us always to choose the more agreeable interpretation of Communist strategy, and even to rely on an evolutionary theory of where communism is going which is pure blind wish. Thus all our great purposes in the world, says Sarnoff, will remain mere dreams unless and until we range them behind a single great decision: that the cold war is in fact an all-out struggle for the survival of freedom. Unless this great decision is consciously made, boldly announced, and acted upon over a wide front under American leadership, freedom could lose.

The decision urged by Sarnoff would not, as some fear, mean a surrender of ideals in mere conflict, nor a suspension of our ultimate (i.e., postcommunism) purposes and goals. Those ultimate goals were most persuasively set forth by Professor Rossiter; but Sarnoff also sees the "rise of a world order under law" as both logical and desirable. The prior question at issue is whether tyranny or freedom will be the organizing principle of that ordered world. Since communism is determined to make tyranny the principle, communism cannot safely be outwaited; it must be combatted, confounded and overthrown.

The decision to do this, says Sarnoff, will itself breed the means of its implementation. Many such means are already at hand, lying around unused or half-used for lack of adequate motive. A bolder foreign aid and trade program, a stronger and bolder NATO, an earlier B–70, are obvious examples. Another is the Freedom Academy mentioned by Sarnoff (and advocated by Life, February 16, 1959) which still awaits action by committees of Congress. Had a few graduates of such an academy belonged to the Japanese Teachers Union at the time the Communists invaded it some years ago, last week's disaster might have been prevented at its source.

We urge all readers of Life's series to think further on this "great debate" (we'll gladly send reprints for rereading) and there will be more discussion in Life. Each contributor has opened up some exciting perspectives for a great American future. But to realize any of these great purposes, can it be taken for granted that communism will simply move aside? In our view, the challenge of communism must be met first.

Big Newspaper Chains

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Newhouse Octopus Clamps Its Tentacles on Four More Papers," published in the Hudson Dispatch, of Union City, N.J., for June 21, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEWHOUSE OCTOPUS CLAMPS ITS TENTACLES ON FOUR MORE PAPERS

Despite the repeated warnings which this newspaper has sounded against the insidious moves of big press chains to absorb and crush independent operations throughout the country, the dangerous trend toward eliminating opposition papers goes on at an increasing pace.

We have long wondered when the American people will awaken to what will eventually transpire if the newspaper trusts in the Nation aren't curbed. We think that it is long past time that some congressional committee looked into this monopolistic threat to the once-vaunted freedom of the press. We seem to recall that there is a Federal statute known as the Sherman antitrust law.

Formidably, the Newhouse chain of newspapers has been buying up independent publications throughout the country until today it has emerged as the second combine in importance in the United States of America, topping the dwindling Hearst publications, with 14 as against 13, for the once powerful trust which had 26 dailies. Newhouse operations now are only led by the Scripps-Howard syndicate, which operates 18 newspapers.

Within 8 days the Newhouse combine has moved in on four of the country's most important publications. First it was the Denver Post. Then it was the Springfield (Mass.) Republican Co., which publishes the afternoon Daily News, the Morning Union, and the Sunday Republican. In both instances, as has been his practice in many of his acquisitions, Mr. Newhouse purchased only minority holdings, with the eventual intention of taking over full control.

In getting a toehold on the Denver Post, the Newhouse chain reportedly paid $3,600,000 for its 15-percent holdings, purchased from the daughter of the late cofounder and copublisher. Other Post stockholders banded together to announce that this invasion was as far as Mr. Newhouse would be allowed to go.

The Springfield transaction netted the chain 40 percent of the Republican Co. stock. It was announced that the Newhouse interests had also acquired rights to buy an additional 45 percent of the stock at a future date. No purchase price was mentioned.

Indicative of the growing resentment toward the Newhouse acquisitions was a front-page editorial published in the Springfield Sunday Republican expressing displeasure over the sale. The editorial said it "came as a shock," and added: "Inroads by outsiders into New England business are attaining galloping proportions.

"The purchaser, Samuel I. Newhouse, of New York, is a stranger to this area. He typifies absentee chain ownership. His motives are allegedly profits. This represents his first invasion of New England. It is not good for the community."

The editorial said the three newspapers assured their readers, advertisers and employees that "irrespective of Mr. Newhouse the present employee-management will continue to control these newspapers at least for the next 7 years." The Newhouse organization declined comment.

This newspaper octopus now has spread its tentacles from coast to coast and from North to South until it either owns outright or has acquired a percentage of 17 dailies or Sunday publications.

Besides the Denver Post and the Springfield papers, the Newhouse chain includes the Staten Island Advance, Long Island Press, Jersey Journal, Newark Star-Ledger, Long Island City Star-Journal, Syracuse Herald Journal, Syracuse Post Standard, Syracuse Sunday Herald-American, Harrisburg Patriot and News, Portland Oregonian, Birmingham News, St. Louis Globe-Democrat and Huntsville (Ala.) Times.

More and more are the newspaper trusts buying up independent publications and subjecting large populations to the "brainwashing" that comes with having no opposition press. If something isn't done to halt this trend, the American people someday may find themselves in the grip of a few great news chains—and freedom of the press will really be "chained."

Wiretapping: Take a Second Look

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. SANTANGELO. Mr. Speaker, the bill of rights which protects the individual from Government interference distinguishes us from people living under totalitarian regimes. Wiretapping and eavesdropping violate a citizen's right to privacy. This right has been valued greatly by civilized men and should not be encroached upon except in emergency or for the protection of our Government against espionage and treason. Congress has been called upon to pass upon legislation which would give States the right to wiretap and to invade the person's right to privacy. The Washington Post in an editorial has critically reviewed pending legislation in its editorial of June 29, 1960. Mr. Lawrence Speiser, director of the Washington office of the American Civil Liberties Union, has set forth the thinking of those opposed to wiretapping and the reasons why pending legislation should not be approved.

I believe that the Washington Post editorial and the letter from Mr. Speiser to the Washington Post will clarify the confusion and the thinking of the uncertain. I believe that these articles are well written and will prove of assistance to the reader.

LOCAL EAVESDROPPING

Although it has had bills to permit wiretapping introduced in almost every session for the past 20 years, Congress has never authorized this kind of invasion of privacy by any law enforcement authorities, Federal, State, or local. Section 605 of the Federal Communications Act adopted in 1934 still stands as a flat prohibition of any unauthorized interception and divulgence of telephone communications. Now, however, in the closing days of the 86th Congress, the Senate has approved a new-fangled way of circumventing section 605—a bill by Senator KEATING which would grant Federal statutory permission for wiretapping by State and local officers in compliance with State law.

Six States have statutes authorizing their police to tap telephones in defiance of the congressional statute forbidding the practice. New York, where most wiretapping takes place, permits the practice on order of a State judge. Embarrassment over the conflict with Federal law has led several New York judges to announce recently, however, that they will no longer grant police wiretapping requests. This, in turn, has produced pressure from New York police and prosecutors for congressional passage of the Keating bill.

The Keating bill would allow State law enforcement authorities to do what is forbidden to Federal law enforcement authorities. It would, in consequence, create a completely confused as well as completely anomalous situation. Telephone lines are no respecters of State boundaries. Eavesdropping would become indiscriminate not only for all local users of a tapped telephone but for all persons at the other end of the line in another State which did not authorize the eavesdropping. The right to privacy—the right which Justice Brandeis called "the most comprehensive of rights and the right most valued by civilized men"—would be diminished all over the country.

This newspaper has favored limited use of wiretapping by Federal authorities in espionage, treason, and kidnaping cases, under strict judicial safeguards. Certainly no more lenient policy should be applied to the States. The Keating bill to permit local wiretapping was drafted in haste and has been reported by the Judiciary Committee without hearings and, we think, without adequate consideration. It would change the atmosphere of American life far too drastically to be jammed through in its closing days by a Congress impatient to get out of Washington.

WIRETAPPING: TAKE A SECOND LOOK

One of the recurrent criticisms of Congress is that in its headlong rush to adjourn by a fixed date, often much legislation is adopted without adequate consideration and study.

A prime example is the Keating wiretap bill, S. 3340, which would authorize the admission in State courts of evidence obtained by wiretapping pursuant to a State court order. This would change the Federal law which we have had on our books since 1934 which prohibits the interception and divulgence of telephonic communications.

Last Friday the Senate Judiciary Committee reported out the Keating wiretap bill, even though no hearings had been held on it. The suggestion of wiretapping pursuant to a court order is at first blush an attractive one. New York and four other States have laws of this kind. Yet the experience of New York under its law has not been a happy one.

In 1955, Justice Hofstadter of the Supreme Court of New York County, in announcing his intention to grant no further applications by law enforcement officials to wiretap, said:

"A tapped wire is the greatest invasion of privacy possible * * *. A telephone interception is a far more devastating measure than any search warrant. A search warrant is confined to a definite place and to specific items, or, at least to items of a stated class or description. Those in possession of the searched premises know the search is going on, and when the officer has completed his search, whether successfully or not, he departs.

"Not so in the case of telephone interception. The interception order is obtained ex parte, and the person whose line is to be tapped is, of course, in ignorance of the fact. The tap is maintained continuously, day and night. Everything said over the line is heard, however foreign to the stated objective of the law enforcement officers. The most intimate conversations, personal, social, professional, business, or even confidential, of an unlimited number of persons may be laid bare.

"In effect, the line of everyone who is called from or makes a call to the tapped line at any time is being tapped during the maintenance of the tap. When a line in a public telephone booth is tapped, as has on occasion been done, the conversations of people having no relation of any kind to the operator of the place in which the booth is situated or the person whose line is tapped are overheard."

The American Civil Liberties Union also objects to wiretapping on the ground that the results are so inadequate that when balanced against the enormous invasion of the right to privacy, the former appears minute in comparison. Here again it is pertinent to quote Justice Hofstadter:

"The application now made follows the general pattern of like applications heretofore made to me, which also, in the main, had as their objective the detection of gambling in some form * * *. Some years ago I instituted the requirement that * * * written reports of the results obtained from any interception ordered be thereafter submitted to me * * *. These showed some arrests and fewer convictions and then rarely, if ever, for a heinous offense.

"It is melancholy to behold (our city) rife with violence an admittedly lawless community, its inhabitants no longer safe by night or day, in their persons or their homes. To be redeemed as part of the great American community, its police department needs external aid, that is, a larger force, with more pay for the men, and a renewed spirit from within * * * but not more wiretaps."

We have too long witnessed the flagrant violation of a Federal statute, not only by State officers, but by Federal officers as well. Nonetheless, during the entire history of section 605, there is no reported case of any law enforcement official having been prosecuted for violating that section notwithstanding the common knowledge that wiretapping is an everyday practice of police departments throughout the country.

In considering this bill, Congress will be confronted with the clear choice of deciding whether to sanction invasion of the right to privacy of citizens who rely on their telephones to communicate with their friends and asociates with the same confidence with which they would communicate with these people in the privacy of their own homes.

The mere fact that the district attorneys of New York have demanded the passage of the Keating bill does not mean that these demands alone can ever replace the necessity for careful and considerate study by Congress.

We recognize that such a procedure may mean the death of the bill in this session because of lack of time. However, it hardly seems likely that such pressing demands have arisen in the past few months since the bill was introduced, which warrant making a major change in our law which has stood for 24 years, and that such demands could not possibly wait until the next session of Congress to consider and determine.

LAWRENCE SPEISER.

(NOTE.—This letter was written before Senate approval of S. 3340. The bill now goes to the House.)

What Rural Electrification Means to My Community

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. HARTKE. Mr. President, 19 Indiana REMC organizations and the Indiana Rural News recently sponsored an

essay contest on "What Rural Electrification Means to My Community." Twenty-eight Indiana high school juniors were selected by the 19 REMC's as winners. One of the 28 was selected by judges as the State winner. She is Johanna Wright of North Webster High School. Her sponsoring organization was the Kosciusko County REMC.

Miss Wright and the other 27 winners received an expense-paid trip to Washington as the guests of the sponsoring organizations. I had the pleasure of lunching with the group and found all of them to be outstanding young men and women.

I ask unanimous consent to have printed in the Appendix of the RECORD Miss Wright's winning essay on "What Rural Electrification Means to My Community."

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WINNING ESSAY—WHAT RURAL ELECTRIFICATION MEANS TO MY COMMUNITY

(By Johanna Wright)

To tell you what rural electrification means to my community, I must first identify it with myself and my life and that of my parents.

Years ago when I was a very small girl I used to ask my parents questions about what they did in the "olden" days. Now this, I found out, brought some laughs but it also brought denials about being that old, you see. Yet when I talked to them about our electricity and how long we have had it, and what they did before the REMCs were operating, my father said a strange thing to me. He said, "Johanna, we were living in the olden days, for farming and living in rural areas changed little until we could turn a switch and have light, waterpower, and heat."

At the dawn of this century, the farmer was earning his living in a way that had changed very little since the middle ages. The tools he used were simple and ancient and for most tasks he could use only the strength of his own body or that of mules and horses. His children studied by the dim light of the kerosene lamp, and his wife was a slave to the wood range and washboard.

Later on, the Delco plant came into being for a few farmers. Compared to how things had been before, this was a great improvement. My father said they could run a 32-volt radio on it and such things as a toaster and a washing machine. Still this was not very practical because they would have to recharge it every day and buy batteries, which were expensive.

Then finally to the farmer's aid came the REMC. Although many did not realize its importance at that time, they surely realize it now. What a difference it has made in our lives and ways of living.

As a rule, farm wives put electricity into use before their husbands did. And usually the first appliance they bought was an electric iron, which was far different from the 6-pound wedge of cast iron that had to be heated on a wood range and handled with a pot holder, that their mothers used to use. Another one also very popular was the radio.

When the cooperatives were first formed many directors wondered how the farmers were going to use all the electricity the lines were built to carry. Their wonderings were shortlived, however, after a survey disclosed the following purchases of appliances by their members: Electric irons and radios, 84.3 percent; washing machines, 63.2 percent; vacuum cleaners, 48.2 percent; and many others.

As for the schoolchildren, teachers, and principals from all over reported that pupils' grades improved remarkably after lines were energized. Also, they were cleaner as a result of running water all the time and there were fewer respiratory diseases during the winter months.

Ministers, too, were pleased at the increase in church attendance as a result of electric lights.

For years the farmer's idea of a good hired hand was a steady worker. But he had to choose carefully in order to get one that wouldn't play off on him and one that would be responsible to his job.

With the electric motor, the farmer had a steady hired hand at last, and also a versatile, hand, too. They were able to use it for pumping water and sawing wood, to elevate hay from a wagon to a hay loft, to blow ensilage into the silo, to grind and mix feed and convey it in mechanical feeders, and for many kinds of farm equipment.

Today, electricity performs more than 400 different chores in the farm home and barnyard. It has taken over much of the drudgery that used to make farmers and their wives old before their time, while at the same time aiding farmers in increasing production.

By and large, local businessmen were enthusiastic about the new co-ops, too. Main Street had felt the impact of rural electrification, and new appliance stores and equipment dealers appeared in town. The co-op's payroll made a difference to merchants, too, for the cooperative was often the biggest business in town.

Some might wonder just what a co-op is? It is a private nonprofit enterprise, locally owned and managed, and incorporated under State law. It is owned by the members it serves and each member has one vote in the affairs of the cooperative, regardless of the amount of electricity he uses.

I have explained how conditions without the REMC have been in the past and how conditions are now, with the REMC, in the present. As for the future, there will be more farm uses for electricity as well as the infinite variety of rural industries and businesses that are starting each year. Also, the summer and winter resort boom shows no signs of abating.

It is a fact that rural electric systems today are an established segment of our Nation's electric service industry. Whether they remain so depends on their ability to adapt themselves to the changing times, to establish themselves financially, and to serve their customers with a maximum of efficiency, helpfulness, and business courtesy. The attainment of these objectives should be their goal for the future.

Reassignment of Colonel Stoddard

EXTENSION OF REMARKS

OF

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. PIRNIE. Mr. Speaker, in these days of keen competition with the Communist world for military supremacy, we must not forget to offer praise to able officers of our Armed Forces who distinguish themselves in the discharge of their important duties in the defense of our country.

I am pleased to commend to the attention of this House the following resolution adopted by the chamber of commerce of Rome, N.Y., on the occasion of the reassignment of Col. Edward F. (Skip) Stoddard, commander, Griffiss Air Force Base, N.Y., after 4 years' outstanding service to the Air Force at that installation.

From my personal knowledge, I am aware of the great contribution made by Colonel Stoddard. He has been an outstanding military commander, while at the same time, promoting excellent community relations. His devotion to teamwork has done much to enable Griffiss Air Force Base to fulfill its vital missions. In leaving for his new assignment, he carries with him the sincere appreciation and good wishes of all citizens who have been privileged to observe the performance of his duties.

The resolution follows:

Whereas Col. Edward F. Stoddard, commander, Griffiss AFB, since July 1956, has been assigned to duty at Ankara, Turkey; and

Whereas the community of Rome is losing a close friend, a good neighbor, and a leading citizen in the departure of Colonel Stoddard; and

Whereas Colonel Stoddard has been a motivating force in the excellent relations existing between the Rome area and Griffiss AFB these past 4 years; and

Whereas Colonel Stoddard has served his nation in a manner reflecting great credit upon the Air Force and himself, and will take with him the affection and esteem of many friends in this community: Therefore be it

Resolved, That the directors of the Rome Chamber of Commerce, acting for the community of Rome:

1. Express to Colonel Stoddard its deep appreciation for his many contributions to the welfare of the community and its airbase.

2. With him and his family continued success and happiness in their new assignment.

3. Convey to his military superiors the conviction of the community of Rome that Col. Edward F. Stoddard is the personification of all that an Air Force officer should be—friendly, courteous, efficient, loyal, capable, dedicated and devoted—and that Rome is a better community because Colonel Stoddard helped make it so.

Unanimously adopted by the directors of the Rome Chamber of Commerce, Rome, N.Y., June 23, 1960.

Class Day Oration by Julius Byron Levine at Harvard College

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. MUSKIE. Mr. President, on June 15, 1960, Harvard University held its Class Day exercises. The Class Day oration was given by Julius Byron Levine, of Waterville, Maine. Mr. Levine was subsequently graduated from Harvard summa cum laude. In addition he was elected to Phi Beta Kappa as one of eight members of his class in his junior year. He has also been selected as a Rhodes

scholar to attend Oxford University in England next fall. His Class Day oration has been termed one of the finest presented at Harvard University. He has brought great credit, not only to himself, but to the State of Maine, and therefore, Mr. President, I ask unanimous consent to have Mr. Levine's Class Day oration printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CLASS DAY ORATION DELIVERED BY JULIUS BYRON LEVINE OF WATERVILLE, MAINE, MEMBER OF THE GRADUATING CLASS AT HARVARD COLLEGE, ON JUNE 15, 1960

Mr. First Marshal, ladies and gentlemen, when Emerson Hall here in Harvard Yard was dedicated in 1906, it became the first building in America to be devoted to philosophy. Quite naturally, the Harvard philosophers offered an eager hand in drawing its plans. William James, in a letter to President Eliot, proposed that a motto be inscribed over the doorway, and he suggested that it be the Hellenic proposition, "Man Is the Measure of All Things." When Emerson Hall was dedicated, and its motto, unveiled, William James was surprised to see that President Eliot had chosen for its motto the query of the psalmist, "What is man, that Thou art mindful of him?"

Professor James and President Eliot were profound men who intended the motto inscribed on Emerson Hall to provide us a sound maxim by which to conduct our lives. If men about to be graduated from college have ever needed sound maxims, we need them now; for in our scientific world, and presumably still more in the more scientific world of the not distant future bad men can do more evil, and good men, more good, than had seemed possible to our ancestors even in their wildest dreams. Our need for sound maxims requires that we answer the riddle that James and Eliot have placed before us: can we at once so conduct our lives that "Man is the measure of all things" and that we act in the spirit of "What is man, that Thou art mindful of him?"

There is ample room, I think, in our multifaceted lives for the full play of both maxims. On the one hand, in our private and inward lives, it behooves us to act in the spirit of "What is man, that Thou are mindful of him?" For example, when in our democratic society opportunities for bearing political and social responsibilities present themselves to us, we should be unmindful of selfish jealousy of our privacy, our efforts, our time, and our money. And in the inwardness of our private thoughts, we should be unmnidful of subjectivity; we should commit ourselves instead to objectivity; we should never allow our thoughts on issues and values to slip into ad hominem channels; nor should we let our measure of truth and good become others' conceptions of them; in a word, let us not cringe before an idealogical tyranny of the majority, but let us make the demands of conscience and reason the measure of all our convictions.

On the other hand, in our public and outward lives, in our decisions and actions that directly affect others, it behooves us to treat man as the measure of all things. As Kant put it, to perpetuate and deepen the "dignity of man as a rational creature * * *," we should "so act as to treat humanity * * * in every case as an end withal, never as a means only." This is to say that the political and social actions which spring from our inward thoughts should be motivated hominis gratia, for the sake of man, for man "as an end withal * * *," for man as the measure of all things. This is to say to this generation of graduating students, as Emerson said it to his, "I think I see place and duties for a nobleman in every society; but it is not to drink wine and ride in a fine coach, but to guide life by the remembrance of the humble old friend. * * *" This is to say also that as we graduates enter our scientific world, we need not fear the possibilities for natural and human engineering that advances in our knowledge of nature and man engender, provided that we are ever mindful of man "as an end withal * * *," as the measure of all things; if this is the case, we may rejoice instead of shuddering at the prospect of almost limitless power, almost limitless food, clothing, and housing, of humans circling the moon, manning space platforms, and, yes, being taught by Professor Skinner's machines. Finally, to say that man is the measure of all things is to say that in the world of affairs, which many of us will soon enter, we should not, in order to swell our profits, acquiesce in dishonesty in television quiz programs or give the Federal Trade Commission reason to report that advertising abuses are at an all-time high; for when we thus treat humanity as "a means only" and not "as an end withal," as when we shirk our political and social responsibilities lest our earnings decline, we bring upon ourselves Oliver Goldsmith's admonition, "Ill fares the land, to hastening ills a prey, where wealth accumulates, and men decay."

Lest we decay, let us at once heed Professor James' and President Eliot's chosen maxims; let us try to conduct our overlapping private and public, inward and outward, lives so that the maxims, "Man is the measure of all things," and "What is man, that thou art mindful of him?" are at one. To this end, let us join Socrates in prayer: "Beloved Pan, and all ye other gods who haunt this place, give me beauty in the inward soul; and may the outward and inward man be at one."

Veterans of World War I of the United States of America, Inc.: Its Legislative Goal and Progress

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. WAMPLER. Mr. Speaker, on July 15 and 16, 1960, it will be my extreme pleasure to attend the annual convention of the officers and membership of the Veterans of World War I of the United States of America, Inc., Department of Indiana, where I will be honored to participate as a principal speaker before this exceptionally praiseworthy organization, an organization dedicated to the welfare of the Nation's veterans of the First World War.

At that time it is my full intention to convey to the Department of Indiana membership of the Veterans of World War I of the United States of America, the legislative progress made thus far with regard to the major legislative goal of the organization, namely: proposals which would provide World War I Veterans with what I consider to be a very justifiable monthly pension of $100.

I shall also endeavor to predict, within the framework of reasonably anticipated legislative procedures, prospects for final enactment of the legislation.

As I stated on January 19, 1960, the date of the introduction of my bill in the U.S. House of Representatives, H.R. 9746, I am sharply aware of the glorious deeds and humbly grateful for the heroic sacrifices of our World War I Veterans, to whom all America points with reverence and pride.

My measure, H.R. 9746, provides for the payment of pensions of $100 per month to each veteran of World War I who served for 90 days or more, or who was discharged or released from service for a service-connected disability, or who served for a period of 90 consecutive days or more and that service ended during World War I.

My bill calls for $100 monthly pension payments without regard to the veteran's annual income, whether derived from social security or railroad retirement benefits, or other annuities or pensions.

I have introduced this legislation realizing fully that in order to maintain individual social and economic status and dignity, this Nation's World War I veteran warriors must have, and, indeed, richly deserve and merit supplemental monthly funds.

When it became apparent that my bill, and similar measures, would receive scant, if any, congressional attention during the 2d session of the 86th Congress, a parliamentary procedure, known as a discharge petition, was initiated in the U.S. House of Representatives. Ultimately, this parliamentary procedure would discharge the House Committee on Veterans Affairs from the further consideration of the legislation, after a majority of 219 Members of the House of Representatives have affixed their names to the petition.

On the very day, June 2, 1960, that the discharge petition—No. 7—was filed in the House, it was my privilege to be one of the very first to sign. Since that time, because of my publicly stated and well-known keen interest in the welfare of our country's World War I veterans, I have worked diligently to generate among other Members of Congress an interest sufficient to activate their support for the $100 per month pension legislation to the extent that they, also, would find it justifiable and reasonable to add their names to the discharge petition.

I most assuredly shall continue to strive in the U.S. Congress to promote the economic and social betterment of the veterans of World War I of the United States of America, a cause which I consider to be fully just and meritorious.

A Circle Trip Around Africa

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. MUSKIE. Mr. President, on April 2 and 3, Mrs. May Craig published two columns which were printed in our Maine newspapers.

In the first, she describes the Algerian crisis.

In the second, her summation for the future upon her return to Washington from her extended tour of Africa.

Mr. President, I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AFRICA ON THE MOVE—ROADSIDE MACHINEGUNS BRING DEATH IN THE AFTERNOON

(By May Craig)

ALGIERS.—There is no prospect of peace in this war-torn country where terrorists, Algerian rebels, fighting to be wholly free of France, assassinate not only French, but Moslems who want to stay in association with France. There are bombings, murder of French and pro-French Arabs in outlying sections of the cities; on the highways motorists are ambushed indiscriminately, usually killed in late afternoon by roadside machineguns. Highway travel is banned after dark around cities; there is curfew in Algiers, this handsome, poor-and-rich ancient city on whose coast the pirates got rich in the early days of the United States. In movies and theaters, nobody can leave during a presentation lest one leave a bomb behind him. Fifty percent of the Moslems are under 20 years old; 35 percent non-Moslems.

We did not see the Algerian rebel government-in-exile in Tunis where they have refuge. We thought we would, but no engagement could seem to be set. We were to see some of them, somewhere, at 6; then at 11:30 at night; then at 1 a.m. I gave up when the 11:30 failed. Whether the Tunis Government interfered, or the rebels were afraid, I don't know. Here we saw only French Government officials and our own American officials and they spoke off the record. Vice consul and economic officer at our consulate is Lewis P. Pickett, Jr. of Portland, who filled me in off the record, and completed—with me asking him about Algeria and him asking me about Maine politics. Perdita Champey (nee Huston) of Portland is English secretary to the Tunisian Government for information—she married a French doctor who has been drafted by France for 2½ years in the Army at $9 a month and she has to earn a living, does not know where he will be sent except that she cannot go with him—she will try to get back to France.

This is polyglot place too; first inhabitants were Berbers, of whom many are still here, and at odds with the Arabs who came with Islam in the 7th century. The Phoenicians were the first known invaders, in 1200 B.C.; after the Romans destroyed Carthage and held most of north Africa, they moved in on Algeria, inter-married with the Berbers; St. Augustine had Berber blood in him. After the Romans came the Vandals and the Byzantines. Coming to these ancient countries, with their history of successive conquests and occupations, it seems naive for us to talk about self-determination except in terms of present rebels and occupants. The Turks held Algeria for 300 years before the French drove them out in 1830. In this Hotel St. George, on room 18 door, is a brass plaque I went to see. It says that Gen. Dwight D. Eisenhower had his office there during the north African campaign in World War II before he went to England to prepare for the invasion of German-occupied France across the bloody channel. Sic transit.

The French are now saying they will stay here with pacification by military action. There are 2 million French settlers here who are determined to stay with Algeria a part of metropolitan France. General de Gaulle, having offered Algeria self-determination in free elections, has now said that free elections cannot be held under terrorist conditions, that the rebels have refused his offers, and that Algeria must be pacified before there can be elections. The French Government officials, and our own, say there are many Arabs here who want to stay with France in some role—either in the French community, but independent, or in association with France, somewhat like Puerto Rico with United States. Whether France, fighting uselessly for 5 years, can stand the drain of an indefinite pacification, with bloodshed on both sides, remains to be seen. It is a dilemma for the United States. Worse, all the Arab nations and the Moslem nations want Algeria to have independence rights now.

Morocco, Tunisia, Libya, Algeria, do not want to join Egyptian Nasser's United Arab Republic, which they regard as a Middle East Egyptian attempt at domination. These countries may federate themselves. The blacks in Africa will not accept any kind of Arab domination. We were told: "Egypt is Egyptian first, then Arab and then Moslem." Other nations know this.

INSIDE IN WASHINGTON—A LONG LOOK TO THE FUTURE

(By May Craig)

WASHINGTON.—The heart turns homeward from the foreign land before the body leaves it for the beloved homeland. So it was with me in Algeria, the last stop at the end of the circle trip around Africa, which began with Morocco, next neighbor to Algeria on the west.

There is a gladness that is almost keen as anguish, when one glimpses the homeland. Patriotism is not bad, one might remember in the fashionable internationalism of today. The modern promotion of internationalism at the expense of family and own land may not be in the best interest of individual liberty and development. The Red Chinese are trying to destroy family and religion in working their will to subordinate everything to the state control, even the age-old devotion of ownership of a piece of land. The farmer, owning his own land, has always been a foundation stone of the United States and the development of the corporation instead of small business, the factory farm instead of the individual farm, the centralization of power in the Federal Government at the expense of States and communities and private enterprise may be the end of individual choices and development. The end is in a conformity that does not foster free thought, free religion, and free education. The individual is not free to think, to choose his government, his education, his God, to follow his individual conscience.

Internationalism would further this dilution of individual development nationally. Africa, determined to get freedom from outside colonialism, talks of Pan-Africanism, of federating the whole continent. No whole continent has ever been federated. Even in North America there are three countries, Canada, United States, Mexico, all individual, all independent, all friendly, with not even a border fort. This is a pattern that might well be followed by all homogeneous groups of people, countries, if they choose freely and carefully.

All over Africa I found different political and social and religious setups. South Africa is determined to live alone; the middle and western groupings who do not want to join the blacks or the Middle East-Egyptian Arabs-Moslems. The blacks are determined not to be dominated by north African Arabs. Yet the newly free, or almost free colonial blacks talked of pan-Africanism—though most will privately admit, and some publicly (as Ethiopia) that they want to be independent of all, but friendly to all.

There is danger of replacing the European colonialism by black colonialism, Red Chinese colonialism, Communist imperialism from Russia. There is already civil and tribal war in the free or nearly free black countries. Most of them are unprepared for freedom and would do well in their new freedoms to keep their former white masters on as hired help to show them how to run their countries. Tripoli did that; Burma did not and now regrets it. Those who do not step carefully may fall into chaos and find themselves under dictatorship, red or black.

One thing is for sure. The whites are doomed as such all over the world. Not today or tomorrow, but eventually. We are the minority. The rising tide of color—yellow, brown, black—will submerge us, dilute the whiteness. In the United States, the blacks will be swallowed up in the whites, in thin dilution, their African personality will be lost. When the founders of this Republic said all men are born equal, and the Supreme Court of the United States said that racial segregation is inherently unconstitutional, they doomed the African Americans to be absorbed into the white population.

Segregation in the South is doomed. But the white race everywhere will be absorbed into the colored. There will be a battle between the yellows and blacks and they and the browns will all become browns with perhaps slant eyes and less curly hair than present blacks. The present browns are too lazy or too diluted to win in this battle. Nobody knows the fate of reliigons as we know them now. The Union of South Africa, fighting for pure white is doomed, their apatheid cannot win; despite the killing.

In the far north there are a few Eskimos left, they are dying a natural death, unable to adjust to civilization. There are cases of pure whites in Scandinavia, where blacks cannot live because they need more sun. The browns who may be the ultimate unified color can live there with modern discoveries of artificial sunlight, vitamins, air conditioning. The Russians, afraid of the Red Chinese, may, in the not-too-distant future, join the West in the battle against the yellows, though themselves diluted already by the Mongol and Manchurian. It is useless, though it may delay the day of complete amalgamation of all races into one in conformity.

One day, creatures from other worlds may come here and stand on the ruins of Carthage as I did. They may look upon the desolate remains of an earth whose people ate of the tree of knowledge, who knew good and evil, who split the atom but were not worthy to know the secrets of nature. There is no asusurance that a unified race will be any better than a mixture of races. The unified race could destroy itself in the fury and fire of nuclear fusion. Perhaps beings from other planets will be better than we; perhaps not. The universe is dotted with dead planets and suns and stars and moons and the dust of what once was. This may be earth's destiny.

Keep the Bookmobiles Rolling

EXTENSION OF REMARKS

OF

HON. THOMAS G. MORRIS

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. MORRIS of New Mexico. Mr. Speaker, the Committee on Education and Labor has considered and favorably reported H.R. 12125 to amend the Library Services Act in order to extend for 5 years the authorization for appropriations under the act. The bill was reported unanimously by the committee without amendment.

There are but a few remaining days for this 86th Congress, yet the question of the extension of the Library Services Act has not been resolved by this body. In view of the time in which we must act, and the very positive need for the enactment of H.R. 12125, I believe that this bill should be considered under suspension of the rules.

As I have said, H.R. 12125 would extend for 5 additional years the provisions of Public Law 597, the Library Services Act, passed in 1956. The primary purpose of the Library Services Act, you will recall, was to stimulate the States in providing better public library services for rural areas. The act was designed to assist in eliminating a serious deficiency in the educational program of the Nation, the lack of adequate public library services in towns, villages, farming communities, and other nonurban areas. Federal funds under the act could be used for books, library materials and equipment, salaries and other operating expenses, but not for construction.

This program of Federal assistance proved to be just the spark needed to stimulate State efforts, and there is today an abundance of evidence supporting its success. We know, for example, that the Subcommittee on Special Education held extensive hearings on more than 50 bills which provide for the extension of the Rural Library Services Act. According to a report submitted by the Committee on Education and Labor, testimony from persons representing every section of the country, was, without exception, in favor of the expansion of the Library Services Act. Favorable testimony indicating progress under the library services program was presented by the U.S. Commissioner of Education. Moreover, the U.S. Office of Education presented clear evidence of the value of continuing the program The Office of Education summed up this need for extension of the act in its report which stated in part:

We recommend that the act be extended for an additional 5 years, to June 30, 1966. An excellent investment has been made in building State programs for rural public library development to maximum effectiveness. An extension of the act will enable many more rural areas still without library service or with inadequate services to experience new or improved service and to benefit directly by a cooperative State-local-Federal library development project.

We can hardly read the pages of the high-caliber newspapers of this country; or pick up one of our well-known, widely circulated magazines; or listen to an address by learned authorities in the field of education; or listen to the statements of our colleagues in this Chamber, without hearing again and again—a plea on behalf of intellectual pursuits and the development of a more highly informed and more learned society. Moreover, we know that through books freemen may expose their minds to the progress of the past, to the teachings of great men, to the prophecy of modern philosophers, and to pertinent explanations of the phenomenal technology of this fascinating and complex era. To insure that all citizens enjoy the same opportunity for the intellectual challenge of good books, we must continue to assist those rural areas in need of assistance in the expansion of their library programs.

Mrs. F. L. Bull, legislative chairman, the National Congress of Parents and Teachers spoke to this general point when she testified before the House Education and Labor Committee in support of an extension of the Library Services Act. Mrs. Bull said, in part:

At the end of each school year we receive reports from all the 52 State congresses. The most recent of these indicates, almost without exception, that the Federal aid received from the Library Services Act has been a tremendous stimulant and incentive for expanding and improving good library service in rural areas. The reports indicate the changing attitude of the general public toward library development is most encouraging and wholesome, as they have learned what good library service is and what it means to the economic as well as the cultural welfare of the community.

Studies of the effect of the Library Services Act upon children are emphasizing what book-loving parents have always urged—that the surest way, the most effective way, to build up in children the sound values which are a defense against trash and obscenity is to steep the children in good reading.

Our PTA's recognize libraries of an essential factor in education. We no longer think of education and learning in terms of years in school, but as something that continues and must be made available to everyone, and particularly to those in the more remote areas.

Under the Library Services Act more than 5 million books have been purchased; large-scale buying and cataloging systems have been made possible which have cut costs of operation and opened new plans for operations; and the movement toward larger administrative units for efficiency and economy of State library operation has been greatly stimulated.

Of particular significance to me, is the fact that 200 new bookmobiles have been added to those already serving people. These bookmobiles are in actuality—taking the written word to the people—a task of importance in library service to rural communities where families are sparsely settled.

There are almost 25 million people in the United States without access to local public libraries. More than 250 counties do not have a single public library. In 1961, it is estimated that there will be 22 million rural Americans without access to public library services, 18 million more with inadequate service, and 150 counties without any service. Moreover, the costs of books, periodicals and bookmobiles have increased significantly. For example, one study reports:

That from 1947 to 1958 the price increase [of books in 13 different subject fields] ranged from 47 to 58 percent.

In the area of U.S. periodical prices, the average cost of periodicals in the field of agriculture in 1947–49 was $1.77, and in 1958 the average cost was $2.48.

Before 1946 few bookmobiles were being manufactured. Converted buses and trailers were in use in some areas. In 1947 a bookmobile carrying 1,000 to 1,400 books costs about $2,900. In 1959 a bookmobile carrying 1,600 books cost about $7,500 [and this is for the smallest standard model available today]. Other models and sizes show ever greater increases in costs.

According to information obtained from a leading library supply house, there has been a 38-percent overall increase in all items since 1950.

Unquestionably, States have a continuing need for the assistance which an extension of the Library Services Act will afford. And this need is not because State efforts in this area are lacking. On the contrary, such efforts have been commendable. Again turning to the House report, we learn that "* * * over the 4-year period the act has been in operation less than two-thirds of the amount authorized by the act has been appropriated. Over the same 4-year period State and local matching funds have increased over 300 percent—from $4,373,826 in 1957 to $13,176,916 in 1960. State appropriations for rural library service have increased 54 percent between fiscal 1956 and fiscal 1960 and local library funds have increased 45 percent during this time." I agree with the committee that this is an outstanding example of the response of State and local efforts to the stimulation of Federal aid.

It was further pointed out that—

Although State and local support has increased remarkably since the beginning of the act, the financial assistance they are able to provide is still inadequate.

I share the belief that since State and local communities have seen what adequate library service means to their cultural and informational life, they will provide even more support. We must not let these people down at this time when such encouraging efforts are everywhere evident.

In conclusion, we might well take our guide to favorable action on the bill to extend the Rural Library Services Act from these famous words by Milton—

A good book is the precious lifeblood of a master spirit, imbalmed and treasured up on purpose to life beyond life.

Processing Perks Up Idaho Potatoes

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. CHURCH. Mr. President, the current issue of Business Week magazine contains a fine article on Idaho potatoes, with special emphasis on significant new developments in the field of potato processing, which will be of interest to many Members of the Senate. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROCESSING PERKS UP IDAHO POTATO

Only 5 years ago, Idaho's potato growers were worried about surpluses when they produced a 30 million hundredweight crop. Last year, they raised 40 million hundredweight and did not worry a bit; instead, they looked for more acres to plant and for means to boost per-acre yields. What made the

difference was a sudden, massive rush by the Nation's consumers for dehydrated and frozen potatoes—and Idaho's early-bird leap into processing.

Until the processed product sprang into popularity, per capita consumption of potatoes had been shrinking for decades, under pressure of changed eating habits—the switch from starches to proteins as incomes rose.

In 1910, the average American stowed away 200 pounds of potatoes a year. By the mid-1950's, he was down to 100 pounds. The only thing that saved potato demand from being halved was the growth of population.

Tide turns: Then came the turn to dehydrated and frozen potatoes. The shrinkage in per capita consumption halted; indeed, the National Potato Council figures it is turning up a bit this year.

The turn came suddenly and rather unexpectedly. During World War II, the processed potato had acquired a bad name as many an Army cook ignored the instructions and miscooked it into a soggy, starchy mess. As years passed, the bad name lost its sting, processed potatoes became tastier and came in more varied forms. Apparently the variety and convenience made people defy economics, since processed potatoes contain as much starch as natural tubers.

The biggest charm of all was the no-paring ease with which the processed potato could be cooked. Housewives and restaurants clamored for them in chorus. Today, supermarket shelves are laden with instant mashed potatoes, frozen food cabinets are crammed with an ever-widening variety of French fries, hash browns, patties, and even "golden potatoes" wrapped in gold foil to simulate baked-in-the-skin.

Swift start: Of all the potato growing States, Idaho moved fastest into processing. In the packing season just ended, the State had 11 packing plants in operation; several more will be ready for the fall season. For the last season, Idaho processed 13.2-million hundred weight, 6 times as much as Maine, its arch rival as a potato grower. And in growing more potatoes to supply its plants, Idaho finally in 1958 passed Maine as the No. 1 producer in the Nation. Last year, it clung to the lead.

Both the bigger crop and the new processing industry brought a nice factor of stability into Idaho's economy. Actually, cattle and wheat are the State's most valuable agricultural items, but potatoes are a strong third. Farmers figure now that the demand from the processors assures them a steady, even a growing market in what had been a feast-and-famine cycle. Most of them produce on contract for the packers. That means they aren't subject to the vagaries of the market; and it assures them of cash in hand, which in turn makes the merchants happy.

More jobs: As for the processing plants themselves, they have added substantially to the State's rather skimpy job openings. Last year, total manufacturing jobs in the State rose by 1,500; the Employment Security Agency says most of the increase was in potato processing.

On top of that, the packing plants run almost all year round, and so provide a cushion for the State in winter when men are laid off in lumber and logging. Idaho's biggest nonagricultural industry. The only time the potato packing plants are idle is for a few weeks in summer, when other industries are at or close to their peaks.

A single valley: Idaho's potato industry, and its boom, lie in a rather small part of that wild and far-spreading State. The part is the upper Snake River Valley, where 80 percent of the State's 660,000 people live. Potato growing started back at the beginning of this century, when the Snake's waters were first tamed for irrigation of the plain along side the river that lies within sight of the Sawtooth Mountains to the north and the Tetons to the east.

Once the irrigation ditches were filled, the area was perfect for potato growing. The soil was light, well aerated, and enriched by ancient volcanic deposits. The growing season was long, the sunshine ample. It didn't take long for the Idaho potato to become a household word. Growing it became a lively business, if a risky up-and-down one. Finally, came processing and the relative stability it brought with it.

Wartime start: Processing, both in techniques and plants, evolved from war-time activities. Indeed, the two biggest companies now in the field—J. R. Simplot Co. and Ore-Ida Potato Products—both had wartime roots. Between them, they now turn out more than half of the Nation's frozen potatoes. Simplot alone produces one-third.

Simplot, whose headquarters is at Caldwell, just west of Boise, was the biggest shipper of fresh Idaho potatoes and onions in the 1930s. During the war, Simplot turned to dehydrating potatoes (BW–Jan. 22, 1955, p. 146). When peace came, the company figured the Army had killed any consumer market for them, so it decided to experiment with frozen French fries.

"We learned a lot about the internal chemistry of the potato," says Leon C. Jones, vice president of Simplot. "We knew we could offer restaurants vastly improved quality over what they were able to prepare themselves from raw potatoes or from precut strips. We knew, too, that our product could save much time in the fryers, which are kitchen bottlenecks at mealtime." Today, Simplot is largely in the business of supplying restaurants and institutions.

Retailers: Ore-Ida, on the other hand, concentrates on supplying retail stores. It got its start in frozen potatoes after President F. Nephi Grigg took over a bankrupt wartime frozen food plant in 1946 at Ontario, Oreg., just across the Idaho line.

Simplot and Ore-Ida support their huge volume with a high degree of integration. Both sell, as well as buy, seed and potatoes. Simplot has a commercial fertilizer division. Ore-Ida keeps 16 trucks on the road to carry less than carload lots to its retail-store customers from Chicago to Los Angeles. It also keeps stocks in 180 warehouses, to provide a faster service for an added fee.

As other processors moved into the business, they started plants in the upper valley—in the heart of the potato-growing area—and Simplot and Ore-Ida have begun to set up their new plants in the same belt, away from their starting bases down the Snake. The new wave of expansion centers particularly around Burley, where both Simplot and Ore-Ida are building new production lines and where one of Grigg's other companies is erecting a plant for lease to the Gerat Atlantic & Pacific Tea Co.

Newcomers: Other companies adding to their facilities are Idaho Potato Processors, Idaho Potato Growers, Inc., and Rogers Bros. Seed Co. Still others are already talking of moving in, some have even bought land. Notable among these is Lamb-Weston, Inc., the Northwest's largest independent packer of frozen peas.

Lamb-Weston has put off announcing the start of building work—and this may have a special meaning. The trade suspects it may be deterred by a growing suspicion that the plants now being built will mean excess capacity, at least for a while. One large packer already expects to operate at less than capacity next year; in 1959, he was pressed to meet demand.

For the long term, no one is seriously worried. Says Ore-Ida's Grigg: "If we continue in this type of economy, there is no reason why the housewife would know what the raw product looks like any more than she knows what a cow looks like—she buys cream and butter and milk," Simplot's Jones adds: "We will see the day when 80 to 90 percent of all potatoes marketed through commercial channels will be processed."

At Simplot's Caldwell plant, there's a "Restricted area, no visitors" sign on the room where the research staff is cooking up new techniques to improve old products or handle new ones. It's symptomatic of the Idaho industry's knack of looking ahead. One example of a new product: the crinkle-cut French fries that in a short time have matched the volume of the original French fries—and without cutting into sales of the older type.

Dehydration: The dehydrated potatoes, which suffered most from wartime unpopularity, have gotten a leg up from new processes. The Agriculture Department collaborated with the industry to make possible potato flakes as well as the granules that are simply potatoes cooked and reduced to powder.

In the new flake process, cooked mashed potaoes are rolled on a huge stainless steel drum and then peeled off in thin sheets that break up into flakes. Both granules and flakes can be dropped directly into boiling water. That's where Army cooks went wrong: They worked with dried potatoes, but often ignored the instruction to put them in lukewarm water first and then bring them to a boil. This broke up potato cells which the new processes preserved.

Improved product isn't the industry only gambit. It is also counting on more professional selling, as such experienced giants as Pillsbury, General Mills, General Foods, Kraft, and A. & P. help do the peddling.

Soviet Spy Figure Set for Cuban Envoy Post

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. FLOOD. Mr. Speaker, the Washington Post of Wednesday, June 29, 1960, carried a news story of great significance. In viewing this appointment, it must be recognized that the Communist conspiracy plans its moves and trains its personnel as much as 20 years in advance. The rapidly unfolding events in the Caribbean and the appointment of the well-trained Sergei M. Kudryavtsev as Ambassador to Cuba conforms to this pattern and bodes ill for the future of the lands bordering on that great body of water, now rapidly becoming the "Soviet Sea" of the Americas. The indicated news story follows:

SOVIET SPY FIGURE SET FOR CUBAN ENVOY POST

Russia has selected Sergei M. Kudryavtsev, who headed a Soviet espionage ring in Canada in the early 1940's, to be its Ambassador to Cuba, informed sources said last night.

Kudryavtsev is now Minister Counsellor of the Soviet Embassy in Paris.

He was first secretary of the Soviet Legation (later Embassy) in Canada in 1942–45 and reputedly one of the early bosses of the espionage ring in Canada. The operation was exposed when Igor Gouzenko, a Soviet code clerk in Ottawa, defected to the West on September 5, 1945.

In 1947, Kudryavtsev came to the United States as an adviser to the Soviet delegation to the United Nations. But his presence in this country in the wake of the disclosures by Gouzenko caused such an adverse reaction that he was recalled 4 months later.

Independence of the Belgian Congo

EXTENSION OF REMARKS
OF
HON. WILLIAM T. MURPHY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. MURPHY. Mr. Speaker, today, June 30, the Congo gains its independence from Belgium. This is an event of enormous importance in the lightning changes which are sweeping across the face of Africa.

But a short 15 years ago—at the end of the Second World War—only four nations, Liberia, Egypt, Eethiopia, and the Union of South Africa, on the entire continent of Africa were independent. Independence for other countries of Africa was considered a problem for the far, far distant future. But 3 years ago the first of the sub-Sahara countries, Ghana, gained its independence from Great Britain. In the last 3 years Africa has been literally transformed until today it is the remaining dependent countries which are in the minority, with independent or near-independent nations dominant on the continent.

This emergence of an independent Africa will be a factor of ever-increasing importance in our foreign relations. We have felt but the first tremors of the new eruptions in Africa. For long our friendly relations with the "mother" countries in Europe have largely sufficed for the conduct of our relations with Africa, but they will not suffice for long in the future. We are going to feel a pressing need to build a new structure of friendly relations with the new nations of Africa, whose interests and inclinations in some degree and part are quite different from those of the European "mother" countries. Not the least important, the membership of the United Nations will be transformed as numbers of independent African nations join together with us in that organization.

The future for independent Africa holds both exceptional promise and exceptionally difficult problems. Hardly anywhere in Africa is this combination of promise and problem so sharply present as in the Congo.

The Congo is blessed with both the resources and the beginnings of industry. Its economic future is bright and it should not be plagued by the continuing and almost insoluble economic difficulties which beset many a Nation emerging to independence under less favorable conditions. The Congo will need new capital and new skills from the world but it needs these to fully develop and use its potentialities, not in desperation to meet acute economic problems. It now provides an attractive setting for private investment and there is no reason why this will not become even more attractive in the future.

One of the Congo's most serious problems is its acute shortage of skills and exeperience. Few Congolese are ready to take over the business of running an independent economy. And even fewer Congolese have any experience in the highly complicated affair of running a government. The Congo has not had the benefit of a long period of transition during which rule was gradually shifted from the representatives of the "mother" country to those who will soon govern the new nation. Instead, in the Congo, independence has burst suddenly upon the scene.

The Belgians, in my mind, are to be congratulated upon moving rapidly to Congo independence once the signs became clear. But for the independent Congo, finding both skilled men to do the day-to-day work of government and the exceptionally wise and experienced leadership which transforms a multitude of tribes into a great nation will remain among the foremost concerns.

In differing degree, these promises and problems confront the whole continent of Africa. There are many bright spots for the future of the economies of these nations. Brightest of all is the future when Africans will be the masters of their own destinies, able to stand in complete equality and dignity among the peoples of the world. At the same time Africans must find solutions to some exceptionally difficult problems, which range from building true nations out of disparate elements tied together only by the common experience of a colonial past, to selecting a course for their nation's role in the wider world, ever more complex and beset by pressing problems. These are African problems and promises. The United States can do little to solve them. But it can help Africans in their solutions by extending wise and sympathetic understanding.

Sparks, Nev., Girl Winner of My True Security Essay Contest

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, in the RECORD, it is a privilege for me to introduce an essay written by a young Sparks, Nev., high school student, Miss Muriel Ann Ellis, winner of the My True Security contest sponsored by the national U.S. Junior Chamber of Commerce. The essay follows:

INITIATIVE AND SELF-RELIANCE: FOUNDATIONS FOR MY TRUE SECURITY, THE AMERICAN WAY

(By Muriel Ellis)

I am an American, my whole being thrives upon the freedom of choosing my own course in life which is allowed by our democratic government. This freedom which is enjoyed by all Americans, but not always employed to its fullest extent, is necessary if a person is ever to realize and test his own potentialities.

We have each been endowed with certain abilities and only the individual can determine to what degree these abilities will develop. Our parents, teachers, and friends all influence our growth, but when once embarked upon the voyage of life, the success or failure of that voyage depends entirely upon the individual.

We are all seeking security in one form or another and all looking for it in different directions. We all want this certain something that enables us to feel reasonably free from the danger of uncertainty. Though we try to attain security through such means as a good job, money in the bank, or other equally materialistic things, the foundation for true security lies within oneself in the resources of initiative and self-reliance.

True security is not simply a bulwark of material goods built up to keep the threat of poverty away. It is more than that. Security is the belief in your own personal worth which is born of confidence. Security is the feeling of surety that enables a person to feel he can surmount or at least overcome the difficulties that will appear on the horizon to mar his course of life.

Two of the foundations for this sought-after security are initiative and self-reliance. We must first discover ourself, decipher what we want from life and then have enough initiative to work steadily toward these goals. No one can help us discover ourself or furnish us with initiative. We must do these things on our own. We must learn to make decisions for ourself and if we feel we are right we should remain steadfast to that decision and pay no attention to what others think. Then if the decision proves to be either right or wrong we must be able to take the consequences.

Self-reliance is the quality which enables us to overcome failure and have enough confidence to continue reaching for new things. It is the realization that success is within our reach and if we have tried our best and not succeeded the effort we have put forth is still enough to envelope us in the feeling of security, for we will know that the best that we could do or attain has been accomplished.

Although initiative and self-reliance are foundations for security, security itself can become a trap which will eventually destroy these two qualities. We must be careful that in our quest for security we do not entrench ourself so deeply as to take the excitement and chance out of new adventures. We must not depend too heavily upon other people for our security, but enjoy the special satisfaction of achieving by oneself.

We should strive to attain a balance between the security we all seek and the uncertainty needed to make our life interesting.

Yes, my true security is based upon the foundations of initiative and self-reliance for my life will be what I make it and the way of life providing an opportunity for this true security is—the American way.

Senior Citizens of Connecticut Favor Medical Care Plan Under Social Security

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. KOWALSKI. In Connecticut many private citizens are working indefatigably for legislation to establish a Federal program of hospital and surgical care for our older citizens under the social security system.

Of these, one of the hardest workers is Mrs. Evelyn Gregan, of Manchester, Conn. Under unanimous consent, I bring to the attention of my colleagues a letter written by Mrs. Gregan to the editor of the Hartford Courant, and published in the Courant on Tuesday, June 28.

In her letter Mrs. Gregan cites some telling reasons why older folks in my home State favor the Forand-type approach to the problems of health care for the elderly.

Following is the text of Mrs. Gregan's letter:

THE FORAND BILL

To the EDITOR OF THE COURANT:

It was my privilege and pleasure to attend the rally for the Forand bill sponsored for the senior citizens of Connecticut by the AFL–CIO at the Bushnell Memorial in Hartford recently.

For more than an hour I stood on the steps of the Bushnell Memorial and watched bus loads of men and women, most of them well past 60, arriving, some on crutches, some on canes, some being guided along but each with a big smile on his face.

As I looked over this tremendous group of people, I remembered what it was like previous to the social security program when there was a poorfarm in every town and everyone had a fear that some day he might be forced to go there.

Statisticians say that the longevity of our citizens is due to the discovery of wonder drugs but as I looked at the eager faces of these people, I wondered: here were some 5,000 people between 60 and 90 gathered together in good, holiday spirit, all members of some club where they go each week to meet and talk with people like themselves, having the same problems, giving them something to live for. Gone is the fear of the poorhouse, each knowing that every month his check is coming, come hell or high water. This, I believe, is responsible for longevity. Keep a person happy and he will live longer.

These are the people that we shall be some day and it is for this reason that we must get behind some guaranteed insurance plan. As Congresman KOWALSKI said at the Bushnell, the Forand bill is not the absolute answer to the problem but it certainly is a big step in the right direction. Handled under social security, the burden would be little for each person whereas if it is handled under the private insurance or Government-State plan, the tax rate is bound to go up to finance it.

Whether you are 20 or 70 it is food for thought. Think what it would mean if you or a dear one should have to be hospitalized for 2 months, plus 2 months of nursing home care, plus surgical expense against the amount of one-quarter of a percent of our social security payments.

If you do not already have a copy of the Forand bill send to your Congressman for one.

EVELYN W. GREGAN.

MANCHESTER.

Roosevelt to Eisenhower; a Period of Rapid Change

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. IKARD. Mr. Speaker, as a majority of the Texas delegation already know, chief of the Dallas Morning News Washington Bureau, Walter C. Hornaday, is retiring from his post here after 15 years of service. During the time I have served here in the House I have known Walter both in his official capacity as a representative of his paper and socially. By far, the large percentage of the Fourth Estate are men of honesty and integrity and do a fine job of reporting the news. No one who has ever given Walter Hornaday a news story has doubted that it would be reported verbatim, without slant or bias. He is one of the finest political writers that I have known on the Washington scene and I know his many friends here will miss him greatly. No one will question the fact that he has earned his retirement and I know his many friends here join me in wishing him and his wife, Ann, all of the enjoyment and happiness they so richly deserve. I am including in my remarks an article written by Walter that appeared in the Dallas Morning News, Sunday, June 26, 1960, that contains some of the highlights of his career here in Washington:

A TEXAN IN WASHINGTON—ROOSEVELT TO EISENHOWER: A PERIOD OF RAPID CHANGE

(Walter C. Hornaday, a member of the News' organization since 1917, will retire July 1. He was chief political writer before moving to Washington in 1945 as head of the Washington Bureau. Here he reminisces on his years in the Capital.)

(By Walter C. Hornaday)

WASHINGTON.—My more than 15 years in Washington cover a brief span in history, but many momentous events have occurred during that period.

Nuclear weapons have been developed so fearful that they may have ended future wars. Russia, an ally in World War II, has become a powerful enemy, while Japan and West Germany are now on our side.

Outer space is being probed with hopes its mysteries may some day be disclosed.

These and other world-shaking developments have had their impact on the Nation, State, and local communities. The pattern of the country's political life, however, has generally remained unchanged.

Democrats and Republicans are still fighting. Blocs within the two parties continue to join forces when it serves their purposes. Conservatives, their ranks thinned, are battling the efforts of liberals to make a big central government bigger by their pushing for higher and higher spending by eroding the rights of the States with the bait of Federal aid.

Franklin D. Roosevelt's death in 1945 gave brief hopes to the conservatives that his successor Harry Truman would follow a moderate course. Truman, after an interlude, adopted the Fair Deal for the New Deal and many anti-New Dealers began to wish for the good old days of Roosevelt.

President Dwight D. Eisenhower's election was hailed as the definite end of the liberal era until modern Republicanism showed up and the Eisenhower regime adopted with some modifications most of the domestic policies of Roosevelt and Truman. Only fairly recently has the President shown a real desire to turn the liberal tide, particularly on spending.

Arriving in Washington some 6 months before Roosevelt's death, I was able to see him closehand at his news conferences. Although few realized it, the President was a sick man then. His health, however, didn't deter him from using cruel wit to make reporters squirm helplessly when they asked questions he didn't like.

President Truman's press conferences were fun. He used an acid tongue at times, but he liked reporters and they liked him personally regardless of their views on his political philosophy.

Truman's habit of shooting off the hip pained his staff but delighted newsmen who seldom left the White House sessions without a fine story.

Truman had no use for the Dallas News. He once told this correspondent at a cocktail party given by Speaker SAM RAYBURN that the Chicago Tribune and the Dallas News were "the two worst newspapers in the United States." And he wasn't joking.

Eisenhower doesn't like reporters. He handles his news conferences with restrained dignity, punctuated with flares of anger when questions he considers impudent are asked. Familiarity is out. Newsmen are referred to by the President as "mister," never by their first name. Eisenhower plainly considers press conference a nuisance, although necessary for himself and the public. He leaves the distinct impression that he would just as soon get along without them.

Washington correspondents are not awed by Eisenhower, although they recognize the hold he has on the American people. Even scandals in his administration have not affected the public's admiration. Attacks on his handling of international affairs will bear the Democrats no political fruit, in my opinion.

No article of this kind would be complete without some mention of the Texas Members of the House and Senate.

Tom Connally was still the powerful and witty chairman of the Senate Foreign Relations Committee when I arrived. LYNDON B. JOHNSON was in Congress.

JOHNSON'S spectacular rise as Democratic leader has made him a national figure. Political experts snickered when the ambitious, restless Texan began to make moves toward the presidential nomination. Today these same experts list him as the man that Senator JOHN F. KENNEDY will have to beat for the prize.

The Texas congressional delegation has been my special assignment during my years in Washington. They are all my friends, at least none are my enemies.

Without my meaning to disparage any of the other Members, I believe Speaker RAYBURN tops them all for personal and political integrity and political wisdom. The high quality of the Texans in Congress is due in part to the discretion of the voters and perhaps in larger degree to the guidance and inspiration they receive from RAYBURN.

Wives of the Texas Members of the House and Senate shouldn't be overlooked in praising their husbands. I personally am grateful to them, for they quickly accepted my wife Ann into their circle and helped a lot to make my family feel at home in Washington from the start.

Outstanding Folklorist

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. FLOOD. Mr. Speaker, the Wilkes-Barre Record of Thursday, June 23, 1960, carried a most interesting editorial on the fine career of Mr. George Korson who, earlier in life, was a reporter for that newspaper and who attended the same high school as I did—James M. Coughlin High School in Wilkes-Barre. Today, George Korson is considered to be one of this country's best writers of

folklore which is an impressive distinction indeed. It gives me a great deal of personal pleasure to include the above-mentioned editorial as part of my remarks and to wish George Korson many more eventful years in his chosen field:

OUTSTANDING FOLKLORIST

George Korson of Washington, D.C., former Wilkes-Barre Record reporter, has long had stature as an author. He has written seven books with Pennsylvania folklore as his specialty. His fellow workers will share in the community's pride in his designation as a nationally known folklore authority, one of the three living outstanding folklorists in America, and one of the alltime "Big Ten."

We learn of the designation through James J. Corrigan, himself of note as a writer of history with emphasis on Wyoming Valley and a former member of the Record news staff.

Korson has given an imperishable touch to our region by recording with skill and accuracy, songs, ballads, and tales of the Anthracite. The merit of his work has been widely recognized at home and abroad. We are told that a survey of librarians showed that nearly 200 books of all kinds, published in the United States and outside, have reprinted folklore material collected by Korson or have discussed him and his work.

Turbulence of the Airways

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which appeared in the New York Times on June 26, 1960:

TURBULENCE ON THE AIRWAYS—WHILE STRANDED BY WILDCAT PILOT'S STRIKE, PASSENGERS LEARN OF DOMESTIC FARE INCREASES TO START FRIDAY

(By Paul J. C. Friedlander)

These have been bad days for the air traveler, and there are few signs that things are going to get much better very fast. First, the traveling public was caught in a fued involving the pilot inspection issue, a fight that the airline pilots and their union have been waging against the Federal Government in the shape of Gen. E. R. Quesada, head of the Federal Aviation Agency. Then, while stranded planes and passengers were still scattered all over the eastern seaboard waiting for the wildcat and unofficial strikes to be called off, the Civil Aeronautics Board announced its decision to raise domestic air fares by about 5 percent. The rise becomes effective Friday.

Simultaneously, the traveling public had been led to believe by some Washington spokesmen and reporters that Congress would abolish the 10 percent Federal travel tax as of 12:01 a.m. this Friday. The tax had been scheduled, by congressional vote a year ago, to be cut to 5 percent on July 1 of this year; then came promises of eliminating it altogether, which is a long-delayed, albeit a fine idea. But in the politics of a presidential year, when every Senator wants to appear a stateman full of "fiscal responsibility," the unorganized travelers lost out to the 10-percent tax.

NO TRAVELER'S LOBBY

It is interesting to note that the final roll-call vote to retain the travel, telephone, and other excise taxes was 84 to 0, but that an amendment to withhold income taxes on stock dividends was defeated 62 to 24.. And the annual attempt to reduce the 27½-percent depletion allowance graciously granted owners of oil and gas wells was defeated 56 to 30. Travelers may recognize from these voting trends the fact that they, almost alone in Washington, have no powerful, nationwide lobby working in their behalf.

As if to fill this void, the Airways Club recently sprang full blown into being, offering to represent anyone who flies as a passenger and also sell him or her flight insurance. The club, a private corporation, hopes to become for the air traveler what the American Automobile Association and its local and State automobile clubs have become for the motorist—his spokesman and his lobby in Washington and in the State capitals. The club's annual membership fee of $10 now provides $15,000 of insurance with the Guardian Life Insurance Co. The club's initial act as a representative of more than 1,000 members enrolled in its first couple of weeks was to line itself up with General Quesada and against the wildcatting airline pilots on the safety inspection issue.

The domestic air fare increases are the result of a CAB investigation of air fares begun in April 1956. The idea then was to inquire whether a rate reduction was not indicated. In April of this year, the CAB concluded that the domestic airlines needed financial help and that they should get a return of 10.5 percent on their investment. To do that, the Board has just concluded, the airlines may raise fares by 2½ percent, plus a flat $1 additional charge on every one-way ticket. This is expected to give the airlines an additional $84 million in revenue annually. The jet surcharges also will continue unabated, at least until June 30, 1961.

The airlines will get that money out of the passengers this way:

Fares from New York [1]

To—	1st class		Coach	
	Now	After July 1	Now	After July 1
Washington	$16.00	$17.40	$13.55	$14.90
Chicago	47.95	50.15	36.35	38.30
Boston	13.65	15.00	11.80	13.10
Miami	80.80	83.83	54.55	56.95
Denver	107.30	111.00	78.00	80.95
Detroit	33.35	35.20	27.00	28.70
Lake Placid	20.70	22.25	None	None
Los Angeles [2]	176.25	181.45	115.50	119.15

[1] Fares do not include Federal tax.
[2] Includes $10 jet surcharge in both classes.

No one will argue that the airlines should not make a profit on their operations. But one may look searchingly into some reasons why they may not be turning profitable dollars. And one may wonder whether it is a joint responsibility of, and failure to act by, the carriers and the CAB that keeps the airlines crying poverty while the population, the traveling public and travel statistics keep growing.

EXPENSIVE "COMPETITION"

Only recently have the carriers begun to admit, first privately and now sometimes in public, that some of their vaunted competition is not true competition, and that it may not be worth what it costs the passenger. The airlines all fly the same equipment, cover the same distances between cities in the same flying time, serve the same kind of food (often indistinguishable in looks and taste), put different but similar uniforms on strikingly similar cabin attendants, make the same kind of mistakes day in and day out in reservations and advance bookings, make the customer suffer through the same confusion when he tries to book a seat and put him through the same kind of exhausting nervous tension at the airports while waiting for his flight and later, for his luggage.

Seven airlines are certificated to fly between New York and Detroit, four between New York and Pittsburgh, six between New York and Boston and three between New York and Miami. It is a rare and highly perceptive passenger who can tell offhand whether he is riding in a 707, a DC–8 or an 880. They look alike, their performance characteristics are similar, their flying times run within minutes of each other and the fares are the same. What kind of competition is this?

CAN'T TELL THEM APART

The airlines reply that their competition comes in the personal service they give at the air terminals and at their reservation offices and in the food and beverages and the cabin service aloft. Here also, it takes a highly perceptive passenger to tell whether he has been waiting impatiently on a telephone ringing in one airline reservation office or another, whether he has been bumped off a flight because of overbooking by one airline or its competitor, whether the domestic champagne the stewardess offers him is bubblier on one plane than on another and whether his weight allowance (40 pounds on domestic coach and first-class flights) is more inadequate on one airline than on another.

He certainly finds no airline fighting competitively for his trade by offering him free stopover privileges, such as are available on foreign routes. European airlines advertise that, for the price of a ticket between New York and, say, Amsterdam, Copenhagen, or Rome, the traveler may visit a half-dozen major cities in between.

In this country it costs the passenger money to make a stopover; not much money, perhaps, but the principle seems to be violated at the expense of the traveler. A New York-Los Angeles ticket today on a nonjet airplane costs $166.25 in first class. To include a stopover in Chicago today the passenger pays $47.95 New York-Chicago, and $120.35 for a Chicago-Los Angeles ticket. The difference between $168.30 and $166.25 is $2.05. In a coach it costs an extra $12.15 for the stopover. These annoying charges are hard to explain, since they involve none of the additional miles of flying a stopover in Paris entails on a New York-Amsterdam ticket.

On Friday when the new fare increase becomes effective with its $1 additional charge tacked onto every ticket, the stopover fee will get worse. The new New York-Los Angeles ticket will include the additional $1 rise. But the passenger who wants to stop en route in Chicago will have to pay the additional $1 fare increase on the New York-Chicago leg, plus another $1 increase on the Chicago-Los Angeles leg. The airlines and the CAB appear to be learning well from the Nation's railroads the lessons of ticket pricing and other customer services that helped denude the railroads of their passenger business.

It is a fair question, one worthy of prompt study, whether both the industry and airline passengers might not be served better if there were fewer airlines operating opposing services over the same route. There could be no less true competition than there is now. There might even be more if the CAB then kept a close eye on the kinds of service being offered and compelled the airlines to live up to the responsibility inherent in their Government-awarded franchises.

CARRYING THE UNPROFITABLE

If the CAB has to adopt fare schedules that will permit the weaker airlines to make a profit, perhaps mergers that leave only a few, strong carriers would permit an eventual rate reduction. Over the North Atlantic air fares, instead of going down, have gone up. Also, jet surcharges have been retained

in the basic fare structure, and all this on the argument that the weaker carriers had to be protected and a fare level adopted that would cover the needs of the neediest carrier. There also has been talk of some kind of cooperation or merging of services over the North Atlantic.

Speaking of both domestic and international flying, no one has yet come up with a good reason why there should be seven airlines flying between New York and Detroit, each with its own station manager, downtown ticket office, reservation system, terminal staff and duplicating multiplicity of expenses. And with all their electronically propelled booking clerks, the passenger still stands in line 15 minutes just to check in a previously checked-in ticket.

It was the passengers, as usual, who stood around and waited while the airline pilots fought their battle with the Federal Aviation Agency. The public arguments and statements about the wave of illness and the wildcat strikes that grounded most of Eastern Air Lines' planes and sharply curtailed Pan American World Airways appeared to disregard the people who fill the seats and make commercial aviation possible.

The pilots were angry with General Quesada, as they have been since he took over direction of the FAA a year and a half ago and started modernizing and enforcing governmental flight safety regulations. The Air Line Pilots Association objected when the FAA ruled that pilots must retire at the age of 60; it tried to beat this ruling in court, but was ruled out of order. Then, when FAA inspectors began tightening up on flight activities, the pilots began striking back.

They objected to the FAA rule requiring the pilots to remain in the cockpit while in flight rather than socializing with the passengers. This was a public relations bit that the airlines liked in the earlier days of aviation, for the captain's graying hair and dignified mien lent courage to timid passengers. But with high-speed jets, the FAA wants the pilots up front working their passage, a conclusion concurred in by many passengers.

Then came the inspection of in-flight jet operations, with the FAA inspector riding the jump seat behind the pilot and copilot. This trouble has an interesting history:

ONLY TWO PILOTS REQUIRED

Twelve domestic airlines fly jets, all of them American-built airplanes. General Quesada notes that every American-built jetplane was designed, constructed, and certificated by the FAA to be flown with a crew of three—a pilot, copilot, and engineer. In negotiating labor contracts with the airlines, the pilots' union persuaded five airlines to use three pilot ; the remaining seven airlines have only two pilots. The trouble developed on planes of those airlines that conceded the third pilot to the union negotiators.

The word featherbedding is heard more often around railroads than airlines, but management officials describe the third jet pilot as so much featherbedding. The union insists he is a necessary part of the crew. This debate fails to note that seven airlines seem to fly jets safely with only two pilots.

The intensity of the pilots' union objections, and of the unofficial walkout of many pilots, fails to jibe with FAA statements. The FAA says it has only 29 jetplane inspectors, 20 turboprop inspectors, and 138 piston-engine inspectors, and that the commercial airline pilot may expect to be checked only once in every 500 flights. This lends more credence to the theory that the pilots' objections might be pointed more at protecting the third pilot's job than in avoiding serious interference with flying safety.

It is unfortunate that in an industry still in the bloom of its youth so many errors of omission can and have been committed in relation to its customers. The local newspapers were filled the other day with the story of a widow who was trapped in New York City with several children while trying to fly to Puerto Rico. She was terribly inconvenienced by the pilots, who refused to fly the plane because they were angry with the Federal Government.

PITY FOR THE PASSENGER

Not quite so dramatic, and not so often or thoroughly reported, are the mistreatments of ordinary passengers whose reservations are lost, whose seats are sold—deliberately or innocently—a second time to someone else, whose luggage takes forever to be unloaded from a plane or, worse luck, lands at another city, who finds it impossible to put through his telephone call to an airline ticket office or, if he is lucky enough not to get a busy signal, to find a clerk who can answer his questions. The laying on of electronic devices apparently has confounded the confusion. It has not eliminated the fog of misinformation and mistakes that rises between the passenger and the airline.

It is hard to believe that this week's fare increase is going to clear up all this confusion and result in sparkling service and on-time departures and arrivals. It may be that some good may come from the arrival on the scene of a company eager and willing to speak up for the air traveler. It is cheering, even though the Airways Club is still a weak, young voice, to find its executive vice president, William R. Beattie, writing to the FAA that the club believes the FAA position is sound and reasonable and that action of certain pilots "caused great inconveniences to the traveling public and threatens to lower the standards of air safety."

Tribute to the Honorable Aime J. Forand

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. IKARD. Mr. Speaker, one of our most beloved and able colleagues, AIME J. FORAND, of Rhode Island, has announced his retirement at the end of this session of the 86th Congress. After serving with great honor and distinction for more than 22 years, a total of 11 Congresses, as Representative of the First District of the State of Rhode Island, AIME has decided for personal reasons that he will not be a candidate for reelection.

Mr. Speaker, I deeply regret that my good friend AIME has reached this decision. I wish him the very best, of course, and a happy and a well-deserved rest. However, AIME will be greatly missed on the Committee on Ways and Means and in this House.

AIME FORAND and I have served together on the Committee on Ways and Means for 6 years. He, of course, was a senior member of the committee when I was first elected to the committee. He was generous with his advice and counsel to new Members who sought it from him and I may say that he through the years has assisted me in this regard on many occasions. His service on the committee has been marked by great accomplishments in the area of the jurisdiction of the committee, resulting from bills which he introduced and his great contribution to the other legislative matters before the committee. I know of no member of the committee, past or present, who has had a more intense interest in the area of social security than AIME FORAND, and I know of no one who has devoted more time, effort, and full capacity to accomplishments in this field than has AIME. We have not always agreed on particular legislative matters, but our area of disagreement has been much smaller than our area of agreement. Much of the legislation in the area of social security is due to his diligent and conscientious efforts on the committee and on the floor of this body.

Another facet of our jurisdiction to which AIME has made great contribution is that of Federal excise taxes. As Members of this House will recall, the Committee on Ways and Means in 1956 established, for the first time in several years, three subcommittees to pursue special areas of jurisdiction—namely, excise taxes, income taxes and tariffs and trade matters. AIME FORAND as a senior member of the committee was made the chairman of the Subcommittee on Excise Tax Technical and Administrative Problems. He applied himself with great energy and diligence to the task before the subcommittee and as a result of his efforts during the 84th Congress, and in subsequent Congresses as chairman of a subcommittee on the same subject, the first revision of the excise tax structure in 30 years took place. The Excise Tax Technical and Administrative Act of 1958 will serve for many years as a monument to the able, efficient and energetic efforts of AIME FORAND. Members of this House appreciate, and may I say particularly members of the Committee on Ways and Means appreciate, the difficult and complex problems which always attend any effort to revise any substantial part of our tax structure. To have accomplished the first technical revision in over 30 years in the excise tax area is indeed a distinct honor.

AIME FORAND, of course, brought to the Committee on Ways and Means and to this House a vast amount of experience. When he first became a Member of the House, he had served for many years in the Rhode Island Legislature and in administrative and other public capacities in his own State. His prior services included not only the foregoing but also service here as a secretary of the man whom he succeeded as Representative of the First District of the State of Rhode Island.

Mr. Speaker, I have mentioned briefly some of the accomplishments of AIME FORAND since he has been a Member of this body, but I could not close these remarks without expressing my deep feeling about the personal qualities of our admired and beloved colleague. AIME is one of those individuals who stand out from the crowd because of the many personal traits which we all admire and indeed envy. He is a kindly man, a man of the highest integrity, a man devoted to his country, family, church and friends. He is one who has always sought to be helpful to others. I have noticed that he was a man who is always thoughtful of his colleagues on

the committee and of members of the staff of the committee.

Mr. Speaker, I regret that AIME FORAND has decided for reasons of his own that he will not be a candidate for reelection and therefore will not be a Member of this body next year. We will sorely miss him as a fellow Member, but we all hope that he will see fit to visit with us often during his well-deserved years of retirement. I wish him the very best.

Hon. Ray J. Madden To Head Indiana Delegates to National Convention at Los Angeles

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. DENTON. Mr. Speaker, our colleague, RAY J. MADDEN, of Indiana, First District, has been twice honored by Indiana Democrats during the month.

On June 21, he served as permanent chairman of the Indiana State Democratic Convention and on June 26, he was elected to head the Indiana delegates to the National Convention at Los Angeles.

Mr. Speaker, I hereby submit an article from the Gary (Ind.) Post Tribune reporting the caucus of the Indiana delegates last Sunday.

I also include a paragraph from Congressman MADDEN's speech as permanent chairman at the Democratic State Convention. This excerpt from his speech should be followed in every State during the coming election. The State organizations too often overlook the importance of building their campaign strategy around the congressional and State legislative candidates in the various congressional districts.

MADDEN TO LEAD DEMO DELEGATION—PICKED TO HEAD 68-MEMBER STATE GROUP AT NATIONAL PARLEY

INDIANAPOLIS.—Representative RAY J. MADDEN, of Gary, veteran First District Congressman, will serve as chairman of Indiana's 68-member delegation to the Democratic national convention starting in Los Angeles July 11.

MADDEN was elected by a 37–26 margin over Third District Chairman Marshall F. Kizer, Plymouth, at the delegation's organizing session Sunday. The vote was then made unanimous on Kizer's motion.

Kizer is cochairman of KENNEDY's Indiana campaign. But MADDEN, who was in Washington, comes from a district where the organization also is considered pro-Kennedy.

MADDEN was nominated by his district chairman, Mayor Walter M. Jeorse of East Chicago. Kizer was nominated by Fourth District Chairman James L. Koons, Avilla.

Here is the list of officers and representatives on national convention committees chosen at the organizational meeting in the Claypool Hotel:

Chairman: Representative RAY J. MADDEN, Gary.

Vice Chairman: Margaret Affils Johnston, Indianapolis.

Secretary: Richard Inskeep, Fort Wayne.

Platform and resolutions committee: MADDEN and Mrs. Kenneth J. Luckett, English.

Credentials committee: D. Emmett Ferguson, Lafayette and Mrs. Johnston.

Committee on permanent organization: Mayor Frank McDonald, Evansville, and Mrs. Lawrence Arnsman, Lebanon, State vice chairman.

Committee on rules and order of business: Eugene B. Crowe, Bedford, State committee treasurer, and Fannie Mae Hummer, Kokomo.

Committee on notification of presidential nominee: Mayor Edward F. Voorde, South Bend.

Committee on notification of vice presidential nominee: Sheriff Gresham Grimm, Evansville.

Honorary vice president of convention: State Auditor Albert A. Steinwedel, Seymour.

LAUDS MADDEN

Mayor George Chacharis, of Gary, said today that Lake County Democrats are happy because Representative RAY MADDEN, of Gary, has been chosen as chief of the Indiana delegation to the National Democratic Convention.

"We feel—like the rest of the State delegates—that MADDEN can do more to unify and solidify the Indiana delegation at the national convention," said Chacharis. "He is well liked by delegates throughout the State and this was indicated by his selection yesterday."

NINETEEN HUNDRED SIXTY CAMPAIGN IN CONGRESSIONAL DISTRICTS

The Indiana Democrats won a great victory 2 years ago in the election of six new Democratic Congressmen and Senator VANCE HARTKE by a majority of almost a quarter of a million votes. We Democratic candidates have barren campaign funds but we are rich in issues and accomplishments for the people. Our record of public service must serve instead of dollars. This great victory was accomplished because of the concentrated work in the various congressional districts throughout the State. The voters realized the necessity of enacting legislation that will improve our economy, increase employment, and bring more security for the American home. We did not have the prestige of a National Presidential or Governor's contest to aid us in the 1958 campaign. Victory in 1958 was accomplished by emphasizing national legislative issues and also the necessity of electing Democratic Congressmen, State representatives and State senators in order to implement laws that would be beneficial for the prosperity and security of farm, labor, and small business.

It is time that the Democratic Party in Indiana realizes that the Republicans have concentrated in the past by educating the voters in the various congressional districts on the necessity of electing Representatives and Senators both National and State, because these officials play such an important part in the economic welfare of the millions of average Americans. It is time for Democratic State, district, county, and city chairmen, including all Democratic precinct committeemen, to know that the average voter can only be enthused and become an active worker in the campaign if he knows a candidate or a party has a platform or a program that will aid the Nation's economy and help his business, job or future security for his family. Historically, the Democratic Party has been the only instrument through which the millions of working men and women, farmers and small business could make an appeal for aid and cooperation. Their requests for just recognition in the operation of our Government can only come through the halls of Congress and the State legislatures of our Nation. After the various programs are acted upon legislatively in our National Capitol or in the State houses, it is highly important that we must have a Democratic President and Democratic Governor and State officials to carry out the legislative programs which a Democratic Congress and State legislature enacts.

Report to Joint Meeting of Civic Committee and American Municipalities Association, Washington, D.C., March 22, 1960, by International Friendship Council of Fresno

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. SISK. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD, a report from the People-to-People Council in Fresno, Calif., which was delivered to the civic committee of the people-to-people program this year in Washington, D.C.

The People-to-People Council, originally the International Friendship Council of Fresno, was founded 10 years ago at the suggestion of the U.S. Information Service, for the purpose of promoting international friendship. Rather than acting through official agencies and governments, the People-to-People Council arranges for individuals in Fresno to contact and assist individuals or small groups in other countries. As the report points out, all the council's projects are small, and have a personal quality which makes them the most effective sort of international diplomacy—a southeast Asian town that has been adopted as a "brother city" by a California town will feel more good will toward the United States than ever could be generated through official channels.

Many towns and cities in the United States have organized similar groups, and I am pleased to say that the first such group was founded in my district, in Fresno. I hope that the following concise and interesting report of the People-to-People Council of Fresno will encourage other comunities to form international councils with the same effective results:

International Friendship Council of Fresno was organized 10 years ago under the guidance of U.S. Information Service. We are now changing our name to People-To-People Council in order to identify ourselves with the broader aspects of the national program.

We operate with a minimum of formality under articles of association which provide for unlimited membership and a board of directors of up to 50. A steering committee of six and the President direct the program. Membership dues of $2 per year have been adequate.

Our first project was the citywide collection of good American books for the University of Delhi, India. Service clubs and other groups participated. The mayor proclaimed International Friendship Week. The consul general of India came from San Francisco to speak to a meeting of Rotary Clubs. The ladies' clubs of Fresno gave a

tea for the consul's wife, at which she spoke and local Indian students danced. Local radio, TV, and newspapers gave excellent coverage of the week's events.

Since then International Friendship Week has been an annual event in Fresno, with newsworthy programs and citywide recognition.

Most of our projects are small. We try to have a member on our board from each of the active service clubs and civic groups in Fresno.

Our steering committee decides on a project and gets one of our members to accept the responsibility for it. The member draws on his club members for help if he needs it. Our steering committee advises, makes contacts abroad, and helps when necessary.

An example is a project which furnished 500 pairs of eyeglasses to a hospital in India. Girl Scout troops collected used glasses. The county optometric society sorted and classified them and furnished blank lenses. Our council arranged transportation.

Under this system, groups and individuals have sent books to a village library in India's Punjab, to Japan, and to the Philippines. In each case the council checked book titles and made sure of delivery to destination. About 10,000 books have been shipped in this way.

One of our members maintains contact with individuals and organizations in 20 foreign cities and coordinates a magazine program for them. He furnishes Fresno groups and individuals with addressed manila-clasp envelopes for mailing magazines, selected to please each recipient. At the top of the priority list are Reader's Digest and National Geographic. Several thousand mailings each year go out through this arrangement.

The council arranges pen pals for young people and adults. Some of these correspondents have become good friends.

A committee, headed by a council member contacts foreign students at Fresno State College to make sure they get a chance to visit in Fresno homes. Some Fresno families have practically adopted students from Asia and the Middle East with very gratifying experiences for both families and students.

Because Fresno is the center of the richest agricultural area in the world, we have many prominent foreign visitors. A council committee is always available to entertain these visitors in their homes, to show them through Yosemite Valley and our mountain resorts and to take them on personally conducted tours of things of interest in agriculture and its related industries. These visitors frequently stay several days.

We write to these people after they return home and send them literature about things which interested them—from how to domesticate honey bees to subsidence in deep aquifers.

One of our members recently shipped two dozen California fruit trees and vines via air-freight to the Governor of Khorat Province, Thailand. These have been planted in the Governor's gardens and will furnish budding and cutting stock to upgrade Thai varieties.

Our latest project is the promotion and organization of a city-to-city relationship between Fresno and a southeast Asian city. We hope to consummate this project during 1960.

Our objective is to furnish individuals and groups in Fresno with do-it-yourself kits for making friends abroad. Hundreds of Fresnans have made friendly contacts with thousands of people overseas and people on both sides of our borders are having fun and broadening their horizons of understanding and good will with our do-it-yourself plan.

Correctional Problems the Courts Can Help Solve

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the very interesting and informative speech of Mr. James V. Bennett, Director, U.S. Bureau of Prisons, given before the eighth annual meeting of the Advisory Council of Judges of the National Probation and Parole Association, at Boulder, Colo., on June 26, 1960.

Mr. Bennett who has served honorably and well for many years in the Government service, with a wealth of knowledge gained by his years of experience in the Bureau of Prisons is most conversant with this subject matter and knows whereof he speaks. He is one of the most sincere, intelligent, and conscientious officials in the Department of Justice and is respected and admired by all who have occasion to confer with him on matters affecting his Department. I believe that his speech warrants the attention, serious consideration and thought of every Member of the Congress.

CORRECTIONAL PROBLEMS THE COURTS CAN HELP SOLVE

(By James V. Bennett, Director, U.S. Bureau of Prisons)

Time and time again I have had various friends remark to me—"I'm glad I don't have your job" or "I sure don't envy your job" or something of the kind. These sentiments apparently stem from the idea many people have that I must deal with a lot of difficult, dangerous, and cantankerous people. Perhaps they also stem from the fact that the results of my work are often disappointing and discouraging—sometimes spectacularly so.

I have an answer for remarks of this kind but that is a theme for another talk some day. But these people are right to the extent that it is not an easy job to run a prison, especially a large one. The administrative details and problems are burdensome, almost overwhelming at times. Funds are chronically limited. Personnel are hard to find, hard to induce into coming into prison work where the financial rewards are so much less than they could expect in almost any other type of work. The institution is overcrowded, and seemingly the bigger the institution the more overcrowded it must be. There is not enough work to go around, and the milling, idle prisoners create other vexing problems for the prison management.

But most of all a prison warden's job is made perplexingly difficult because the objectives of the prison are unclear. He is asked to carry out tasks that are frequently inconsistent or even impossible. This is the oft-asserted paradox of the prisons. He may be asked on the one hand to punish the miscreant, the only conclusion the warden can reach from the excessively severe nature of the sentence. And yet on the other hand, because this prisoner will eventually be released, the warden is expected to rehabilitate him, to modify his attitudes sufficiently that he can live peacefully and lawfully with his neighbors when he gets out. The warden struggles against the embittering influence of the sentence on the prisoner, and sometimes he wins and sometimes he loses. But at best it is a trying and challenging experience.

Conversely, the warden is asked to perform a different kind of miracle. He may be expected, for example, to take a check forger whose depredations have stretched over a period of 20 years and wean him from his larcenous habits within the few short months the court has given him. The court may expect the miracle, but the warden doesn't. But he tries his best.

He is also asked at times to drydock an offender who really did not need to go to prison in the first place and is expected somehow to keep alive in this prisoner hope, drive, and ambition.

However you view it, prison is tough medicine and appropriate only for those who require tough medicine. There is little need for major surgery to clear up a pimple. In dealing with the offender the same principle applies; major surgery where a shot of penicillin will do may be disastrous for the patient.

The courts can do much to help ease these paradoxical tasks with which our wardens are faced. The courts can bring about a more meaningful rapport between themselves and the institutions, closer teamwork, a more productive understanding of each other's problems. The crowded court calendars keep the judges busy of course, but at the same time it seems to me that they have no more challenging and paramount responsibility than prescribing the medicine for the offender and then following up to see how it takes. One of the reasons the doctor watches the effect of the prescription he has written for his patient is so that he can learn what kind of medicine and what kind of dose he might most successfully prescribe the next time. The courts are in much the same position. In order to accomplish their sentencing responsibilities intelligently they should know how the sentences they have already imposed worked out.

For one thing, I am sure they would learn from observation that they should not send anyone to prison unless they are dead certain that this disposition will meet the problems of the individual offender and also provide real protection for the community. We already have a higher proportion of our population locked up in penal institutions than any other nation in the world. We have 120 persons serving sentences in various institutions for adults for every 100,000 of the general civilian population. If we add to this the number of persons held in local and county jails, we get a figure of 178 persons behind bars for every 100,000 of the civilian population. In contrast, England and Wales have only 65 persons under lock and key for every 100,000 citizens. Japan has 89. About the only nation I know of that comes close to our rate is tiny Guatamala, which I visited in October 1958. I found that it had 176 prisoners per 100,000 population, but when I looked deeper into this situation I found that about 60 percent of these prisoners were unsentenced and being detained only temporarily. Our rate of prisoners to population cannot be matched anywhere in the world and it is one record of which we cannot be proud and which we must do all we can to minimize.

Probation over its relatively short history of use in this country has proved itself to be an invaluable substitute for imprisonment. It has saved a good many hopeful offenders from what might have been a corroding experience and it has saved untold

millions of dollars in prison costs. However, because of the use of this type of disposition rests almost entirely with the courts, there are almost startling contrasts in the extent to which the courts depend on it. Some courts use it for a majority of dispositions, while others use it sparingly. It is the chief tool of the courts in New England, for example, while in some midwestern States it is a feeble and undernourished device.

All of us are grateful to the National Probation and Parole Association for its expanding influence and unflagging effort in fostering an intelligent use of probation. It has come a long way during my time. I well remember how Charlie Chute and I were the only ones who appeared in behalf of the Federal probation system. Frankly, the Department of Justice was then skeptical about it and all but a handful of judges were indifferent to the whole idea. From this cradle has grown the great system of today in which we all take pride. The efforts of this organization have speeded the trend toward greater participation by the individual States in the selection, training, and support of personnel involved in probation services. A singular achievement has been the acceptance of the interstate parole and probation compact by all the States. Now probationers may go from one State to another and remain under supervision.

The continuing efforts of this organization to push a more consistent use of probation throughout the country is of paramount importance for many reasons. The statistics on prisoners tell us that in many jurisdictions highly suitable prospects for probation are still being sent to prison. In the courts of New York State only 25 percent of the convicted defendants are being placed on probation, and in Pennsylvania only 30 percent. Yet in Wisconsin 60 percent of the convicted defendants are placed on probation and in California about 50 percent. It appears that the courts in such jurisdictions as New York and Pennsylvania need to be sold on the value of probation. If this can be done, it will be a long step forward in the solution of correctional problems now being passed on to the prisons.

Sometimes the court may be reluctant to extend probation to a defendant because he has no home or job or other personal resources upon which to lean. Rather than send him to prison the court, it seems to me, should make every effort to find some alternative. I have noted that check forgers are frequently mentally or physically ill. They might, for instance, be hospitalized. Sometimes the youngsters—and we are now receiving a thousand juveniles a year in Federal institutions—can better be placed in foster homes or in special community schools, if resources of this kind are developed by the Probation Service. Some of these defendants—like an elderly victim of brain damage that one of our penitentiaries recently received on a minor charge—need domiciliary care, and that is obviously a community responsibility. They should not clutter up the prisons.

The courts can also help to minimize our prison problems even by the very manner in which they impose sentence. It is of course the court's duty to define for the defendant the community's attitude toward his act, and that is partly the function of the sentence. But this can be done in an objective, constructive way, and it may actually put the defendant in a frame of mind where he might be more inclined to cooperate with the corrective efforts of those to whom the court has delegated this duty. On the other hand the manner in which the court passes sentence can have the opposite effect. If the court creates unnecessary antagonisms in the defendant by heaping invective upon him, ridiculing and humiliating him, it may impose very formidable handicaps to the probation officer or the prison personnel who must thereafter try to instill within the defendant an attitude that he really has within himself the capacity to become a worthy citizen. I have seen some prisoners who have gone through such an excoriating experience in court that they remained hostile and intransigent problems for many months, sometimes indefinitely.

If the needs of the defendant and the requirement for community protection dictate that he must be sent to prison, then the type of sentencing procedure that is used becomes most important. And it may also become an extremely frustrating problem for the judge. The penal statutes of this country are a mish-mash of conflict and variation. Most of the States use indeterminate sentences in some form, and at the same time most of them retain some elements of the definite sentencing system. Twenty-seven of the States and the District of Columbia have predominately indeterminate sentences, and 21 States retain predominantly definite-sentence systems. In some jurisdictions mandatory statutes dictate the sentence and leave the court with little discretion. In other jurisdictions, as in California, much of the sentencing responsibility may be removed from the courts for most offenses. The courts of California, as you know, have no say whatsoever as to the time that shall be served by the defendant in prison. These differences in sentencing procedures are complicated further by variation in statutory penalties for the same offense categories and by varying parole policies and practices.

It is devoutly to be hoped that this conglomeration of sentencing procedures will some day be resolved in the direction of more flexibility, more alternatives, and more discretion. The courts need a range of dispositions as broad as the range of sentencing problems with which they are confronted. The Federal system is moving in that direction, as you know. As a result of leigslation enacted in 1958, the Federal courts can, after setting any maximum within the statutory maximum, specify that the matter of parole eligibility will be left entirely up to the Board of Parole, fix a parole elligibility date at any point up to one-third of the imposed term, or let parole eligibility stand at one-third of the sentence.

The new legislation contains an additional feature that has proved invaluable to courts faced with serious sentencing problems. The courts can commit a defendant to one of our Federal institutions for a tentative period of 3 to 6 months, during which time he is studied, observed, and diagnosed. At the end of the period fixed by the court I must take into consideration all of the factors that have been disclosed by this study, and formulate a sentencing recommendation to the court. This procedure, needless to say, has required me to reduce my ideas on sentencing to specific and concrete terms.

But whether or not the courts are equipped with a number of sentencing alternatives, they can still avoid creating problems for the institutions by remembering, as I must remember when specifying for the court exactly the type of sentence that I think should be imposed on an individual defendant, that the institutions have certain very definite limitations. There are certain services they can perform, and certain services they cannot. In this respect it has been my experience that the courts are often overgenerous in their estimates of what correctional institutions can accomplish.

The availability of psychiatric services, for example, has been overadvertised. To a very large extent these services are simply not available. In the Federal Prison Service only a half dozen institutions aside from the Springfield medical center have psychiatrists on their staffs. The other 28 have none. The States are in an even less favorable position. In a recent survey we found there were only 32 full-time psychiatrists employed in State institutions for adult offenders, and even this number was concentrated in 12 States, with 15 of the psychiatrists accounted for the State of California. However, even if a prison is fortunate enough to have a psychiatrist, the number of prisoners he can treat is severely limited. He is lucky if he has time enough to perform the diagnostic services that are required of him.

Further complicating this situation is the fact that there are certain types of problems that most psychiatrists agree they can do little to remedy, especially in a prison setting with all its limitations. Homosexuals and other persons with any extensive history of several aberrations are pretty poor prospects for any presently known psychiatric technique. The psychiatrists cannot do much to help the mentally defective, and the addict or the sociopath do not seem to offer much hope at our present stage of knowledge. The mentally defective belong in a mental institution where specialized facilites for this training are available. The addict is a product of his environment and must be treated within the context of that environment after a period of withdrawal under medically controlled conditions. Perhaps of the three, only the sociopath should be committed to prison, but even with this type of offender the psychiatrists admit their prognoses must be guarded.

Under present conditions unfortunately the courts must send to prison the alcoholic, the vagrant, and the social misfit. For all practicable purposes they get along well in prison, but as soon as they are released they resume their previous patterns and the prison is indicted for their failures. But the reason for their failures is all too obvious. The prison can treat only the individual, and those problems that are peculiarly within him. It cannot treat the social environment which produced him in the first place. The readjustment of the alcholic, the vagrant, and the social misfit, if it is to be accomplished, must be done within the community.

The community has been hesitant to accept its rightful responsibilities with regard to this group, and as a result the prison has become a catch-all for its many rejects. The judge, as a partner of the institutions in the administration of justice, must use an intelligent discrimination in insisting that the community accept its problems. He does not, I believe, need to be an automaton merely processing such cases to prison. He can assume a more positive role, as many of them do.

In Denver, for example, through the efforts of Judge William H. Burnett and his associates in the municipal court the "drunk" population of the city jail has been cut by 60 percent in recent years. This has been accomplished largely by marshalling community resources, by recommending some of these individuals to a medical commission for commitment to a State hospital, and by encouraging those individuals with any constructive motivation left to join some organization such as Alcoholics Anonymous. Through similar efforts by Judge Ray Harrison, of Des Moines, the rate of arrests for drunkeness in his city has been cut more than 30 percent. In this respect I agree with Judge Burnett's observation that "there is a definite relationship between the community which is making progress on this problem and the leadership of some particular judge in that community."

In addition to developing overall policies of this kind the judges can more closely scrutinize the individual defendants to determine the appropriateness of imprisonment or some other disposition. I recall, for example, that one eastern court sensed from the characteristics of the defendant before

him that there was some element present that he could not put his finger on, and he committed the defendant to us for study and observation. We found that the defendant had been in and out of mental institutions, that he was in escape status from one State mental institution, and that he was currently schizophrenic. Between the court and ourselves arrangements were made to return him to the State hospital from which he had escaped and the court cut his sentence to time served. We have had several other similar cases in which this procedure has proved useful.

Finally, the importance of a consistent sentencing philosophy at all times and between all judges cannot be overemphasized. Admittedly, this is difficult to achieve. The range of median time served varies markedly across the country. For all offenses, the median time served is the lowest in Vermont, with 10 months, and highest in Illinois, with 3 years and 2 months. Even for murder, the time served by those who are released varies from 5 years 4 months in Virginia to 15 years 2 months in Ohio. Persons convicted of manslaughter serve from a median of 1 year 5 months in Tennessee to 4 years 6 months in New York. Robbers serve 1 year and 3 months on the average in Colorado, but they serve an average of 6 years in Indiana. For the common offense of auto theft convicted offenders serve as little as 8 months in Maryland and as much as 31 months on the average in Iowa. Similarly with forgers, who serve 8 months in South Carolina, but 3 years in West Virginia.

Many judges have worked out a system for minimizing such disparities. Some of them keep on hand the statistics showing the average time served for given offenses in an effort to be consistent with their fellow judges. Some of them keep memoranda concerning their own sentence dispositions, in an effort to keep their own sentences consistent with each other. Some find it helpful to write short opinions or statements of their reasons for imposing a particular sentehce. We have found the latter helpful, incidentally, when the court sees to it that these transcripts accompany the prisoner to the institution.

Perhaps more promising than any of these methods is the sentencing institute. This was also a feature of the sentencing act passed by the Congress in 1958. The first nationwide conference of this kind, as most of you know, was held right here in Boulder in the summer of 1959, under the dynamic leadership of Judge Alfred P. Murlah. Several of the circuits have also made sentencing an important part of their conference agendas, and within the next year a regular program of sentencing institutes on a circuit basis will be organized. The authorizing legislation sponsored by Congressman EMANUEL CELLER was quite broad and in effect specified that the judges at these institutes could discuss any and all matters that would bring about the "formulation of sentencing principles and criteria which will assist in promoting the equitable administration of the criminal laws of the United States."

To achieve the teamwork which is necessary if the criminal laws are to be applied more equitably the judge ought to visit the institutions to follow up on the persons they have committed there. They ought to observe the programs and find out what the actual resources of a prison are. And if a prisoner again returns to their courts they should try to determine what reasons accounted for his failure. Sometimes it may be the institution that is at fault, and sometimes it may be the community. Sometimes it may be the nature of the original sentence. No one could expect, of course, that the judge will be able to follow up on every case that appears in his court. But he can make a sampling survey of this kind from time to time.

Our ideas concerning prisoners and punishment have changed gradually over the years, but it is likely that this type of inquiry will accelerate that process. And it is likely that similar inquiry on the part of the courts will do a great deal to change our sentencing procedures over the next generation. There seems to be left only one direction for this change to take place—in the direction of more consistency and more flexibility.

That inquiry is both overdue and essential. About 200 years have elapsed from the time of the classical principle of punishment, which equated each crime with an appropriate penalty established in advance by statute, to the more contemporary proposal of a sentencing tribunal, which divorces the judges from practically all responsibility or discretion with respect to the imposition of sentence. Despite 2 centuries of discussion and experience, no general consensus has yet been reached and the question of the limitations of the individualization of punishment continues to be the most intractable problem in the entire field of criminal jurisprudence.

The significance of historical trends in the individualization of treatment lies in the fact that each development has been incorporated into the criminal law. Furthermore, the acceptance of these developments by the public, the judiciary, and the legal profession has been facilitated by advancements in the social and behavioral sciences. As this knowledge increases and becomes more precise, the correction of the offender will hopefully become as important a function of the sentence as are the values of deterrence and public protection.

These values of deterrence, incapacitation, and correction attributed to the criminal law are not inevitably and necessarily contradictory or mutually exclusive. The overriding function of a sentence is not to be an end in itself, which is sheer retribution, but rather a means for the achievement of those values. The problem of judicial discretion is the determination of a sentence, therefore, is that of balancing the requirements of the legal norms with the characteristics of the individual offender. Experience has taught us the paradoxical but sad lesson that reliance on the humanitarian motivation or the sense of justice of a judge is not enough to insure the most appropriate disposition of the offender either in the interests of the community or in the offender's eventual correction.

Justice for United States in Cuba

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. PHILBIN. Mr. Speaker, now that expropriation of American property in Cuba has become a reality, this Nation, in my opinion, cannot afford further delay, in its own interest and in the interest of freedom and justice in the Western Hemisphere, in taking prompt action. I have felt and said that we should have taken action long ago.

Nothing is ever gained by compromising with Marxists or waiting for them to change their tactics. The fact that we have temporized with Marxism over a period of time is responsible for much of the trouble that exists in the world today. However, that is a different story, and a long story, and I will not go into it now. It constitutes a sad, pathetic chapter as history will attest.

The Congress has been beside itself passing measures to expedite and accelerate foreign investment. What good will this do, I inquire, if American investments overseas and American property in foreign countries face ruthless, illegal, confiscation and expropriation?

The sanctity of human rights, property rights and contractual rights lie at the very basis of Western civilization and, indeed, should be a necessary part of any civilization. No worthwhile government can operate successfully, domestically or externally, that does not recognize contractual rights and is not willing to protect valid, legitimate property rights. No self-respecting, decent government will repudiate its solemn treaties and legal commitments.

By its harsh, arbitrary action, the Cuban Government has indicated that it intends to pursue expropriation of American property, and perhaps other property as a national policy. That being so, this Nation has no choice but to protect itself against this kind of brigandage and theft, and if we do not do so, we will become the laughing stock of the world.

I again respectfully suggest to the President and Secretary of State that the Organization of American States be immediately convened to discuss not only expropriation of property by Cuba, but also the existence of a dangerous, aggressive Communist conspiracy in the Western Hemisphere that constitutes a present danger and dire threat to the peace, security, and liberty of our Western World.

This action should be taken immediately, and without further delay. It should have been taken long ago.

Furthermore, the Congress and the Government should move immediately to apply such economic sanctions as we have available to us—and they are very persuasive—designed to mitigate, if that be possible which I doubt, the severity of the vicious anti-American campaign in Cuba and the ruthless expropriation of American property in that land.

And, Mr. Speaker, if these measures should fail, we should boldly map out and adopt other more extreme measures that will definitely insure the protection of American interests and rights in Cuba and keep our great country and this hemisphere from being infected with the malignant virus of communism.

Bayard Auchincloss' Sound Dollar Drive

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, like the weather, almost everybody talks about the need for a sound dollar, but few in-

deed are undertaking to do anything about it. One such man though, who is doing what he can, with what he has, where he is, and whose efforts I have observed and applauded from afar is Bayard Auchincloss, a young science teacher from Oklahoma City. That his efforts have attracted the attention of the press as well is encouraging, and is attested to by three recent articles, which I commend to the attention of colleagues who share my concern over our responsibility to shore up the American dollar:

[From the Napa (Calif.) Register, Apr. 7, 1960]

SIGNATURES ARE FINE—BUT DON'T SEND ANY DOLLARS

(By Ed Koterba)

WASHINGTON.—Please don't send any more dollars. They've kept two of us busy stuffing them back in envelopes and returning 'em to the senders.

It all started when I told about an Oklahoma City science teacher, Bayard Auchincloss, and his one-man campaign for a sound U.S. dollar.

Auchincloss' plan is dramatically simple. He wants to collect 2 million signatures from people who are for a sound dollar. These he will display before Members of Congress to prove just how deeply incensed our taxpayers are about inflation.

MAIL ERUPTS

I related this, and the mail erupted. Within a few days the sound dollar man received 500 letters asking for petition-pledge forms (which he sent out pronto).

Letters bombarded me, too—at the Capitol, the White House, at the newspapers and at home. They came from the poor, the well-established, the young, the elderly, Democrats and Republicans. So enthusiastic were some writers that they enclosed dollar bills to be forwarded to Auchincloss.

The irony is that this personable patriot hadn't asked for contributions. He's absorbing the expenses himself, as long as his own personal budget can take it.

Already, the science teacher has amassed more than 100,000 "me too" signatures from all points of the country. He expects to hit his first million in a couple weeks.

Since he can't leave his classrooms for the whole day, he's had to hire two helpers at his sound dollar headquarters, 106 West Main Street, Oklahoma City. They've been working overtime sending out the petition-pledge forms and "I'm For A Sound Dollar" auto stickers.

SEND CLIPPINGS

There's another major item in the master plan of the sound-dollar man. That is to kick off an avalanche of letters from constituents to Congressmen enclosing clips of any newspaper story that tells of Government waste or proposed Federal inflationary spending.

Auchincloss, a handsome former P-47 fighter pilot, and an ace of World War II, has another idea of dramatizing his campaign. He hopes to hold an enormous sound-dollar rally in Oklahoma City for 6,000 taxpayers.

Already he has acceptances tentatively from two speakers, Capitol Hill's biggest anti-inflation advocates, Senator HARRY BYRD, Democrat, of Virginia, and Senator BARRY GOLDWATER, Republican, of Arizona.

Just in the short time since the Oklahoman came up with his plan, new records leading toward fiscal destruction were being established.

Our national debt nudged up another notch and now stands at just a shade under $300 billion—the highest debt of any nation of any generation in all the world. At the same time, the people who keep tabs on installment buying disclosed that families have fallen deeper than ever into personal debt—$50 billion.

And as this is written, I learn that our 46-cent dollar has shrunk another fraction—to its lowest point in all time.

Maybe those 2 million signatures will wake somebody up in Washington.

A TEXAN IN WASHINGTON—CRUSADER PUSHES FOR SOUND DOLLAR

(By Robert E. Baskin)

WASHINGTON.—A carrot-topped young descendant of Peter Stuyvesant turned up in the Capital one day last week to see what he could do around here about promoting his one-man crusade.

Bayard Auchincloss is 38, a World War II fighter ace over Germany, a science teacher at a private school in Oklahoma City and—most of all right now—an exponent of the sound dollar.

Washington is full of pleaders for special causes, most of whom operate with an expertness born of long practice. But Auchincloss is strictly new to the business.

"I don't have any organization," he told reporters here. "And I don't know what needs to be done to achieve a sound dollar.

"What I want to do is arouse the American public to the need for a sound dollar. Then it's up to the people in Government to work out the details."

Considering the fact that his campaign has been underway only since February, he appears to be doing fairly well.

Auchincloss is concentrating on youth and he has obtained about 10,000 signatures on a youth petition to Congress asking that it stop increasing the national debt. Kiwanis Key Clubs in Oklahoma and Texas, including those in Dallas, have approved the project.

Auchincloss, a member of a wealthy New York family, is financing the campaign himself.

"I haven't asked anyone for contributions," he says.

He is using many types of promotion to make the public aware of his campaign.

On April 15, deadline for filing Federal income tax reports, Auchincloss had a skywriter make a big dollar mark over Oklahoma City. Newspapers, radio and television advised folks that this was a "sound dollar" promotion.

In addition he printed up automobile stickers, campaign buttons and stationery stickers with the sound dollar theme.

So far he has received about 1,000 letters from persons in 31 States offering to help the campaign along. One well-to-do Oklahoma farmer spends most of his spare time distributing buttons and literature, Auchincloss reports.

"As the program progresses," he says, "it is becoming more and more apparent that people already have strong feelings about the financial profligacy of our Government, and that all they need is some way to express themselves on the subject."

Recently, Auchincloss distributed postcards which urge Senators to support a constitutional amendment to bar any increase in the national debt and to reduce it annually by $500 million.

This summer Auchincloss plans to attend both national conventions to distribute literature and advertise in other ways the sound dollar theme.

Asked about his reasons for launching the campaign, he has a simple answer.

"I've got four children," he says.

[From the Daily Oklahoman, Mar. 24, 1960]

INFLATION FIGHTER RALLYING SUPPORTERS—AUCHINCLOSS' SOUND DOLLAR LTD. ATTRACTS LETTERS FROM 22 STATES

(By Bill Harmon)

Bayard Auchincloss' favorite letter among those received at his Sound Dollar Ltd. headquarters came from a Canonsburg, Pa., housewife.

She and her husband, she said, are weary of "fighting the losing battle of trying to live within our very modest means." She wrote she had left dishes in the sink to take time to offer help to the anti-inflation crusade.

Auchincloss thumbed through a growing stack of letters from over the country Wednesday. The response to his sound dollar movement, he said, has been marvelous.

From a new headquarters location at 106 West Main answers to the letters along with petitions, auto stickers, and red, white, and blue folders explaining the plan are going out daily.

Auchincloss, 38-year-old Casady School teacher, counted almost 250 letters received since Monday. Many of them, like the one from the Canonsburg mother, were penned or penciled on tablet paper. Others came on expensive letterhead stationery. All offered aid in the fight against inflation.

"We've come a long way, I think, in 2 months. We've become national in scope now," said the soft-spoken Auchincloss. "It shows the extent of the feeling of the people about what's happening to the dollar.

"It's there, wanting to come out. The more they think about it, the stronger their feeling about it. That's the way I feel."

The objective of Sound Dollar Ltd., has changed a little since it was formally launched February 4, he said. It began—Auchincloss' own idea and financed by him—as a means of letting the people know about economic issues.

"We're now providing a way for people to communicate with their Congressmen easily and effectively," he explained. "We're getting people to write and we're helping them realize that their opinions about inflation are worth something."

Auchincloss, son of a wealthy New York family, seeks no personal gain from the movement and he has no readymade plan to stop inflation. The goal he's set for the sound dollar petitions is 2 million signatures to present to Congress.

Many of the letters he's received evidently came from elderly persons.

"Here's wishing you success," said a Baldwin, N.J., man. He said it was time "someone with backbone did something about nasty inflation."

Inflationary Government spending has given him an upset stomach, said an Amarillo, Tex., man, and he was "unable to find any Republican or Democratic medicine that gives me any relief."

A few of the letters contained dollar bills.

"Sorry it's only worth 46 cents," wrote a Huntington, W. Va., man who enclosed a dollar.

One letter was written in verse.

"Looking for a dollar as sound as '39, let us stop our kidding, it's going to a dime.

"Our Uncle Sam, the Grand Old Man, even if he's broke could find a way to subsidize every single bloke," wrote the versifier from Media, Pa.

"Let's do something about it besides talk," urged a Clarksburg, W. Va., man. Another, from Garden City, N.Y., asked, "Why stop at 2 million signatures?"

The letters began coming in more heavily since Auchincloss appeared last week at a Washington news conference. Reports of his crusade for economy in Government were circulated in the East, and Auchincloss now has received requests for petitions from 22 States.

The petitions call for an end to wasteful spending and eventually an end to foreign aid.

A letter from a New York woman offered her services in carrying a sound dollar placard in Washington.

"I could always stretch the dollars but they have lost their elasticity," said another from a Belle Vernon, Pa., woman. A retired teacher deplored the gimme, gimme atti-

tude of people today wanting Government support from the cradle to the grave.

Auchincloss said he believes the sound dollar movement is just beginning to roll. He plans to continue to finance as much of it as he can alone. Use of the new headquarters space was donated by a supporter.

One of Casady's original staff of four, Auchincloss teaches history, geography, general science and music.

As a P-47 fighter pilot he was an ace in World War II with the 8th Air Force, making 71 combat missions and shooting down five German planes. He won the Distinguished Flying Cross.

His teaching duties limit the time he can give to Sound Dollar, Ltd., but now that national interest is becoming aroused, Auchincloss believes the 2-million-signature goal is in sight.

"We hope to show the mounting feeling on the part of average Americans that they don't want the Government to keep on spending so much money, more money year after year," he said.

Effect of Importation of Machinery on the Domestic Economy

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. SHIPLEY. Mr. Speaker, a serious problem exists because of the unfair competition to the machinery industry on foreign-made machinery and I wish to mention at this time some of the effects such imports have on the U.S. economy and on the economy of the 23d Congressional District of Illinois which I represent.

Traditionally, the United States is a heavy exporter of machinery. However, in recent years imports have been growing. In the single year between 1958 and 1959 they rose from $472 million to $656 million or by 39 percent. In the same period exports remained almost stable. Much of the increase is the result of more modern, lower cost foreign industries rebuilt since World War II, many of them with the financial and technical aid of the United States. Not only do their products come in as imports and compete with domestic industries but they also compete with our exporters in foreign markets.

According to a study by the Department of Commerce, Illinois share of U.S. exports of nonelectrical machinery is one-seventh of the national total. About 11 percent of the Nation's electrical machinery output is located in Illinois. Her machinery industry thus is affected by increased imports, such as 1959 witnessed in industrial, office and printing machinery and in electrical apparatus imports. Furthermore, our machinery industry is experiencing more and more difficulty in competing in world markets.

One pertinent example is the recent award of a contract to Mitsubishi Shoji Kaisha, Ltd., of Japan, for a number of towing locomotives to be used in the Panama Canal Zone. It is true that the Japanese bid was well under the lowest American bid, that of the Plymouth, Ohio, Locomotive Works. Perhaps this is good business, but I quarrel with the idea that the Japanese were awarded the contract through fair and free competition. Our laws impose burdensome production costs upon business which, together with our high wages, makes the term "free and fair competition" a mockery.

If our machinery industry is to survive, action must be taken to insure fair competition.

Imports are causing serious concern in our country. While exports increased only slightly less than the gross national product between 1950 and 1959, imports increased by 8 percentage points more than the increase in gross national product.

Dun's Review has recently completed a survey of the effects of imports on our economy. Both the members of their president's panel—representing 175 of the Nation's leading companies—and a random selection of 300 small manufacturers expect more serious competition from foreign imports in the next 5 years. Most of the panel members and the smaller companies polled believe that lower labor costs, less overhead, foreign government export subsidies, and low ocean freight rates account for the difference in costs. Many trace it primarily to lower wage costs, although there is diversity of opinion here. I am sorry to say that close to 40 percent of the presidents of large corporations on the panel reported that they plan to launch more foreign operations—licensing arrangements, new plants and expanded facilities abroad, joint operations with oversea manufacturers, and purchase of foreign concerns. I do not know how many of these are located in Illinois or if any are in my district, but I do know that this means the export of jobs from our borders and import competition. The smaller businesses must rely on increased efficiency, new products, automation, and greater production. The increase in imports of finished manufactures, which in 1950 constituted about 18 percent of total consumption imports, accounted for about 34 percent of import transactions in 1959. Together with semimanufactures, they accounted for over half of U.S. imports by value. This is a grave portent for my congressional district and for the State of Illinois.

For all these reasons, I feel that concrete action should be taken immediately to alleviate such conditions.

Federal Bureau of Investigation—IV

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. DEVINE. Mr. Speaker, the following article is the fourth of a series appearing in the Columbus (Ohio) Dispatch relative to the wonderful record of the world's greatest law enforcement agency:

WASHINGTON.—A couple of years ago, just before the Christmas season, an FBI apprehension was effected in Columbus, Ohio.

Walter Carl Splitt and Barbara Ann Jones were arrested. Their story began when they escaped Ohio institutions and FBI assistance was requested. The FBI found indications they were responsible for a bank robbery in Kentucky.

Shortly before Christmas, the FBI received word that Splitt and Jones might well be in Columbus.

Columbus police were particularly desirous of taking these individuals into custody. Investigation led to the Northern Lights Shopping Center. Splitt had a reputation of being an extremely dangerous individual. Barbara Ann Jones, although of relatively tender age, was nevertheless a gun moll and normally carried a loaded automatic strapped to her thigh, concealed by her dress.

A special agent of the FBI walked into a drugstore in the shopping center. He saw Splitt and Jones seated at a table. Reinforcements and police were summoned.

As he came out of the drugstore, he gave an appropriate signal to the assisting officers. The signal assured them that Splitt and Jones were in the drugstore. The fugitives finished their coffee, emerged and edged through the crowd to their car. They were hemmed in by Columbus police and FBI. Both were taken into custody before they could use firearms.

In such a case, immediate positive identification of a fugitive is of paramount importance. Fingerprints provide the answer.

The FBI Identification Division established by Director J. Edgar Hoover in July 1924, is an indispensable part of the FBI team.

The world's largest storehouse of identification data, currently houses more than 155 million sets of fingerprints and receives about 20,000 fingerprint cards each working day.

The bulk of these prints are noncriminal and are housed in the civil files. But there are approximately 13½ million fingerprint cards of individuals arrested for criminal offenses. These are segregated from the civil fingerprint cards. A "monicker" or nickname file is also available.

In one instance, the name of "Kentucky Red" was all that was known by a law enforcement agency. When this alias was checked through the "monicker" files of the Identification Division, full facts concerning this criminal were made available. As a result, a case was solved, a fugitive located, and justice meted out.

At the time of its establishment, the Identification Division totaled 810,188 fingerprint cards.

These were the result of consolidation of the fingerprint cards on hand at the Federal penitentiary at Leavenworth, Kans., and those in the possession of the International Association of Chiefs of Police. Today thousands of law enforcement agencies throughout the States use and contribute to this national clearinghouse of identification data.

During the early days of World War II, a fisherman pulled a shark from the water near Miami, Fla. A human hand was found in its stomach. It was the right hand and identification would be painstaking without the prints of the left hand. The FBI files (except with regard to certain notorious criminals such as bank robbers, extortionists, and impersonators) classify fingerprints according to data derived from a study of all 10 fingers.

The FBI's efforts to identify the right hand necessitated an approximation of the classification of the missing left hand.

Trial and error took place. After considerable study, research, and unsuccessful attempts to identify the person, a sufficiently close guess of the left hand was made to permit the location of a fingerprint card. A positive identification was made based upon the fingers of the right hand.

The FBI is constantly serving the public through its identification facilities.

In one instance, an individual from Thiess, Germany, consulted the FBI as to the whereabouts of a missing relative who had been known to reside in Oklahoma years earlier.

A check of the Identification Division files of the FBI revealed that this missing relative was in Portland, Oreg. The correspondent in Germany and the missing person in Oregon were notified. As a result, father and son were restored in family unity after an absence of approximately 25 years.

In another instance, a person walked into a sheriff's office, and said he had no idea who he was. Clearly he was an amnesia victim.

There were no papers of identification or other means of identifying this person—but fingerprints, which remain the same throughout life, provided the answer. A check of the civil files of the FBI revealed he had been fingerprinted in the State of Washington in 1905, one of the first enlistees of the U.S. Army subjected to fingerprinting.

In Columbus, Ohio, recently, a man was charged with the death of three schoolchildren. The individual, driving a stolen car and fleeing from police, lost control of the vehicle and plowed into a group of children awaiting a schoolbus in South High Street. Three died.

There have been similar occasions in the past when the offender was not under police scrutiny as in the preceding case. For example, there was the situation involving a 7-year-old schoolchild. As she stepped from the curb after school she was struck and killed by a hit-and-run motorist.

Alert local officers investigating at the scene of the crime encountered bits of evidence which led to the solution of this case.

Tiny pinpoints of paint embedded in the clothing of the child were sent to the FBI laboratory for spectrographic analysis. In the hands of scientists staffing the FBI laboratory, these paint specimens were analyzed. They found that the vehicle was an old model car which had been painted 11 different times.

Comparison with the FBI national automobile paint file showed that the car was a 1948 Pontiac and was green at the time it left the factory, but 10 subsequent layers of paint had been applied.

The FBI advised local officers of the exact order and color of each layer of paint and the order in which these applications were put on the car. Shortly, police located a suspect vehicle.

A penknife and a quick flick of the wrist made it possible for an investigating policeman to secure a sample of paint from the suspect vehicle. It was sent to the FBI laboratory and there compared with the initial specimen. Each layer of paint matched up conclusively.

When faced with the possible testimony of an FBI expert in local trial, the suspect confessed and admitted the situation which led to the death of the child.

Prior to November 1932, this would not have been possible. At that time the FBI laboratory was founded. Director J. Edgar Hoover, in building the basic structure of the FBI, realized the importance of science in crime detection. Small at the beginning, the FBI laboratory has grown to more than 100 experts, each highly proficient in his particular specialty. Municipal, county, and State law-enforcement agencies throughout the Nation submit evidence in criminal cases to the FBI laboratory for cost-free examination. During the 1959 fiscal year, nearly 185,000 examinations were conducted by experts of the FBI laboratory.

Examinations cover a multitude of matters. The FBI laboratory has on hand samples of the typewriting of all known U.S. makes and most typewriters of foreign manufacture. There are thousands of samples of safety paper. Handwriting as retained from known extortionists, impersonators, espionage agents, anonymous letter writers, and persons likely to participate in the overthrow of the U.S. Government.

Even lipstick is susceptible to analysis and comparison with FBI standards.

As its name implies, the FBI laboratory is not devoted solely to criminal undertakings.

A few years ago, an elderly lady died. Litigation arose over the estate and the case wound up in Federal court.

One thing which puzzled the persons looking after the estate was the large number of notebooks, papers, notes, and various documents around the huge house. Some mentioned explorations.

A question developed as to the authenticity of papers relating to the Lewis and Clark expedition into the Northwest Territory. The papers soon wound up in the FBI laboratory. It took the laboratory a relatively short period of time to render its report:

"The papers are notes of the Lewis and Clark expedition, authentic notes, the only known authentic notes, in the handwriting of Lewis, and of Clark, except for document No. 12 which was a map and contained a paragraph written in the margin; that paragraph was written personally by Thomas Jefferson."

The FBI laboratory concluded that these documents would be interesting to scholars and historians when ultimately published.

Like all FBI undertakings, the laboratory is devoted to search for the truth. The officials and experts of the FBI laboratory are not rated according to the number of convictions which they obtain. Appreciation of scientific fact—understanding of science as a means of assisting in the administration of justice is of top-level importance.

Thus the FBI laboratory is a valuable adjunct of law enforcement officers throughout the land. Both are devoted to serving the ends of justice. Neither is concerned with convictions per se; each is concerned with putting facts on the record.

Fulbright Report Falls Short

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. DEROUNIAN. Mr. Speaker, in the report of the Senate Foreign Relations Committee, we witness the appalling spectacle of Americans trying to undermine American prestige. I call to the attention of my colleagues the article by David Lawrence which appeared in this morning's New York Herald Tribune:

FULBRIGHT REPORT ON U–2 SEEN REACHING NEW LOW

(By David Lawrence)

WASHINGTON, June 29.—Has the "prestige" of the Senate Foreign Relations Committee "reached a new low"? The Senate has just been given a report on the U–2 affair which in part is concurred in by some of its Members, while others dissent. It lacks coordination and consistency. Ten Senators—all of them Democrats, including Senator KENNEDY—officially put themselves on record as implying that the President should have lied to the world. Six Republicans and one Democrat insist that it was absolutely necessary for the President to tell the truth.

The same committee's chairman, Senator J. WILLIAM FULBRIGHT, Democrat of Arkansas, after presenting the report to the Senate, alleges that the administration is lying now about certain aspects of the incident. In a speech to the Senate, he says:

"We are told that this particular flight was in a special category; that it was seeking information of extraordinary importance which might not be available later. However, we are not told, even under conditions of the utmost secrecy, what that information was. In view of the sensitivity of some of the other things we were told, this reticence on the part of the executive branch raises the question of whether the information sought on May 1 was in fact as important as it has ben represented. There is ground here for the conclusion that the alleged extraordinary importance of this information is the administration's cover story for its own costly mistake."

SEES INCONSISTENCY

To accuse one's own Government of lying to a Senate committee doesn't seem to bother the Senator, who, in the same speech, also declares that President Eisenhower should have refused to take responsibility for the U–2 business and, instead, should somehow have evaded the truth. For, while Mr. Eisenhower did not really know in advance of the particular flight on May 1, he did give general authorization in advance and said so to the American people and the world. Yet Chairman FULBRIGHT says to the Senate:

"The gravest mistake was made when the President assumed responsibility for the flight."

Senator ALEXANDER WILEY, of Wisconsin, ranking Republican on the Foreign Relations Committee, and Senator FRANK LAUSCHE, of Ohio, Democrat, in a separate report concurred in by five Republican Senators, rebutted this same point as follows:

"Conditions following the May 1 flight having developed as they did, it was unavoidable for the President to make a statement with regard to it. If he had to make a statement, he had to state the truth. Moreover, if he had not told the truth by avoiding personal responsibility, the four demands Khrushchev made upon him in Paris would not have been altered."

NOTES CONTRADICTIONS

But what is puzzling are the contradictions in the main report, which frankly says that "the sort of information provided by the U–2 if or enormous value in assessing Soviet capability to mount a surprise attack," and then argues later on as follows:

"In looking back, if one accepts the conclusion that the failure of the mission furnished an excuse for Khrushchev's wrecking of the summit conference, then, in the absence of compelling reasons to the contrary, there is good reason to conclude that the flight should not have gone."

But the Secretary of Defense says the reasons were compelling, and the Senate majority report itself concedes the great value of information obtained by the U–2 flights, which were needed to help protect the American people against surprise attack by the missiles of the Soviet Union.

THE FULBRIGHT SPEECH

Possibly the prize example of inconsistency and lack of coordination among the Democratic Members is to be found in Senator FULBRIGHT's own speech, when he says:

"In any event, my argument is not that the President should not have told the truth; my argument is that he should not, as the head of our Nation, have become personally involved in the incident, one way or the other."

WOULDN'T SATISFY RED CHIEF

This appears to be one of those "distinctions without a difference." For the query will be immediately posed as to how a President of the United States can keep himself from becoming "personally involved" in any official action taken by his own administration. One can hear already the outcries from the Democrats demanding an investigation of why the President, assuming that he did blame someone else, didn't know in advance what was being done and why he has subordinates who do such things, and so on. Indeed, Mr. Khrushchev would not have been satisfied with such a patent evasion of official responsibility and would have continued to demand the removal and punishment of those same subordinates.

There was a time when the Senate Foreign Relations Committee had considerable prestige. Today its report stands as a glaring example of how to furnish arguments to the Soviets for use on the airwaves to try to discredit the United States and to help bring it to a "new low in prestige"—which phrase an American Senator, chairman of the Senate Foreign Relations Committee, uses in an indictment of his own Government.

Some Notes on Foreign Trade—Tariff Problems

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. WRIGHT. Mr. Speaker, so much has been said and written about the effects for good or ill upon our total economy exerted by our trade and tariff policies that it sometimes is difficult to obtain a clear, broad, and objective picture of the situation.

Recently, at the request of Mr. C. Wilson Harder, president of the National Federation of Independent Business, Mr. George Burger, Jr., prepared a thoughtful and careful analysis of the problem which I believe merits reading and study.

Mr. Burger is assistant to the president of this organization. The organization itself, certainly known to most Members of Congress, is an excellent example of democracy in action. Representing the largest numerical strength of any such businessmen's organization, this federation espouses causes only after they have been individually voted upon and endorsed by the majority of its many thousands of small and independent business members throughout the entire Nation.

The article follows:

SOME NOTES ON FOREIGN TRADE—TARIFF PROBLEMS

Right from the beginning, it's important to get a balanced view on these matters. Some points are in order:

1. The problem of import damage to U.S. domestic industries is not new; it is something that's been with our country right from the beginning and despite the presence of which we have developed an increasing number of small businesses.

2. We're not alone in this problem. To a greater or lesser degree, some businessmen and labor bodies in other countries have been, and are, complaining to their own governments about the effect of imports on their own industries.

3. Since we are not a self-contained unit (since we need some things produced in other lands), we've got to trade. This leads to problems. For instance, we buy tin. To pay for this, we try to sell oil. This runs us headon into industries in other countries, and generates competition. For the gross of knitting needles we sell to Japan, the payback may come in a roundabout way, as an effort to sell, say on the part of England, a British automobile to some consumer in our country.

4. In all this international buying and selling, just the same as in our own buying and selling, somebody is going to get hurt. My friend who opened a variety store in South Redwood City went into competition with a chap across the street, and failed. He got hurt because of competition. Now he's doing something else. Our problem, in all work on international trade, is to prevent serious injury through unfair competition. This is where the rub comes in. Who is to say what is serious injury and unfair competition? A case in point: When my wife suffered a thyroid condition, the family doctor was much alarmed and gave her a long, costly series of treatment. Finally he sent her to a specialist. This chap, used to seeing extreme cases, examined her, dismissed her trouble as inconsequential.

5. As in all other situations, the outfits most likely to be hurt first and worst are the newer and smaller firms in an industry. At both levels they are likely to be tender financially. However, we've got to make a distinction: the direct, immediate effect of imports is likely to be felt by manufacturers in affected lines. Retailers (particularly the large retailers) generally are most interested in being able to sell good goods at long profits, regardless of source of supply. In the field of imports, this may not be entirely true for the smaller retailers who, for one reason or another, may be wedded to distribution of American-made products. But, generally, retailers will complain bitterly only when imports dry up sufficient domestic manufactures that they begin to lose customers due to unemployment. Since manufacturing in the U.S. employs only a fraction of the number of workers who are employed in the retailing trades, this reaction could be a long time coming, barring a well-developed public relations program by affected manufacturers. Further, we've got to make another distinction: the effect of, and reaction to, imports can vary from area to area. For instance, our port cities would have an interest in foreign trade, imports and exports, and might think such trade very beneficial. But a nonport city—that is, the site of an affected manufacturing plant or plants—might be forced to stay awake nights worrying about the inflow of foreign goods.

6. There's no question but that there is a definite problem in some areas of our domestic industry due, directly and indirectly, to imports from foreign countries. For instance, Business Week reports: "Chinamakers have had a body blow from the growth of imported merchandise. Eight out of 21 firms of long standing in the restaurantware field folded in the last couple of years." Some of the remaining factors in the industry have made manufacturing connections abroad.

Among the products and industries affected seriously by import competition, are the following:

Watches, office machinery, sewing machinery, tableware, cameras, clothing (women's and men's), bicycles, wilton and velvet carpets, radios, semiconductors, handmade glassware, chemicals, oil, automobiles, coal, calf and kid leather, mink skins, hardwood plywood, textiles, stainless steel flatware, steel.

7. However, before considering the injury and remedies needed, we have to look into the problem. For instance, automobile imports have been giving Detroit a headache, but there is a strong possibility this is not due to price alone, but rather in some measure is due to the possibility that the foreign manufacturers had been giving the American consumer a choice in style and size and economy he hadn't been having. Now, with the new American small cars on the market, some of these foreign manufacturers will take a beating. Goliath is already cutting its operations back. More than this, we have to be careful of statistics. For instance, Singer Sewing Machine is the only large manufacturer of these devices remaining in the United States. It has set up plants abroad to produce, with lower labor costs, machines to compete with those being sold here from Japan. Its employment at its New Jersey plant has been reduced from 9,000 to 4,000, but not because of the swelling tide of imports so much as because of the introduction of labor saving machinery.

8. We must not fall into the trap of thinking that protection for U.S. industries is the solution to prosperity problems. Statistics show that the volume of imports and exports grows and dimishes with our prosperity, and with its cycle. High tariffs have never reversed an economic downswing. The Smoot-Hawley protective tariff of the early 1930's, one of the biggest barriers ever erected against import competition, failed miserably either to restore prosperity to our country, or to bring stagnant industries back to life, or to restore small business activity.

9. One thing we must recognize, whether we like it or not, is that since World War II we have been building ourselves a king-sized import headache. In the long run, for any country, exports tend to balance imports, and imports to balance exports. Since the war we have been exporting tremendous amounts of capital to restore the war-shattered and disrupted economies of other lands (to a degree, in self-interest we've had to do this in order to remain competitive with the only other major power in the world—the U.S.S.R.). Whether or not we want a "payback," we've got to get one, and we must expect it to come in goods and services. There's no other way out. This would seem to be the pattern that came about after World War I, when the sum of our postwar capital investment, in other countries was much smaller than recently. In this connection, in textiles (one of the hard-hit industries), according to Business Week, it's unlikely you will find many stores doing as much as 5 percent in imports, 1, 2, or 3 percent would be more like it—as compared with the 10-percent figure after World War I.

10. The facts in No. 9, above, would seem to indicate that, if we are in trouble over imports, we are now only in the early stages. This is borne out by statements that the thing which is worrying manufacturers today is not so much the total volume of imports being received and sold, as it is the rate of increase in these imports. For instance, in women's clothing there were an estimated $115 million worth of imports last year, against half of that in 1955. Further, imported new car registrations for the first 8 months of this year amounted to 400,000, against only 57,000 for all of 1955.

11. Much is heard about lower wage costs in other lands being the basis for successful cut-price competition in American markets. The truth is that in other countries wages are perhaps 25 percent of what they are in the United States. But this is not (as indicated in the example of automobiles and bicycles in No. 7 foregoing) the only reason

for successful sales of foreign products on our markets. It is, however, one reason in certain industries affected, and in these industries an important one.

12. Much is being heard about the establishment of plants abroad by U.S. firms. U.S. firms are establishing such plants. But it must be kept carefully in mind that not all these plants are being established to sell back into the U.S. markets. Some of them are being established to meet local and regional requirements which could not be met out of plants located in the United States. In any case, as reported in U.S. News & World Report, John L. Lewis recently observed "1,000 American companies have producing plants abroad. They employ 1 million foreign workers." A list of some of these companies and brief descriptions of their operations (based mainly on an article from U.S. News & World Report are appended.

13. Some effort has been made to make a case for freer foreign trade, or to attack protectionist moves, on the basis of relative employment. For instance, statement has been made that the process of foreign trade (imports and exports) is responsible for 4.5 million jobs (steamship operations claimed that in 1956 the jobs of 1 million New England workers depended on foreign trade). But just how many of these jobs are due to imports, and how many to exports, is not broken down (think of this in the context of having to have imports to have exports, and vice versa). Against this, it was said, up to 1 year ago, that the jobs of 500,000 Americans had been affected by foreign trade. In any case, judging by the number of industries affected by import competition, and by the fact that in only one of these industries—pottery—there are 100,000 jobs, this 500,000 figure could be low.

14. In any case, the argument over damages in this field seems to center around two or three things:

(a) Whether our Government is using the escape-clause device in agreements to provide needed protection of our domestic industries.

(b) Whether there is vigilance in using peril-point provisions and powers to assure no damage to U.S. manufacturers.

(c) Whether we are, in fact, allowing the United States to become a dumping ground for foreign manufacturers.

In connection with the latter, we've got to remember that other countries have accused us of dumping in our below-.US. cost sales of agricultural commodities on world markets. But in this connection, American Viscose Corp. complained in 1956 that of 92 complaints of dumping submitted by U.S. manufacturers and industries to Government from 1947 on, in only two cases were there findings that dumping had actually occurred. The Nationwide Committee on Import-Export Policy reported in 1958 that succeeding Presidents had given but lipservice to escape-clause provisions in our tariff laws.

APPENDIX—AMERICAN FIRMS WITH PLANTS ABROAD

(Based mainly on article in U.S. News & World Report)

Royal McBee: Three plants in Holland, building a fourth, producing typewriters, with total employment of 1,600. Another plant, in Italy, makes accounting equipment. Plans to import a portable from the Dutch plants, costing about $75, as compared with the selling price of $145 for its American made counterpart.

Smith-Corona: Recently bought British Typewriters, Ltd., in order to compete with foreign portables sold in this country. Its British plant labor costs are estimated about 70 cents an hour.

Remington-Rand: Expanding its oversea operations, already had 23,000 workers in 29 plants. Latest move, agreement with Japanese company to make business machines for the Far East. Remington portables made in Holland are coming in to the United States at a few hundred a month. Some standard typewriters produced in Holland are coming in, too.

Underwood: Reports its British plant is bursting at the seams. Is selling in the European market. Earlier this year it opened a new plant in Italy for adding machines and may produce a standard typewriter for the U.S. market.

(All the four foregoing firms are banking on their oversea operations to keep them competitive in foreign markets and at home.)

National Cash: Plants in Britain, Germany, France, Switzerland, Sweden, Brazil, and Japan which employ 7,300.

Frieden: Plant in Holland makes calculators and billing machines, is about to add a full line. Some office equipment parts made in Holland are to be exported to the United States for use in assembling domestic products. Labor costs abroad reported one-third of U.S. costs.

Burroughs: One plant in France, employing 600, making adding machines, for sale in European Common Market, by present plans.

IBM: Twenty-five thousand eight hundred and fifty employees in 22 plants in 18 countries. Plants in Germany, France, and Italy are being expanded. New factory underway in Holland, and others being built in Japan and Argentina. At present time none of its products are coming back into the United States.

Minnesota-Mining: Shortly will begin making recording tapes and other supplies in new South African plant. Company officials also looking for suitable property in Italy, for a new $750,000 factory.

Hamilton Watch: Agreement with Japanese firm to exchange its production know-how for the exclusive right to sell that firm's watches in U.S. markets. The Japanese firm plans to send 8,000 watches a month into the United States. In Japan the average wage for workers in precision industries, making watches, radios, cameras, and optical instruments, is $46 a month. Average wage in the United States is about $360 a month.

Elgin National: Has leased small factory in Switzerland, for manufacture and assembly of watch components, for use in U.S. assembly. Average wage in Switzerland is about 60 cents an hour.

U.S. Time Corp.: Has taken over 2 German plants that make 1.2 million timepieces a year. Time plants in Germany, England, and France employ 3,700. All the firm's movements for low-priced watches are made in the United States, however.

Singer Sewing: Americans bought $3 million in British sewing machines in 1958, most made by a Singer subsidiary. Singer is the only large sewing machine maker left in the United States. It is producing a low-priced machine in Scotland to sell at $69.50 in the United States, to compete with foreign machines, mostly Japanese, which sell for as low as $49.50. The British wage rate is about $1 an hour. Singer has had plants in Britain, Germany, Italy, and France for many years. It is building in Turkey, Australia, and Mexico. It has part interest in a Japanese firm, but none of this firm's products are being sold in the United States. It has definitely cut back on manufacturing in the United States, mostly on the cheaper models. No plants are closed, but employment is down (for instance, its New Jersey plant has dropped from 9,000 to less than 5,000), but attributes this to automation.

(American auto makers, hit by falling exports, are increasing production abroad to keep sales and profits up.)

Ford: Plant in Australia planned to employ 2,750 workers and produce 200 cars a day. Will make trucks in Argentina, in $15 million plant, employing 1,200.

GM: Completing new plant in Brazil. Employed 97,000 overseas in 1957, and 107,000 in 1953. Net investment outside United States and Canada, end of last year: $330.5 million.

Chrysler: 1958 bought 25-percent interest in Simca, plans to increase holdings. Recently announced plans to build in Mexico for parts. Later plans to produce 12,000 Chrysler and Simca cars there.

GM: Plans to import 64,000 Vauxhalls and Opels this year, compared with 33,000 in 1958.

Ford: Plans to import 44,000 English Fords and German Taunus cars, 2,000 more than 1958.

Chrysler: Plans to ship 50,000 Simcas to the United States this year, against 12,800 sales from September through December last year.

(Auto industry pay in Britain, an average hourly $1.26; in Germany, 69 cents an hour; in France, slightly higher than in Germany, all against an average $2.66 an hour, plus fringe benefits, in the United States.)

(Rubber companies are using foreign plants to produce small tires for small cars abroad, and also for shipment into the United States for sale here.)

General: Plants in 18 countries, including Canada. Principal products tires and tubes, some plastics, and tiles.

Goodrich: New plants building or planned in Brazil, Australia, and Iran. Synthetic rubber factory planned for Holland.

Firestone: $18 million being poured into building and expansion overseas. Major expansion areas: Argentina, Brazil, Venezuela, India, Portugal, and Germany. Has 15,000 factory workers in 17 foreign countries.

U. S. Rubber: Recently acquired majority interest in one of the largest German rubber companies. Also has plants in Belgium and France.

Goodyear: Making tires and tubes in 29 foreign countries. Sinking $7 million into new plant in France.

(In drugs, the benefit has been, to an extent, with American companies, because other countries have been forced to get basic materials from us.)

Parke-Davis: Rapidly expanding abroad because of high cost of exports from the United States to other countries. Wages in Germany are 25 percent of those in the United States. Has plants in Belgium, Italy, Spain, South Africa, Australia, Puerto Rico, Brazil, Colombia, Argentina, and Chile. Its British plant, in operation since before 1900 now employs more than 1,500 people. Has close to 5,000 employees, exclusive of Canada.

Johnson & Johnson: Six thousand five hundred employees in 20 countries, making baby products and health and hospitalization specialities. No plans to manufacture abroad especially for the United States, although this is being done to a minor degree on specialized products.

Merck, Sharp & Dohme: Owns largest chemical and pharmaceutical manufacturing plant in India. Other units in Holland, Britain, and Australia being expanded. Company reports no drop in employment in the United States, just expanded consumption abroad.

Bristol-Myers: Just bought new German plant, and plans another to employ 250 in making toothpaste, hair tonics, shaving cream, and other products. Other plants in Britain, Latin America, South America, Australia, and New Zealand.

Vicks Chemical: In the Philippines, at one of the three oversea plants owned and operated by Vicks, the wage scale, based on official rate of exchange, is around $3.62 a day.

International Harvester: Producing bargain-price tractors in Britain for sale into the United States. Plans to import at least 300 this year, to sell for about $2,800, as compared with an American-made machine that goes for $3,350.

Ford Motor: Importing two models of diesel tractors made in its British plants. In last few years, $28 million worth of one of these models was sold in the United States.

J. I. Case: Has bought controlling interest in a French firm that makes tractors and other farm equipment. Has not announced plans to import French production, but there's possibly it may import a small diesel tractor.

Deere & Co.: Owns 85-percent interest in German plant that turns out tractors and other farm equipment. Has another plant in Mexico, and building another in Argentina.

Allis-Chalmers: Has plant in Britain and recently bought others in Mexico and Australia.

(Interesting observation on comparative wage rates: IH pays about 80 cents an hour in Britain, 70 cents an hour in Germany and France. The average wage for its hourly employees in the United States is $2.59.)

Ex Cello Corp.: (Machine tools) says it's being priced out of world markets, and the only way to stay in business is to make products abroad. Formerly 25 percent of American-made machine tools went for export. Now the flow is the other way. It has bought plants in Britain and Germany. German labor costs are 25 percent of Detroit. In England, skilled labor is available at $1 an hour. Its domestic employment is down from 10,000 a couple of years ago to 6,750 now. The firm isn't bringing foreign-made products back into the United States, but says it will have no qualms about doing so if the need arises.

Gross Printing Press: Employs 800 people in new plant in Britain, building a smaller plant in Germany. Has not yet tried to sell British-built presses in the United States. Says its British subsidiary could undersell its domestic plant by 25 percent any day in the U.S. market. Comparative labor costs are 80 cents an hour in Britain against $2.72 an hour in Chicago.

Hyster Co.: Has opened new plants in Britain, Holland, and Brazil.

Minneapolis-Honeywell: Has 50–50 ownership deal with a Japanese firm that employs close to 13,000 workers.

Marine Outboard International: Bought newly built plant in Belgium to assemble Evinrude and Johnson outboard motors of small sizes. Has $2.6 million investment presently, will expand on this by another million.

Otis Elevator: Has number of oversea plants, and policy of importing some of the more complicated components of elevators because, even after paying duty, they are cheaper than those produced in the United States. Figures its manufacturing costs are two-thirds raw material, one-third labor in Europe, and just the reverse in the United States.

Yale & Towne: Has metal products plants in Britain and Germany and two licensees in France. Plans to open another plant in Brazil.

Eversharp: Recently announced plans to import razor blades from newly purchased plant in Sweden.

Johns Manville: Has working agreements with 13 companies in 10 European countries. Opening two plants in Italy. Investing several million in existing plants in Latin America, and has acquired majority interest in a Mexican factory.

Du Pont: Building three new plants, to employ 1,000, in Holland, Belgium, northern Ireland to produce fibers, paint, and synthetic rubber for the European market.

Worthington Corp.: Makes pumps, compressors, and other industrial equipment in 11 countries, about to open new plant in Italy, and is thinking of expansion in South America. Although Worthington's sales abroad represent about one-fourth of its total business, 60 percent of these sales are based on oversea production, and only 40 percent represents exports from this country.

Litton Industries: Expanding operations abroad, primarily to make items to sell back into the U.S. market. Just bought majority interest in Swedish firm that produces cash registers. Forty percent of this Swedish firm's output is now sold in the United States, and Litton aims to raise this to 75 percent. Litton has plant in Netherlands which ships to the United States. Additionally, the firm imports German-built machines.

One Hundred and Seventy-fifth Anniversary of Gardner, Mass.

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. PHILBIN. Mr. Speaker, I am privileged and honored to bring to the attention of the House that the city of Gardner, Mass., in my district is celebrating this week its 175th anniversary with an impressive program of activities to commemorate this outstanding event. In recognition of this anniversary, I am introducing an appropriate resolution for the consideration of the House which extends greetings and congratulations to the community on the occasion of the 175th anniversary of the incorporation as a town of Gardner, Mass.

It was on June 27, 1785, that the General Court of the Commonwealth of Massachusetts, approved the petition of some 30 citizens to incorporate the township of Gardner, named after the great hero of Bunker Hill, Col. Thomas Gardner, from portions of the surrounding towns of Winchendon, Ashburnham, Westminster, and Templeton. At the time of incorporation, Gardner had a population of about 375, made up of some 60 families, mostly engaged in farming.

Located in an area of Massachusetts which was settled by pioneer colonists in the early days of American history, Gardner has grown from this small beginning into a thriving and active community of some 20,000 people. Today, Gardner is a busy manufacturing center known as the Chair City of the World, symbolic of its fame as a furnituremaking center. The manufacture of fine furniture in Gardner goes back to 1805 and the community takes pride in the fact that its artisans and craftsmen have made the name of Gardner synonymous with that of quality furniture.

Furnituremaking is Gardner's chief industry with some 100 factories, big and small, making home furnishings of all kinds. Among the largest furniture makers is the well-known Heywood-Wakefield plant, one of the oldest furniture manufacturers in America. It remains under the active management of direct descendants of the five Heywood brothers, who founded the company in 1826. There are other outstanding concerns too numerous to recite here.

In these brief remarks, Mr. Speaker, it is not possible for me to recount in full the story of this historic Massachusetts community, but I would like to pay richly deserved tribute to the early settlers of Gardner who helped to build this great country of ours with their magnificent sacrifices, struggles, and accomplishments. The record of their superb work and contributions lives to this day, and Gardner can take justifiable pride in the remarkable legacy it now possesses.

Efforts to form the separate township of Gardner first began in 1781. With the help of neighboring towns, this became a reality on June 27, 1785, when Gardner was incorporated as a town from parts of four neighboring towns. Gardner took about 6,000 acres from Westminster, 2,800 acres from Ashburnham, 4,500 acres from Winchendon, and 700 acres from Templeton.

For some 50 years, farming was the main occupation and those few first industries were those which met the needs of farmers. Chairmaking had its start in 1805 when James M. Comee began the manufacture of chairs in his home. This work was done by hand except for the legs which were turned by a lathe. His product was well received in such cities as Worcester, Springfield, and Boston and it soon became necessary for him to hire workmen to meet the demand.

From this small enterprise grew the great Gardner furniture industry of today and diversified manufacturing enterprises from baby and doll carriages to industrial time recorders.

I am prompted on this occasion to say a word about the leadership and the people of Gardner with special emphasis on this generation.

Like most New England communities, Gardner originated in travail, painstaking work and bitter sacrifice. The early founders meant business. They were not confounded by the grandiose, economic schemes and social ventures that confront us. They were a devout and patriotic people. They placed their faith in their God and their reliance in the developing strength of their free institutions and their courageous fellow countrymen.

First of all, they established places of worship, meeting houses, schools and libraries. The rows of stone walls which cover so much of the New England countryside are silent, but impressive testimony to their industry and laborious work. They zealously pursued the arts of agriculture and husbandry and wrung out of the stubborn, rock-strewn soil and rugged hills of colonial lands a meager, hard-earned living for themselves and their families that nurtured a wholesome, loyal family life.

They encouraged learning, the arts and sciences, and diligently embraced education as a means of securing better leadership and developing their resources, and lifting the levels of knowledge, intelligence and know-how.

Their patriotism was not only a watchword; it was an all-embracing, constantly felt resolution to defend and develop their sacred birthright.

Present-day Gardner has many outstanding leaders imbued with this devotion to basic values and fundamental institutions. I know of no other Ameri-

can community that can boast of better leadership in its industrial, civic, and political activities. Labor and management, banking and manufacturing, artisan and professional man, banker and religious leader, worker and teacher, every class and group of Gardner's society, work hand in hand to promote the common interest of the city.

Thus, an enviable esprit de corps has been built, animated by strong, capable, public-spirited leaders, drawing sustenance from the enthusiastic support of the people, who are quick to recognize not only what is in the interests of the city, but what squares with the rules of humanity and justice.

I am exceedingly proud of this great city with its superb leaders and loyal people. It is without question one of the cleanest and most beautiful of all American cities, and it could never be excelled in its civic spirit and patriotic fervor.

Gardner is indeed a queen and a gem among the cities of the Nation, and on its 175th anniversary, I am highly privileged to hail, salute, and heartily congratulate the leaders and the people of this hard-working, warm-hearted, dignified, and charming city.

Gardner marches into the future with the vibrant confidence born of its illustrious heritage and past successes, inspired by a most able and vigorous leadership, and sustained by a loyal and devoted people.

Gardner, working harmoniously for the advancement of the community, will move ahead in growth and progress in these years, and in the years to come, ever growing stronger in a material sense and ever preserving and enhancing that quality of spiritual dedication for which it is noted and which will continue to engender in its citizenry those close ties of loyalty, respect, and affection which are so essential to American community life and so valuable in safeguarding the fountainhead of American enterprise and freedom.

Mr. Speaker, in observance of its 175th anniversary, Gardner has arranged a varied program of events extending from June 27 to July 4 which should long be remembered by northern Worcester County. Among the highlights will be a general reunion of all Gardner High School classes, which promises to be the largest class reunion ever held at the school, a huge civic parade, reportedly the biggest since Gardner celebrated its 150th anniversary 25 years ago, an outstanding NEAAU swimming meet, and finally on July 4 as the grand finale, an old-fashioned mammoth fireworks display with every indication it will be the most spectacular in central New England on that date.

In addition, a Founder's Day program will be held on July 2 under the direction of the Honorable M. Alan Moore, district court judge, which will review Gardner's history and growth. Representatives of neighboring towns from which Gardner was formed will participate in the program.

Also on July 2, there will be held a general class reunion at Gardner High School, the largest gathering ever of alumni of this outstanding school, which will furnish dramatic and convincing proof of this school's contributions to the growth and welfare of the community. Several thousand will attend the special program planned at Stone Field.

Gardner's 175th anniversary celebration program opened on Monday of this week with a special proclamation by Mayor Cyrille P. Landry. This proclamation so fittingly sets the general character of the Gardner observance that under unanimous consent I insert the text at this point in the RECORD:

[From the Gardner (Mass.) News, June 27, 1960]

PROCLAMATION

Gardner's 175th anniversary celebration gets underway today with a proclamation by Mayor Cyrille P. Landry officially setting aside the week of June 27–July 4 for the citywide observance. The proclamation follows:

CITY OF GARDNER BY HIS HONOR, CYRILLE P. LANDRY, MAYOR, A PROCLAMATION, 1960

In the "History of the Town of Gardner" written by the Reverend William D. Herrick and others (November 1877–July 1878) the following statement appears: "According to the most accurate information, which we are able to obtain, regarding the initiatory steps, taken for the incorporation of this town, Mr. John Glazier, then a citizen of Westminster, in May 1785, presented a petition to the Massachusetts Legislature, bearing about 30 signatures, praying that body to erect certain portions of Winchendon, Ashburnham, Westminster, and Templeton, into a township, called Gardner."

Acting on the above petition the general court of Massachusetts on June 27, 1785, created the town of Gardner, securing the necessary land from the westerly part of Westminster, the southwesterly part of Ashburnham, the southeasterly part of Winchendon, and the easterly part of Templeton, in the county of Worcester.

The history referred to above tells us that, as far as is known, Gardner had, at its incorporation as a town, "a population of only about 375, embraced in about 60 families." The principal occupation of the inhabitants, during the first 20 years following the incorporation, was farming. At the present time Gardner—having become a city January 1, 1923—has a population of approximately 20,000 and has become a manufacturing center whose products are known throughout the world.

It is only fitting that we celebrate the 175th birthday of our fair city and pay tribute to those who helped to make it a reality. Now, therefore, I, Cyrille P. Landry, mayor of the city of Gardner, do hereby proclaim the period from Monday, June 27, 1960, through Monday, July 4, 1960, for the 175th anniversary celebration and request that these days be observed by appropriate events, exercises, and ceremonies throughout our city in commemoration of Gardner's incorporation as a town and her rich heritage since that time.

Given at the office of the mayor, this 15th day of June, in the year of Our Lord 1960.

CYRILLE P. LANDRY.

By His Honor the Mayor.

GENIA J. PACOCHA,
City Clerk.

Through the effective help and kind cooperation of Rear Adm. Edwin J. Roland, commander of the First U.S. Coast Guard District with headquarters at Boston, Gardner has been fortunate in obtaining the renowned U.S. Coast Guard Academy Band, which will be featured at three celebration events: the 175th anniversary ball at the National Guard Armory, a band concert on July 3 at Greenwood Pool during the NEAAU swim meet, and participation in the July 4 parade.

The anniversary program of events follows:

June 27: Proclamation by the mayor opening anniversary week.

June 28: Coast Guard tour for leading citizens, 10:30 a.m., aboard Coast Guard cutter in Boston Harbor.

June 29: Gardner Junior Olympic Day, track and field competition for city youth, 1 p.m.

June 30: Rotary luncheon, address by Coast Guard official, 12:15 p.m., Colonial Hotel; Gardner High School Band concert, 8 p.m. Bickford Playground.

July 1: Softball game between Coast Guard Academy and Napoleon Club, 5:30 p.m., Ovila Case Playground.

July 2: NEAAU swimming meet, 10 a.m., Greenwood Memorial Pool: Founders' Day program, 2 p.m., Pearson Auditorium; Gardner High School general class reunion, 4:45 p.m., Stone Field; comedy safety boating exhibition, 5:30 p.m., swimming meet finals, 6 p.m., Greenwood Memorial Pool; 175th Anniversary Ball, music by U.S. Coast Guard Academy Recruiting Band, 8:30 p.m., National Guard Armory.

July 3: Anniversary church services, morning, city churches; NEAAU swimming meet, 12:15 p.m., Greenwood Pool; car exhibition, sports, classic, antique, and vintage divisions, 2 p.m., Industrial Foundation Building; U.S. Coast Guard Academy band concert, 5 p.m., Greenwood Pool; swimming meet finals, 6:15 p.m., Greenwood Pool.

July 4: Little League exhibition game, 10 a.m., Little League Field; anniversary parade, 3 p.m., streets of Gardner; band concert, 8 p.m., fireworks display, 9:45 p.m., Gardner Airport.

This well rounded program of anniversary activities is being met with the enthused and wholehearted cooperation of the entire Gardner community. In addition, Gardner will be host to thousands of visitors over the holiday weekend since the celebration is one of the main attractions in central New England during the July Fourth holiday period.

Especially noteworthy is the Founders' Day program planned for this Saturday at Pearson Auditorium which will signal an unusually busy weekend of anniversary activities. Chairman of this event is the Honorable M. Alan Moore, learned and distinguished Massachusetts jurist who presides over the Gardner district court. Judge Moore directed the Founders' Day program during Gardner's 150th anniversary in 1935. The 100th anniversary of Gardner in 1885 was presided over by his grandfather, the Honorable John M. Moore.

Under Judge Moore's direction, a simple but eloquent ceremony will set the theme of the Gardner anniversary celebration—the development of the community from a small settlement of some 60 farming families to the busy industrial and trade center the city is today for northern Worcester County. The exercises will be opened by greetings extended by Gardner's mayor, the Honorable Cyrille P. Landry. In turn, greetings and best wishes to Gardner will be extended by visiting selectmen and other town officials from the four

neighboring towns from which Gardner was formed.

The Honorable George C. Sweeney, a native of Gardner and former mayor, now chief judge of the U.S. District Court at Boston, will address the group.

The exercises will also feature three historical sketches by Dr. Marie Gearan, Mary I. Burch and Esther Gilman Moore.

Mr. Speaker, I am very much pleased to introduce today in the House a special resolution bringing attention to the 175th anniversary of Gardner, which I have the honor to represent in the Congress, and extending the congratulations of the House to the people of this community. Under leave to extend my remarks, I ask that the text of my resolution be printed in the RECORD.

The material follows:

Whereas the year 1960 marks the 175th anniversary of the incorporation as a town of the city of Gardner, Mass., as a town on June 27, 1785; and

Whereas from the time of its settlement in 1740 the people of Gardner have figured conspicuously in the founding, growth, and defense of this Nation; and

Whereas the observance of the 175th anniversary of Gardner is being celebrated June 27 through July 4, 1960, with impressive community ceremonies, large public gatherings and widespread participation of Massachusetts citizens and visitors from other States and places; and

Whereas Gardner is a beautiful community rich in historic interest, well known for its patriotic contributions, noted for its many famous sons and daughters who distinguished themselves in many fields of endeavor and many facets of American civilization: Now, therefore, be it

Resolved, That the House of Representatives extends its greetings and felicitations to the people of Gardner, Mass., on the occasion of the 175th anniversary of this community and the House of Representatives further expresses its appreciation for the splendid services rendered to the Nation by the citizens of Gardner during the past 175 years.

For Services Rendered

EXTENSION OF REMARKS
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. KYL. Mr. Speaker, when we talk about postal privileges of small country newspapers, it might be well to note that all the red ink is on one side of the page. An Iowa editor writes as follows:

Last week the ASC manager returned our statement for subscription renewal with the comment that the ASC has no funds for newspaper subscriptions. The very next day we received three sheets of material from his office for free publication and we have received two other releases since then. We also received two releases from the Soil Conservation Service, a four page release from the Post Office Department, two from the Department of Defense, one from each branch of the military service, and several from other Federal Agencies asking for free space. Similar appeals have been received from the Red Cross, polio, heart, and cancer foundations. And to top it all off, we recall items in Congressman POWELL's franked envelope, and items from STU SYMINGTON and LYNDON JOHNSON, none of which related to Iowa business.

Mr. Speaker, newspaper publishers in our small towns ask for no free ride. The Government should continue to consider services rendered when it presents its bill to the country newspaper.

Rearview Brinkmanship

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. DAGUE. Mr. Speaker, the critics of the late, great John Foster Dulles constantly belabored him for his "brinkmanship" without ever coming up with an alternate plan that would keep the Communists on the defensive, as his unyielding stand unquestionably did. Today we are seeing a display of another type of "brinkmanship" by some of Mr. Dulles' former censors who are walking to the very edge of criticizing the President for the U–2 incident, the collapse of the summit meeting, and the Japanese fiasco, but refrain from an all-out attack upon Ike for the simple reason that they sense that the American people are in no mood to tolerate open assault on their beloved President. Indeed, there is much evidence that the people resent domestic, partisan attacks on Mr. Eisenhower even more than they do the rantings of Mr. K. or the Japanese commies, since they feel that the latter are outside the family and are following an expected pattern.

It is recognized, of course, that there are certain highly placed partisans who conveniently forget that it has been only a few short months since they were urging Ike to do the very things in which they now find so much to criticize. They are now saying—looking into their rearview mirrors—that we should have suspended the U–2 flights prior to the Paris conferences. But they wholly ignore the fact that as soon as Mr. K. would have become aware of our having called off our aerial surveillance for the duration of the talks he would have strung out the conference interminably, all the while preparing his nuclear weapons for attack. And they forget, too, that diplomatic negotiation was the very device that Japan used to cover up her plans for the assault on Pearl Harbor. In other words, it is illogical that we should have let down our guard for a single moment and I can only hope that steps are being taken to come up with an adequate substitute for our suspended flights.

As for the charge that Mr. Eisenhower should have ignored or denied our aerial reconnaisance after it became evident that the Russians had one of our planes is simply to say that Ike should have maintained a lie. And recognizing that innuendo and untruth are the traditional tools of diplomacy is still no reason that Americans—and especially their President—should depart from our time-honored trait of "telling the truth and shaming the devil." Yes, we have come to a pretty pass when Members of the Congress of the United States are given to criticizing the President simply because he refused to be branded a liar.

The President in his report to the people on his Far Eastern tour has, I think, put things in their proper perspective. He emphasized that his trip was a good will journey and not a diplomatic mission. He also underscored the fact that he was invited to visit several countries and was royally received in all but one. That the invitation in the case of Japan was withdrawn was definitely a slap at the United States but certainly not at the prospective guest. And there is ample evidence that the overwhelming majority of the Japanese people are now mortified to an extent greater than that which they experienced when they lost the war.

There is ever-increasing evidence that the one thing the Communists fear more than anything else is the winning personality of our great American President and the way of life he represents and personifies. Indeed, their violent demonstrations are ample testimony to that fact.

In my opinion, Mr. Speaker, we have never been stronger than in this hour when we have proved that, in balance, we are superior in deterrant power to the strongest potential aggressor and that, also in balance, due to the peaceful missions of our President we have more admiring friends around the world than ever before in our history.

Good for Gates

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. HESS. Mr. Speaker, under leave to extend my remarks, I include an article, "Good for Gates," by the widely read columnist, Alice Widener, whose column appears in the Cincinnati Enquirer and other leading newspapers throughout the Nation.

This article is of particular interest in that it points up the manner in which U.S. prestige was enhanced at the time of the ill-fated summit conference in Paris, by the strong but prudent action of Secretary of Defense Thomas S. Gates, Jr., in ordering a worldwide test of U.S. communications and command readiness.

Although this sound action of Secretary Gates received spasmodic and gratuitous criticism from some individuals who were not close to the issues, the result of Secretary Gates' action has been highly beneficial from the international standpoint. It is the kind of action, as the article points out, which demonstrates to the world that the military forces of the United States are not asleep in these critical days. It demonstrates, also, that our leadership, as exemplified

by the Secretary of Defense is alert, strong, ready, and at the same time statesmanlike. It is the kind of governmental action which demonstrates the much-admired qualities of resoluteness and prudence.

Secretary Gates has stated that he was mystified why anyone should criticize his action of directing the precautionary tests of U.S. military communications at the time when tension was quickly increasing prior to the torpedoing of the summit by Chairman Khrushchev. After reading this fine article by Alice Widener, I think that the readers will be mystified also why anyone should have criticized that action by Secretary Gates.

I think it is highly appropriate to observe that the action referred to in this article is another of the numerous decisions and policies enunciated by Secretary Gates which have materially enhanced the prestige of the United States, and the effectiveness of our national security. For these many things which Secretary Gates has accomplished in the relatively few months he has been Secretary of Defense, I believe that the title of this article is particularly appropriate.

As you will note, it is entitled "Good for Gates."

I commend this article to the attention of all Members of this House.

GOOD FOR GATES

(By Alice Widener)

PARIS.—Most Europeans breathed a sigh of relief on learning that Secretary of Defense Thomas S. Gates had ordered a worldwide test of U.S. Armed Forces' readiness at summit time. The people here know that Secretary Gates has to cope with two facts:

1. The Central Committee of the Russian Communist Party intends to wipe out Western civilization;

2. The Pentagon is the main physical defender of our civilization.

Even Hitler spared Paris and Rome in World War II. But Khrushchev would willingly destroy in one blow and without a qualm all the symbolic and actual beauties of the Capitol, Notre Dame, Westminster Abbey, St. Peter's and the Vatican, the Coliseum and the Parthenon.

Yesterday, at the French Ministry of Information, Mlle. Simone Menut said, "On his state visit to De Gaulle, we showed Khrushchev some of our most beautiful historic sites. Not only was he bored, he was hostile. At Rheims Cathedral, he made a point of turning away and saying rudely, 'Show me a factory worker so I can talk with him.'"

Last night, the well-known French press photographer Zizi told me, "Last week when Khrushchev went to the countryside to talk about peace, he patted two healthy, happy French schoolboys on the head and said in Russian to Malinowsky, 'They'll make good soldiers!'"

If the West were to abandon its traditions and accept a proletarian culture, then the Kremlin would gladly accede to "peaceful coexistence" during the change-over. But if the West wants to preserve its civilization and great traditions, then it must be ever ready to fight for them.

As things stand now, most Europeans frankly admit that they rely for safety on our military might. They don't fear or dislike American militarism; they pray for its strength. Contrary to what some biased reporters say, most people in Great Britain and France deplore the "ban the bomb" activities of a loud minority of "walkers for peace." They also deplore the activities of those whom they describe as "good-for-nothing professional pacifist intellectuals." Again and again, I heard Englishmen say in May, "The pacifists were wrong in 1936; the French wanted to move against Hitler, but our pacifists wouldn't let them." Again and again this week, Frenchmen have told me, "If only you Americans don't permit yourselves to be hamstrung as we were in 1936."

The pacifist "marchers for peace" in London and Paris are a loud minority with a hard core of Communists at the center. These militant Reds urge fronters to advance further toward appeasement and goad laggers into putting out a left foot first.

As soon as Khrushchev's infamous press conference was ended, European journalists turned to one another with the comforting remark, "At least the U–2 affair shows the Americans are on the qui vive." Except for pro-Communists, no responsible reporter believes it is possible to talk things over rationally with Khrushchev or his ilk.

It is an excellent thing that Secretary Gates had said the U.S. Armed Forces will undergo more readiness tests on a no-warning, no-notice basis. He says he is "mystified why anyone would question the wisdom of it." Secretary Gates is not the only one who is so mystified. It is most puzzling to note reactions to our Armed Forces test in some American quarters and to see how encouraging these reactions are to Communists here.

On May 20, l' Humanite, the French Communist newspaper, reprinted Walter Lippmann's critical column of May 19 in its entirety with the quoted heading, "The errors of the American Government not only torpedoed the summit but also gravely hurt the prestige of the United States." Mr. Lippmann said that Secretary Gates' act in calling for a worldwide alert was an even greater mistake than the U–2 affair. Next day, l' Humanite highlighted on the center front page the quotes, "Mr. Adlai Stevenson—We can't wipe out our mistakes with a sponge" and "Mr. Chester Bowles—We must revise our foreign policy."

These statements, coupled with Senator KENNEDY'S, are worrying Europeans greatly. The French people know it was General de Gaulle who stood firm against Khrushchev. Now they wonder whether Stevenson, Kennedy and Bowles, if in power, would undercut De Gaulle and Adenauer. The French say there are three Western leaders with firmness enough to oppose Khrushchev—"De Gaulle, Adenauer and Nixon," and they ask, "Will the Americans punish the Pentagon for protecting us all?"

Jean Prost, a Frenchman who does liaison work for De Gaulle and the Quai d'Orsay with foreign diplomatic representatives, said today, "It is sheer demagoguery to talk of censuring Secretary Gates, restraining the Pentagon and changing American foreign policy. In Paris, the Western alliance was tested and stood firm. Do demagogic critics want to break it up?"

Here in Paris, after the arrival and departure of Khrushchev and Malinowsky, popular opinian is "Good for Gates."

H.R. 870, To Abolish Capital Punishment

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. MULTER. Mr. Speaker, it was my privilege on May 25, 1960, to appear before a special subcommittee of the House Judiciary Committee in support of my bill, H.R. 870, to abolish capital punishment.

My testimony was as follows:

STATEMENT OF THE HONORABLE ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Mr. Chairman, I thank you for that very kind introduction. It is always a pleasure for me to be able to appear before you and your distinguished colleagues and present my views. Even though sometimes we are in disagreement it is always an agreeable disagreement and looking toward getting the best legislation on the subject presented.

I am happy to have the privilege of appearing before you in presenting my bill, H.R. 870, which would abolish the death penalty under all laws of the United States enacted by the Congress except the Uniform Code of Military Justice.

My bill does not touch the Atomic Energy Act. I thought it did not touch any of the espionage acts. It certainly was not intended to do so. If it does, I have no objection to the committee's amending it in that respect or in any other respect, for that matter, to meet with the will and intent of the Congress.

If H.R. 870 is enacted, then the extreme punishment under our Federal laws would be life imprisonment instead of death.

It should be emphasized that this bill does not seek to invade States rights and it will not in any degree affect or change either the statutory or common law of any one of the 50 States. Every one of these 50 States will continue to have the sovereign right to determine the basic question for itself.

It is generally agreed, I believe, that there are three basic purposes of punishment in our society today. These three basic purposes are to prevent crime, to mete out justice, and to rehabilitate the criminal. We automatically preclude rehabilitation of the criminal when we impose the irrevocable punishment of death.

That leaves for our consideration the other two basic purposes for capital punishment. It is around those two alone, then, that the strongest arguments for the retention or abolition of capital punishment revolve.

Mr. Chairman, the most important question here, it seems to me, is whether we can justify the death penalty on the ground that it prevents or deters crime. For if this unique deterrent of death, as it is sometimes called, does not clearly serve this purpose of prevention, then we are left with only the purpose of meting out justice or retribution. Some say that is merely demanding an eye for an eye, a life for a life. But in some cases we demand a life for an injury, for of the 31 executions carried out under Federal laws since 1930, only 15 were for murder. Two were for rape, one was for armed robbery, five were for kidnaping and eight for espionage.

Let us look at the deterrent purpose of the death penalty. Is the death penalty necessary for the purpose of preventing crime.

There have been studies made to determine whether the death penalty clearly deters crime. One of the most authoritative of such studies was conductd by Great Britain's Royal Commission on Capital Punishment. This commission made an exhaustive study of capital punishment in many countries, including the United States. Their report, issued in 1953, concluded "that there is no clear evidence in any of the figures which we have examined that the abolition of capital punishment has led to an increase in the homicide rate, or that its reintroduction has led to a fall."

Sir Ernest Gowers, chairman of the Royal Commission on Capital Punishment, later wrote a book entitled "A Life for a Life," and began his book by writing, "Before serving on the Royal Commission, I, like most other

people, had given no great thought to this problem. If I had been asked for my opinion, I should probably have said that I was in favor of the death penalty, and disposed to regard abolitionists as people whose hearts were bigger than their heads. Four years of close study of the subject gradually dispelled that feeling. In the end I became convinced that the abolitionists were right in their conclusions."

In the light of the conclusions of this Royal Commission, one very interesting point was made by a participant in the debate in Great Britain when he questioned where the burden of proof should lie—with those who would retain the death penalty or with those who would abolish the death penalty. In answer to the argument that it should be clearly established that an alternative to the death penalty offered a deterrent to crime and satisfied the public conscience before we abolish the death penalty, this witness answered, "Is not that really putting the onus in the wrong place? If we start from the assumption that there is a practice that is inherently barbaric, and which everybody, deeply and profoundly, feels ought to be dispensed with if it possibly can be, is not the only justification for its retention convincing and irrefutable proof that without it society would be seriously harmed?"

Mr. Chairman, one of the most comprehensive studies of capital punishment and the value of the death penalty in the United States was published in the "1952 Annals the American Academy of Political and Social Science." The conclusion of this study of the death penalty as a deterrent to homicide in the United States was summarized as follows: "Statistical findings and case studies converge to disprove the claim that the death penalty has any special deterrent value. The belief in the death penalty as a deterrent is repudiated by statistical studies, since they consistently demonstrate that differences in homicide rates are in no way correlated with differences in the use of the death penalty. Case studies consistently reveal that the murderer seldom considers the possible consequences of his action, and if he does, he evidently is not deterred by the death penalty. The fact that men continue to argue in favor of the death penalty on deterrence grounds may only demonstrate man's ability to confuse tradition with proof, and his related ability to justify his established way of behaving."

I think also that we need only to look at the murder and nonnegligent manslaughter rate here in the District of Columbia which imposes a mandatory death sentence for first degree murder to see the weakness of the argument that the penalty of death deters crime. The most recent report of the Federal Bureau of Investigation shows that in 1958, Washington, D.C., had a rate of murder and nonnegligent manslaughter per 100,000 that was as high or higher than most other standard metropolitan areas of comparable size. Washington, D.C., with a rate of 6.1 murders and nonnegligent manslaughters per 100,000 population had an even higher rate than Chicago, Ill., with a rate of 5.9, or the New York-Northeastern New Jersey area with a rate of 3.3.

It seems to me, then, that we are not justified in speaking of the necessity of the death penalty. There is no valid case for the death penalty as the most effective deterrent of crime. On the contrary, the invalidity of this argument is upheld by each murder committed.

We must then defend the other purpose of punishment as it applies to the death penalty; i.e., to mete out justice.

I believe, Mr. Chairman, that it has often been pointed out that it is not so much the threat of the death penalty itself which has served as a deterrent, but rather the certainty of its being carried out. The U.S. attorney for the District of Columbia recently testified before a House District Subcommittee that the mandatory death sentence here in the District of Columbia actually hinders the administration of justice. He pointed out that there have been only 12 first degree convictions in 104 indictments over the past 7 years and only 1 of these convictions has resulted in execution. Abolishing the death penalty in the District would improve rather than hinder the administration of justice.

That hearing was held this very month. This is the most current testimony that is available on the subject. At that time the District of Columbia Committee was considering a bill which would make the death penalty instead of mandatory, discretionary with the jury.

I believe, also, Mr. Chairman, that there is a moral question involved in the justice of capital punishment. This is especially pertinent to this punishment because the death penalty is absolute and final. It permits no correction of error. We know that innocent men have been executed. How can we impose a penalty as absolute as death when our knowledge cannot be absolute in imposing it? Juries do make mistakes.

If we hold that life is sacred, then what moral right does society have to demand a life for a life? One of the best answers to this question was given by a man who had intimate knowledge of the judicial process, Evelle J. Younger, judge of the Municipal Court of Los Angeles, when he wrote that "no human instrumentality is fit to pronounce and execute an irrevocable judgment. Only God with His infinite wisdom and charity should wield that awful power."

These are some of the reasons why I hope this committee will see fit to report favorably on my bill, for, as Albert Camus, the Nobel Prize winner wrote, "The death penalty is to the body politic what cancer is to the individual body, with perhaps the single difference that no one has ever spoken of the necessity of cancer." I hope that we will remove the cancer of capital punishment from the laws of the United States.

I am sure you will hear much more from other witnesses in support of this measure. May I conclude my comments by directing your attention to the wealth of data which I have accumulated from time to time in support of my position and which I have placed in the CONGRESSIONAL RECORD. They are not so much in the order of importance but rather in the order in which they appear in the RECORD. They are as follows: With your permission I would like to have these items made part of your record.

(The information referred to follows:)

"June 2, 1959, page A4663, article from the New Jersey State Bar Journal by Daniel M. Berman entitled 'The Case Against Capital Punishment.'

"June 3, 1959, page A4733, statement of New York Board of Rabbis entitled 'Capital Punishment.'

"March 4, 1960, page A1882, article from New York Herald Tribune by Victor Wilson entitled 'Capital Punishment in the United States.'

"March 7, 1960, page A1973, testimony of Dean Donal E. J. MacNamara before the Legislature of the State of Virginia.

"March 7, 1960, page A1925, article from Vassar Alumnae magazine by Prof. C. Gordon Post entitled 'On Capital Punishment.'

"March 8, 1960, page A2028, article from New Republic magazine by Gerald W. Johnson entitled 'Chessman's Challenge.'

"April 12, 1960, page A3221, article by J. A. H. Hopkins entitled 'Capital Punishment.'

"April 13, 1960, page A3265, article from United Synagogue Review entitled 'A Shameful Blot on Society.'

"May 2, 1960, page A3739, editorial from the Washington Post entitled 'When the State Takes a Life.'

"May 2, 1960, page A3712, article by Dr. William F. Graves entitled 'A Doctor's Ordeal Along Death Row.'

"May 3, 1960, page A3790, editorial from the Washington Post entitled 'The Sanctity of Life.'

"May 10, 1960, page A4022, news story from the New York Herald Tribune by Robert J. Donovan entitled 'Governors Against Death Penalty—Oppose It 17–8 in Poll; Others Are Noncommittal.'

"May 12, 1960, page A4097, article from Reader's Digest by Ernest Havemann entitled 'Capital Punishment Is Not the Answer.'

"May 18, 1960, page A4254, editorial from Bulletin of the East Midwood Jewish Center entitled 'From Where I Stand.'

"May 24, 1960, page A4419, article from the Progressive magazine by Daniel M. Berman entitled 'Capital Punishment Is on the Way Out.'"

Mr. MULTER. I will also leave with the Committee a pamphlet entitled "Issues of Conscience—Man's Right to Life" written by Ruth Leigh for the Commission on Social Action of Reform Judaism and published by the Union of American Hebrew Congregations, a national organization representing reform jews. I understand you will hear Miss Leigh later.

Thank you, Mr. Chairman.

Mr. LANE. Would you be kind enough to take that list which I presented you?

Mr. MULTER. I have it here, sir.

Mr. LANE. Would you take up separately each of the items on that list and tell us whether or not it is the intention of your bill to remove the death penalty in those various statutes outlined there by counsel of the committee?

Mr. MULTER. I wonder if it would serve your purpose if, instead of taking this section by section, and your staff has done a careful job on it, there are what appear to be some 18 to 20 different items of reference, if I said to you without trying to take the time to refer to them item by item, that it is not my intent to include—my bill was prepared for me by a congressional draftsman—if the draftsman included any reference to an Espionage Act, Atomic Energy Act, or to the U.S. Code of Military Justice, it should be deleted.

I did not intend by my bill to cover any of those items or to eliminate the death penalty in any of those cases.

You might ask why. I am opposed in principle to imposition of capital punishment in any case. I have been here long enough to be a practical legislator, however. I do not believe that in the atmosphere that prevails today that the country would approve repealing the death penalty in courts martial proceedings or in espionage cases. Therefore I would like to amend the law as to each of the other crimes. There I think the country is ready for the abolition of capital punishment.

If it is agreeable to you I will review each of these items as against the sections and submit to you a supplementary statement to indicate which of these sections should be deleted from the bill.

Mr. LANE. That will be most helpful to the committee if you do that.

What would you say about treason?

Mr. MULTER. I did not say treason specifically. I believe it comes within the same category as espionage and should be treated the same way and excluded from my bill.

Mr. LANE. If you prefer to go into it further and report to the committee that will be agreeable.

What would you say in a case such as this, where a man has committed murder and is serving a life sentence in Alcatraz, and while he is there serving in Alcatraz he plans and plots the murder of one of the guards for some particular reason and does murder the guard while he is there as a prisoner? How will you take care of such

a case? You cannot give him any more imprisonment. He already has life imprisonment.

What do you think in such a case?

Mr. MULTER. In that case we must direct ourselves to the fact that the criminal has been enabled to commit a murder or a second murder for which he can get no greater punishment than that already imposed. We should address ourselves to the administration of that prison. If this man is in prison for life there is something radically faulty with the management and operation of that prison if that person can be put in a position where he can commit murder on an inmate or a guard. The principle still remains the same in my mind. The fact that such a man might be faced with the death penalty will not deter him from committing that crime. It never has.

Mr. LANE. It would make no difference in the world if you had the best warden in the world in those institutions. Some of the prisoners always are scheming or plotting to do damage to somebody else or to get out. It is one of those things they cannot easily detect. We may have the best administrators in those institutions.

Mr. MULTER. The violent prisoner should be confined so he cannot be violent. Certainly every prisoner before he enters the prison is stripped of everything, everything he might use to commit a crime, even taking away his shoe laces.

If despite all that kind of care a prisoner still will commit murder upon an inmate or upon a guard, capital punishment will not deter that man from doing it. We need better administration to prevent that possibility.

Mr. LANE .That has been said and done.

Mr. MULTER. I have not had too much experience with the administration of prisons. It seems to me the man who is violent should not be in jail but in the psychiatric ward and should be getting treatment there.

What do we do in the psychiatric wards where we have violent patients who are confined because it is believed that these people have murderous tendencies? We hold to a very minimum commitment of murder on the part of a potentially violent patient.

If that can be done in a hospital why can it not be done in a prison?

Mr. HENDERSON. The argument you make concerning abolition of mandatory death penalty in the District of Columbia appears to be an excellent one. However, it does not quite follow that that is an argument for the abolition of the death penalty universally, it seems to me.

Mr. MULTER. Is life worth any more or any less in the District of Columbia than it is anywhere else in the world?

Mr. HENDERSON. I refer to the mandatory death penalty. That is what you are faced with in the District of Columbia. According to your argument and according to the argument of many it has in itself interfered with the administration of justice in the District of Columbia.

However, that argument does not necessarily follow, that the discretionary use of the death penalty would hamper the administration of justice.

Mr. MULTER. I cannot argue with you. I must concede that in those cases where the death penalty is discretionary with the jury or with the court there is more likelihood of the jury to convict where the sentence might be the death penalty, while in those States, and New York is one of them, where in certain crimes if the jury brings in a verdict of guilty in the first degree the death penalty is mandatory. There is no choice with the court. The only relief then is to seek a commutation or pardon from the Governor.

In those cases New York, as the District of Columbia, where the jury is confronted with no choice, either murder in the first degree and the automatic imposition of the death penalty, or acquittal, they have too many times acquitted. Many times a man has gone free where certainly the least that should have been done with him was to imprison him for a number of years.

In that respect, you might write into this bill a provision as to what you mean by life imprisonment, so as to provide that nobody convicted of one of these heinous offenses, who is sentenced to life imprisonment, can be released until he has served a minimum of 20 years.

Mr. HENDERSON. That is all I have.

Mr. LANE. I have before me a report from the government of the District of Columbia signed by the President of the Board of Commissioners, Mr. Robert McLaughlin.

In that report he makes this statement:

"While the Commissioners express no opinion on the provisions of H.R. 870, not directly related to the District of Columbia, it is the belief of the Commissioners that sections 13 and 14 of the bill abolishing the death penalty in the District of Columbia are not desirable at the present time and, accordingly, the Commissioners do not favor their enactment.

"Instead the Commissioners prefer the Congress to enact S. 2083 of the 86th Congress or H.R. 11263 of the 86th Congress, each of which would abolish the mandatory death penalty for murder in the first degree in the District of Columbia and vest discretion in the trial court and jury to impose either death penalty or life imprisonment."

Mr. MULTER. I commend the Commissioners for the attitude they take in going as far as they do, but I must disagree with them and urge they do not go far enough.

They are addressing themselves there to the administration of justice in the District in the hope there will be more convictions of criminals indicted for these heinous offenses; criminals now go free because the only choice with the jury is death or acquittal.

They imply, in taking their position that a jury should have discretion in imposing the death penalty, that the death penalty is a proper punishment. That is the basic difference between us.

Mr. LANE. Further questions?

Mr. KASTENMEIER. I would like to ask this: I understand, then, you regard this primarily as a practical political problem rather than a moral problem?

Mr. MULTER. Oh, no. I say this is basically a moral problem. I take the position that governments are mere aggregations of men, and the morality we require of men must be required of nations if the nation is to be moral, and this is definitely a moral problem.

If I as an individual have no right to take the life of another, the Government which I, together with my fellow man have set up, has no right to do as a nation or as a State that which I have no right to do.

Mr. KASTENMEIER. Then it is a rather divisible morality. For example, you preclude capital punishment in courts-martial cases. In other words, if a soldier falls asleep while on guard duty or deserts you would permit execution in those cases. Apparently you do not oppose capital punishment in those cases.

Mr. MULTER. I do oppose it in principle. It is not included within the terms of this bill because I am afraid we could not get a bill enacted which also affected courts-martial proceedings and treason cases. I oppose it even in those cases, but, as I said before, I am a practical enough legislator to believe that a bill that would try to abolish it in all those spheres would not today have public acceptance in our country.

Mr. LANE. You say there have been only 31 of these cases in the last 30 years?

Mr. MULTER. Yes. That is the information given to me by the Library of Congress after some very exhaustive research of the matter. Eight were for espionage.

Mr. LINDSAY. I should like to commend our distinguished colleague for the excellence of his testimony and presentation on a very important subject.

I was interested in the Congressman's answer to Mr. KASTENMEIER's question. I take it you do not make any distinction in principle to the death penalty with respect to espionage and other crimes.

Mr. MULTER. I do not, sir.

Mr. LINDSAY. If your principle is good for one it is good for all. Is that true?

Mr. MULTER. That is my feeling.

Mr. LINDSAY. I press this because I have debated this question at great length with my friend, Mr. James Bennett, Director of the Federal Bureau of Prisons. I know he will not mind my putting this in the record because it is generally known that he makes exception to his general disapproval of the death penalty in the case of espionage and the killing of Federal officers in the course of duty. He is thinking, of course, of personnel in the Federal Bureau of Prisons.

I consider Mr. Bennett one of the world's experts on this subject. I have never quite been able to rationalize in my own mind the reason for the difference. If the argument is good in one it is good in the other.

If you accept the fact there is no real deterrent value any longer, if there ever was, in the death penalty, then it should extend across the board.

Mr. MULTER. I agree.

Mr. LINDSAY. I think you are absolutely correct in not trying to include in your bill the armed services. In the first place I am afraid that subject matter would have to come before the Armed Services Committee.

Second, it is complex. There is no distinction, however. The Army continues to carry out death penalties whereas the Navy and Air Force have not executed a man in something like 30 or 40 years. There is no reason for the Army to continue.

Mr. MULTER. I agree.

Mr. LINDSAY. You have done a good job.

Mr. MULTER. I am aware of Mr. Bennett's opinions and I respect them and him. Without trying to evaluate who is the man who is more to be respected or the greater expert in the field, I am sure you are familiar with the opinions of our own former Warden Lawes of the Sing Sing Prison in New York who takes the opposite position to Mr. Bennett.

He says capital punishment accomplishes no purpose and should be abolished.

Certainly he is and was rated as a foremost penologist.

Mr. LINDSAY. There is no doubt but what the mandatory death penalty at times makes bad law. We had a terrible battle in the Congress over the subject of the so-called Mallory bill. There are those who argue that if the death penalty in the District were not mandatory the conviction never would have been reversed.

In other words, the courts find ways to avoid convictions where there is a mandatory death penalty. As Congressman HENDERSON pointed out there are clear grounds for removing the mandatory aspect, at least. If Congress takes action on nothing else, it should do this much.

How many Federal laws are there where the death penalty is in nature mandatory?

Mr. MULTER. Murder in the first degree is one, of course. Murder in the course of——

Mr. LINDSAY. Is there a Federal crime of murder in the first degree?

Mr. MULTER. They may not call it murder in the first degree, but premeditated murder carries the death penalty under Federal statutes.

Rape carries with it the death penalty under the Federal statutes.

Kidnapping carries the death penalty under Federal statutes.

Unintentional killing during the course of the commission of a felony, such as armed robbery, carries the death penalty.

Mr. LINDSAY. All of these crimes are crimes which occur on Federal property, I suppose?

Mr. MULTER. Yes.

Mr. LINDSAY. In each of those cases is the penalty of death mandatory or are there discretionary powers within the jury, within the judge, or both?

Mr. MULTER. On the Federal level.

Mr. LINDSAY. Yes.

Mr. MULTER. I believe it is the same as it is in New York State. It is mandatory. The jury determines merely the guilt or innocence. It cannot find the defendant guilty of a lesser crime. If it finds the defendant guilt of that crime, the court must impose the death penalty.

Mr. LINDSAY. It is required to do so?

Mr. MULTER. Yes, sir.

Mr. LINDSAY. In those statutes does the jury have the power to recommend a penalty less than death?

Mr. MULTER. On the Federal level, I think not. I am not certain.

Mr. LINDSAY. Counsel has pointed out in title 18, section 108(2), the crime of murder, the statute reads: "Whoever is guilty of murder in the first degree shall suffer death unless the jury qualifies its verdict by adding thereto 'without capital punishment,' in which event he shall be sentenced to imprisonment for life."

I suppose there would be an improvement on that language, in your mind, if the judge also had the power to make an adjustment in the event the jury did not recommend life imprisonment.

Mr. MULTER. I very strongly believe that the imposition of the punishment should always rest with the court, and in every case the court should have discretion as to the punishment to be imposed. It should not be left to the jury. Every member of the committee is a lawyer and has practiced law before coming here, and some of us are still practicing law. We know how a jury can become emotional about some of these problems. When it comes to imposing the death sentence, or any other sentence, for that matter, I think if there is a lapse of time between the bringing in of the verdict by the jury and the court has the probation report before it and has time to consider the matter and then imposes the sentence, there may be less emotion involved and more adherence to justice and right.

Mr. LINDSAY. Did you submit figures as to the number of Federal executions which have taken place in the past decade or so? Do we have that in the record?

Mr. LANE. Thirty-one.

Mr. MULTER. Thirty-one by Federal courts.

Mr. LINDSAY. Can you bring that down to date a little more? Do you have the figures for the last 10 years of the number of Federal executions for nonmilitary crimes?

Mr. MULTER. I shall try to get that information for you. I think I can get it very readily, although I do not have it at the moment. These 31 cases were since 1930, a 30-year period. Of course it would be considerably less if we take the last 10-year period.

Mr. LINDSAY. I would suspect, without knowing, that it is a declining scale; that the graph goes down; that within the past 10 years there have been very few. Has counsel that information?

Mr. MULTER. I will get that information for you, sir. I think you are quite right in what you say. I am looking at the statement with reference to the District of Columbia alone, where of course the rate has been going down, too. In the last 7 years there have been only 12 first-degree convictions in the District of Columbia out of 104 indictments. In other words, here we have approximately 92 defendants who went free. I do not say all of them were guilty or that all of them should have been convicted, but I venture to guess that of the 92 who went free—Mallory is a typical incident which comes to mind—many should have been convicted of some crime. They should have ben imprisoned. Again without trying to pass judgment on Mallory, I think from what we know about the Mallory case, that is a typical instance of where there should have been a conviction for some crime.

Mr. LANE. Any further questions, gentlemen?

Mr. HENDERSON. One further question.

In your opinion, Mr. MULTER, does society have the provision for capital punishment as a deterrent to crime, as a method of punishment for the guilty offender, as a part of the provision of the principle of an eye for an eye, or a carryover of the barbaric principle of revenge?

Mr. MULTER. I think, sir, it is defended on the basis of all three. I say not one of the three reasons for it are logical or reasonable or should be followed any longer. The best illustration of the eye for an eye idea and the emotionalism involved is the action of a lynch mob. A mob carrying out a lynching is doing what they think is enjoined by the Old Testament, an eye for an eye, but their emotions are running away with them. It is an emotional reaction which causes them to take the law into their own hands and to speed the imposition of the punishment, which should be done only by a court. They justify it on the ground that a court would do it anyway. The court should not do it anyway. The court should not do it at all.

May I refer to the Old Testament reference to an eye for an eye. In those days it was usually a rabbinic court. A rabbinic court which once in 70 years condemned a defendant to death was referred to as a murderous court. We are inclined to overlook the fact that even in those days the eye for an eye injunction was circumscribed by so many if's, and's and but's that it was rarely, if ever, imposed. It came to be known not literally as an eye for an eye, but a theory of compensation for the injury done.

Mr. CAHILL. May I ask one more question.

Under your thoughts, Congressman MULTER, would a person who is convicted of a major crime and is sentenced to life imprisonment ever have the possibility of being released from prison?

Mr. MULTER. My bill does not touch the subject.

Mr. CAHILL. What is your thought on that?

Mr. MULTER. I think if the bill is enacted, it should have a provision in it defining what we mean by life imprisonment, with a minimum number of years that the defendant must serve before his sentence can be commuted or he may be released.

Mr. CAHILL. Do you feel that there should be the possibility of commutation and release where a person is sentenced to life imprisonment?

Mr. MULTER. After a minimum of, say, 20 years of service. If you recall, I think here, too, we have the famous Loeb-Leopold case.

Mr. CAHILL. That is what I am thinking of.

Mr. MULTER. The court said these boys must remain in prison for the rest of their natural lives and should never again be released to society. One of them died as a result of a murder in jail, and the other was more recently released. Those who have followed that case I think will all agree that this man has been rehabilitated and he deserves another chance. He is making good. The chances of this man ever committing another crime of any kind are nil.

Mr. CAHILL. That is my question, along with the chairman's question. Let us assume a person is sentenced to life imprisonment and, on the basis of prison conduct, is released, and then immediately upon release commits a major crime. What would be the punishment?

Mr. MULTER. The punishment upon conviction again would be life imprisonment. If you write into it a minimum of 20 years, it would be a minimum of 20 years. No case comes to mind. I do not say they have not happened, because I am sure they have, but I can recall no case of a man having been convicted and sentenced to life imprisonment who, upon release, committed another crime for which he could have been convicted and sent to jail for life again or upon whom the capital punishment could have been imposed. There may be such cases, but I have not come across them.

Mr. LANE. I think, Mr. MULTER, I could cite you a case where a man had life in an institution and murdered one of the guards in the institution while he was there.

Mr. MULTER. There have been such cases, yes, sir.

Mr. LANE. I know of one particular State where a life sentence for murder means only that at the end of 13 years he may apply for his parole and may be released.

Mr. MULTER. I think this committee, if it looks upon this bill with favor, should write into the bill the minimum of what it believes a life sentence should be—15, 20, 25 years. It should be written into the bill.

Mr. LANE. Any further questions, gentlemen?

Mr. LINDSAY. There is one point which is interesting, raised by Mr. CAHILL. When you get to the question of whether or not a Federal court can impose a life sentence not subject to commutation, you run into tricky questions as to the power of the Executive. It is the same question whether or not the Executive can commute a death sentence to life imprisonment on the condition that there be no later commutation or lessening of the sentence. There you have the question whether the Executive has power to bind his successor.

Mr. MULTER. It is a nice question whether or not you can take from the Executive, his right to pardon.

Mr. LINDSAY. Right.

Mr. LANE. If there are no further questions, Congressman MULTER, we again thank you for your appearance here this morning. You are always so helpful to our committee.

The National Convention of the Polish Falcons of America

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. RODINO. Mr. Speaker, I should like to direct the attention of my colleagues to the fact that the Polish Falcons of America have chosen to hold this year's national convention in the congressional district which I am proud to represent.

This is a great tribute to the vitality and achievement of Nest 104, our local chapter of Falcons, and an honor for all of the people of Newark and, indeed, of the State of New Jersey.

I understand that this is the first time in 88 years that the National Convention has taken place in Newark, N.J. Some 4,000 delegates have gathered here for a weeklong schedule of tournaments and other events which will culminate in a banquet at the Polish Falcon Hall on Sunday.

I should like to take this opportunity to bid them a warm welcome, and to express the hope that they have had such

a successful week that they will come back to us again in the very near future.

The activities of the Polish Falcons are well-known and highly regarded throughout the country. The very name "Falcon" suggests vigor, strength, vitality of mind, and soundness of body. It is these goals which the Polish Falcons have pursued for almost a century.

A large part of the Falcon program is focused on youth activities and on physical development. This emphasis on youth, and on diverting youthful energies to sound and wholesome purposes is of the utmost importance. We appreciate its significance today, as we become more and more concerned with the frightening statistics on juvenile delinquency and with the general aimlessness of many of our youngsters who do not seem to be able to find their way.

These are problems which do not worry mothers of young Falcons, or Falconettes. They know that their youngsters are engaged in worthwhile pursuits and are building their characters and bodies for a bright and happy future.

The importance of physical fitness is too often forgotten in this country. President Eisenhower himself expressed distress at this fact in a recent press conference. The problem began to receive increased attention with the onset of the draft, as we realized what a large proportion of our young men have been unable to meet the physical requirements of the armed services.

And yet, physical fitness is vital to our strength as a Nation. We cannot permit ourselves to grow soft in any regard, if we are to remain the vigorous and energetic people we have always been in the past. By its activities the Polish Falcons are doing a service not only to Falcon members, but to the entire country. There is no greater patriotism than helping to build up the strength and human resources of this Nation.

The Falcon program, it is important to note, is based in the context of Polish tradition and culture. Their young people grow up learning of their national origins and taking pride in their heritage. They thus become fine, outstanding American citizens, enriching the American scene by their unique contribution and adding to that great diversity of culture of which America is justly proud.

There is a similar Falcon organization which exists in Poland today. I do not know how much contact there is, or is permitted to be, between the Polish Sokolstwo and the Polish Falcons of America. But I do know that the very existence of this flourishing organization in this country cannot but give heart and courage to the members in Poland who have suffered, and continue to suffer, under the yoke of Communist oppression. We all know that the hope of the Polish people for eventual liberation has never been extinguished. I am confident that that hope is nurtured and inspired by the example of the American Falcons who live in liberty and freedom.

The Falcons have always concerned themselves with the trials and the sufferings of the Polish people. They have focused attention on the cause of Poland, and, by so doing, have furthered the cause of freedom everywhere.

I should like to pay special tribute to Nest 104, the Falcon chapter in Newark, and to John Byk as well as to the other officers and leaders, many of whom I have come to know personally. The fact that Nest 104 has been selected as the hosts of the Falcon convention is eloquent testimony of the effectiveness of Nest 104's thriving and successful program.

A San Franciscan's Reaction

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. SCHERER. Mr. Speaker, Mr. Robert W. Tallman who is one of the outstanding members of the California Bar interested himself in the circumstances surrounding the rioting in San Francisco last month in connection with the hearings of the House Committee on Un-American Activities. An editorial in the Washington Post of May 17, 1960, dealing with these hearings so shocked Mr. Tallman that he wrote to the Washington Post about the editorial and what his investigation disclosed with reference to the demonstrations against the Committee on Un-American Activities.

It is my feeling that the Members of the Congress should have the benefit of the thinking of one of San Francisco's leading citizens concerning these unfortunate demonstrations. I am therefore asking that Mr. Tallman's letter of June 28, 1960, be included in these remarks:

SAN FRANCISCO, CALIF., *June 28, 1960.*

EDITOR,
Washington Post and Times Herald,
Washington Post Building,
Washington, D.C.

DEAR SIR: This is the first letter I have ever written to a newspaper editor. However, I feel compelled to bring certain facts to your attention which you obviously did not have before you when you wrote your May 17, 1960, editorial, "Coming to Life," concerning the so-called spontaneous student riot in San Francisco or what we San Franciscans now sadly refer to as "Black Friday."

As a member of the San Francisco bar and an alumnus of Stanford University and of the University of California Law School, I must take strong exception to your unwarranted conclusion that on that day our San Francisco "police, it seems clear, acted with unnecessary severity" in taking action against students whom you describe as merely noisy. I take even stronger exception to your sunny exultation that, "It is heartening, despite the excesses, to see American students behaving once more like American students."

Before answering your statements I think it necessary to explain why I am so late in commenting on your May 17, 1960, editorial. The answer is simply this. On Sunday, June 26, a film entitled "Operation Abolition" compiled from the news coverage of the riots by our television stations KRON-TV and KPIX-TV had its first showing before a group of some 600 college students and alumni at the Greenbrier Hotel. This film was shown for the first time to Members of Congress on Monday, June 27. There were many University of California alumni viewing these films and we were so shocked and appalled by what we saw and heard that Mrs. Edward Collins, former vice president of the University of California alumni, myself, and other alumni present called yesterday upon Representative GORDON SCHERER who was in the hearing room at the time the riot occurred to learn all we could about the background and the buildup of this so-called spontaneous student behavior. As you may know, many of our noisy University of California students were taken to jail and booked for inciting a riot, disturbing the peace, and resisting the police and one of the noisier ones was additionally charged with assault with a deadly weapon for grabbing Officer Ralph Schaumleffel's club from him and hitting him over the head with it. (San Francisco Chronicle, May 14, 1960.) Officer Schaumleffel and seven other "unnecessarily severe" police officers were treated at our Central Emergency Hospital for injuries received during the riot. Four of the demonstrators were also injured.

After talking with Representative SCHERER and reading his speech on the House floor of June 2, 1960, "How far will they go?—The San Francisco Riots," I contacted your paper to determine whether you had taken an editorial position on this riot. After a reading of your May 17, 1960, editorial and the various UPI and AP releases upon which it was apparently based, I strongly recommend that you review all the facts concerning "the excesses" of our students' irresponsible and lawless behavior.

As I see the issue, it is not a question of whether one is for or against the House Un-American Activities Committee, but rather whether it is not in fact frightening and appalling rather than "heartening" to see American students openly and flagrantly violate the law and treat Congressmen, judges, and law enforcement officials with utter contempt. Certainly, the San Francisco Chronicle, which was on the scene, clearly recognized this issue in its May 16, 1960, editorial.

"Friday's disgraceful riot at city hall left a black mark on San Francisco which is quite undeserved by this tolerant city.

"The students who were responsible for it have a lesson to learn. It is that strong personal opinions of hostility toward an Un-American Activities Committee cannot be turned into hostile action without intolerable risk of harm to public order.

"Friday afternoon's mob of 200—mostly students, but not all of them innocents in the art of mass demonstration—threatened to force its way into the Un-American Activities Committee meeting room against the orders and warnings of the police. What, we wonder, does the concept of "law and order" mean to these students? What do the sight of a policeman's uniform and the sound of his command mean? Apparently, to this mob, nothing but a challenge to get more stubborn and defiant.

"The performance by college and university students in so ill-mannered, boorish, and obviously dangerous a way gets no sympathy from us as an exercise of youth groping to understand and improve the democratic process. Chanting defiance in the face of a police order to fall back is not a first amendment freedom. These young people have managed to set back the cause of responsible concern for the Bill of Rights."

The background or the buildup of this tragic day bears examination. In February 1960 the following question appeared on the University of California English entrance examination:

"What are the dangers to a democracy of a national police organization, like the FBI, which operates secretly and is unresponsive to public criticism?"

When this question was brought to the attention of the board of regents it was with-

drawn and an apology was made by the regents to Mr. J. Edgar Hoover. However, this action provoked a storm of protests from certain university faculty members and students and the Daily Californian in its editorial of March 4, 1960, condemning the regents action referred derogatorily to Mr. Hoover as a "sacred cow."

There were a number of student picket lines formed in the ensuing months for the savior of the late Caryl Chessman and against the Berkeley branches of the Woolworth and Kress stores. The other merchants of Berkeley bitterly complained that their business was adversely affected by such picketing.

On May 2, 1960, Caryl Chessman was executed. A delegation from the university arrived at 11 p.m. the preceding evening to maintain a vigil at the gates of San Quentin. On the morning of the execution the demonstrators learned that our State supreme court had denied Chessman a stay and:

"Upon hearing this the demonstrators sat down in the middle of the road. Police had to use force to get them out of the way and a riot almost occurred. Arrested for opposing arrest and unlawful assembly were Frank Harper, an English instructor at San Diego State College and Peter Thygeson, a union organized from Berkeley." (Daily Californian, Tuesday, May 3, 1960, p. 1.)

On this same date Students for Civil Liberties, a student action group recently mobilized on this campus issued the following statement:

"We, the Students for Civil Liberties, have formed to protest the announced hearings of the Un-American Activities Committee in San Francisco * * *.

"We feel that the hearings should be canceled and that the committee be abolished." (Daily Californian, May 3, 1960, p. 1.)

On this same evening student Dan Greenson submitted a resolution to the executive committee of the Associated Students of the University asking them to condemn the actions of the University of Illinois in firing Prof. Leo Koch for his views on premarital sexual relations. The executive committee passed this resolution even though it had been ruled a direct violation of President Kerr's directive against the associated students taking an official stand on an off-campus issue. But the Daily Californian editorialized:

"Many people have argued that one cannot correct a law by breaking it. In this particular case we disagree with them."

Chancellor Seaborg demanded that the resolution be rescinded but the executive committee openly defied him and refused to do so. Thus on May 2, at San Quentin the law was broken and "a riot almost occurred." On May 3 the policy of the president of the university was specifically violated.

As the week of Black Friday opened "nearly 300 members of the U.C. faculty" blasted the committee and branded its work as "insidious and harmful." The Student Committee for Civil Liberties held a mass meeting at Dwinelle Hall, "which was addressed by two law professors, Jerome Cohen and Michael Heyman.

"We must try to cancel the committee itself—have it abolished," said Cohen. (San Francisco Chronicle, May 11, 1960, p. 9.)

The student committee then scheduled and held a protest rally at Union Square in San Francisco on Thursday, May 12, 1960. According to the May 12, issue of the Daily Californian:

"The SCCL plans to picket the hearings today. It has issued a call for students to attend the rally and hearings and suggests that people 'laugh out loud in the hearings when things get ridiculous.'"

This issue was freely circulated among the mob at the hearings. According to the Daily Californian the SCCL was picketing and holding protest rallies to "back subpenaed student Douglas Wachten." According to the May 12, Daily Californian:

"Wachter doesn't know why the committee subpenaed him. 'I think the committee wanted to subpena someone on campus in order to tag Cal's political movement as un-American,' he said.

"Wachter is a member of Stiles Hall and Slate and has participated in the CORE picketing of Kress and Woolworth's stores. He was the only university student to walk 18 miles from San Francisco to San Quentin to protest Caryl Chessman's scheduled execution."

What the Daily Californian probably did not know was that Douglas Wachter and his father, Saul Wachter, "an identified Communist agent, attended the 17th national convention of the Communist Party last December as delegated from the northern sector of the California Communist Party." (Representative SCHERER'S June 2, 1960 speech.)

Thus the university students were urged "to laugh out loud in the hearings" by their own newspaper and to treat Members of Congress with utter contempt. And laugh, sing, chant, scream, boo, hiss they did.

The following Friday afternoon is tragic history. Rather than describe it I strongly urge you to view the newsreel films of what took place and to listen closely to the terrifying sound track. The organized shouting and chanting of the mob caused our judges to request that the city hall chambers be cleared of the demonstrators for three of our judges found it impossible to continue their proceedings because of the noise. Before the police summoned to disperse the crowd could reach city hall, admitted Communist agitators such as Archie Brown were leading the shouting and clapping of the mob and at one point these agitators sang "The Star-Spangled Banner." The frenzy of the mob rose to new heights.

You must see "Operation Abolition" to believe what happened next.

When the arrested students subsequently appeared before our judges they booed and hissed them. Judge Axelrod who is to be commended on the way he handled the problem urged the students to waive a jury trial and submit their cases to him on the basis of the police reports. Sixty-two of the defendants accepted his advice and Judge Axelrod subsequently determined that there was sufficient evidence in the police reports to justify conviction of each defendant. However, he dismissed the charges against them stating that "I believe the defendants have been punished sufficiently, I am hopeful they will profit by their lesson." He was thanked by the defendants shouting that he had completely vindicated them and that the police therefore were guilty of unwarranted police brutality.

San Francisco is a proud city, and the Post's editorial does us a grave injustice. I honestly feel that you will find little heartening in viewing students behaving like wild animals—totally unresponsive to the commands of those charged with enforcing our laws. And in viewing their excesses, as recorded by the KRON–TV and KPIX–TV cameras, please keep in mind that every Congressman, regardless of the purpose of his visit to our city, has the right, as does any other citizen, to enjoy our hospitality in complete freedom from harassment by a few irresponsible and lawless individuals.

Sincerely,

ROBERT W. TALLMAN.

Water "Laboratory" in Southwest Urged

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD a timely article by Mr. Roscoe Fleming, of Denver, which appeared recently in the Christian Science Monitor. With increasing interest being focused on the problems of the Nation's water resources, the suggestions presented in Mr. Fleming's article deserve thoughtful consideration. Those of us from the arid and semi-arid regions of the Southwest and the mountain West have lived and worked with water resources problems for generations. We stand ready to contribute to the rest of the Nation whatever we may have gained in the way of practical knowledge of the problems of water resources use and conservation. There is no better region in the Nation for a program such as that outlined in Mr. Fleming's article.

The article follows:

WATER LABORATORY IN SOUTHWEST URGED

(By Roscoe Fleming)

DENVER.—A group of water experts skilled in looking at the future suggests that the entire Southwestern United States might well become a great, overall water-and-climate laboratory or pilot project, to show the best ways for development and use of water that the whole Nation will need before A.D. 2000.

They say that the Southwest, the Nation's driest corner, will need water first and worst, and that its booming growth in certain areas is already pressing hard on the available water supply.

Yet the needs of the whole Nation are not far behind. By the year 2000, or in only 40 years, the United States must find a consistent water supply throughout to support twice as many people as now, plus a material complex more than twice as great and intricate.

INDISPENSABLE RESOURCE

Water is the one most indispensable material resource for a civilization, and where is ours to come from?

Lessons learned in such a regional development as is proposed for the Southwest could be invaluable, in saving time and in averting waste in an overall national planning and development program such as "must become standard practice sometime in this century."

The report is one of those commissioned by the Senate's Select Committee on National Water Resources headed by Senator ROBERT S. KERR, Democrat, of Oklahoma, preliminary to the committee's own overall summation. The whole, with its supporting documents, will form the most comprehensive and valuable body of national water information ever gathered.

This particular document is the work of a group headed by Edward A. Ackerman, who with Dr. George O. G. Löf wrote the massive and thorough "Technology in American Water Development" last year, for Resources for the Future. Dr. Donald Patton aided Dr. Ackerman in this one.

TECHNIQUES STUDIED

Its specific topic is the impact of new techniques, and their meaning and possible value in the gigantic forthcoming task. The writers suggest that this task is at least as vital to the Nation as the $40 billion integrated highway program already underway, but that the water program in its entirety will dwarf the road program both as to size and complexity. In fact, it will be the most complex task of internal development the Nation has ever tackled.

It will require an immense body of advance planning and programing in itself, and we ought to get started now, they say, in a specific segment to accumulate experience for the great national task.

The first big job will be to determine what the Nation wants water to do, and what are the national and regional priorities. Another early task will be to determine what ground area shall be needed for waterworks such as future dams, plus a program to set it aside so it won't be covered with hundreds of millions of dollars worth of improvements and therefore unavailable and out of reach later for what may be, after all, a more valuable use nationally.

GOVERNMENT'S ROLE

All this comes under the head of planning, which has many more facets. Next will come development. New techniques will apply to management as well as to physical construction.

The writers do not visualize the Federal Government, in itself, as the doer and controller of all. Instead, they say it should do its part in planning, development, and construction; but as to the latter in particular should leave it largely to State or regional organizations, local entities public or private, and so on.

They suggest that a system of loans and grants to induce local cooperation would be more effective than overall Federal operation. Such a method now is being relied on to enable local pollution control, and thus slowly to improve the waters of whole basins.

Finally, when it comes to operation they envisage computer-aided control systems that will see that every drop of water is in the right place doing the right thing at the right time for the utmost benefit to the needs of the human population, direct and indirect.

COMPLEXITY GREAT

This would be something like the water-control systems already in use in the TVA, and some basinwide western developments—but so much more complex that any present system is little more than an early embryo of what those of A.D. 2000 must be.

If the southwest with its pressing water needs were to be chosen as the first arena for such complete water control, the first step would be to ask the States to set up models of their expected consumption right up to A.D. 2000. The States included are California, Nevada, Arizona, Utah, Wyoming, New Mexico, Texas, Oklahoma, Kansas, and Colorado.

Secondly, both by States and overall, "prognostic hydrology" would be put to work to ascertain the total possible water supply that will be available, counting all that which could be developed or saved by advanced techniques.

Thirdly, these two patterns would be matched, and from the matching would naturally flow such further developments as the systematic design of new facilities, basin and interbasin flow, the making of future construction big enough to make sure of all available "scale economies" due to size (as in power production) and so on. Insofar as possible, legislative bodies would be asked to provide continuing appropriations so that work might be planned years ahead.

A large, general research and innovation program always on the alert for better ways of doing things would accompany all this.

As to the actual management of water, the writers say we must come to the three-dimensional concept in which water in the atmosphere, on the surface, and underground all will be developed as one integrated supply. We are far from this today. Only in a few scattered spots has there been any integration at all of surface and ground waters, for example, which are treated as entirely separate entities.

SUGGESTIONS LISTED

When it comes to making the best use on a permanent basis of the Southwest's waters specifically, the writers suggest:

Prognostication of weather and of consequent water supply for future years through better forecasting aided by such powerful new observational aids as satellite observations, and lessons learned through atmospheric research, and so forth, all rapidly integrated by computer techniques.

Location and development of ground waters which, in all, total much more within reachable depths in the earth's crust than all the surface waters.

WASTE SUPPRESSION

Enhancement of supply by consistent cloud seeding—which the writers estimate could add 40 million acre-feet yearly to western precipitation and 15 million acre-feet to runoff by manipulating forest patterns to keep more snow on the ground, by ground water development, by desalting brackish and sea water, and by averting pollution or cleansing polluted waters.

Suppressing waste, as by keeping reservoirs covered with chemical films to hold back some of the 10 million acre-feet that yearly evaporate from water surfaces; by eliminating water-wasting vegetation; by lining canals against seepage; by better irrigation practices, both technical and legal—the writers say that western water precedents are designed for justice, not efficient use; and by studying the highest use of water. This might lead to a slowdown in irrigation development.

Other water uses, such as those connected with establishing homes or industries or even recreation, are beginning to be more economically valuable.

Immigration of Orientals

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JUNE 14, 1960.

Hon. HIRAM FONG,
U.S. Senate, Washington, D.C.

DEAR SENATOR FONG: You were kind enough enough to favor me with a copy of your article which appeared in the Honolulu Advertiser, and which you inserted in the CONGRESSIONAL RECORD of June 1, 1960. Your article discusses, in the main, what you refer to as discriminatory features of our immigration laws affecting orientals.

Assuming that your purpose in inviting my attention to your article was to elicit my comments thereon, I am willing to oblige in the spirit of frankness and fairness.

Your article contains several errors as to facts. This is said not for the purpose of embarassing you personally. I believe that you have been misled by those who supplied you with information dealing with matters of considerable complexity and a wide legal and historical background.

The following is submitted for the purpose of correction and clarification:

1. Soon after the cessation of hostilities—in 1946, to be exact—a few of us in the House of Representatives originated an effort to repeal the exclusion clauses based on race then effective under the 1917, 1924, and 1940 immigration and nationality laws. Our efforts were partially successful when, in 1948, we succeeded in removing from our "suspension of deportation" statute the racial restrictions applicable to orientals.

Further attempts to delete from our immigration and nationality laws the main oriental exclusion clauses resulted, in 1949, in the passage by the House of a bill which, unfortunately, encountered delays in the Senate.

2. Having enlisted the support of the late Senator McCarran of Nevada, I succeeded in providing for the final and definitive repeal of the oriental exclusion clauses by the Walter-McCarran Act, enacted in 1952.

For the first time in the history of the United States an immigration and nationality law contained a sentence which was unanimously praised as the "Magna Carta" for oriental immigrants and their descendants. The sentence reads as follows: "The right of a person to become a naturalized citizen of the United States shall not be denied or abridged because of race or sex * * *" etc. (sec. 311 of the Immigration and Nationality Act). By virtue of the same law, ineligibility to naturalization because of race was abrogated as a bar to immigration. All countries of Asia and the Far East have been assigned immigration quotas pursuant to the Walter-McCarran Act.

3. The late Senator McCarran and myself have been rather lavishly praised and awarded honors which I do not intend to list, by several countries of the Far East and by organizations of American citizens of oriental descent. My personal files and records are replete with the most touching expressions of gratitude and appreciation for what the Walter-McCarran Act has done with respect to immigration and naturalization of orientals.

4. The results of the repeal of the oriental exclusion clauses are clearly indicated in the statistical reports published annually by the Department of Justice. While in the last prewar decade, 1931–40, the total immigration from Asia amounted to 15,344 persons, there were 42,385 Asians admitted into the United States as immigrants in the first 5 years following the enactment of the Walter-McCarran Act. (This figure is, of course, unordinately large due to the fact that during those years there occurred a sizable influx of "war brides" and "GI fiances.")

However, the long-range effects of the Walter-McCarran Act on immigration from the Orient remains readily ascertainable in the statistical figures published annually by the Attorney General of the United States.

Here are some abstracts from the Department of Justice reports for the years 1956–59, pertinent to the erroneous assertions of your article.

Immigrants admitted:

Natives of—	1956	1957	1958	1959
China	4,450	5,425	3,213	5,723
Japan	5,586	6,354	6,543	5,851
Korea	703	648	1,604	1,720
Philippines	1,873	1,996	2,236	2,633

Since the enactment of the Walter-McCarran Act, total admissions of immigrants from Asia were as follows:

1953	8,029
1954	11,751
1955	12,131
1956	17,538
1957	23,102
1958	19,867
1959	24,312

5. You have devoted a considerable portion of your article to deploring the fact that the United States does not admit a sufficient number of immigrants from such countries as Burma, Cambodia, Malaya, Laos, Nepal, Vietnam, and Thailand.

I wish to invite your attention to a report of the Department of State dated April 1, 1960, in which it is stated that the immigration quotas for all the above-listed countries are open and immigrant visas thereunder are immediately available for qualified applicants.

Sincerely yours,

FRANCIS E. WALTER,
Chairman.

Future of Lafayette Square

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. McCARTHY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter to the editor of the Washington Evening Star of June 30, written by Mr. Frederick Haupt III, entitled "Future of Lafayette Square."

I was one of those who joined with several other members of the Public Works Committee in objecting to the approval that the committee gave to the planned courthouse construction in Lafayette Square. The least we can do is to wait until after the next election, because of the possibility that the next President might wish to spend more time at the White House and he may be concerned about Lafayette Square when he looks out his front door.

Mr. HUMPHREY. Mr. President, I would like to voice my approval.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FUTURE OF LAFAYETTE SQUARE

I wish to acknowledge a debt of gratitude owed to our paper by everyone who is interested in preserving Lafayette Square and the buildings adjacent to it. The editorial support which you have given bespeaks a breadth of vision and a genuine concern with the historical—and esthetic—appearance of the Nation's Capital, both of which provide the logical answers to the parochialism which would convert this "forecourt of the White House" (as Frederick Gutheim has called it) into another Federal Triangle—or rectangle, in this case. In addition to your editorials, your news coverage of the hearings by the Senate Subcommittee on Buildings and Grounds, the pieces by Day Thorpe, and the piece by Gilbert Gimble (on June 26) have not only maintained public interest in this matter (which had already begun to take on the aspects of a strictly private affair between various agencies of the Federal Government) but have also provided the backing that is so necessary to the efforts undertaken to preserve the square in Congress and by private citizens in Washington.

The article by Mr. Gimble ably presents both sides of the case as it has developed to this point, and quite properly points out that congressional action "may shape the character of the historic square for coming generations."

General Services Administrator Franklin Floete is especially to be thanked for his sensible alternative proposal to erect a triple court building in Southwest Washington. It is particularly encouraging to see the legislation introduced in Congress by Senators DOUGLAS, GRUENING, HENNINGS, HUMPHREY, KENNEDY, MANSFIELD, MORSE, and MURRAY and by Representatives THOMPSON and McDOWELL. The General Federation of Women's Clubs and the National Federation of Music Clubs have shown a determined interest in preserving Lafayette Square; and their support is invaluable and of special significance because it does not represent purely local interests. And finally, our thanks should go to Carl Levin for his initiative and energy in forming the Citizens Committee To Save Lafayette Square.

FREDERICK HAUPT III.

Freedom Academy Legislation

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, prepared by me, relating to Senate bill 1689, to create a Freedom Commission and Freedom Academy charged with undertaking a development and training program aimed at developing an integrated cold war operational science and training Government personnel, private citizens and foreign students in this science.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MUNDT

Senate Judiciary Committee approval of the Freedom Academy bill may well be historically marked as the turning point upon which this Nation's fight for freedom in the cold war struggle against communism began to yield the returns of victory through the erosion and eventual demise of the Red conspiracy's drive for world domination.

While those who have carried on the campaign for the Academy would have preferred to have such a program of counteraction in operation long before now, nevertheless, the committee action comes at a most propitious time, for the echoes of Communist success in fomenting the riotous acts of a minority of Japanese still ring in our ears.

The riots in Japan, unfortunately, are an excellent demonstration of Communist techniques—developed in the hard schools of political warfare over a period of 40 years—which have led to the conquest and subjugation of nearly a billion people.

There is no question in my mind that with final enactment of this legislation establishing the Freedom Academy as a permanent weapon in our cold war arsenal, our Nation, as leader of the Free World, can sustain a systematic, coordinated economic, political and psychological campaign which can perhaps be one of the most important factors for attaining permanent world peace. The Freedom Academy can be of substantial force in bringing to an end despotic, tyrannical oppression by the architects and practitioners of an ideology that is a disease of the mind in building false hopes of materialistic success when at the same time it destroys the fruits of such success by wiping out the fundamental, moral foundation of dignity and freedom of the individual.

The two broad objectives of this bill, I believe, provide this Nation with the organizational means to meet our cold war development training needs in such manner as to bring the full strength of our tremendous moral, spiritual, intellectual, and physical capacity to bear in this struggle for survival.

These objectives as outlined in the Committee report are:

1. To develop an integrated operational science for our side which will meet the entire Soviet political-economic attack and work toward our national objectives in a systematic manner, utilizing all potential means in the public and private sectors which are in accord with the ethics of free men faced with a Soviet-type challenge.

2. To train Government personnel, private citizens, and foreign students in this science.

The cold war in which we are engaged has been clearly defined in an editorial by Life magazine (February 18, 1959) when it said, in presenting arguments for establishment of a Freedom Academy:

"The gap (in the range of weapons with which we are fighting the cold war) lies between our military preparedness at one end and our conventional diplomacy at the other. On this wide and surging central front we presently deploy a few smidgens of propaganda, economic aid and covert intelligence activties. To the Communists, on the other hand, this is the most important front of all. Throughout it, and in depth, they deploy all those techniques of political warfare, both overt and covert, which are the day-and-night work of the world's Communist Parties and which were known to Lenin, their inventor, as the organizational weapon.

"The weapon with and without the help of military threats, is chiefly responsible for all the gains the Communists have made since World War II. It becomes more potent with their rising capacity for economic and technical and cultural exports. Neither the Red Army nor straight Marxist propaganda, with all their power, could alone have created student riots * * * frustrated the parliamentary system of Italy, won an election in the most literate State of India * * * retained key footholds in the British and American labor movements * * * dazzled the opening mind of Africa, or poisoned strategic corners of press and university opinion from Paris to Tokyo. These are organizational successes, the fruit of long and rigorous training of dedicated individuals in a conspiratorial technique."

Life's editors said: "Given the will, the Communist political war can be countered by open and ethical methods which will uphold the values as well as the institutions of freedom." I think these methods can be found in a program such as is contemplated in the Freedom Academy legislation.

America has learned the lessons of hot war. Today we have a Defense Establishment in a state of such combat readiness that it prompts Russian Premier Khrushchev to say that his Moscow comrades would put him in a straitjacket if he thought of waging war.

But it took generations of experience—some of it bitter—to reach the position of military readiness which now exists and to complete a system of hot war training schools such as our military academies, or the National War College, for example.

The cold war which confronts us is as deadly, if not more so, than a hot war. While we are prepared to meet and defeat

any enemy on any front in a hot war, we have yet to develop a coordinated program to attain similar success in the cold war. This, of course, is not difficult to understand, for until the cold war was thrust upon us after World War II, never had we been faced with the type of conflict in which we are now engaged.

The crash of the summit, the riots in Japan, and the monstrous propaganda attacks coming from behind the Iron and Bamboo Curtains leave little room for misunderstanding the determination of communism to capture the world. With any lingering doubts removed as to the intentions of the Communists, it seems to me the opportunity is at hand, as the committee points out, to implement this program to develop an integrated, operational science for our side which will meet the entire Communist attack and work toward our long-range national objectives in a coordinated manner, utilizing every area of potential strength.

To those who question the wisdom of looking to new methods and new approaches in the struggle against communism, I call attention to the report of the Senate Internal Security Subcommittee. While the portion I cite is brief, I think the report developed in part from Central Intelligence Agency testimony reveals the extent and depth to which the enemies of the free world have gone to undermine and destroy the institutions of freedom.

In substance, the report outlines the fact that the Soviets are operating an extensive system of political warfare training schools and development centers at Moscow, Leningrad, Tashkent, Prague, and elsewhere on both sides of the Iron Curtain. Some of these schools, like the Lenin Institute of Political Warfare, began operating in the mid-twenties. The center at Prague specializes in training Latin Americans and Africans, while the school at Tashkent trains Communists from the Islamic countries. The top schools in Russia, China, and Czechoslovakia are not narrow trade schools, but comprehensive training centers giving detailed instruction in the vast field of political warfare and supporting subjects, with courses often running 2 or 3 years in length.

Significantly, the training of Latin Americans was stepped up in 1956 and in that year Red China began operating a parallel system of schools for Latin American Communists. And with the harangues of the Cuban Red Dictator Fidel Castro slapping us in the face nearly every morning as we pick up our newspaper, the committee comment that "one lone Freedom Academy, costing a fraction of the Cuban sugar subsidy, can lay the foundation for a major breakthrough" is even more revealing as we consider what can be a positive, direct, forceful step toward launching an offensive that can strengthen the free world alliance, raise anew the hopes of mankind everywhere, and dash forever the ambitions of power-mad rulers who threaten to bury us.

I am hopeful that despite the few remaining days in this session of Congress, the leadership of the Senate will bring this important, vital legislation to a vote.

Lassie Leaguers in New York

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, by me, relating to Lassie Leaguers in New York.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In these times of intense work, it is both refreshing and rewarding to take note of an organization devoted simply to recreation—the Lassie Leagues. Lassieball is similar to baseball, indeed it is a part of baseball. It gives girls aged 10–15 a chance to play a game organized on the national level. Nearly 10,000 girls are now playing the game across the country. In Albany, N.Y., alone, 500 girls are playing. One hundred and fifty girls play in the two leagues at Rochester, and new leagues undoubtedly will be formed. New York is proud to see such great interest in Lassie Leagues within the State. Opportunity for physical training is important to a young person's education, and the Lassie League provides just this opportunity. Fitness has always been a desirable goal for the men of this country, but it is equally vital for women as well. In playing Lassieball, girls can work toward fitness while gaining a sense of the excitement of winning and the acceptance of being a good loser. I think we need to recognize more the value of athletics in recreation and to salute the Lassie Leagues for helping our youth to do so.

American Veterans Committee Platform on International Affairs, 1960

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the international affairs platform of the American Veterans Committee, as adopted at its 1960 convention:

AMERICAN VETERANS COMMITTEE PLATFORM ON INTERNATIONAL AFFAIRS, 1960

I

1. The American Veterans Committee has as its central concern a more stable world. But a stable world is not an unchanging world. The first requirement for American diplomacy is that it identify itself sympathetically with those changes that can lead to greater freedom from want and from fear.

2. We believe that our Nation's security requires continuous collaboration between the United States and other countries for the preservation of peace, the improvement of living standards, and the enjoyment of personal liberties. At the same time, just as the welfare of the American veteran depends upon the health of the whole American community, so does the welfare of the American community depend upon the strength and solidarity of all nations that are or aspire to be free.

Moreover, the standing of the United States abroad will in great measure be determined by what we do within our country. Specifically, the military capacity to resist aggression, whether nuclear or conventional, wherever and in whatever form aggression may occur, is an indispensable foundation of a successful foreign policy.

Such a foreign policy also demands that we produce and develop those goods, services, and new ideas which will satisfy essential domestic needs and the greater needs of less-privileged peoples. The present rate of U.S. economic growth is inadequate to meet the needs.

And, finally, no foreign policy will be persuasive for the other peoples of the world until the American Government takes positive action for the discontinuance of racial and religious discrimination in political, economic, and social activities in its own country.

3. The people of the United States and its Government are firmly committed against war as an instrument of national policy. This commitment is an inalterable fact of American life. Further than that, the people of the United States and its Government recognize their responsibility in the maintenance of peace and the raising of living standards throughout the world. Since World War II any significant remnants of isolationism have disappeared. As a nation, we have recognized our responsibilities as one of the greatest world powers. Consistently with our basic policy of peaceful resolution of international controversies we led in formation of the U.N.

From the adoption of the United Nations Charter to the end of the Korean conflict the United States has led the world in combating the economic conditions that lead to war. Of all this, we in AVC are proud.

For some years past, however, the foreign policy of the United States has been limited to "holding the line" against aggression and has largely been one of reaction to Communist initiatives rather than positive action based on an affirmative and consistent policy of our own.

As the Soviet Union has created periods of "cold war" or of "peaceful coexistence" the United States has moved from brinksmanship to summitry. As a result the traditional methods of diplomacy have suffered and the importance of the U.N. declined. But the traditional methods of diplomacy and the U.N. are calculated to develop responsible relations and peaceful solutions of controversies between states. In an increasingly complicated world these institutions become even more important.

Replacing these methods by personal diplomacy can only lead to confusion and discord and can only serve the purposes of those who seek to frustrate responsible agreements among nations.

The fiasco of the recent summit meeting at Paris is a glaring proof of the need to return to the traditional methods of diplomacy and a greater utilization of the United Nation's machinery. Periodic meetings of the heads of governments of the great powers are certainly necessary, but it is our belief that these can best be held within the United Nations Security Council under the procedures established by article 28 of the charter.

Further than that, rapid emergence of new nations toward independence requires the strengthening of the existing international machinery in order that they may develop in a responsible and constructive way. In this connection we believe that, to an increasing extent, international aid should be channeled and harmonized through the United Nations, on the basis of long-term planning, and long-term commitments.

With this being so, ways must be found to include within the United Nations all nations, including the Peoples Republic of China.

4. Too often our foreign policy has not been sufficiently attuned to world realities and our Government has been unwilling or unable to anticipate things to come. Too often Americans have been preoccupied with the menace of communism to the exclusion of all else, and our leaders have shown neither the imagination nor the daring to risk new approaches to peaceful settlements. The assumption of our foreign policy has been that if the status quo vis-a-vis the

Communist world can only be preserved long enough, the Communist world will collapse under the weight of its own injustices and inconsistencies. The history of recent years demonstrates the futility and danger of that assumption.

II

5. Yet, however, interdependent the world has become through technology, it remains sharply divided in a variety of other ways. On one level, it is split among the Communists, the anti-Communists, and those who are neither. We are obliged to recognize the differing demands that each of these worlds makes upon U.S. foreign policy and to recognize at the same time the divergent interests within each world.

6. There is first of all the Communist challenge. It requires that the military defenses of the non-Communist world be made progressively stronger and more flexible. We hope, however, that the leaders of all nations are aware that in this nuclear missile age the avoidance of war between major powers has become an essential. The controlled reduction of all armaments and the abolition of atomic weapons must continue to be a central objective of U.S. policy—a disarmament which is reliably policed and enforced. Meanwhile, we cannot in safety discount the influence of Sino-Soviet military power and the threat of blackmail implicit in that power.

7. At the same time, greater emphasis should be given by the United States to diplomatic initiatives, which demonstrates our Nation's unflagging interest in achieving a more peaceful, free, and prosperous world. Our governments should, for example, press forward with a program through which all peoples may benefit from the peaceful uses of atomic energy. We believe, further, that the Sino-Soviet challenge at this point is a challenge to the Western World's capacity to associate itself constructively with the struggle of nations, in Africa, Asia, Latin America, and the Middle East, to raise their living standards and to achieve a democratic society.

8. We welcome the interchange of persons between the United States and Communist countries and hope that the present exchange program will be considerably strengthened and broadened. We believe that such a program should emphasize exchanges in matters of health, rehabilitation of the disabled, science, and other technical fields. We support President Eisenhower's proposal for exchanges of thousands of students between American and Russian universities and only regret that no steps were taken to implement this proposal.

III

9. It is essential that our Government form its foreign policies in concert with all our friends so that at all times there shall be the widest possible consensus on how best to deal with threats to peace and freedom.

This brings us to America's relations with its allies. We believe our Government should think and act on the realistic basis of cooperation between consenting partners. This requires a sharing of decisionmaking between the United States and friendly governments on problems which directly affect their interests. And this applies not only to Western Europe but to Latin America and elsewhere. If division and discord among non-Communist nations is a prime Sino-Soviet objective, and we believe it is, the closing of ranks and the building of confidence among non-Communist nations should be a prime objective of U.S. policy. The American Veterans Committee supports measures which promote the unity of the non-Communist world through political consultation, the lowering of trade barriers and in certain instances the pooling of ideas and resources for mutual benefits and the active fostering of the European Common Market, the free trade area, and the budding Latin American Common Market.

We should reassure the Latin American countries that we respect thier sovereignty and act accordingly. Our actions should consistently show that we regard them as equal partners in the Organization of American States rather than as second class states. Instead of carrying on a day-to-day program of expediency, we should, as part of a long-range policy, intensify our programs to help the Latin American nations achieve economic advancement and political stability.

10. We believe that the United States has much to learn from as well as give to the peoples of Asia, the Middle East, Latin America, and Africa, and that underdeveloped areas can be helped to progress along their own lines of development. A diplomacy which succeeds with these many races and histories must be sensitive to local traditions, aspirations, and materials needs. Foreign economic assistance, technical cooperation and long-term loans repayable at low interest rates all on a scale far beyond that presently in effect—are required from the United States in order to remove dangerous inequalities of opportunity, as well as to counter enterprising Sino-Soviet trade operations in these areas.

11. Nor should we expect in exchange for such assistance that less developed nations will approve of U.S. foreign policies or that they will spurn whatever assistance may be offered them by the Communist world. Our Government cannot command cooperation; it can only encourage it by respectful, generous, and continuing interest in the rapid development of those countries. That development should have high priority in our national thinking. For we know that if present trends continue, despite assistance presently being given, the gap between the industrialized nations of the West and the underdeveloped regions will become wider, not narrower. And the Communist world, pointing to the rapid technological advances of the Soviet Union and Communist China as examples, will do all it can to convince the underdeveloped nations that progress demands the kind of collective organization championed by communism. The alternative path to progress, one consistent with free association and humane values, must be made to work.

12. The American Veterans Committee supports the peaceful settlement of international disputes and a strengthened United Nations. The peace for which we work, like the disarmament we seek, will not come from capitulation to aggressive threats; it will come from courageous, intensive effort to harmonize the positive purposes of the United States with the needs of the world at large.

13. Finally, the prime task of nations in this second half of the 20th century is to find a method of banning war. Both the United States and the U.S.S.R., regardless of which may have the preponderance of power, are now capable of destroying each other as well as scarring all humanity on this planet for all time to come. All nations must find the means somehow of surmounting the barriers of ideology, mistrust, and past errors on both sides so that the prophecy will be realized: "Neither shall man know war any more."

Address of Hon. Michael A. Feighan of Ohio, Before the Donauschwaben Society of the United States

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FEIGHAN. Mr. Speaker, on Sunday, June 12, 1960, the Donauschwaben Society of the United States held its annual meeting in Cleveland, Ohio. The Donauschwaben people were among the many who were dispossessed and pauperized by the Russian Communists during and immediately following World War II. Many of these victims of Red tyranny have come to our shores and here they have built a new life in freedom for themselves and for their families. A deeply religious and hard-working people, they look to the United States to give vigorous leadership to the cause of justice as the key to a lasting peace.

Under leave obtained, I include in the RECORD my address "The Donauschwaben People Look for Justice":

I am happy to have this opportunity to attend this national meeting of the Donauschwaben (Dough-na-schwa-ben) and to say a few words of greeting. At the outset, I want to commend Reverend Sulzer for the wonderful work he has done and I am confident will continue to do, for the Donauschwaben people here in Cleveland. He deserves the grateful thanks of all present here for his untiring efforts and sacrifices in the cause. You have a fine man as president of the Cleveland chapter, Mr. Anton Rumpf, who is equally concerned with the future welfare of your people; good leadership is the requisite to happy results and I am sure you have enjoyed both.

It was some years ago that I became acquainted with the Donauschwaben people. The circumstances were not happy ones because it had to do with the expulsion of all people of German Ethnic origin from the nations and territories occupied by the Red army. As a member of the Judiciary Committee I made a number of official visits to Europe immediately following the war to study the plight of the homeless and dispossessed. I was concerned with all who were so stricken regardless of their ethnic origin or country of nationality. The magnitude of this problem in the years 1945 to 1948 was such as to cause some people to throw up their hands in despair. I was not among them. This, I felt, was the greatest of our immediate postwar problems because it involved millions of innocent people. A solution to this problem had to be found, a solution which met the requirements of justice.

Sufficient time has passed to permit an objective examination of the reasons which led the Russian Communists and their collaborators to expel the people of German Ethnic origin from homelands they had enjoyed for centuries. I see these as the major reasons:

1. Most of these people were dedicated Christians, people who clung to their faith in the face of all odds. As such they would find all the works and demands of communism as repulsive, as something to be fought.

This attitude would lead to resistance against the new order the Russians planned to impose upon the people. Thus, the Russians decided forced expulsion was in the interest of communism. This would mean fewer people to control and fewer problems for their police state methods.

2. Communist functionaries were demanding loot and reward for their collaboration with the Russians. By expropriating all the property held by the people of German ethnic origin and expelling them, the Russians would acquire a rich treasure of loot which they could share with their hired hands in the countries occupied by the Red army. The record of performance tells us this is exactly what they did. But the record also tells us that many of those who collaborated with the Russians to share in this loot were later liquidated by the Russians—a just reward for their treasonable services.

3. The Russians were convinced that by throwing some 10 million homeless and pauperized people upon the war-torn economies of Germany and Austria they would create chaos and insoluble human problems—the grounds upon which the Communist vulture feeds. They believed the people of the western world would lack the courage and spirit of sacrifice required to resolve this great human problem. But here they were wrong. We have reduced the size of the problem to manageable proportions, we have found new homelands for several millions of the dispossessed, we have provided economic programs for the assimilation of more millions of people in the Federal Republic of Germany, we have utterly defeated the hopes of the Russians for chaos and civil disorder on a scale which would make Communist takeover of Germany possible. What we have done has not fully compensated the individuals who were deprived of their rights, property, and heritage by these Russian expulsions but we have acted in the spirit of justice. Time and the scales of international justice, we know, will take care of the rest.

The United States became a haven for over 400 thousand of the dispossessed and homeless of all creeds, all nationalities and all ethnic origins. There were those who sought to exclude persons of German ethnic origin from the right to participate in our resettlement programs. They sought to blame the expellees for the crimes of the Nazis, being blind to the fact that the expellees were equal victims of tyranny and inhumanities, that they were human beings with the same problems, the same hopes and the same rights before God as all the rest of the displaced. Any effort to discriminate against people on the basis of their ethnic origin is completely un-American. That is why Congress provided opportunities for your people to come to America and here to build a new life in freedom. I have always been proud of the part I played in making this possible. My efforts have been amply rewarded by the fine record of achievement and good citizenship your people have made in this land of their adoption.

Let us look for a moment to the Russian problem in its broader context, in the context of their struggle for the world. All thinking people are concerned with the tensions which grip our international life. The Russians have created these tensions during the past 40 years of Communist conspiracy. Today they occupy and enslave more than a score of non-Russian nations with a total population of over 200 million people. They are attempting to put the entire world behind their Iron Curtain, to turn back the pages of history to the dark days of the Mongol khans. Seeing this in its reality has caused freemen to unite, to prepare to meet the challenge, to turn back the Muscovite hordes.

The great question of our times is not summit conferences, it is not personal diplomacy. It is not peaceful coexistence. All these questions have been disposed of by the present administration in Washington. They have disposed of them by proving the utter futility of attempting to resolve the Russian problem by these methods. For this we give them credit, they have performed a useful service, they have proven that no administration can carry on negotiations with the Russians unless it is prepared to agree to concessions which will lead only to war or peaceful surrender.

The time has arrived to take the political offensive against the Russians. We must look forward to the peaceful dismemberment of the present-day Russian Empire—the source of all the world tensions. This can be done by the people of the captive, non-Russian nations if we will give them full moral and political support. There are only 70 million Russians in the U.S.S.R. To this we can add no more than a few thousand non-Russians who are fully collaborating with them in the preservation and extension of the empire. We have several hundred million non-Russian captives behind the Iron Curtain who want the United States and other free nations to collaborate with them in their fight against Russian imperial communism. It is foolhardy on our part to reject their pleas for assistance in destroying the menace which is attempting to destroy our free way of life. This is the only sure course to prevent war, the only road to peace with justice.

I do not believe it is too much for us to believe that the restoration of freedom and national independence to these captive nations will open the door for a just settlement of the injustices done the Donauschwaben people by the Russians and their communistic collaborators in those countries. We Americans believe in justice for all nations and people. This includes the just claims of your people for the properties expropriated by the Russians who occupy these captive nations.

You have found the good life here in the United States of America. You have worked hard for the success you have attained. You have found a new happiness in all the opportunities our free way of life offers to all other people. You are proud of your heritage. You have preserved your culture and the historic aspirations of your people. This is a story of success. It is the American story. This is the story all of us seek to preserve and share with all the nations of the world.

Oversea Refugee Programs

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. RODINO. Mr. Speaker, I should like to direct the attention of my colleagues to the following letter which was sent to President Eisenhower by the Nutley Chapter of the American Association for the United Nations:

JUNE 22, 1960.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The Nutley Chapter of the AAUN, noting that only one-half of the $10 million made available to the White House contingency fund under section 703 of the Mutual Security Act 1959 has been committed to refugee needs, expresses the hope that you will see fit to allocate the remaining $5 million to oversea refugee programs.

We realize there are many legitimate claims upon the mutual security contingency fund, but we are deeply convinced that refugee needs should be given high priority in order to present to the world a faithful reflection of U.S. leadership and cosponsorship of World Refugee Year.

We know, too, that like all our compatriots, you have a sympathetic concern for these victims of powerful historic forces, of Communist oppression, and of the most cruel social injustices.

During the coming United Nations Week in October, the Nutley Chapter of the AAUN plans to focus special attention on the refugee problem and to collect funds for transmission to the United Nations High Commissioner through the U.S. Committee for Refugees. We feel that our efforts would be very greatly aided if the full $10 million authorized by Congress were utilized to this great humanitarian end.

Respectfully,

C. A. REOPELL,
President, Nutley Chapter, AAUN.

World Refugee Year—Success or Failure?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. MULTER. Mr. Speaker, it is just a matter of hours until World Refugee Year becomes history. This year—dedicated to alleviating the plight of the earth's uprooted peoples—is due to end on midnight, June 30.

Some 70 nations of the free world joined in proclaiming World Refugee Year under the auspices of a United Nation's General Assembly resolution adopted in December 1958.

According to the United Nation's resolution the World Refugee Year was to have the following aims: "To focus interest on the refugee problem; to encourage additional financial contributions from governments, voluntary agencies and the general public; to encourage additional opportunities for permanent refugee solutions through voluntary repatriation, resettlement or integration on a purely humanitarian basis."

It is too early to assay the general impact of World Refugee Year upon the total problem toward which it was directed. Indeed, it is hoped that this impact will not cease to be felt with the passing of World Refugee Year, but that the increased efforts and the solutions that were found during the year will continue to be applied as long as world refugee problems remain to be overcome.

There is no single world refugee problem. There are many of them. Someone has said that the refugees are not a stagnant pool but a running stream of humanity. New peoples are constantly joining their ranks, others gradually leaving them.

It is not an easy task to ascertain the nature and extent of the refugee problems throughout the world. A complex

of economic, social, political and humanitarian considerations are involved. These considerations vary with each group of refugees and with each individual within a group. They do not all need, nor do they want, the same type of assistance. They do not all wish, for example, to be moved once more and resettled in a strange and foreign land. Some do. Most, at one time or another, are in need of food, shelter, clothing, and medical care. Others need rehabilitation and training to make them self-sufficient in the environment of their asylum. An unfortunate few will never be totally self-sufficient again.

I believe that a great deal has been accomplished during World Refugee Year that is worthwhile. At the same, the high expectations for this event were to a large extent unfulfilled. No one, of course, expected that all of the problems would be cleared away within the year. But there were many things that might have been done that were not.

There has certainly been a quickening of the public awareness in the United States of the nature and extent of the refugee problems. This was brought about by the publications of the United Nations and through the use of mass media by private organizations such as the U.S. Committee for Refugees.

There have been increased contributions for refugees by private individuals, both in money and the basic necessities, such as food and clothing. Here again the private voluntary refugee agencies are to be credited with having provided the stimulus that sparked these drives. Substantial contributions were made in this field by other private organizations such as the fraternal and benevolent societies, church groups, and the like, that are not normally engaged in refugee activities.

The U.S. Government increased its contribution to the various activities benefiting refugees. Over $70 million was spent on these programs by the United States. This included approximately $40 million for the regular refugee programs, $25 million in surplus foods distributed under Public Law 480, and over $5 million of the $10 million fund specially earmarked for World Refugee Year activities.

The one area, in my opinion, in which we in this country failed to live up to our capabilities is refugee legislation. The Congress alone is responsible for this. What better occasion could we have had to enact a substantial refugee bill, or even to revise our basic immigration law so that more of the world's refugees could be accommodated within its framework?

I, for one, am sadly disappointed with what we shall have to settle for as our legislative contribution to World Refugee Year. This, as it turns out, is House Joint Resolution 397, which at best can be expected to allow about 5,000 refugee-escapees to enter the United States in each of the next 2 years. This joint resolution passed the House in April and was amended and reported out of committee in the Senate last week. I hope it will clear both Houses before adjournment.

The Senate committee's amendments to the joint resolution, I believe, improved it in several particulars but did not broaden it very much in scope. These amendments added a provision committing us to accept up to 500 "difficult to resettle" refugee-escapees. In doing this we will join Australia, New Zealand, Canada, and a number of other countries that have already taken in hardcore refugees, whose needs are the most urgent of all. The Senate committee also amended House Joint Resolution 397 by tacking onto it the provisions of H.R. 10419 which had already passed this House. These provisions extend the alien orphan adoption program under section 4 of the act of September 11, 1957, for 1 year until June 30, 1961, and the Azores and Dutch Indonesian refugee programs for 2 years until June 30, 1962.

One of the shortcomings in the general provisions of House Joint Resolution 397 is that they apply only to refugees under the mandate of the United Nations High Commissioner for refugees. That is, only European refugees can come in under them. Refugees in the Near and Far East are completely excluded from these provisions.

Another shortcoming is that the legislation provides that the United States shall accept only 25 percent of the number of refugees resettled outside the United States. The United States, the free world's wealthiest and most powerful nation, is thus put in the position of being a follower rather than a leader in resettling refugees.

There would, of course, be less need for this country to enact special refugee legislation if its basic immigration laws were not tied to the national origins quota system. The best way to provide permanent refugee relief would be to replace this antiquated and discriminatory system with one that would determine immigration on the basis of need.

Congress has had before it a bill for such a system since 1955. This is the Celler bill first introduced in 1955 and reintroduced in each Congress since that time. Along with a dozen or so of my colleagues I introduced in the present Congress a companion bill to that of the distinguished chairman of the Judiciary Committee.

This bill is a comprehensive omnibus proposal which would completely rewrite the Immigration and Nationality Act. In addition to abolishing the national origins quota system it would enact other needed reforms in our immigration and nationality laws. These include granting increased due process protections in deportation and exclusion procedures; eliminating second-class citizenship provisions for naturalized citizens; and providing greater efficiency in administering the law by an independent commission in place of the dual administration by the Justice Department and the State Department that the present law requires.

I shall not attempt to explain all the details of the substitute provided for in the bill in place of the national origins quota system. The substitute system would be a unified quota system with certain percentages going to five different classes of immigrants from any country in the world.

These classes are:

First. Family reunification, which would include close family relatives of residents of the United States.

Second. Aliens whose skills are urgently needed in the United States.

Third. Those whose admission would help solve economic problems of friendly nations. The Dutch Indonesian refugees are a good example.

Fourth. Those fleeing religious or political persecution.

Fifth. A fifth class would include those who do not fit into any of the four preference groups.

No one nation would receive a preponderant share of immigrant visas, as a percentage limitation would apply apply within each of the five classes of immigrants.

The United States can be justly proud of its efforts to assist the millions of displaced persons and refugees resulting from World War II and ensuing events. During the past 15 years our Government has spent well over a billion dollars for these purposes. The big intergovernmental agencies—the Intergovernmental Committee for European Migration, the United Nations High Commissioner for Refugees and the United Nations Relief and Works Agency—would hardly be able able to operate without this country's financial support. More than 700,000 displaced persons and refugees were settled in this country since World War II.

This proud record only adds to my disappointment over our lack of greater accomplishments during World Refugee Year.

Howard "Slim" Suttle

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. WILLIAMS. Mr. Speaker, it is with sorrow that I announce the passing of a long-time member of the Capitol Press Corps, a noted newsman, and my close friend—Howard "Slim" Suttle.

Widely known for his deep and abiding love for Mississippi and her people, Slim Suttle was a competent reporter, having covered the Washington scene for 20 years. He was active in promoting the good qualities of our great State.

He will be missed by those who knew him. My office particularly will not soon forget his friendly greeting. Hardly a day passed but that Slim dropped by, quite often with a Mississippi visitor he was showing around Capitol Hill.

To his wonderful wife, Amelia, and their devoted daughter, Kay, I extend my sincere sympathy.

Under leave to extend my remarks, I include the news story of his passing from the June 22 issue of the Jackson (Miss.) Daily News, and two editorials

on the life of our departed friend. They follow:

[From the Jackson Daily News, June 22, 1960]

CAPITOL CORRESPONDENT HOWARD SUTTLE, DEAD

Howard "Slim" Suttle, Washington correspondent for the Jackson Daily News and a veteran of more than 30 years in the news writing field, died at Baptist Hospital here early this morning.

Suttle, 52, became ill about 3 o'clock last night at the Heidleberg Hotel and was removed to the hospital about 1:30 a.m. He died at 3:25 a.m.

Cause of death has not been determined.

Wright and Ferguson is in charge of local arrangements, which are incomplete. Burial is expected to be in McComb where Suttle formerly lived.

Suttle was the son of the late Reverend G. H. Suttle, founder of Northside Baptist Church in Jackson.

A native of Louisiana, he moved to McComb in 1930 as city editor of the McComb Daily Journal, now the McComb Enterprise-Journal.

Suttle moved to Washington in 1940 and opened a news bureau there. He served as Washington correspondent for both the Jackson Daily News and the Shreveport, La., Journal. He was also a former staff member of United Press International wire service.

Suttle maintained a voting residence in Pike County, and had been named as a alternate delegate to the National Democratic Convention next month in Los Angeles from the Fourth Congressional District.

He was a member of the National Press Club in Washington and also a member of the Washington professional chapter of Sigma Delta Chi journalism fraternity.

In addition he held membership in both the Mississippi and Louisiana State Societies of Washington.

He was well known among congressional delegations and Government officials in Washington from Mississippi and Louisiana.

Suttle had been in Jackson and McComb for the past several days and was registered at the Heidleberg Hotel here.

After he became ill about 8 p.m. he called State Representative Walter Hester of Adams County, who was in the hotel, about 1 a.m., complaining of abdomen pains.

Suttle was in shock when a physician arrived and was moved to Baptist Hospital about 1:30. He died 2 hours later. The physician said cause of death could not be determined.

Mrs. Suttle, the former Amelia McCarthy of McComb, was in Washington.

She and a daughter, Mrs. Leonard Hearton of Forest Heights, Md., are scheduled to arrive here this afternoon.

In addition to his wife and daughter, Suttle is survived by his mother, Mrs. G. H. Suttle of Monroe, La.; a sister, Mrs. J. Norman Coon of Monroe; and a brother, Spurgeon S. Suttle of Little Rock.

Three grandchildren also survive.

[From the Jackson Daily News, June 23, 1960]

HOWARD SUTTLE, SOUTH'S CHAMP

The sudden and untimely death of Howard "Slim" Suttle, Washington correspondent for the Jackson Daily News and several other southern newspapers, was a deep shock to his family and a host of friends.

Mr. Suttle died at the age of 52 a short time after he was stricken at a downtown hotel where he had been completing arrangements for a series of television and radio broadcasts on the National Democratic Convention in Los Angeles next month.

Mr. Suttle was in the editorial office of this newspaper on Tuesday afternoon after returning from Shreveport where he conferred with the editor of the Shreveport Journal, one of the newspapers he represented in Washington. The veteran newsman was in a cordial and cheerful mood, having enjoyed several days visit in Mississippi from the hectic Washington pace.

A native of Louisiana and a former resident of Jackson and McComb, Mr. Suttle had close personal contacts with some of the highest officials in the Nation's Capital.

He was truly a man who walked with kings but never lost the common touch. He was in love with politics.

Ever friendly, never complaining, Howard Suttle had a tender spot in his heart for the underdog. Nonetheless, he pursued news without fear from any quarter.

Howard Suttle will be missed by a host of friends in all walks of life in Mississippi, in Washington, and in the Southern States which he dearly loved and championed the cause therefor.

Heartfelt sympathy goes out to his widow and relatives.

[From the Jackson Clarion Ledger]

HOWARD SUTTLE WAS AN ABLE JOURNALIST

Journalism has sustained a loss in the untimely passing of Howard "Slim" Suttle, widely known newspaperman of Mississippi and Washington, D.C., who died at the age of 52 after a career of 30 years.

"Slim" Suttle was popular, conscientious, and devoutly loyal to the South. Energetic and resourceful, he established his own news bureau in the National Capital, covering the Washington beat for various southern newspapers.

He had his own inimitable style and the knack of interpreting political events with wisdom, accuracy, and clarity. He was faithful to his profession and distinguished himself as an outstanding journalist.

Many Mississippi leaders at local, State, and National levels have paid impressive tributes to "Slim" Suttle's ability, loyalty, and integrity. Each of these tributes has been well earned and richly deserved.

We join his many friends and contemporaries in extending heartfelt condolences to his loved ones in their time of sorrow. "Slim" Suttle was a credit to the fourth estate and will be greatly missed.

Trouble in San Francisco

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mrs. DWYER. Mr. Speaker, on June 22, 1960, a constituent of mine, Mrs. George C. Dreyer of Mountainside, N.J., addressed a communication to the mayor of San Francisco in regard to the recent hearings held by the House Un-American Activities Committee in that city.

Since she has requested me to insert her statement in the RECORD, I am doing so under leave to extend my remarks.

The communication follows:

RE BREAKDOWN IN LAW AND ORDER, THEREFORE SOCIETY

The CONGRESSIONAL RECORD of June 2, 1960, page 10921, gives an eyewitness account by seven ministers of the savage treatment permitted members of a duly constituted congressional committee—the House Committee on Un-American Activities—when holding May 12 and 13 hearings in San Francisco.

It was a frightening and unsavory account, to say the least, sir. To me it was a demonstration of a successful attack upon law and order; therefore society, an attack upon everything my family and friends believe in and belong to—decent American society.

I simply had to write you of my feelings of shock and worry at such a riotous happening. It was communism at work in an American city, and I earnestly and most respectfully beseech you, Mr. Mayor, to mark well those responsible for the outrage, and thus gain the thanks and respect of American patriots throughout the whole country.

My Congresswoman, the Honorable FLORENCE P. DWYER, the members of the House Committee on Un-American Activities, and each member of the California congressional delegation and New Jersey congressional delegation have been forwarded a copy of this communication.

Sincerely,

Mrs. GEORGE DREYER.

Helen Keller

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the name of Helen Keller, already an inspiration to millions of persons throughout the world was the subject of much discussion this week, which brought her 80th birthday. In this body, Senator LISTER HILL has, in his sponsorship of a bill to offer new honors to Helen Keller, focused attention on her achievements in very dramatic and pertinent fashion.

An editorial in the June 25 edition of the Daily Home News, New Brunswick, N.J., also expresses the affection felt for Miss Keller. It also gives a deeply meaningful statement once uttered by her.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELEN KELLER AT 80, HER LESSON LIVES

Monday will be the 80th birthday of one of the great ladies of our time, Helen Keller.

Stricken totally blind and deaf and virtually speechless at the age of 19 months, Miss Keller's adventurous spirit and dogged determination, aided by the faithful assistance of two other great ladies who have now gone to their reward, led her to triumph over apparently insurmountable obstacles.

Twenty years ago Miss Keller wrote, "The spirit, like the sea, is greater than any island or continent of sense-experience within its waters. * * * My deep-rooted feeling that I am not deaf or blind is like the feeling that I am in the body but not of it. * * * I use my limitations as tools, not as my real self."

Probably no other person of our times has done so much personally to cheer the handicapped, to spur the handicapped along to triumph over their misfortunes. With her teacher, Anne Mansfield Sullivan and her companion, Polly Thompson, Miss Keller traveled the world taking encouragement and help to the blind in institutions on all the continents. Her life was a busy one, full of writing and lecturing.

Then her faithful associates passed on. Now in the sunset years of her life, Miss Keller in retirement still exerts a tremendous influence on the world around her, in her own words still trying to "make the light in others' eyes my sun, the music in others' ears my symphony, the smile on others' lips my happiness."

The March of the Mail Through History

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. PORTER. Mr. Speaker, the importance of our mail system cannot be overemphasized. Its significance in history has been recognized.

Under unanimous consent I am including a column entitled "Topics," from the New York Times for Sunday, June 12, 1960, in which some interesting facts about the history of the mail service are set forth:

TOPICS

TRADITION OF MAIL DELIVERY

Eighty-eight years ago, in the second week of June 1872, the Post Office Department became a separate department of the U.S. Government. The same act of Congress provided that "mail robbery should no longer be punished by death," and in other respects brought postal regulations into harmony with the conditions of the day. Thus was formalized an institution that links our own country with a tradition of mail delivery going back to distant antiquity. The earliest letter carriers were couriers who brought epistles scratched on clay, wax, or bronze directly from sender to receiver. King Sargon of Babylonia founded a royal post in 3000 B.C., and during the first millennium of its existence postal service remained a royal prerogative.

GREEKS AND ROMANS

The Greeks and Romans, who fashioned so much of what we know and appreciate today, perfected the art of delivery by human courier. Speedsters who were messengers, when they were not competing in Olympic Games, were known to cross vast areas in a short time, and one renowned runner, Philonides, once covered 60 miles in 9 hours. To the Greeks, too, we owe the famous inscription gracing the entrance to our town's general post office; the historian Herodotus, writing of the Persian postal system of the sixth century, B.C., said: "Neither snow nor rain nor heat nor gloom of night stays these couriers from the swift completion of their appointed rounds." Credit for the first modern postal system goes, though, to Caesar Augustus, first Roman Emperor. The postal system disintegrated with the collapse of the empire, and Europe lacked organized postal communication until the early 1300's. But other civilizations had picked up the threat. Marco Polo reported 10,000 postal stations in the China of Kublai Khan, believed to have lived from 1215 to 1294, and more than 700 years ago Inca couriers were carrying messages along a 5,000-mile stone road from Colombia to Chile.

BUSINESS BY MAIL

Our own postal system was based largely on the British, whose tradition of having the finest in the world started when Henry VIII appointed Sir Brian Tuke first "Master of the Posts." Benjamin Franklin, co-deputy Postmaster General of the Colonies from 1753 to 1774 and appointed first Postmaster General by the Second Continental Congress in 1775, was largely responsible for developing our own postal service into an efficient and reliable means of communication. The movement westward in the 1800's not only increased the demand for speedy and efficient postal service but set the stage for the conduct of business by mail. Mail order publications were recognized as aids to the dissemination of knowledge as far back as 1789, and lower postal rates governed them. Pioneers in isolated locations eagerly welcomed items ranging from a squirrel rifle to a complete set of living room furniture—a forerunner of today's direct mail business, which includes everything from a postcard to a 1,500-page catalog.

RISING TO THE CHALLENGE

Today just about everyone with something to sell, teach or preach uses the mails. This includes big and small business, service industries, philanthopies, educational institutions, clubs, labor unions and political candidates. Modern technology and organization have risen to the challenge to our Post Office Department posed by this deluge of mail, estimated at 55 billion pieces a year, more mail than is handled by all the rest of the post offices of the world put together. In 1943 a postal zoning system was started to expedite mail handling and delivery. In 1947 helicopter mail service was started in Los Angeles, and "talking mail boxes" were introduced here in New York in 1956. Last year a Regulus I guided missile, launched from a submarine 100 miles off the Florida coast, carried 3,000 letters to a safe landing 22 minutes later at the Mayport Naval Auxiliary Air Station near Jacksonville. This marked the first official use of missiles by any post office of any nation. Such an event gives rise to the thought that rockets may carry mail from the earth to the moon in less time than it once took a pony express rider to gallop from Dodge City to Tucson.

Increase in Informal Entry Ceiling Would Cut Costs of Small Businessmen

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. MACK. Mr. Speaker, I rise in support of my bill, H.R. 9240, to amend the Tariff Act of 1930 so as to authorize informal entries of merchandise where the aggregate value of the shipment does not exceed $400.

This is not a tariff cutting bill, Mr. Speaker. It could be accurately described as a redtape cutting measure for the relief of small businessmen.

If enacted, this bill would not change the amount of duty collected on imported merchandise. It would, however, eliminate a considerable amount of paperwork for jewelers and other small businessmen on small shipments of goods for retail sale. Tourists and travelers also would benefit from a higher informal entry limit.

The Department of Commerce, in its favorable report on my bill, explained that informal entries are distinguished from regular entries in that a short written form and less complicated customs procedures apply to shipments qualifying for informal entry.

The original ceiling of informal entries was $100. This was increased to $250 by the Customs Simplification Act of 1953. Although my bill would increase this limit to $400, it is certainly true that there has been considerable price inflation since 1953. It is probable that a $400 limit would permit a small businessman to use the informal entry method for about the same quantity of merchandise as was possible under the $250 limit 7 years ago.

The informal entry method is particularly useful for shipments by mail. Such shipments are examined by customs officers and the amount of duty is ascertained. Then they are delivered by the postal service to the addressee who pays the duty and whatever tax may be applicable. In contrast, shipments over $250 are mailed to the customs office nearest the addressee. The addressee is notified by mail that his shipment has arrived. He or his authorized agent must appear personally at the customs office to file an entry with supporting invoice, entry bond and any other necessary documents. After payment of duties and taxes, the shipment then may be released.

Besides being less burdensome to the small businessman, the informal entry method, is much less expensive. Since many of the retailers affected operate on a small profit margin, the difference in importing costs is often the difference between profit or loss.

It is for these reasons, Mr. Speaker, that I urge the House to follow the unanimous recommendation of the Ways and Means Committee and pass this bill.

U.S. Labor Against Fidel Castro

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an illuminating article, "U.S. Labor Against Fidel Castro," by Dr. Emilio Nunez Portuondo, former president of the Security Council of the United Nations. This piece shows that only one political party is allowed to function in Cuba today, the organization set up and controlled by Soviet China and the Kremlin. In short, Nikita Khrushchev and the Soviet "Gauleiter of China," Mao Tse-tung, are collaborating in the domination of the Castro brothers, Fidel and Raul. Working people are the first victims and principal slaves of the regime. Fortunately, the AFL–CIO executive council, on May 4, 1960, expressed itself on this subject. The ar-

ticle is included at this point in the RECORD:

[From Latin American Events, May 16, 1960]

U.S. LABOR AGAINST FIDEL CASTRO

With great satisfaction, we turn over the editorial space of this issue to the AFL–CIO executive council, which on May 4 released a very significant statement sustaining the anti-Castro prodemocratic position of this newsletter.

U.S. workers, patriotically, and with much more perspicacity than the "experts," recognize the fact that Cuba is in the hands of international communism, that the Cuban situation constitutes a problem threatening the security of the entire hemisphere, especially the United States.

Is U.S. labor to be classified as alarmist, or will the required measures be taken with the necessary urgency to prevent the entire hemisphere from being turned into a concentration camp run by Soviet Russia and Red China?

Wrote this great organization of workers, "Since the fall of the Batista dictatorship in Cuba, the AFL–CIO has expressed on several occasions its complete support of the Cuban people's efforts to rebuild the political and economic structure of their country on the basis of social justice, freedom, civic morality, and human rights.

"We have also offered our cooperation to the Cuban labor movement in whatever action might be required to maintain it truly independent and democratic, free of Communist influence and solely responsible to the will of its members.

"In the early months of the Fidel Castro regime, we shared with other true friends of Cuban democracy, the misgivings caused by the initial excesses of the revolution; but we also shared the hope that democratic processes would soon be restored, so that the many long overdue economic reforms would get underway. The Cuban people could then utilize the resources of their country for improving their social and economic conditions and strengthening their democratic institutions.

"Events in Cuba have taken, however, quite a different turn. The latest manifestations of the Castro regime have revealed unmistakable signs of a definite trend toward a totalitarian state. This is based upon the technique of regimentation and militarization of the masses to a degree comparable to the practices prevailing under Fascist or Communist regimes.

"The Cuban Confederation of Labor has become a mere appendage of the Government under complete control of pro-Communist elements imposed from above without consideration of the will of the rank and file.

"Loyalty to democratic principles and opposition to communism has been branded by Castro's government as synonymous with counterrevolutionary activity, punishable with discharge from the job, immediate arrest, and loss of property.

"The right of collective bargaining has been abolished. As in countries behind the Iron Curtain, Cuban workers are no longer free to change jobs without Government approval.

"Hiring and firing have become the prerogative of the Government. The quest for economic improvement, a legitimate trade union activity, has been banned.

"Cuban Government spokesmen have asserted that the people will not be given in the foreseeable future the right to choose their leaders through the process of democratic elections. The courts have been submitted to the arbitrary will of the executive. The right of habeas corpus has been indefinitely suspended.

"The Communist Party is the only political party which is free to operate today in Cuba. Opposition newspapers have been forced to close. Democratic journalists, who distinguished themselves in opposition to the Batista regime, have been forced into exile for insisting upon their right to criticize the pro-Communist policy of the present government.

"These actions on the part of the Castro regime in Cuba have shocked the democratic public opinion of the Western Hemisphere, particularly those sectors which rejoiced over the victory of the revolutionary forces in January 1959, and have consistently supported the economic reforms and other social objectives once proclaimed by the revolution.

"The Cubans, our traditional friends, are being subjected to an intensive violent campaign of hatred and scorn against the United States. This has been aggravated by the repudiation, on the part of the Castro regime, of the treaties which are the foundation of our inter-American system. These treaties bind the countries of the Western Hemisphere to respect each others' sovereignty and pledge them to unite against external aggression and internal Communist subversion.

"The disruptive activities of the Cuban Government can no longer be lightly dismissed as outbursts of inexperienced, youthful leaders swept by the upsurge of economic nationalism.

"They have all the earmarks of a well-planned strategy designed to make Cuba an advanced outpost of the Soviet Union's drive to infiltrate the new world.

"The AFL–CIO has consistently advocated that dictatorships have no place in the world and particularly in our inter-American system. We have consequently urged, time and time again, the Organization of American States (OAS) to isolate the dictatorship of the Dominican Republic and similar regimes which do not emanate from the freely expressed will of the people.

"We have also urged the OAS to take firm steps to prevent these dictatorships from endangering the peace of the Americas with their constant subversive plots against neighboring democratic regimes.

"We now believe with its repudiation of the existing inter-American treaties and its purposeful, violent, and slanderous anti-U.S. campaign, tailored on the Communist pattern, the Castro government is endangering the peace of the Western Hemisphere.

"We call upon the American family of nations, through the instrumentality of the OAS, to be alert to the danger that the Castro regime and other dictatorships represent to democratic stability and the peace and progress of the Americas. The OAS has in its charter sufficient provisions to enable it to take collective measures to protect the peaceful democracies from the aggressive designs of the dictators and from the subversive actions of international communism.

"The AFL–CIO sends the Cuban people renewed expressions of support for their aspirations of economic reforms capable of bringing higher standards of living, social justice, national economic independence, and democratic freedoms.

"We also send fraternal assurance of solidarity to the free trade unionists of Cuba, now fighting to rescue their labor movement from the presently imposed, pro-Communist, totalitarian control. We are with them with the same spirit and determination that has inspired the AFL–CIO to oppose dictatorship and totalitarian rule of every color and kind, in every part of the world."

Thus ends U.S. labor's indictment of Fidel Castro. We would like to add only one point to this great declaration of the AFL–CIO. (Incidentally, all of the facts and conclusions mentioned therein can be found in past editions of Latin American Events.) We hope and pray, for the well being of the Americas, especially the United States, that the opinions of organized labor will be taken into account by those officials responsible for policymaking decisions on the tragic Cuban situation.

Where Big Crops Are No Problem

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. WILLIAMS of New Jersey. Mr. President, a visitor from Pakistan has, within recent weeks, worked at my office while pursuing his studies of agricultural policymaking in the United States. He is Aslam Zafar, District Director of Agriculture in the Karachi Federal District.

In a recent interview with George Kentera, Washington staff reporter for the Newark (N.J.) Evening News, Mr. Zafar gave his opinions on problems that perplex us in this Nation and problems of concern in his home nation.

His comments, as reported by Mr. Kentera, offer an interesting commentary on matters of interest to everyone concerned with the international food shortages and surpluses which exist incongruously today. The interview also gives us Mr. Zafar's reactions to the American system of government.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE BIG CROPS ARE NO PROBLEM—PAKISTAN EXPERT SAYS FOOD-SHORT LANDS WELCOME "TROUBLE" LIKE OURS

(By George Kentera)

WASHINGTON.—One of this Nation's most vexying problems, its growing crop surpluses, doesn't seem horrendous at all to someone from a food-deficient land.

"I'd be willing to turn in my problems for yours," say Aslam Zafar of Pakistan.

The 36-year-old Zafar does have problems. They center around his efforts to produce enough food on 200,000 acres for the 2 million persons in the district of Karachi's 800 square miles of territory.

District director of agriculture, Zafar holds a master's degree in agriculture from Cornell University (1953) and a similar degree from the University of Pakistan. He has been in this country since November, studying U.S. agriculture under sponsorship of the Asia Foundation and the American Political Science Association, and he is presently working in the office of Senator WILLIAMS, Democrat, of New Jersey.

SEEK UNDERSTANDING

"Our main purpose," he says of himself and similar visitors, "is to understand the democratic system as it relates to agriculture policymaking and legislation; also, to observe your general democratic system of government."

Like many Americans, Zafar disagrees with the policies of Agriculture Secretary Benson.

"Benson says there should be no agriculture controls, free production, and less parity," he says. "But you are spending $1½ million a day to store your surpluses. This calls for more controls, high parity, and a distribution program of surplus food in the United States and abroad.

"There is no need to discourage your farmers from producing more, because this is the only field in which the United States has a clear lead.

"Americans should be proud of their capability to feed the world, in 10 years, it may not be the same."

SO NEEDED

In Pakistan, which is deficient in food but an exporter of such crops as jute and cotton, incentives are being offered farmers to produce more. This year, the Central Food and Agriculture Ministry established a floor price for wheat and may extend it to rice.

"Food is so needed abroad that maybe Americans can't visualize the conditions," he says. Zafar is a supporter of the food-for-peace plan offered by Senator HUMPHREY, Democrat of Minnesota, under which surplus foods would be offered to the United Nations for distribution to needy lands.

He has pertinent statistics at his fingertips. He cites figures to show that shipping the food abroad to non-Communist nations would cost only half as much as storing it in this country.

COMPENSATION

Zafar also feels a plan could be worked out that would not depress the international market for other food-exporting nations. If, for instance, Pakistan buys 100,000 bushels of wheat a year from Canada, he says, an agreement could be made binding his country to continue such purchases despite commodities it might receive under the food plan.

In his work at home, Zafar is immersed in programs of land reform and farmer education. Pakistan farmers did not use fertilizer until 1950, and many still believe it to be a poison.

The holdings of large landowners are being broken up in a program which may take 25 years. No one may own more than 1,000 acres of nonirrigated land, of 500 acres of irrigated land. Attempts are being made to raise small farms to at least 12½ acres.

The large landholders will be paid for their land over a 20-year period; the small farmers who gain land will have to pay for it over a 25-year period.

While Zafar sometimes expresses bewilderment at the American system of government, he nevertheless believes that the American system of area representation—in both the Senate and House—is worthwhile.

"Of course, there is a human factor," Zafar says. "People like to please those who help them during the elections."

But he finds this closeness between legislators and the electorate to be, in general, a good thing. Last year, he says, an Agriculture Advisory Committee was formed in Pakistan to represent the farmers; it drew its inspiration from the American system of congressional representation, and the local farmers contributed ideas which are being incorporated in the district's program.

Zafar, who is in this country with his wife Shirien, was born and reared on a farm in a village in the district of Jullundur. Before he returns home this summer, he will visit a group of California farmers, near Sacramento, who immigrated here from that village.

The National Purpose

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. HUMPHREY. Mr. President, I want to commend to the attention of my colleagues an article written by Walter Lippmann in the June 20 issue of Life magazine.

The article is another in the fine series on defining America's national purpose, and its title is suggestive of its theme, "The Country Is Waiting for Another Innovator."

Mr. President, this is an article of nourishing wisdom, and I want to quote a few passages from it:

To use increments of our growing wealth wisely and prudently for public and immaterial ends: that is the goal, so I believe, toward which our national purpose will now be directed. We have to pay for defense, and there can be no serious dispute that we must pay for it. But we have also to be able and willing to pay for the things which cannot be consumed privately, such as the education of children, the development of beautiful cities and the advancement of knowledge. We have to be willing and able to pay for what is, to put it briefly, civilization itself.

At bottom, we have to do these things because they need to be done, because they have to be done, and because they are supremely worth doing. Even if we were not challenged, we would need to do them for their own sake. We would need to do them even if Russia were still where it was 50 years ago.

Mr. President, I ask unanimous consent that Walter Lippmann's article from the June 20 issue of Life be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COUNTRY IS WAITING FOR ANOTHER INNOVATOR

(By Walter Lippmann)

In a rather special sense Americans have always been a purposeful Nation. For the country is settled by the descendants of people who pulled up their roots in the old societies and crossed the wide ocean for a purpose. Always they came with a sense that they would make for themselves a better life in a new world. They believed that they had new work to do and that all who saw their example would be enlightened and inspired by it.

The bond of American union has not been piety and reverence for the past but a conviction of purpose and of the destiny it would bring for posterity. America has always been not only a country but a dream. There has always been a general and unquestioned belief that here on this soil there would be demonstrated to mankind the blessings of freedom: as the shackles and servitudes of the past were put away, there would arise a great and glorious society.

And so, until very recently at least, we have looked upon it as in the nature of things that for America nothing is finished, that this is a young Nation. Americans have been a Nation of exuberant optimists, sniffing the air with a buoyant feeling that it is the early morning and that it is good to be alive. Evil and perversities of fate were not more than obstacles to be gotten at and overcome.

There were no insoluble human problems. At the worst, there were problems that it might take a generation or two to master. It never occurred to Americans to ask whether they were going to survive. They had just begun to live. Nor did they worry about the consequences of becoming rich, fat, self-centered, and beset with the illusion that the present can be made to last forever. For they were not yet rich and they had to work hard for a living.

If, as so many of us think today, we are now without such a general and inspired sense of national purpose, where shall we look for the cause and the remedy?

The cause of the vacancy is, I believe, this: We have reached a point in our internal development and in our relations with the rest of the world where we have fulfilled and outlived most of what we used to regard as the program of our national purposes.

We are rather like a man whose purpose it is to cross the continent and, having started from New York, he has gotten to Chicago. Which way shall he go then? There is more than one way to cross the continent, and until he has chosen which way and then has worked out the intermediate stops, he will remain in Chicago, feeling worried and without a sense of direction and of clear purpose.

The American people today are like the man who got to Chicago, who needs a new roadmap to show him the way from there on.

In this century, the sense of national purpose has been a composite wrought under three innovating Presidents, under Theodore Roosevelt, Woodrow Wilson, and Franklin Roosevelt. They led the country on the road which it has taken for some 50 years—since America emerged as a great power in the world, and since at home it has become an evermore industrialized and urbanized society.

Time has passed and history has not stood still. The Roosevelt-Wilson-Roosevelt formulas and policies and programs no longer fit the character of the world Americans are now concerned with, the world as it has developed since the Second World War. We are now waiting to be shown the way into the future. We are waiting for another innovator in the line of the two Roosevelts and Wilson.

The innovator for whom the country is waiting will not come with a new revelation of the ultimate ends and commitments of our society. The ultimate ends are fixed. The Nation is dedicated to freedom. It is dedicated to the rights of man and to government with the consent of the governed. The innovation, which is now beginning, will be in the means, in the policies and programs, by which the ultimate ends of our free society can be realized today.

IT IS NOT THE NATION WHICH IS OLD BUT ONLY ITS LEADERS

My thesis is that to affirm the ultimate ends—as every public man does in almost every speech—is not a substitute for declaring our purpose and leading the Nation. These affirmations are like standing up when "The Star-Spangled Banner" is played, and then doing nothing further. They beg the question, which is not whither the Nation should go but how it should get there.

The remedy, then, will not be found in the restatement of our ideals, however resounding the rhetoric. It will be found in the innovation of the political formulas, the concrete measures, the practical programs by which our ideals can be realized in the greatly changed world we now live in. I feel sure that innovators will appear with the new generation that is rising to power. For it is not the Nation which is old, but only its leaders.

Broadly speaking, there have been two great epochs in our history, each with its own dominant national purpose. The first epoch extended from the middle of the 18th century down through the 19th. Beginning with the colonial wars of the 18th century and then with the founding of the Republic, the central purpose of the American people was to open up the continental territory, to consolidate that territory firmly within the American Nation and to make the territory invulnerably secure against all other powers.

In the pursuit of this purpose the American colonists fought the French and the Indians. The new American Nation fought the British and the Spanish and the Mexicans and the Indians. It fought a great and terrible Civil War to preserve the Union of its territory. Officially it may be said

that this epoch, during which the national purpose was to consolidate the national territory, ended in 1890 when the last of our 37 wars with the Indians was concluded.

After the turn of the century, the original national American purpose having been fulfilled, an new epoch began. It began, we may say, with Theodore Roosevelt's recognition that the United States was no longer a sheltered and semidependent nation but that, having settled the continental territory, it had become one of the great powers. Roosevelt, who was a far-seeing innovator, saw too that the United States was no longer a rural nation of independent farmers. Increasingly, it was becoming an industrial society inhabited by great corporations which exercised powers that often challenged the authority of the established Government itself.

The innovation begun by Roosevelt was carried further by Woodow Wilson. Wilson accepted reluctantly the burden of our being a great power. When he was forced into the First World War he attempted to define a national purpose which would reduce that burden. He began by declaring that the world must be made safe for democracy and ended by demanding that it become democratic.

This has proved to be an aspiration rather than a purpose, policy or program. For had it become a national purpose, the Nation would have found itself committed to a perpetual crusade and, therefore, to perpetual war. Nevertheless the aspiration, though it is quite unrealizable in a very great part of the world, has become an element of the Amercan conscience. Even when we feel compelled to subsidize some of our more primitive clients the Wilsonian ideology makes us uneasy and embarrassed.

When Franklin Roosevelt became President he found himself, rather unexpectedly, confronted with the breakdown of the established economic order. Contrary also to his hope and to his expectations, he was confronted with the rise of a new thing in modern history—the monster of the totalitarian state. Necessity became the mother of invention. It demanded the improvization of a new national purpose in domestic and in foreign affairs. The innovations of Franklin Roosevelt were an grand improvization.

From the New Deal, particularly from the second phase of it when Roosevelt turned from a planned economy to a compensated economy, the present generation of Americans have inherited the formulas of their political actions. They have inherited the compensated economy and the welfare state, and no serious person in either party would now propose to repeal and undo them.

In foreign affairs, the country learned in the Second World War that it was no longer one among many great powers but that in fact it was the leading power upon which the whole Western World depended for its security and for leadership. This is a burden and a responsibility and a danger and a demand upon our resources and a test of our wisdom which the first Roosevelt and Wilson never anticipated, but which the second Roosevelt began to be aware of from about the middle of the war to the time of his death.

In the 15 years which have passed since the end of the Second World War the condition of mankind has changed more rapidly and more deeply than in any other period within the experience of the American people. There has been a swift and radical change in the balance of power in the world. Among the masses of the people in the underdeveloped countries in all the continents there is a mounting revolution. There is a radical change in the technology of war and of industry. There is in the United States and other countries a threatening agglomeration of peoples in cities. There is a menacing increase in world population. There is a development of the mass media of communication which, because it marks a revolution in popular education and in the presentation of information, and in the very nature of debate and deliberation, is affecting profoundly the assumptions of the older democratic system.

IN PART WE HAVE OUTLIVED OUR OLD PURPOSES, IN PART THEY ARE IRRELEVANT

Nobody, it is fair to say, not the most sensitive and knowing among us, is as yet able to realize fully what all these changes mean and to point out specifically how this country should deal with them. But what we do know is that the formulations of national purpose which were made in the first half of this century are now inadequate. In part we have fulfilled them. In part we have outlived them. In part they have become irrelevant because of the unexpected changes in the condition of things. In part they are out of focus. All in all, they do not now mobilize our energies.

Necessity will again be the mother of invention, and in the time to come we shall close the gap which now exists between the new realities and the old formulations of our national purpose. I do not presume to anticipate the innovators for whom we are waiting. But there is already visible, it seems to me, the shape of the land across which the innovators must lead the Nation.

Thus for the first time in American experience we are confronted with a rival power which denies the theory and the practice of our society, and which has forced upon us a competition for the leadership of the world. This challenge coincides with the radically new fact that the oceans have ceased to be our ramparts and that our land is no longer invulnerable.

As there is no chance that our immensely formidable rival will disarm or disappear, we shall have to live in the same world with him. We shall have to solve problems which did not exist for Wilson or for the two Roosevelts. We shall have to devise ways of protecting our vital interests, which are worldwide, and we shall have to do this without precipitating an insoluble crisis that would generate an inevitable war. This will demand a deep reformulation of our foreign policy, which has hitherto been, and in a great part still is, addressed to a very different world situation. It will demand a reeducation of American opinion, not only when it yearns for the lost innocence of our old isolation but also when it plunges into a new globalism which supposes that we are omnipotent, and averts its eyes from the hard reality of the power of the Communist bloc.

TO USE OUR GROWING WEALTH WISELY FOR PUBLIC ENDS: THAT IS THE GOAL

We know, of course, that the challenge is a broad one. The competition is in the whole field of national power. It is a competition not only in military power but in all forms of power, the power to produce wealth and the power to use wealth for education, for the advancement of science, and for public as well as private ends.

On our success in achieving military security by arms and by diplomacy depends our existence. Our ability to meet the challenge depends upon our success in learning to use our growing wealth for something more than just private satisfaction. It depends upon our being willing to use it for imponderable and immaterial ends, like science, education, and the public amenities.

To use increments of our growing wealth wisely and prudently for public and immaterial ends: That is the goal, so I believe, toward which our national purpose will now be directed. We have to pay for defense, and there can be no serious dispute that we must pay for it. But we have also to be able and willing to pay for the things which cannot be consumed privately, such as the education of children, the development of beautiful cities and the advancement of knowledge. We have to be able and willing to pay for what is, to put it briefly, civilization itself.

At bottom, we have to do these things because they need to be done, because they have to be done, and because they are supremely worth doing. Even if we were not challenged, we would need to do them for their own sake. We would need to do them even if Russia were still where it was 50 years ago.

But now we are in fact challenged, and because of that we must do these civilized things, not only to make a better life for ourselves but to mobilize the power to avoid a much worse life. Were there no great rival and challenger, we might dawdle along, we might indulge in a growing private affluence while we suffered a declining national greatness. But for us there is no choice but to respond to the challenge, even though this demands that we change many of our cherished dogmas and harden ourselves to a sterner way of life. For our freedom and our system of democratic government are not likely to survive just because we believe in them and enjoy them. We shall have to prove that with them and through them we can satisfy the needs of our people and be equal to the challenge of the time we live in.

Western freedom will not survive just because it is a noble ideal. In our age it will survive if, and I think only if, we can take freedom down with us into the hurly-burly of the conflict and prove that a free society can make itself the good society.

I should like to add a postscript to express a personal feeling about the challenge we face and the response we must make. It is that with all the danger and trouble and worry it causes us, the Soviet challenge may yet prove to have been a blessing in disguise. For without it, what would become of us if we felt that we were invulnerable, if our influence in the world were undisputed, if we had no need to prove that we can rise above a tranquil self-satisfaction?

We would, I feel sure, slowly deteriorate and fall apart, having lost our great energies because we did not exercise them, having lost our daring because everything was so warm and so comfortable and so cozy. We would then have entered into the decline which has marked the closing period in the history of so many societies—when they have gotten everything they wanted, when they have come to think that there is no great work to be done, and that the purpose of life is to hold on and stay put. For then the night has come and they doze off and they begin to die.

An Open Letter to City Friends on Problems Faced by Farmers

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article from the Fort Dodge (Iowa) Messenger, of June 24, 1960, entitled, "An Open Letter to City Friends on Problems Faced by Farmers":

AN OPEN LETTER TO CITY FRIENDS ON PROBLEMS FACED BY FARMERS

(By Fran O'Brien)

(A recent article in the Messenger brought this note from a New York man, "Your story of April 9 in the Messenger—'A Man May

Laugh, That Is a Hat' is great. The readers of your paper are fortunate to have such good advice. Best wishes, Bill Riemers." Riemers is with the Millinery Institute of America and enclosed two articles on hats, so I suspect he is with the public relations department. In return, I hope Bill won't mind if I do some public relations for the farming industry, for I feel this is a field sadly neglected by those actively engaged in it. Thus, I am writing this open letter to Bill Riemers and city friends.)

DEAR BILL: It was a thrill to hear from you and to know that a bit of my writing is enjoyed way out New York way. I likewise enjoyed your articles on hats. Personally, I love hats, Bill, and I'm all for the movement to "Get hats back on heads." But, I'll have to confess, I haven't had a new Easter bonnet in 3 years. I couldn't afford one.

You see, Bill, we are farmers, and despite all you may have heard about those "rich farmers," money just isn't plentiful down on the farm these days. If you haven't read Mary Conger's story on the farm situation in a recent Saturday Evening Post, I suggest that you do. It pictures the plight of the "big, efficient farmer" on 720 acres. Ours is a family-size farm of 160, so we are "little farmers." But the Congers are losing money—so are we.

My husband and I have been married 18 years and have five children. We love the farm and think it is an ideal place to raise a family. Ours is a beautiful farm, with rich, all-tillable soil, a fine, modern house and good buildings. It especially means a lot to my husband because he was born on it and lived here all his life. It dates back to the days of his grandfather. For 80 years it has supported several generations of large families with a good living, but it isn't doing that today.

This isn't due to our laziness or inefficiency. My husband is, and always has been, a good, hard-working, thrifty man. When his dad died in the depression, he was in his twenties. For many years he worked and made many sacrifices to help his mother pay off heavy debts. They succeeded. Now, he is trying to do the same for us. We were doing very well until the last few years when we, like the Congers and other farmers, got caught in the merciless cost-price squeeze.

I have tried to do my part, too. Before marriage and for 2 years afterward, I was a teacher, and used by savings to completely furnish the house. This was a big help to my husband because he could use his earnings to buy the $18,000 worth of machinery and livestock to farm. Now, I make a few dollars writing. By the way, Bill, if you know a friendly New York editor, who would be interested in any "literary corn" fresh from the country, please let me know.

We are average farmers—better off than some, worse off than others. But farmers all over are having a hard time making a living. Again and again, I talk to worried farmers, who are losing money and heart. Many are taking part-time jobs if available, some are competing for extra land, and others are leaving the farm entirely.

City folks are fed all sorts of myths about the farmer. For example, that their trouble is due to their inefficiency. Actually, farmers have been the most efficient workers of all. During the last 10 years they have increased their output per man-hours by 69 percent but are working for less than they got in 1950. Compare this with factory and office workers, who have increased their efficiency only 21 percent but their wages have increased up to 58 percent in the same time.

Perhaps you, too, believe that higher food prices mean the farmer is making more money. Just the opposite is true. The average net income per farm in Iowa last year dropped 29 percent compared to a national decline of 16 percent. Higher food prices are benefiting only the processors, packagers, and distributors.

But we wouldn't complain if our expenses hadn't increased tremendously during the same 10 years. Everything we sell is on a "What will you pay me?" basis while the things we buy are on a "You pay what is asked" basis. I shall cite a few examples.

What are you paying for pork chops and hocks in New York these days? We sold our hogs for 10 cents a pound. It would take about 2½ hogs to buy new shoes for the seven members of our family. And how are eggs selling in the city, Bill? We sell ours for 20 to 26 cents a dozen.

But last summer eggs were lower than that. I remember, because our 2-year-old son accidentally sat on a broken popbottle. It took three stitches by the doctor to sew up the cut and his bill was $18. We had just sold 90 dozen eggs for a total of $15. It took a week's work of feeding and caring for hens, gathering, cooling, cleaning, packaging, and delivering the eggs. But the 90 dozen was $3 short of paying the doctor bill.

The other day I saw the most adorable hat in the shop. I looked longingly at it, tried it on, then looked at the price tag. It would have taken 60 dozen eggs to pay for it. I couldn't even consider buying it—the kids needed shoes too badly.

Does your wife complain of the price of beef brisket and steak, Bill? We sold some fine beef cattle for 24 cents a pound. It would take 15 head of these to buy a $3,600 tractor that sold for $2,000 back in 1951 when we were getting 36 cents a pound for beef cattle.

I have heard farmers say that if they don't get at least $1.25 a bushel for corn they aren't even making expenses. Top price for corn here today is 96 cents, but most farmers are getting much less. The adverse weather of last year caused a high moisture content and farmers get docked for the extra moisture. Some farmers got as low as 60 cents. We sold ours for 85 cents. At this price it would take about 3,000 bushels to buy an economy-type car. A few years ago when we got $2 for corn, a similar car sold for less.

Maybe this will be hard to believe because we live in an area that has some of the best land in America, but there isn't a single "Cadillac farmer" in our neighborhood. "Our Cadillac" is a 1954 Ford bought second-hand. I suspect that a lot of those "Cadillac farmers" you hear about had a previous big bank account, inherited a lot of money or are just one jump ahead of the banker.

We do all sorts of crazy things down on the farm, Bill, such as selling stewing hens for 6 cents or 9 cents a pound, then seeing them on display in the supermarket for 43 cents per pound. Then, there was our neighbor who raised some fine potatoes—prepared the soil, bought, cut and planted seed, weeded, sprayed, cultivated, dug, sorted, and delivered the potatoes. He got 2 cents a pound. The grocer put them in 10-pound bags and sold them for 39 cents—getting almost double what the farmer got.

Why do we do such idiotic things? Because our products are perishable or costly to hold, we need the money, and we are at the mercy of the buyer and seller. Like yours, our grocery bill has skyrocketed, too, Bill. It used to be that the farm wife's "egg money" paid for all the groceries plus such frivolities as new hats, but in many cases that isn't true any more.

No doubt you've heard about the "pampered farmers" getting rich off Government subsidies. Yet, many like us are getting no subsidies at all. But the subsidies that are paid to the actual farmers are low compared to those given to railroads, airlines, steamships, power, and other companies, the postal deficit or compensation checks.

From the early days, our Government has passed laws for the protection of manufacturing and processing industries in the form of tariffs and national subsidies, both direct, and indirect. Minimum wage laws protect industrial workers. Americans have paid out billions for these in the form of taxes and higher prices for goods and services. We acquiesced or approved on the principle that what was good for industry and labor was good for all. But there are many who believe that the farmer should be denied the same protection.

Some say surpluses are an evil, but they are a safeguard against crop failure, a reserve in disaster, and a means of winning friendship abroad. Yet, with our grain bins overflowing and our feedlots overcrowded, there are millions throughout the world who go to bed hungry every night. Does it not seem paradoxical that we have men with the intelligence to solve the secret of the atom and send satellites into space, yet we cannot find a way to distribute our vast surpluses to the starving millions?

We are told, "Farmers have to get big or get out." But what is the sense of spending more and more to get bigger and bigger to raise more and more to get less and less? It takes money to get big, and where will we go if we get out? To the cities, already crowded with workers competing for jobs? Besides, industry isn't interested in a middle-aged man like my husband, who has no training or experience in anything but farming.

So, like the Congers, we, too, will try to ride out the storm. We are cutting down and doing without. My husband used to hire outside help but he can't afford it now. Although he is older and the work is harder for him than it used to be, he is working 12 to 15 hours a day, 6 days a week. So am I. We receive no time and a half for overtime, no unemployment compensation, and no vacation with (or without) pay.

But I have little desire to be wealthy, Bill, for riches have their hazards. There are more important things I would like our children to have, for instance, a deep appreciation for the good, the true, and the beautiful. What better place can one hope to find this than in God's great, beautiful outdoors where every season proclaims the wonders of creation?

However, I do want enough return from our work to pay our debts and to keep our family reasonably well nourished and clothed. I hope, too, that we can give our children a good education, because I believe it is one of the best investments there is. It opens doorways to many wonderful things, and it is something no one can take away from you.

I wish we could work a little less hard and occasionally be able to enjoy a few frivolous things, like a baseball game or a new hat. My husband loves baseball—almost as much as I love hats, but he has never gone to a big league game in his life. I hope some day he can, and that I can go with him—wearing the newest, craziest hat I can find. After all these hard years, he deserves a good laugh.

Best wishes to you, too, Bill, and thanks for listening.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Daily Digest

HIGHLIGHTS

Both Houses overrode President's veto of Federal pay raise bill and cleared for President appropriation bills for military construction, independent offices, and legislative branch.

Senate passed numerous bills, clearing many for President.

House passed Roosevelt Memorial bill, and killed bill on foreign surplus imports.

See Résumé of Legislative Activity.

Senate

Chamber Action

Routine Proceedings, pages 14213–14256

Bills Introduced: 13 bills and 3 resolutions were introduced, as follows: S. 3795–3807; S.J. Res. 217; and S. Res. 348–349. **Pages 14215, 14443**

Bills Reported: Reports were made as follows:

H.R. 12483, to abolish mandatory capital punishment for first-degree murder in the D.C. (S. Rept. 1824);

H.R. 11516, to create a judicial officer for the Post Office Department (S. Rept. 1825);

H.R. 5436, to provide for a register in the Department of Commerce in which shall be listed the names of persons who have had their motor vehicle operators' licenses revoked (S. Rept. 1826);

S. 675, to regulate the practice of physical therapy in the D.C., with amendments (S. Rept. 1827);

S. 2979, authorizing conveyance of U.S. moneys and land to the Convalescent Hospital of Washington, D.C., Inc., with amendments (S. Rept. 1828);

S. 3727, to provide for the bonding of persons engaged in the repair or modernization of residential property in the D.C., with amendments (S. Rept. 1829);

H.R. 10952, authorizing the National Society Daughters of the American Colonists to use certain D.C. property as its national headquarters (S. Rept. 1830);

H.R. 10921, to revise provisions of the D.C. Life Insurance Act dealing with investment of funds of life insurance companies, with amendments (S. Rept. 1831);

H.R. 12740, making supplemental appropriations for fiscal year 1961, with amendments (S. Rept. 1832);

S.J. Res. 217, authorizing the President to make certain adjustments in the sugar quotas for foreign countries (S. Rept. 1833). **Pages 14214–14215**

Bills Referred: Numerous House-passed bills were referred to appropriate committees. **Pages 14258, 14293, 14301**

Sugar: It was made in order to consider H.R. 12311, to extend the Sugar Act of 1948, when it is received from House. **Page 14213**

Hawaii: Senate adopted H. Con. Res. 706, authorizing the making of certain corrections in the enrolling of H.R. 11602, amending certain U.S. laws in light of the admission of the State of Hawaii into the Union. **Page 14268**

Calendar Call: Order was entered for call of calendar on Saturday, July 2, beginning with Order No. 1817 (S. 3758, minimum wage bill). **Page 14281**

Federal Pay Raise: Senate debated and, by 74 yeas to 24 nays, overrode veto by President of H.R. 9883, to provide salary increases for postal and other Federal employees. Both Houses having voted by a constitutional two-thirds majority in favor of passing the bill over the objections of the President to the contrary notwithstanding, the bill becomes law. **Pages 14264, 14265–14266, 14275–14292**

Bills Cleared for President: The following bills were cleared for President's signature in the manner indicated:

Alaska University: S. 3545, to permit the lease or sale of Alaska University lands by sealed competitive bids (concurrence in House amendments);

Temporary appropriations: H.J. Res. 778, making temporary appropriations for fiscal year 1961 (passage without amendment);

Military construction appropriations: H.R. 12231, fiscal 1961 appropriations for military construction (conference report adopted);

Appendix

Greetings to Townsend Clubs of America 20th National Convention

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. HUMPHREY. Mr. President, the 20th National Convention of the Townsend Clubs of America will begin on Monday in Indianapolis, Ind. I have been at several of these national meetings and I regret I cannot join these fine people for this meeting.

I would like to share with my colleagues a message which I sent to the Townsend Clubs convention outlining my plan for a broad program to achieve social justice for America's 16 million senior citizens. This is a practical plan which we in this body ought to adopt now not because of political considerations but because we have a moral obligation as a nation to see that justice is done for all our citizens.

I ask unanimous consent that my message to the 20th National Convention of the Townsend Clubs of America be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HON. HUBERT H. HUMPHREY—MESSAGE TO TOWNSEND CLUBS OF AMERICA, INDIANAPOLIS, IND., JULY 4, 1960

Dr. Townsend, delegates, and visitors to the 20th national convention of the Townsend Clubs of America, I deeply regret that I cannot be with you at this convention as I have been at several of your national meetings. I have many good friends among you and know your organization well. It is a fine patriotic organization of good, God-loving people. I like it. I have considered it a privilege to work side by side with you in the effort to win a place of respect for the elderly men and women of America.

I want to pay tribute to Dr. Townsend and his son, Robert, for their farsighted leadership and to your Washington legislative representative, Mrs. Ford, for her hard working day-in and day-out devotion to the needs of elderly Americans. It is an honor to pay tribute to them and to every member of the Townsend Clubs of America for your unswerving defense of the rights and best interests of our senior citizens and the cause of social justice for all Americans.

You and I believe that when any American is a second-class citizen—when any American cannot walk in dignity and self-respect—we all are hurt and our country is hurt. As a full measure of dignity and self-respect for our senior citizens is achieved, our whole Nation is better.

In the record of achievement for older men and women in America, the Townsend Clubs have a special place. You have earned an immense share of the credit for keeping the goal of social justice for all in the public eye and awakening sympathy for this goal in the hearts of millions of Americans. Your determined spirit made possible many of the past achievements under our social security program.

There may be no Federal law that bears the name, Townsend plan, but your goals, because you convinced so many, became national goals; and many were written into law. Do you know why they became national goals? Because you worked constantly in all the communities of America to show your fellow citizens that your objectives were actually theirs. You did not speak only through a large corps of Washington lobbyists. You relied on the good sense of the American people and took your plea directly to them. This is why social security and all kinds of legislation which maintains the dignity of older Americans is one of the best known and best understood issues today.

Even the present administration, which sometimes has a difficult time hearing because its closest friends are shouting too loud for special interests, has heard the demands of the American people of all ages for justice for more than 16 million senior citizens. But the administration has its own idea of what justice is—what dignity is—for these 16 million. Justice, as close as I can figure it out, from the plan for medical care presented by this administration is not total destruction of the specter of unexpected and costly illness. Justice instead is just that amount of medical care and other social security benefits wrapped up in a soothing explanation and a clever label that the administration hopes the voters will not check up on before November.

But you and I know—because we have talked to the American people about their hopes and fears for their later years that if they are told honestly that the administration package is really a limited, ineffective pauper's oath plan of medical and hospital care, they will demand real, honest justice, not administration self-justification.

That goal of real justice, real security, real dignity is what I am going to be thinking of every minute that Congress may meet this year—just as I have thought about it every day of my 12 years in the Senate.

And I am not going to stop at thinking—but I am going to continue to do everything I can to put my action program for senior citizens into law.

My program has six major points:

First, America's older men and women want, need, and ought to have health insurance benefits that give adequate protection against the heavy costs of illness and provide necessary medical, hospital, and nursing home care through the social-security system.

Second, our senior citizens need and ought to have an increase in retirement and pension benefits to meet the rising cost of living now and in the future. I have recommended that the minimum social security benefit payment be increased by 30 percent.

Third, we need a realistic limit on the amount older workers may earn for themselves before they lose social security benefits. Older men and women have valuable skills which can help our Nation, but they cannot be asked to give up benefits that they have earned over the years because of a maximum-earnings formula designed for another era.

We need more opportunities for employment of older workers. I have proposed a tax credit for employers who hire older workers as a means of encouraging employers to use this wonderful fund of skill, knowledge, and experience, if the elderly want to work.

My fifth proposal would put an end to the inequities and injustices of old-age assistance programs. It would make individual people, not statistics, the overriding concern of assistance programs. It would set minimum Federal standards for State assistance programs and abolish public shame lists.

Finally, my six-point program calls for effective Federal assistance in a broad program of housing for the elderly. This proposal was adopted recently by the Senate.

But action on social security law improvements and on medical and hospital care is up to the Senate. The House sent the Senate a long, long bill which would revise some aspects of present legislation. The House sent us a great many words, some technical improvements, and not very much else.

One Townsendite proposal—payment of disability benefits regardless of age is in the bill. Beyond that there is little to indicate that social security is a program adapted to meet the 1960's.

Our social security program, splendid in intent and as a framework for meeting some of the needs of retired and disabled men and women must be constantly and courageously reevaluated. We cannot rest with provisions designed for the thirties, forties or even the fifties—however excellent they were. We must meet the challenge of the 1960's and future decades—the challenge of assuring all Americans a retirement income for their retirement needs. We cannot tie the dignity of human beings to an out-dated, rigid formula.

I shall continue to press for six amendments to the 1960 social security bill. Four are part of my six-point program—a medical and hospital care plan through social security; an increase in the maximum earnings limit to at least $1,800 a year; removal of inequities in public assistance and a tax credit to employers hiring older workers.

I shall continue to press for two other amendments. First, I want to transfer the responsibility for distribution of our food abundance from the Secretary of Agriculture—who refuses to believe that there are Americans who are going hungry—to the Secretary of Health, Education, and Welfare. Many of our elderly citizens are without adequate diets—which is outrageous in our generally prospering economy. I want to see that the elderly and the needy get the food that is available and will be wasted if not used.

Finally, full disability payments for the blind are a must. I do not see how we can justify discrimination against the blind when it comes to these benefits.

That is my program for 16 million senior citizens. It is a practical program which can and ought to be adopted now. I assure you that I will keep on doing everything I can to see that it is adopted. I look to you Townsendites for the same wonderful cooperation in achieving this program which would be a major step toward a realistic, just retirement program for all Americans—a universal retirement and pension program. I know you have always given wonderful cooperation to all programs which will really benefit America's senior citizens.

I myself pledge to you that I will continue to work side by side with you for justice for senior citizens and all Americans.

Germanium Diodes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from the general manager of Clevite Transistor in Waltham, Mass., on the subject of germanium diodes:

CLEVITE TRANSLATOR,
Waltham, Mass., June 30, 1960.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

SIR: The U.S. Tariff Commission proposes to reduce or eliminate the tariff on germanium diodes at the next General Agreement on Trade and Tariff Conference in 1961. I am calling this to your attention as at least 75 percent of the germanium diodes manufactured in the United States are manufactured in Massachusetts. Manufacturers include CBS Electronics, Lowell; Kemtron, Newburyport; Raytheon, Brighton; Sylvania, Woburn; Transitron, Wakefield; and Clevite Transistor, Waltham.

Outside of Massachusetts there are seven other manufacturers in the germanium diode business. This list includes Hughes Aircraft, Newport Beach, Calif.; General Instrument, Newark, N.J.; and General Transistor Co., Pawtucket, R.I.

While the dollar volume of sales of the semiconductor industry has increased four and one-half times between 1956 and 1959, the dollar volume of sales for germanium diodes decreased from $33 million to $27 million. The number of germanium diodes made has increased by 50 percent since 1956, but prices have dropped faster than unit volume has increased. As you can see, a number of companies are selling in a highly competitive market.

Germanium diodes are the one part of the semiconductor business which has been selected by the Tariff Commission for tariff reduction. It is the smallest segment of the industry and the only one which has not been increasing in dollar volume of sales. Yet the Tariff Commission proposes to decrease the tariff and invite further foreign competition. This proposal is made at a time when the industry had already petitioned the Director of the Office of Civil and Defense Mobilization to investigate the threat posed by foreign importation of semiconductor devices and take some corrective action.

In the past 3 years the Japanese production of germanium diodes has increased by 1,000 percent while the U.S. unit volume has increased only 50 percent. At this rate the Japanese will soon surpass the United States in diode production as they have done in transistors. The Japanese can undersell U.S. manufacturers because their labor rate is a small fraction of ours. While no data are available, we know that the European production of germanium diodes is also increasing rapidly. The logical market for this increased capacity is the United States, as both the Japanese and European markets for germanium diodes are not increasing as fast as their capacities to make them.

About 75 percent of the germanium diodes manufactured in the United States are used directly or indirectly for national defense. A healthy germanium diode industry is necessary for the national security and welfare.

Approximately 3,000 people are directly employed in making this product and many others who work for suppliers are indirectly involved. Clevite Transistor employs about 1,700 people from Waltham and adjacent areas. A majority of these people are supported by germanium diode sales. The expense of our research and development is largely supported by this same product. A major loss of germanium diode sales would be a crippling blow to us.

We presently operate in the old Waltham watch factory. This building is one of the few remaining relics of a now defunct industry which was ruined by imports made from low labor rate countries.

We are now building a new $4-million plant in Waltham. I do not believe it is in the best interest of Massachusetts, or the country, to turn this into another mausoleum.

In summary, I do not believe it is in the best interest of Massachusetts or the country to reduce the tariff on germanium diodes. The employees of Clevite Transistor will be very grateful for any assistance you can give them in preventing this from happening, and would be very pleased to hear of any positive action which can be taken.

I have enclosed a copy of the statement in behalf of the Electronics Industry Association to the Committee for Reciprocity Information Relative to the Trade Agreements Act of 1934. This statement will provide you with additional information.

Very truly yours,

JAMES F. BATTEY,
General Manager.

STATEMENT IN BEHALF OF THE ELECTRONIC INDUSTRIES ASSOCIATION TO THE COMMITTEE FOR RECIPROCITY INFORMATION RELATIVE TO NEGOTIATIONS UNDER THE TRADE AGREEMENTS ACT OF 1934 AS AMENDED AND EXTENDED

This statement is submitted in behalf of the Electronic Industries Association and its membership, representing approximately 350 manufacturers of electronic products, pursuant to notice of investigation and hearings of the U.S. Tariff Commission, issued May 27, 1960. It is the purpose of this statement to express the opposition of this association to the inclusion of germanium diodes (Tariff par. 214) as a product for consideration in proposed trade agreement negotiations under the Trade Agreement Act of 1934, as amended.

More than two score manufacturers of semiconductors, including germanium diodes, are members of this association.

EIA's opposition to the inclusion of germanium diodes in the list of products to be considered for possible U.S. tariff concessions is twofold:

(1) Reductions in the present tariff would endanger national security; and

(2) The American semiconductor industry, including germanium diode production, is a relatively new business which has been greatly expanded, but which is highly competitive. Specifically, both sales and prices of germanium diodes have decreased recently in this country. The GATT description relating to the product in question follows:

Paragraph 214:

Earthy or mineral substances wholly or partly manufactured and articles, wares, and materials (crude or advanced in condition), composed wholly or in chief value of earthy or mineral substances, not specially provided for, whether susceptible of decoration or not:

Ammonia synthesis catalyst: dead burned basic refractory material consisting chiefly of magnesia and lime: feldspar, ground; germanium diodes; marble chip or granito; stone (except Cornwall stone), crushed otherwise than merely to facilitate shipment to the United States, or ground; synthetic materials of gem stone quality, such as corundum and spinel, and articles and wares composed wholly or in chief value of such materials; and substances and articles, decorated.

BACKGROUND STATEMENT

The U.S. semiconductor industry was born only 10 years ago as a result of scientific breakthrough in solid-state physics. However, production of these devices did not reach significant levels until 6 years ago. Since then, a phenomenal expansion has taken place, in capacity, facilities, and new companies. Many of these concerns represent small business as defined by the U.S. Government. This industry is extremely important to the national defense as these devices are used in most military electronic equipments.

Despite the expansion of U.S. facilities and the highly competitive nature of this business, foreign competition already has made a huge inroad in this area, based primarily on low labor costs.

In fact, last September this association filed a petition in behalf of its member companies, requesting that the Director of the Office of Civil Defense Mobilization exercise the authority conferred in him under section 8 of the Trade Agreement Extension Act to (1) initiate an immediate investigation of the import of semiconductors, including those contained in finished products; (2) determine pursuant to such investigation whether such imports represent a present or foreseeable threat to our national security, and (3) take whatever action is deemed appropriate as the result of such investigation to alleviate any possible threat to the impairment of our national security. EIA's application was filed on September 17, 1959, pursuant to OCDM regulation 4.

GOVERNMENT ACTION

On October 2, 1959, the Director of the Office of Civil Defense Mobilization announced that "he has ordered an investigation of imports of transistors and related products under the provisions of section 8 of the 1958 Trade Agreements Act." His announcement stated further: "The investigation will cover all semiconductor products including diodes, rectifiers and transistors imported as separate units, as combination of units or contained in finished products."

EIA POSITION RE SECURITY

In brief, the EIA application to the OCDM stated that the increasing foreign penetration of the American semiconductor market will have an adverse effect upon the growth of the electronics industry producing these products: that the continued trend of imports of such products will impair the efforts of American producers to provide the capacity to meet existing and potential national security requirements; that it will create instability in employment, thereby resulting in loss of essential skills; and finally, that it will result in an eventual reduction in research and development needed to further advance the art—all to the detriment of our national security program and efforts to meet the challenge of Soviet Russia for superiority in military technology in electronics.

U.S. INDUSTRY STATUS

The Electronic Industries Association has some difficulty in submitting statistics on germanium diode production and/or sales as it is difficult to delineate between germanium diodes and rectifiers. However, available statistics indicate that the market for germanium diodes has decreased from $37.8 million in 1956 to $26.7 million in 1959. It is interesting to note that significant production of semiconductor devices probably began in 1956 and that there has been a decrease in sales of germanium diodes since that time.

JAPANESE PRODUCTION

In contrast, information obtained by the U.S. Embassy in Tokyo from the Japanese Ministry of International Trade and Industry and published by the Electronics Division of the Business and Defense Services Administration, U.S. Department of Commerce, shows the following production data:

Semiconductor devices, diodes

Quantity (units):	
1957	3,862,800
1958	10,106,700
1959	33,094,900
Value (1,000 yen):	
1957	592.4
1958	956.7
1959	2,506.5

The above statistics released by the Japanese indicate their production facilities and capacities and other statements point to the fact that export of such devices are aimed at the U.S. market. Therefore, EIA concludes that U.S. manufacturers will suffer greatly by foreign competition from those areas where labor rates are much lower than ours.

Incidentally, there are at least 12 U.S. manufacturers competing for the reduced $26.7 million market for germanium diodes and indications are that many of these will be forced out of the business if tariffs are reduced and the extensive foreign imports continue.

An interesting fact in support of the EIA statement is the fact that Japanese production of germanium diodes has increased by 1,000 percent in the last 3 years. It is evident that at this rate the Japanese will soon surpass the United States in diode production as they already have done in other semiconductor areas.

While we have no specific data on the European production of germanium diodes, indications are that such facilities have been increased extensively.

The logical market for this increased capacity in both Japan and Europe is the United States as foreign domestic markets of diodes have not increased as fast as the abilities to produce semiconductor devices.

Based on the foregoing statement, the Electronic Industries Association believes that the Committee for Reciprocity Information relative to negotiations under the Trade Agreements Act of 1934 as amended and extended should eliminate germanium diodes from the list of products to be considered for possible U.S. tariff concessions.

Realities of Soviet Strategy

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. DODD. Mr. President, on April 26, 1958, the Honorable MICHAEL A. FEIGHAN, Congressman from the 20th District of Ohio, made a very penetrating and prophetic examination of the realities of Soviet strategy. This address was given at the first annual roundtable conference of the Institute of Ethnic Studies at Georgetown University. The conference was attended by scholars and authorities on world affairs from various parts of the United States and other countries of the free world.

The address of Congressman FEIGHAN won the 1959 Vigilant Patriots award given annually by the All-American Conference To Combat Communism.

A short time ago I read the national award winning address given by Congressman FEIGHAN and was impressed with the fact that while it covers an examination of the global conflict, the analysis cuts through complicated problems and issues to arrive at the stark realities which all Americans must understand.

I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REALITIES OF SOVIET STRATEGY—WHAT IS BEHIND SOVIET POLICY?

(Address by Representative MICHAEL A. FEIGHAN)

Mr. Chairman, faculty of Georgetown University, the director and staff of the Institute of Ethnic Studies, and distinguished guests, I should like by way of introduction to congratulate the president and the board of governors of Georgetown University for the foresight and leadership they have exercised in the establishment of the institute. I recall the happy circumstances during 1954 under which Georgetown University and its able faculty cooperated with the Select Committee To Investigate Communist Aggression, 83d Congress, in the tremendous task of putting together 17 special reports predicated upon, as I recall it, several tons of historic documents and eyewitness statements given under oath attesting to the nature and the objectives of Communist imperialism. As a member of that select committee, I am privileged to say that without the assistance of Georgetown University much of the information so badly needed to understand the tactics and objectives of world communism would not now be available to the leaders of our Government or to the American people. It is a truism that without the full truth which can come only through a careful and objective examination of all the material available, it is impossible to understand the nature and objectives of communism and accordingly it is impossible to prepare a defense against its further encroachment upon the individual liberties and freedoms of all mankind.

It is fitting that the institute should select as its theme for the first annual roundtable conference the subject—"Nationalism in Our Divided World." By so doing the institute has provided an opportunity for a scholarly examination of the most powerful political movement at work in the world today. In another sense, your deliberations during these 2 days can serve a very useful purpose because nationalism as a worldwide political movement is so little understood here in the United States and elsewhere in the free world. By the wide publication of these deliberations, which I earnestly hope may be done, the basis will be provided for a much needed program of public education.

Unfortunately the grave misunderstandings about the origin and nature of nationalism which has developed in the last 20 years or thereabouts has caused us to confuse positive nationalism with such self-destroying movements as national socialism as epitomized by the dictator Hitler, and so-called national communism, a tactic more recently developed by the Communists as a device for smothering the legitimate national aspirations of subjugated nations.

The topic assigned to me is not an easy one because it calls for an examination of worldwide Russian Communist strategy and an estimate of what lies behind the policy of the Kremlin. I shall approach this assignment by dividing the world arena into four readily understandable parts and then examine Russian-Communist tactics in each of these areas.

The first area to be examined is what I shall call the Russian power orbit which includes the Russian Federated Soviet Socialist Republic come 11 well-defined non-Russian nations forcibly incorporated into the Soviet Union, the 5 so-called satellites of Central Europe, Communist China and the Communist occupied areas of Korea, Vietnam, and Germany.

As I see it, the Russian Federated Soviet Socialist Republic is the heartland of a modern-day Russian empire. The non-Russian nations of the Soviet Union are the first line of colonies of this empire. The Central European satellites and Communist China represent the second line of colonies of the empire. The Communist occupied parts of Korea, Vietnam, and Germany are tactical operation centers from which the Russians expect to add at least three more strategic colonies to their empire in the forseeable future. It is arguable that the Central European satellites and Communist China are more in the nature of dependencies than colonies. However, I believe that an objective examination of the Russian methods of controlling and exploiting these nations reveals them to be more in the nature of colonies than dependencies.

As to the existence of a modern-day Russian empire, there is much less dispute on this vital question than prevailed but a few years ago. The strange alliance of World War II brought the United States and other free nations into a "working relationship" with the Communist dictatorship. The free nations had nothing more in common with the Communists than the common objective of defeating the dictators Hitler and Mussolini, and at the 11th hour of conflict, Tojo, the leader of Japanese imperialism. This strange alliance muted our understanding of world political realities which existed then as now and beclouded the true nature of our partner of necessity, to-wit: the Russian Communists. The events of the conflict caused the leaders of the Soviet Union to be pictured as allies of democracy and defenders of human freedom. At war's end the people of the free world naturally expected that a period of unparalleled tranquillity among nations would quickly develop and that all the war objectives set forth in the Atlantic Charter and the Declaration of Liberated Territories would be accorded to all the people of the world without exception.

The uneasiness of the strange wartime alliance was soon brought to public attention by the provocative and uncooperative attitude of the Russian Communists in the immediate months following the cessation of armed hostilities. The failure of the Russians to honor their firm commitments with respect to the liberated territories by their rigging of rump elections in Poland, Czechosolovakia, Hungary, Romania, and Bulgaria brought dismay and anxiety to the leaders of the free world. Communist aggression in Greece and Communist threats against the national integrity of Turkey sounded another alarm. This was followed by the Russian inspired and directed Communist conquest of China. The Berlin blockade and Communist aggression in Korea increased already existing political tensions in the world and served to cause the free nations to develop alliances calculated to prevent further Communist aggression. The Russian-instigated war in Vietnam provided additional evidence that the land conscious Russians had not given up their dream of world empire. These unhappy events caused thinking men to shake off most of the political illusions created during World War II. The cold war has forced us to take a cool look at the cold facts of life as it exists in the world of today.

During the past 5 years there has been an increasing amount of evidence of the colossal failure of communism as a system behind the Russian-imposed Iron and Bamboo Curtains. The Communist camp, since the death of Dictator Stalin, has been faced with the choice of giving up communism as a political and economic method or engaging once again in all its most brutal and inhuman methods in an effort to force an unworkable system upon the many different people of a vastly expanded empire. The present Russian leaders in an effort to avoid making the choice have been compelled to expose the failures of communism as a sort of safety valve for the pent up feelings of the exploited masses. In these circumstances the beclouded picture of life under communism caused by the events of World War II is day by day becoming clearer. On March 5, 1953, just before the Kremlin announcement of the death of the dictator, Stalin, an illuminating editorial appeared in the Moscow Pravda calling for unity within the ruling class of the Soviet Union. This editorial is marked by a sense of fear and urgency and is highlighted by the following statement:

"The ardent, selfless support which the Soviet Government enjoyed in the difficult years of the war from all peoples of the U.S.S.R.—and above all, the confidence in the Soviet Government displayed by the Great [ethnic] Russian people, the leader among the peoples of our country—was the decisive power which insured for our country the historic victory."

There now should remain little doubt in the minds of students of the problem that the basic driving force behind world communism is Russian imperialism. Communist ideology remains as a psychological weapon which is used by the Russian imperialists in their tactical and propagandistic maneuvers directed at the non-Communist world. I believe that with the passage of time these realities will become more apparent and the small amount of confusion which still remains on this basic question will disappear.

The first task, therefore, which confronts the Russians is that of consolidating their colonies to their empire by a wide variety of control mechanisms and tactics, most of which are administrative, propagandistic, military, economic, and perhaps outstanding, by the use of their secret police. From the geographical point alone one can see the tremendous burdens which are involved. The great distance involved, from the Baltic Sea to the Pacific Ocean, imposes grave problems of administration, communications, and the deployment of military forces in such a manner as to be quickly available to put down any political revolutions such as the Hungarian freedom revolution. Added to this are the political and economic problems which compound the overall problem of internal control and consolidation which now confronts the Russian leaders. Coupled to these problems is the fact that there are, at maximum, only 90 million Russians in the empire—a small minority when one considers the unenviable regard with which they have been held historically by the non-Russians in the empire. This, in my view, explains in large part why the Russians must carry out a constant and unrelenting propaganda effort within their own empire.

Communism has a limited appeal with the present-day Russian empire. Only the new aristocracy spawned by the Russian Communists are fixed to the party. The new aristocracy composes but a small fraction of the total population of the empire. Many of them are the opportunists like one finds in any society who put physical comfort as their primary requirement—the role they play to attain this is immaterial to them. Among these are non-Russians who, like their counterparts in any colonial or dependent area, are willing to carry out the orders and plans of the imperialists, providing their material lot is somewhat better than the exploited masses. Still others are infused with historic Russian chauvinism which is reflected by their desire to play a superior role in the attainment of the dream of world empire, which dates back at least 300 years.

On the other hand, the appeal of nationalism is almost unlimited. The people in the non-Russian nations of the present day Russian empire, certainly no less than the people of Asia and Africa, are attuned to the call of this worldwide political movement. Most of them have known the blessings of free and independent governments in the past. All of them have highly advanced and distinctive cultures, languages, arts, music, folklore, and traditions which are supported by a geographical contiguity which reaches far back in history. The suppression of these national traits by the Russians has fanned the flame of nationalism in all their colonies.

While there are minorities in the proper sense of the term within the Russian Federated Soviet Socialist Republic, it is a grave mistake to refer to the people of the non-Russians nations of the Soviet Union as minorities or nationalities. Even the Russians have stopped referring to them as nationalities and minorities, as was the custom in the Czarist Russian Expire. It will be recalled that on the occasion of the commemoration of the 300th anniversary of the Treaty of Peryaslav in 1954, the Kremlin made many proclamations attesting to the fact that Ukraine and other non-Russian nations of the Soviet Union have the status of independent nations. However, the Russians define this independent status as "national in form and Socialist in substance." Clearly this is no independence at all, but rather a clever device of the imperialists to meet the on-rushing wave of nationalism in the non-Russian nations and a propaganda term calculated to mislead the people in the non-Communist world, particularly those who have recently attained national independence or are today striving for that goal.

While the leaders of the Kremlin talk much about the managerial class, the new intelligentsia and economic goals, in fact, their major attention is address to making constant accommodations to the drive of nationalism. This is attested to in part by the fact that today there are more non-Russians holding membership in the presidium and in the secretariat of the central committee of the Communist Party than at any time during the past 40 years. Last November Khrushchev, in an address marking the 40th anniversary of the Bolshevik Revolution, made this revealing statement:

"A powerful, modern industry has been created in all union republics, national group leaders of the working class and intelligentsia have been created and cultures, national in form and Socialist in content, have been widely developed."

These changes did not come from any goodness of the heart on the part of the Russian leaders but rather as a matter of absolute political necessity. Where this trend will eventually lead is a matter which should be given the most careful thought and study by those who believe in the independence of nations and human freedom for all people.

I will not take your time in discussing the powerful trend of the national independence movements in central and north Europe because the case has been made in the public mind by the self-liberating actions of the Poles and the Hungarian Freedom Revolution.

It is my judgment therefore, that the complex internal tactics employed by the Russian leaders are directed at meeting and containing the most powerful force at work within their empire—nationalism.

The second area to be examined is the colonial and dependent areas of the free world. I believe there is general agreement that the African Continent stands as the last remaining colonial area in the free world. The tactics of the Russians directed to the African Continent can be quickly defined as follows:

1. To incite general discontent and disorder among the population at large.

2. To incite the people of the colonial area against the West which is pictured by Communist propaganda as imperialist, colonizers, and exploiters. The United States is singled out in this conection and our desire to lend a helping hand is described by the Russians as "economic imperialism."

3. To stimulate a rapid step-up in the demands for self-government.

4. To train and position cadres of Communist agitators and political commissars whose task it is to seize control of newly independent nations as they emerge from colonial status.

5. To disrupt and retard legitimate efforts of Western nations to train indigenous leaders for responsible and democratic self-government. Without such leadership the rapid emergence from colonial status to independence makes the Nation a vulnerable target for the well-trained cadres of Communist agitators and commissars. So that there shall be no misunderstanding about my meaning in this regard, I point out that there is no justification for any foot dragging on the part of any of the Western nations in hastening the day of independence for all the nations of Africa now in a colonial status.

6. To deny the vast mineral resources of the African Continent to the free enterprise system of economic development. The Russians are well aware that the indigenous leaders have no chance, on their own, of developing these vast resources so as to benefit the African people. Also the Russians do not have the wherewithall, though they are full of rosy promises, to provide what is necessary to bring about a rapid economic advance for the people of Africa. If the Russians are unable to maintain a standard of living for the people in the colonies they have established upon the once free and independent nations since World War II, commensurate with what the people therein have been accustomed to, it is reasonable to ask how they might be expected to help in the economic development of other colonial people? The improbability on this question is multiplied when one understands that the people in the non-Russian colonies of the Russian Empire are day-by-day increasing their demands for the decencies of life.

It is of interest to note that not so long ago the Russian Communists were attacking positive nationalism in Africa by characterizing it as "bourgeois nationalism" and attempting to brand it as a political instrument of the West. Particularly singled out for this treatment was President Tubmann of Liberia. Times have changed, however, and the Russian leaders have been forced to adopt new techniques to meet the increasing threats of nationalism to their dreams of world empire. Today their basic technique is to associate themselves with the rising tide of nationalism in Africa while undertaking measures calculated to capture those political movements and to pervert them into instruments of Russian imperialism. The experience which the Russians have had within their empire and in south and southeast Asia with nationalism taught them that it was a movement which took its strength from the masses of people and therefore could not be defeated by mere propaganda or a head-on political collision.

The third area to be examined is the non-Communist area of Asia and the Near East, particularly the newly independent nations. The political complexion of this entire area

has changed since the end of World War II. The colonial empires of the past are no more. In their stead are many independent nations, which today are faced with a variety of internal economic and political problems.

The Russians took unusual steps to associate themselves with the tide of nationalism which swept through Asia during and immediately following the war. The extremes to which they went is best demonstrated by the skillful role played by Ho-Chi-Minh, an old Comintern agent who, during World War II, took on the disguise of "worker for the national liberation of Vietnam." Through intrigue and propaganda, Ho Chi Minh, an agent of Rusisan imperialism, took over a large part of a legitimate national independence movement in Vietnam and plunged that country into a bloody war which resulted in the present unnatural division of that unhappy land. Similar efforts were made by Russian trained Communists to be in the vanguard of the national liberation movements in Indonesia, the Malay Federation, Cambodia, Laos, and Burma. Even in the Philippines, where the United States had pledged national independence for that country which would come into effect immediately after the war, the Communists attempted to organize armed forces to oppose the establishment of a democratic form of government.

Where the Communists failed to seize control of the national liberation movements they have developed other tactics now directed at the newly independent nations of Asia.

They are:

1. To prevent their orderly and full development as sovereign independent states.

2. To neutralize them in a manner as to isolate them from the stream of progress of civilization. The neutral character which the Russians have been attempting to foist upon these nations is a first step in dragging them into the Russian power bloc.

3. To spread suspicion and disfavor upon the free countries of the West—particularly the United States. The West is pictured by Communist propaganda as "imperialist," "exploiters" and "colonizers"—phrases which have deep meaning to the people of Asia. Little is known by the people in these newly independent countries about either the historic or present-day imperialism and colonial methods of the Russians. This situation is further aggravated by the fact that there is uncertainty in these countries as to just where the United States stands with respect to the rights of nations to national self-determination.

4. To use agitprops to cause internal confusion and dissension—a tactic calculated to prevent bona fide indigenous leaders from stabilizing their countries, developing workable economic progress programs, and cementing national independence of a genuine character. Thus the internal strength necessary to withstand the buffeting and tensions in international affairs caused by Russian actions elsewhere in the world is not developing as rapidly as proven friends of these countries had hoped for.

5. To develop cadres of local Communist commissars for infiltration of the newly independent governments and given time, which the Russians seek by their tactics of confusion and delay, they hope to have a sufficient number of local, trained agents to gain control over the affairs of the newly independent nations.

6. To make gilded promises of economic assistance as a wedge to gain entrance for cadres of so-called technicians and advisers. These so-called technicians and advisers have proven in reality to be skilled Communist agitators. The orderly economic development of these newly independent countries does not fit in with the plans of the Russian Communists. On the other hand economic disorder and stagnation leading to economic dependence on the U.S.S.R. does serve those plans.

In the Near East the Russians have concentrated on the tactic of diverting nationalism into negative and self-destroying channels. There they pose as friends and supporters of the Moslem people despite the fact that one of the largest colonial holdings of the Russians is the former independent Turkestanian Democratic Republic which since 1922 has been subdivided, for purpose of control, into five so-called Soviet Republics. Those are Uzbek, Turkmen, Kirghiz, Tadzhik, and Kazakh. In addition the once free and independent nations of Azerbaijan, North Caucasia and Idel-Ural are now reduced to Russian colonial status. In all, there are well over 30 million Moslem people held within the Russian power bloc.

The Kremlin is now attempting to turn this vulnerability into an asset with an estimated 350 million Moslem people in the Middle East, Africa, south and southeast Asia. Radio Tashkent, located in the heart of old Turkestan, with a powerful radio signal utilizing the major languages and dialects of Asia and Africa, works around the clock spreading the biggest of Communist lies. Neither the United States nor any other free country has a radio signal or program capabilities to even remotely counteract this Russian propaganda campaign. Even Radio Peiping, the organ of the Chinese Communists, is being forced into a secondary position in Asia by the powerful radio signal which emanates from Tashkent. If this situation is allowed to prevail, vast areas of Asia and Africa will, by default, be gravitated into the Russian power bloc.

The fourth area is the free Western World. This is roughly defined by the still free nations of north, west, and south Europe, Great Britain, the Commonwealth countries of Australia and New Zealand, together with the nations of the Western Hemisphere. The tactics directed to this area by the Russian Communists take the following form:

1. To cause confusion among and between the leaders of the free nations. On the foundation of confusion the Communists can and do quickly build dissension and distrust. This tactic is reflected by the recent efforts of the Russians to entice the United States into bilateral discussions as a prelude to another summit meeting. Only a few days ago Gromyko, the Russian Foreign Minister, refused to see the Ambassadors of the United States, the United Kingdom, and France together, and insisted on carrying on separate preparatory discussion with them. To divide and sow distrust between allies is the objective.

2. To disintegrate and fragmentize the free world alliances which to date have stood as a bulwark against the outbreak of world war III. The distinguished American labor leader, George Meany in a recent public address spotlighted this tactic by the following statement:

"In recent years Soviet expansion has been blocked through the collective defense system of the West and through American superiority in the thermonuclear field. The primary purpose of Soviet foreign policy is to destroy these safeguards of world peace."

3. To strike fear into the hearts of the people of these free and independent nations by the Russian technique of rattling the atomic and hydrogen bombs in such a manner as to suggest that those countries which prepare adequately to defend their national independence and integrity will be marked out by the Russians for early and special treatment. Today's paper April 26, 1958, reported that Mikoyan heading a trade delegation to Bonn, Germany, made a proposition that if Germany refused to accept missiles and other defense equipment from NATO, the Russians would guarantee that the West Germans would not be treated to atomic and hydrogen bombs in event of conflict. This is only the latest evidence of this tactic.

4. To stimulate negative nationalism or better defined—isolationism—in each country to an extent that the people therein will be deluded into believing that neutralism is a safe haven for them or that their best interests are served in world affairs by going it alone. If the Russians attain this objective in the free Western world they will then proceed to pick off each of these countries, one by one.

5. To create the impression that the people of the world have no other alternative but to make a choice between all-out atomic warfare or peaceful coexistence on terms laid down by the Kremlin. The primary requirement of the leaders of the Kremlin for peaceful coexistence on their terms is now well defined. Those terms have been publicly stated by Khrushchev on many occasions. They call for the recognition of a status quo as it now exists in the world. The loud clamor of the Russians for another summit meeting has for its immediate objective that of forcing the leaders of the West into a formal recognition of the present-day Russian empire. By this maneuver the Russians are calling upon the United States and other free countries to assist them in their ignoble task of enslaving many nations and hundreds of millions of people. This demand now being made by the Russian Communists underscores the urgency of their needs for time to consolidate their empire, time to work out new accommodations within their empire to meet the rising tide of nationalism, and time during which the leaders and people of the non-Communist world will be forced to haul down their defenses and thus become weakened in their determination to exist as free and independent nations.

6. To propagandize all the people of the non-Communist world into believing that all is well behind the Russian Iron Curtain, that the future belongs to communism, and that the Russian drive for world empire cannot be stopped by any nation or coalition of nations. In this respect the present-day occupants of the Kremlin are making skillful use of the propaganda technique which Genghis Khan first demonstrated with devastating effect as his highly organized mounted army moved from east-central Asia westward in a movement that reached the very gates of old Europe. The advance agents of Genghis Khan went into towns and villages several days march in advance of the golden hordes. There they engaged in a whispering campaign advancing a doctrine of military invincibility of the "Great Khan" together with the considerate treatment he extended to all those who took no active part in resisting his military movements westward. This caused whole villages and provinces to submit meekly to the advance of the golden hordes. Promptly thereafter all the men and male children were murdered, the women ravaged, and the entire area plundered of everything holding material value. We can learn a lesson from the psychological strategy of Genghis Khan by understanding that his successors, who now occupy the Kremlin, have borrowed his techniques of psychological warfare and applied them to modern-day conditions in their drive for world empire.

But with all their propaganda the Russian leaders from time to time unwittingly make statements which expose their internal political and economic weaknesses. Only last November in a report to the Supreme Soviet Khrushchev pointed up the lot of the common people of the empire in these words, "We still have unresolved problems and that defects exist and serious difficulties must be overcome * * *." He was referring to an acute housing shortage, the lack of consumer goods and the poor quality and high cost of the limited amount of such goods available

to the people. Apparently Khrushchev has found a solution to this problem for himself because he had some very stylish suits and coats made to order in Italy a short while ago.

Since last October the Russians have been taking a great international sleigh ride on their spectacular launching of an earth satellite. There is no doubt this is a considerable accomplishment for a system which is unable to provide a decent way of life for the people it controls. However, I believe it would be a grave error to take this highly sensational accomplishment as evidence that the Russians have achieved a high level of industrial capacity comparable to the United States or that their general level of scientific capability equals that of the free world. Account must be taken of the important part played in the sputnik success by German scientists who were captured or kidnaped by the Russians or otherwise enticed to go to the Soviet Union. Then too, one must take into account the possibility that the Russians needed a spectacular success to draw world attention away from their unattractive record in putting down the Hungarian freedom revolution, which may have caused them to put all their eggs in one attention-catching basket. In any case their spectacular sputnik performance served to wake up the people of the United States to the extent that we quickly thereafter successfully launched three earth satellites of more advanced types which are still circling the world. The last satellite has a life expectancy, as estimated by an eminent scientist, of some 200 years.

Now, turning to the question of what is behind Russian policy, I believe the following conclusions follow logically from the examination of their worldwide tactics:

1. That their goal of world empire remains unchanged.

2. That their serious internal political problems are compelling the Russians to seek another summit conference in order to force the free world to recognize a status quo in the world and to accept an era of peaceful coexistence.

3. The Russians need recognition of a status quo in order to convince the people of the many nations held within their empire that the non-Communist world has deserted them and that there remains no other course open for them but total and final submission to their present colonial status.

4. That the Russian plan for peaceful coexistence is a timesaving device which will permit them a breathing spell during which they will seek to make new accommodations to the rising tide of nationalism within their empire, in Asia, in the Middle East and in Africa. These accommodations will of course seek to smother this natural political movement or pervert it into an instrument of Russian-Communist imperialism.

5. That the Russians are engaged in an all-out effort to fragmentize and finally destroy the free world alliances which have stood firm in a common determination to prevent world war III. The recent declaration of the Russians about ending nuclear bomb tests, immediately after they completed their biggest series of tests, is nothing more than a supporting action to this objective. So long as these alliances of free and independent nations remain prepared to meet and defeat any new power thrust of the Russians the possibilities of a hot war are very slim indeed.

In the face of these realities I cannot resist the temptation of making a few observations on what the non-Communist world could do in these circumstances to advance its own self-interest.

The first is that we should not refuse to enter into a summit meeting with the Russians. We should begin immediately to prepare a new and fresh climate of world opinion for such a meeting. To that end there are a number of meaningful actions which the United States could undertake immediately. Among them I would include:

1. A firm declaration by the President that the United States continues its historic support for the political principle of national self-determination for all people. Such a statement, if properly and fully exploited, would clear away the serious doubts and uncertainties about where we stand on this issue in the critical areas of Asia, Africa, and the Middle East, as well as behind the Russian-imposed Iron and Bamboo Curtains.

2. The United States should take the initiative in convening a conference of the leaders of the free world who, working in concert, should establish a definite date for the independence of each nation on the African continent, and then push ahead rapidly with a program calculated to develop indigenous leaders who will provide responsible and democratic government for the people of each of these nations. Such a step would do much to enhance the cause of free people because it would assure democratic forms of government and at the same time turn the spotlight of world opinion upon the Russian imperialists. Moreover, action of this type would provide incontrovertible evidence of our determination to create a world atmosphere in which the natural right of all nations to national self-determination could be exercised.

3. The President could challenge the Russians to honor the war aims set forth in the Atlantic Charter and the Declaration for the Leberated Territories. Action of this type would quickly expose the basic fallacy of the current Russian demand for a recognition of a status quo as it now exists in the world.

4. The President and Congress could take cooperative action to cause the Voice of America to be in a position where it could effectively counteract the Russian tactic of the big lie which is now being beamed from Radio Tashkent, Radio Moscow, Radio Prague, Radio Peiping, and from other centers within the Russian Empire. There is no valid reason why the Voice of America should not reach the people of all the non-Russian nations of the U.S.S.R. in their native language with programs calculated to cause them to associate their destiny with that of the United States and other free and independent nations. This would be a very inexpensive undertaking compared to the billions of dollars Congress must now provide to keep our Defense Establishment in a state of certain preparedness.

5. Finally, we should take immediate steps to firmly associate the United States with the coming victory of the national independence movements within the present-day Russian Empire. Our failure to take such steps at this critical stage of the worldwide ideological contest will cost us dearly in terms of the historic friendships which our Founding Fathers have earned for us through their Declaration of Independence and our Nation's lifelong opposition to imperialism and colonialism.

Israel Port Authority

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. HALPERN. Mr. Speaker, in a recent issue of the New York Times it was reported that heartening progress has been achieved in Israel on the creation of an Israel Port Authority. The authority, which will be modeled on the Port of New York authority, will operate Israel's shipping facilities on the Mediterranean Sea and the Gulf of Aqaba.

I am proud to relate that the chief credit for this beneficial development belongs to Mr. Austin J. Tobin, executive director of the Port of New York Authority, who recommended such an agency on a recent trip to Israel at the request of the International Bank for Reconstruction and Development. The Bank has hinted that if a port authority were recommended and approved it would be more favorably inclined toward Israel's request for a loan to help it finance a port expansion and modernization program.

Mr. Tobin, who is enthusiastic over the progress the Israelis have made, particularly in reclaiming desert land for citrus crops, reported that more port facilities are urgently needed. The tonnage that is expected to flow through Israeli ports by 1965 will be more than 30 percent greater than at present. Raw material imports would be matched by industrial, chemical, and agricultural exports.

Under the proposed program, facilities would be constructed at Ashdod on the Mediterranean and at Elath on the Gulf of Aqaba, the revenues from which would amortize the World Bank loan.

The additional economic strength that these projects will give to this dynamic democracy in the Middle East is welcomed by its friends all over the world. New York is particularly proud that one of its outstanding citizens, Mr. Austin Tobin, who is among the Nation's most highly regarded authorities in the field, has been largely responsible for the inception and development of this meritorious project.

Mr. Speaker, under unanimous consent I include an article from the New York Times of June 11, 1960, describing the port authority and Mr. Tobin's efforts in its behalf, in the RECORD at the conclusion of my remarks.

The article follows:

ISRAEL PORT AUTHORITY ASSURED; AGENCY HERE TO SERVE AS MODEL

(By Bernard Stengren)

Establishment of an Israel Port Authority, modeled on the Port of New York Authority has been virtually assured. It will operate Israel's shipping facilities on the Mediterranean Sea and the Gulf of Aqaba.

If the Knesset (Parliament) approves, one of the first major tasks of the semi-autonomous agency will be supervision of the construction of Ashdod, a new port facility south of Tel Aviv and Jaffa.

Austin J. Tobin, executive director of the Port of New York Authority, acknowledged yesterday that he had recommended such an agency. Mr. Tobin returned this week after an inspection tour of Israel made at the request of the International Bank for Reconstruction and Development.

While Mr. Tobin was in Israel, Eugene R. Black, President of the Bank, hinted that if a port authority were recommended and approved, the bank would be more favorably inclined toward Israel's request for a loan to help it finance a $64 million port expansion and modernization program.

The Bank, which recently lent the United Arab Republic $56,500,000 for widening and

deepening the Suez Canal, was asked to advance from $25 million to $30 million to Israel, with the remainder to be raised by local interests.

A major share of this money—about $46 million—would be used to build a modern, deepwater port at Ashdod. At present, the waterfront there is sandy beach—"just like Asbury Park," Mr. Tobin said—and a huge stone jetty would be built in the shape of a rounded L out into the Mediterranean. Another stone jetty would be built perpendicular to the shore, forming an almost closed pincers through which ships could pass into protected waters and to the piers.

In its first stage, Ashdod would have two piers, each containing two sheds and separated by a 100-foot slip in which two ships could be loaded or unloaded simultaneously.

Mr. Tobin, who was enthusiastic over the progress the Israelis have made, particularly in reclaiming desertland for citrus crops, said that more port facilities were "urgently needed."

"The trees are planted and are growing," he said, "and by 1965 Haifa just will not be able to handle the additional exports and imports."

LARGE CARGOES HANDLED

He said Haifa had done "miracles" in handling a record total of 2,820,000 tons of cargo. By 1965, he said, a "conservative estimate" indicated that 3,630,000 tons of cargo would be coming in and going out of the country.

The remainder of the port development funds would be spent at Elath, on the Gulf of Aqaba—which last year handled 130,000 tons of cargo on what Mr. Tobin described as a "fisherman's wharf," and at Haifa.

With the further development of the three ports, Mr. Tobin said, Haifa could concentrate on imports of iron ore, semifinished iron and steel items and other raw materials and on exports of industrial products; Ashdod, near the citrus-growing region, could specialize in exports of those fruits, and Elath would be the logical place for shipping potash and phosphates obtained in the Dead Sea area.

Mr. Tobin said that in discussions with high Israeli officials he gained the impression that a board of unsalaried commissioners would be chosen to supervise the authority, with a full-time executive director and staff to operate it.

At first there would be no attempt to operate airports also as the Port of New York Authority does. The agency would be self-sustaining, using port fees to repay the World Bank loan and to foot its operating expenses. It would sell bonds for future capital projects.

The Miracle of Israel

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, Mr. Dean Alfange, New York attorney, and former candidate for Governor of New York, made the following statement about Israel upon his recent return from that country.

A special study mission from the Foreign Affairs Committee, of which I was a member, visited Israel last fall, and its report on Israel is confirmed by Dean Alfange's findings.

The report of the study mission, House Report No. 1386, stated on page 23:

Although still primarily concerned with the attitude and acts of the Arab world around her, Israel's economic efforts and improvement are nothing short of amazing. The Government has demonstrated its capability of assisting newly independent nations in the development of their economies by providing technical assistance. The study mission was impressed with the progress Israel is making.

In Israel's governmental circles there is no misunderstanding or confusion regarding Russia's aims in the Middle East. However, there seems to be primary preoccupation for acquiring a self-determined defense posture of greater strength.

Dean Alfange's statement follows:

REPORT ON ISRAEL

(By Dean Alfange, of New York)

Israel is the miracle of our times. She is developing a pattern of life that has no analog anywhere in the world. She has absorbed immigrants from backward and even uncivilized countries and has molded them into a free, productive and classless society with full employment.

Israel's example should point the way to the underdeveloped nations of Asia and Africa. By adopting the Israeli pattern they could make the most of their meager economies and at the same time retain their freedom.

We, in the United States, are making a fatal error when we assume that these underdeveloped nations must choose between the Western way of life and the Soviet system. These nations lack the training and the heritage to adapt themselves to Western ways. If the Soviet system is the only other alternative, it has a far better chance to succeed because it promises quicker results in terms of material benefits.

But now comes Israel with a third alternative—a pattern of life which offers decent living standards plus freedom. Israel holds the key to the solution of the problem of the underdeveloped states.

The free world can win the battle with the Soviet Union for the loyalty of these nations by studying the Israeli pattern of life and promoting it as a third alternative to the countless millions of Africa and Asia who are yearning for freedom and a just share of the good things of life.

In my opinion, Israel has made the greatest single contribution toward winning the cold war in this area. The statesmen of the free world should recognize this fact and act upon it.

Business Plans for New Plants and Equipment, 1960–63

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. WILEY. Mr. President, as a Nation, we recognize that if we are to provide rapid progress domestically as well as meet the challenges internationally, it is absolutely essential that we maintain a sound, progressing economy.

Among other things, this means providing goods and services essential for a better life for our people. In addition, we have the task of supporting an ever-stronger defense to provide for our security.

What does this depend upon? A high level of business activity, maximum employment, strong purchasing power for consumers, fair wage levels for the workers of our country, and further strengthening of other aspects of our economy.

If we are to make maximum progress, then we not only need long-range planning in these fields, but also a close evaluation on whether or not the proposed rates of progress will meet the needs of the Nation.

We recognize, of course, that the interests of workers, business, industry, consumers—all our people—are closely related; consequently we must strive for greater cooperation, not strife, as we attempt to work together to build a stronger economy.

Recently, the McGraw-Hill Department of Economics published its 13th annual survey entitled "Business' Plans for New Plants and Equipment, 1960–63."

The highlights of this survey include:

First. American business plans to spend a record $37.9 billion for new plants and equipment in 1960 and to maintain a high level of capital expenditures during the next 3 years.

Second. Manufacturers plan to concentrate on greater efficiency. Close to $10 billion or about two-thirds of this year's expenditures planned by manufacturing firms is for modernization.

Third. Manufacturing companies were operating at an average rate of 85 percent of capacity at the end of 1959. This is 9 points below the rate they indicated they would prefer to operate.

Fourth. Manufacturing firms are planning a modest 5 percent increase in capacity this year—and they plan to increase capacity at a rate of about 4 percent per year in the next 3 years.

Fifth. Manufacturing companies expect sales to increase 8 percent this year and an additional 17 percent during the 3-year period 1960–63. If these sales expectations are met, these increases would bring operating rates close to preferred levels and create a demand for additional capacity.

Sixth. Depreciation allowances will rise to nearly $25 billion by 1963 and will provide a strong prop for a high level of capital investment. More than 80 percent of the reporting manufacturing firms indicate it is their policy to spend all or nearly all of their depreciation allowances for new plants and equipment.

Seventh. Business plans to increase its research efforts and to step up its introduction of new products. Research and development expenditures are expected to reach $9.5 billion this year and $10.7 billion by 1963. About one-third of the reporting manufacturers indicate that they will be devoting a significant amount of their 1960 expenditures on plants and equipment for facilities to make new products. By 1963 they expect that 12 percent of their sales will be in new products, products not made in 1959.

I ask unanimous consent to have the overall survey printed in the Appendix of the RECORD.

There being no objection, the survey was ordered to be printed in the RECORD, as follows:

American business plans to spend a record amount for new plants and equipment in 1960 and to maintain a high level of capital expenditures during the next 3 years. Manufacturers plan to concentrate on greater efficiency. Almost two-thirds of this year's expenditures of $15.2 billion will be for modernization. Business also plans to increase its research efforts, and to step up its introduction of new products and processes. These are the most important findings of the 13th annual survey of Business' Plans for New Plants and Equipment, conducted by the McGraw-Hill Department of Economics during the last half of March and early April.

For 1960, this survey shows that business now plans to spend 16 percent more than last year—compared with an increase of 10 percent indicated in our preliminary checkup last fall. (The Department of Commerce and Securities and Exchange Commission survey published in mid-March indicated a 14 percent increase in business spending for this year.) This increase in business' plans for expenditures on new plants and equipment suggests strength in the capital investment segment of the economy. Thus, American business now has plans to spend $37.9 billion this year and already has plans to spend more in each of the next 3 years than was spent in 1959.

This figure and all other figures in this survey relating to capital investment are now directly comparable with those provided by the U.S. Department of Commerce and the Securities and Exchange Commission. In the past capital expenditures were not comparable with the official Government figures because of differences in industry classifications and because of the inclusion of a petroleum figure which covered some current account expenditures as well as capital investment. Data tabulated by the previous methods are available to those specifically interested, but in this report only figures comparable with the Government data are used.

The average level of spending already planned for 1961–63 is higher than the amounts spent in 1959. These are preliminary plans—and incomplete in many cases. Expenditures may actually exceed current estimates for these years, if plans are revised as they have been in the past. Experience indicates that businessmen generally underestimate their capital expenditures for periods longer than 1 year ahead.

The McGraw-Hill survey is not a forecast; it is a report of what companies plan to spend on new plants and equipment at the time the survey was taken. And these figures represent the plans of large firms, in most cases. Past experience indicates that small companies do not always follow the trend of the larger firms.

PLANS IN MANUFACTURING

Manufacturing firms now plan to spend $15.2 billion in 1960—26 percent more than last year. Among the metalworking industries the auto industry shows the biggest increase with spending plans up 66 percent in 1960. But the other industries in metalworking—machinery, electrical machinery, transportation equipment—also show substantial gains this year. The planned expenditures of the metalworking industries are also up since last fall. Although plans decline slightly in 1961 and 1962, metalworking firms already have plans to increase spending in 1963.

The chemical process industries, as a group, indicate considerably more long-range stability in their plans than the metalworking or primary metals groups. The chemical industry, which has spent over a billion dollars every year in the postwar period, already has plans to spend an average of $1.7 billion in each of the next 4 years. The petroleum industry, which is spending $2.8 billion this year, already has plans to spend the same amount in 1961 and to spend even more in 1962–1963. The paper, rubber, and stone, clay, and glass industries plan to increase spending this year, but show expenditures declining after 1960.

The steel industry is planning to spend $1.6 billion this year—and more than $1.5 billion in 1961—very near the record amount spent in 1957. Beyond this year and next, however, steel companies indicate a considerable decline in expenditures. Nonferrous manufacturers indicate spending plans of $369 million this year—and approximately the same level over the next 3 years.

The food and beverage industry (up 6 percent this year) and the textile industry (up 17 percent this year) plan a steady level of investment in 1961–63.

NONMANUFACTURING INDUSTRIES

Every industry in the nonmanufacturing area has increased its expenditure plans for 1960 since last fall. Electric and gas utilities now plan to spend a record $6.2 billion this year—only a few million dollars less than their 1957 peak. To meet growing power needs, electric utilities' planned expenditures remain high throughout 1961–63.

A sharp rise in expected deliveries of jet airliners boosts the spending plans of "other transportation" this year. However, since most of the aircraft will be delivered this year, there is a substantial decline in each of the succeeding years.

The mining companies, which account for a relatively small part of the nonmanufacturing total, show an up-and-down pattern in plans beyond this year. Railroads indicate a 16-percent increase in expenditures this year. Although there will be some fluctuation in expenditures beyond this year, this survey indicates plans of close to a billion dollars in spending in all the years reported.

Commercial companies (which in this survey are mostly large chain stores, department stores, banks, and insurance companies) plan a total expenditure of $9.2 billion in 1960. This figure represents the largest amount ever spent in this area.

EXPANSION VERSUS MODERNIZATION

Manufacturing companies are concentrating on replacement and modernization in an effort to increase productivity and reduce costs. This year, industry plans to devote 65 percent of its total spending for replacement and modernization and only 35 percent for expansion. These are almost the same proportions devoted to this purpose as in 1959. However, total spending by manufacturers in 1959 was only $12 billion compared with $15.2 billion this year. Thus, over $2 billion more will be spent for modernization this year. Only the chemical industry expects to spend a larger proportion of its investment on expansion than on modernization of its facilities.

NEW CAPACITY AND RATES OF OPERATION

With the emphasis on modernization, manufacturers are planning to increase capacity[1] by only 5 percent this year. With the exception of 1958 this is the smallest planned increase in the past 10 years. Manufacturing companies plan to add to capacity at a rate of about 4 percent per year over the next 3 years. These smaller additions to capacity are a reflection of operating rates which are below the preferred rates.

[1] Our capacity index for total manufacturing has been reweighted, by industries, in the same manner as the Federal Reserve Board's revised index of industrial production, resulting in a revision of our index of manufacturing capacity in prior years.

At the end of 1959, manufacturers, on the average, were operating at 85 percent of capacity. This is 9 points below the rate they indicated they preferred to operate.

Manufacturing companies now indicate that they would prefer to operate at 94 percent of capacity, compared with 90 percent as indicated in the McGraw-Hill survey of April 1957, the last time this question was asked. With the exception of the paper industry, every industry now indicates a higher preferred rate.

Conceivably, the operating rate at the end of 1959 might have been slightly higher if companies had been able to get special types of steel, which were still in short supply because of the 116-day strike. Only steel companies were operating at close to their preferred rate.

SALES EXPECTATIONS

Manufacturers expect, on the average, an 8-percent increase in sales this year and an additional 17 percent by 1963. If these long-run sales expectations are met, operating rates would be close to preferred rates and create a need for additional capacity by 1963.

Since our preliminary survey last fall, some industries have revised their sales expectations for this year. The auto industry which had expected a 15 percent increase in sales, now expects only a 7 percent increase. The steel industry which expected a 25 percent increase in sales for this year now expects a 22 percent increase. The transportation equipment industry (aircraft, ships, railroad equipment), on the other hand, now expects higher sales this year.

BUILDINGS, MACHINERY, AND OTHER EQUIPMENT

This year, 30 percent of business total capital expenditures will be for buildings and 70 percent for machinery and other equipment, again emphasizing industry's concentration on modernization. In manufacturing, the proportion going for buildings is only 20 percent. These percentages are nearly the same as indicated in last year's McGraw-Hill survey. The commercial sector (chainstores, hotels, and office buildings) is the only area devoting more than half of its investment to buildings.

DEPRECIATION

Depreciation allowances are now equivalent to about two-thirds of total capital spending planned for this year and are the largest single source of funds for new plants and equipment. By 1963 American corporations will have $24.8 billion available through annual depreciation deductions—an increase of 18 percent over 1959. Manufacturing companies indicate their depreciation allowances will rise 17 percent.

The estimates in this survey are based on depreciation deductions for tax purposes. Some companies record depreciation differently on their own books of account.

Companies were also asked whether or not it was their policy to spend all or nearly all of their depreciation allowances for new plants and equipment. More than 80 percent of all manufacturing firms answering indicated they do spend all of their depreciation for this purpose. Depreciation allowances plus retained earnings and depletion allowances will provide a strong prop for plant and equipment expenditures in the next few years.

REGIONAL EXPENDITURES

Manufacturing companies plan to invest the largest proportion of their expenditures in the North Central States—30 percent in 1960 and 27 percent in 1961. However, this is a smaller proportion than manufacturers indicated they were spending in this area in 1958 and 1959.

Manufacturers are continuing to devote an increasing proportion of their capital expenditures to the West. Last year they planned to spend 13 percent of their invest-

ment in the West. This year they plan to increase the proportion to 15 percent in 1960 and 17 percent in 1961. Manufacturers are also planning to increase the percentage of investment in the South, but New England and the South Atlantic States will receive a smaller share of total investment in 1960 and 1961. About the same proportion will be spent in the Middle Atlantic States in the next 2 years as a year ago.

RESEARCH AND NEW PRODUCTS

Industry is increasing its research programs in an effort to increase productivity, cut costs, and develop new products and processes. Expenditures for research and development by American industry reached a record $9 billion in 1959—exactly the amount companies reported they planned to spend a year ago. Industry now plans to increase its research expenditures by 6 percent this year and another 12 percent by 1963. Every industry with the exception of the aircraft industry which obtains a large proportion of its funds for research from the Federal Government expects to spend more for research and development this year.

A significant share of manufacturers' research and development programs is for new products. Manufacturing companies estimate that 12 percent of their 1963 sales will be in new products. (New products are defined as "products not made in 1959 or products sufficiently changed to be reasonably considered as new products.") And close to one-third of the reporting companies indicated that a significant share of their 1960 expenditures for new plants and equipment will be for facilities to make new products.

The largest increase in new products is expected by the transportation equipment industry, largely aircraft. With the exception of the auto industry, the metalworking industries expect new products will acount for at least 15 percent of 1963 sales. The chemical industry expects 14 percent of its 1963 sales to be in new products and other figures range from 4 percent in the petroleum industry to 25 percent in the machinery industry. This will mean the introduction not only of many new products, but of completely new processes during the next 4 years.

RESEARCH FACILITIES

Manufacturers are planning to increase their capital investment in research facilities to carry out their research programs. Manufacturing firms now plan to spend $682 million for research facilities compared with $523 million planned for 1959. The chemical industry plans to spend the largest amount for this purpose—$119 million, followed by the transportation equipment industry ($94 million), and the electrical machinery industry ($92 million). Thus if these expenditures were added to the total research effort this year, R. & D. would be well over $10 billion.

Companies were also asked how they determined their research budgets. Nearly half (48 percent) of the reporting manufacturers indicated that plans for new products were the most important factor in determining their research and development budgets. Sales are the next most important factor. Only 2 percent of the reporting manufacturing companies indicated that they relate their R. & D. budgets to capital investment, while 13 percent of the firms answering indicated that profits were the most important factor in determining their R. & D. programs.

Some industries differ considerably from the average. For example, 44 percent of the companies in the stone, clay, and glass industry indicate R. & D. budgets are related primarily to sales. Steel firms also indicated that sales were more important than plans for new products in determining R. & D. expenditures.

HOW THE SURVEY WAS MADE

This survey, made by the McGraw-Hill Department of Economics, is based on industry's replies to a questionnaire received during the last half of March and early April and thus represents industry's thinking at that time of year.

Companies that participate in the McGraw-Hill survey are usually the larger companies in their industries. This fact may affect the results of the survey. However, in each successive survey a concerted effort is made to include more medium-sized and smaller firms. More such companies cooperated in this survey than in any previous year.

Companies reporting in the survey employ more than 50 percent of all workers in the group of industries where capital investment is highest. This group includes petroleum, utilities, railroads, chemicals, autos, and steel. In industries where coverage is not so complete, companies are carefully selected to provide a representative cross section of their industry. Companies included in the industrial sample employ a total of nearly 8 million workers, about 40 percent of total employment in all industry.

Commercial business—trade, finance, and services—is the one major field of capital investment with a lower level of coverage. The sample in this field is made up primarily of large chainstores, mail order and department stores, insurance companies and banks.

Figures on manufacturing capacity compiled by McGraw-Hill are the only available direct measure of expansion in manufacturing. Physical capacity is measured by the reporting companies, according to their own definitions. However, companies in the same industry generally follow the same practice. Weights for the index are based on value added by manufacture. Our capacity index for total manufacturing has been reweighted, by industries, using the new weights developed by the Federal Reserve Board in its revised index of industrial production. This has resulted in a revision in the index for manufacturing capacity for prior years. This makes it possible to compare our index of manufacturing capacity with manufacturing production.

STATISTICAL NOTES

All figures on capital investment plans are now directly comparable with those provided by the U.S. Department of Commerce and the Securities and Exchange Commission. Considerable confusion arose because of the lack of comparability between the two sets of data. In the past the McGraw-Hill data differed in industry classifications and included a petroleum figure which included some current account expenditures. These differences have now been eliminated.

Correspondents of Business Week personally interviewed many company executives, as did members of the McGraw-Hill Department of Economics. Other McGraw-Hill magazines helped conduct the survey in their own fields.

Panamanian Protest Plans for July 4 Celebration

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. FLOOD. Mr. Speaker, an informative news story in the Christian Science Monitor of June 27, 1960, by Mr. Ralph K. Skinner, distinguished correspondent of that paper on the Isthmus, will be of interest to all who follow United States-Panama relations.

The news story follows:

PANAMANIANS PROTEST PLANS TO MARK JULY 4

(By Ralph K. Skinner)

PANAMA CITY, PANAMA.—A campaign pushed by Panama University students and professors to revoke official celebration of the Fourth of July as an official holiday here is seen to be merely another slap in the face to Uncle Sam.

The students may believe they are being fiercely nationalistic whereas there is evidence they are being used by Cuban agitators and other anti-U.S. groups active in Panama.

Traditionally the Fourth of July has been celebrated in Panama because of its close links with the United States. Panama's Independence Day, November 3, is a legal holiday in the Canal Zone. There has been reciprocal entertainment on the respective national holidays.

PANAMANIANS WELCOMED

In addition to the big reception given on the Fourth at the U.S. Embassy in this capital city for Panamian officials and other citizens, Canal Zone officials have welcomed Panamanians of all classes to celebrations in the Canal Zone.

The American Society, composed of American businessmen in Panama, customarily has entertained the President of Panama at a big Fourth of July party with fireworks and the like.

This correspondent has attended such parties when the President of Panama had such an entertaining time he stayed for hours. Top Panama officials and United States officials mingled in an aura of great friendliness and cordiality.

U.S. OFFICIALS INCLUDED

Similary, the U.S. officials were included in Panama official affairs coincident with the celebrations of November 3.

To cancel any Panama observance of the Fourth of July and to revoke its status as an official holiday here would be a step backward in the already unsatisfactory relations between the two countries, it is held by observers here.

A friendly Fourth of July this year might tend to restore the previously amicable relationships between Panama and the United States. Perhaps the student action is a signal that Panama does not want such relations restored.

Last year on November 3, Panamanians seeking to plant Panama flags in the Canal Zone touched off extremely serious riots in which many were injured, cars overturned and burned, property damage done, and the U.S. flag at the American Embassy torn down and desecrated. Another anti-United States riot followed on November 28.

RELATIONS STRAINED

Since that time, relations have been strained between the two communities.

This correspondent has been told by Panamanian leaders that massive demonstrations against the Canal Zone are planned again for November 3 this year. They forecast great public support.

Although the Panama Government and its public order forces would not favor such demonstrations, it is unlikely they would seriously oppose any action obviously backed by public sentiment.

Avowedly, the purpose would be to plant Panamana flags in the Canal Zone to reassert Panama's claimed sovereignty there.

Actually the purpose might be to exert more pressure to gain further U.S. conces-

sions to Panama's seemingly insatiable demands.

And for certain groups, there would be the collateral advantage of lowering U.S. prestige throughout Latin America with twisted reporting of the demonstrations.

Herman Blum Speaks on Lincoln

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. SCOTT. Mr. President, I would like to call to the attention of the Senate a significant address made recently by Mr. Herman Blum before the New Century Club of Philadelphia. Mr. Blum, chairman of the board of Craftex Mills, Inc., is the Pennsylvania member, advisory council, Civil War Centennial Commission; senior vice president, Lincoln-Civil War Society; and honorary member, National Lincoln Sesquicentennial Commission. Since his words on Lincoln are worth even greater attention than they have been getting throughout Pennsylvania, I ask unanimous consent that the text to his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LINCOLN PARADOX: SELF-CONTRADICTORY, YET EXPLAINABLE

(Address by Herman Blum, before the New Century Club of Philadelphia)

Beginning on January 8, 1961, and continuing during the following 5 years, the American people will observe the 100th anniversary of the Civil War. The commemorative programs planned by the Civil War Centennial Commission, will be conducted on a nationwide basis at grassroots level—in schools, colleges, churches, and civic organizations.

You ask: "What do we expect to commemorate about this tragic period of our national life?"

Certainly, not the bloodshed, not the strife or the hatred and discord occasioned during the war period.

What we are seeking to remember should be of vital interest to our young people, who will have a historic opportunity to bring into proper focus, the record of the years between 1860 and 1865. And part of that record should be our ardent desire to pay tribute to the men on both sides, who fought to settle the greatest issue America ever faced.

I

We cannot commemorate the Civil War, however, without recognizing the overwhelming impact of one man upon that conflict. That man was Abraham Lincoln. For Abraham Lincoln was the Civil War. More than anyone or anything else, it was his personality, purposes, politics, policies, and overall strategy that dominated and directed that struggle.

A Confederate general once summarized his conclusions about the Civil War like this:

"We were never outfought, the truth is that we were simply outthought."

In this connection note what Lincoln said in his Gettysburg Address:

"The brave men who fought here * * *." He didn't say, "The brave Union men who fought here."

It was Lincoln's magnanimous thinking which recognized the heroism of all the men who fought in the war—Rebel as well as Union—that was the decisive factor in bringing the Civil War to a conclusion. It was his thinking that robbed the South of the will to continue the fight and laid the foundation for basic reconciliation.

II

Now, what can I tell you about Abraham Lincoln that 5,000 or 6,000 books written about him have not already told? What is there about this man that makes people understand him and take him into their hearts? What is there about him that commands the reverence of all classes of people, of all creeds and races in all the nations of the earth?

I will not attempt a categorical answer to these questions. Perhaps there is no logical explanation of the Lincoln phenomena.

Be that as it may, it is an inglorious personal experience of mine that answers some of these questions. The incident I am recalling, will also make the humble background of our 16th President a little more understandable and less astonishing.

At the turn of the century, I was an eager-beaver cub reporter on the Chicago Tribune. I recall how excited I was about a John T. McCutcheon cartoon that appeared in the Tribune on Lincoln's birthday of that year. The Tribune's indulgent city editor tolerated my bizarre reportorial feats, but not my habitual impertinence or the squandering of my $2-a-week expense allowance. Just before he fired me from the paper, I managed to muster up enough nerve to ask the famous cartoonist to autograph a copy of his Lincoln drawing for me. And this McCutcheon did graciously.

You will appreciate how I have cherished that engaging cartoon, when I tell you that I managed to save it all these years. After more than a half century, it still has a place of honor in the Lincoln memorial room of our Blumhaven Library.

The McCutcheon cartoon depicts a log cabin set against a background of desolate wilderness. In the foreground, deep in a muddy rut of a forest trail, is a rickety buckboard being dragged by an amiable mule. A mongrel dog is trotting up ahead. On the wagon seat, smoking a corncob pipe, is a ragged backwoods man. Sitting beside him, rigged out in calico and a slouchy sunbonnet, is his wife. Our Kentucky bushwacker points to the shack and out of the corner of his mouth, remarks to his wife: "I heerd Nancy Lincoln's got another baby—a boy this time. Goodness knows whut she'll do with it. They kaint skessly take keer o' little Sairey as it is."

Obviously, we can't say for sure what that Kentucky backwoodsman had in mind when he made that remark about the birth of the Lincoln baby, but it could well have been the hillbilly version of the acute worry we call the "population explosion" today.

Ever since that cartoon was published in the Chicago Tribune, historians have been working on the theme that the underprivileged baby, who was born in that dirt floor log cabin, had shiftless, improvident, illiterate parents. Over the years, the discussion as to how Lincoln achieved greatness, has gone on without letup. Was Lincoln great because of his heritage? Was he great in spite of it? Which is fact, which is fiction? The stories about Lincoln's parentage may be summarized as follows: His parents were poor indeed; the father,[1] however, was hardly an ignorant man, although he lacked formal schooling. His mother was an intensely spiritual woman; his stepmother, a loving parent and an inspiration to young Abe.

In short, the thing that answers all the questions about Lincoln's paternity, are Lincoln's own words. And these in substance are: "I owe it all to my angel mother."

This simple tribute to his mother, has somehow escaped most Lincoln biographers. Lincoln's declaration of his indebtedness to his mother, however, leaves no fundamental questions about him unanswered.

III

Today, while we are feverishly comparing the qualifications of our "undeclared" and/or "declared" candidates for the Presidency, all of whom are Governors, U.S. Senators, or Vice Presidents—wouldn't it be illuminating if we could account for the paradox of Abraham Lincoln becoming our only President who had never been a Governor, a U.S. Senator, a Cabinet Minister, a Vice President, a war hero, or a great general?

What was there about this obscure[2] lawyer, who had been a postmaster of a tiny village, a humble State legislator and a one-term Congressman, that indicated he was to be the preserver of a united America? Here was a man, born in a log cabin, on a site known as "Sinking Spring Farm," deep in the wilderness of Kentucky. He had less than a year's schooling, and no formal education at all. This tall, bony man arrived in Illinois in 1831, friendless, penniless, powerless, ragged and alone, struggling for the bare necessities of life.

And when it came time for Lincoln to make his bid for the Presidency, he had no multimillionaire to back his candidacy; there was nary a Wall Street tycoon among his sponsors. Nor did he have a combination of big city political bosses who met in a smoke-filled room to handpick him. And no politaker buzzed around to make a survey for Candidate Lincoln or to advise him how to alter his personality image to influence the voters.

Was he that well known that he didn't need organized political support to win the nomination for the Presidency? Actually, when he was nominated, he was so little known that some newspapers kept misspelling his first name as "Abram." Some of the papers printed phonetic pronunciations of his last name so people would know how to say it. He was deeply etched in the mind of the voters as a tall, awkward railsplitter, a homespun lawyer who told stories and jokes, but could be silent and melancholy as well.

What about Lincoln's personality? His contemporaries said he was the homeliest man in Illinois. Cartoonists spurred on by Lincoln's political enemies, pictured him as approximately diabolical. If Mr. Lincoln were to make an appearance on television today, his roughhewn features, framed by his shaggy beard, would scare the bejabbers out of his viewers.

Lincoln was 6 feet 4 inches tall, ungainly in his movements. He had a high-pitched, thin voice, utterly different from the deep voice of those who recite his words today.

---

[1] Webster's Biographical Dictionary, 1957 issue, lists him as "an illiterate wandering laborer."

[2] But by no means ineffective. Lincoln is reputed to have likened his opponent for the legislature in 1833, to a river steamboat with a whistle so big and an engine so small, that when the whistle was blowing the boat merely trembled, but couldn't run. And when the engine did manage to propel the boat, the whistle "wooden" whistle. "Now as to my worthy rival," he said, "when he speaks, he is incapable of thinking, and when he is thinking, he is speechless."

He was no spread-eagle, whistlestop, give-'em-hell orator. His stump speeches were mostly extemporaneous. While plain spoken and timely, his talks were seldom movingly expressive. By no stretch of the imagination, could we rate him a radio spellbinder or image-salesman on TV today.

And was the nomination of Mr. Lincoln handed to him on a platter, because nobody else wanted it? No indeed. There were powerful contenders for the nomination. Among them was William H. Seward, then U.S. Senator, and former Governor of New York and Salmon P. Chase, U.S. Senator from Ohio. And on the first ballot Lincoln was far behind his rivals.

IV

Well then, what power did pick this undistinguished lawyer for the Presidency? How was it that this relatively untried statesman, inexperienced in foreign affairs[a] or diplomacy, untrained in military science and war economy, was able to face the perils of his day and to carry out his staggering assignments? What force was it that impelled this undeveloped man to make wise decisions in frightfully crucial situations? What caused him to suddenly generate leadership which he had not shown before entering the White House? Was it the gigantic pressures of circumstances that raised this uneducated man to the highest intellectual level or was it something else?

Do you suppose there is such a thing as fate? Do you believe in destiny? Do you believe that Divine Providence, every now and then, intervenes in the affairs of our Nation, to pick a man to meet a particular crisis? Are there not a number of these mystic occurrences recorded in history—outstanding events for which there is no other explanation than that Almighty God, in His wisdom, had chosen a man as His instrument to avert the disaster that threatened his people?

V

The key to Lincoln's eternal position in history was the depth of his spiritual feeling. It is true he was not a member of a regular church. In Illinois he once rented a church pew, but it was Mrs. Lincoln who usually sat in it. He was never baptized or made a formal profession of faith. This has caused some to conclude that, since he was not a member of a church, Lincoln could not be considered religious. Some of his political enemies raised the religious issue and insisted on calling him an infidel. This did not dismay Lincoln, for he was not an unbeliever. He was not opposed to creeds, but he did say this:

"I cannot without mental reservations assent to long and complicated creeds and catechisms. If the church would ask simply for acceptance of the commands 'Thou shalt love the Lord thy God with all thy heart and with all thy soul and thy neighbor as thyself'—that church I would gladly join with."

Another passage in the Bible makes clear the nature of true religion. It is: "What doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?"

Basically, Lincoln symbolizes this text and must be recognized as genuinely religious. He memorized long passages from the Bible. Perhaps no President who occupied the White House ever read the Bible as much as Lincoln. His two great speeches—the Gettysburg Address and second inaugural, are filled with the rich word "poetry" of the King James version of the Bible.

Lincoln had deep religious convictions and constantly sought divine guidance. There is no doubt in my mind as to the source of Lincoln's power. If he was not inspired of God, then there is no man who ever lived on earth who was so inspired.

From Caesar to Napoleon, from Socrates to Albert Schweitzer, men have risen step by step, according to well-known principles. That is not what we call being a man of destiny. They are men of time, men of talent. The inspired men are fewer. Whence they came, from whence they get their power, by what rule they get that power, we know not. They arise from the shadow and vanish in the midst. We see them but we know them not. Where did Shakespeare get his genius, Mozart, his music, Burns, his poetry—where but from God? And from the same source came Lincoln's power to carry out his stupendous mission. It was from this same divine source that Lincoln derived his courage, endurance, judgment, and mercy. And no story told a thousand years from now will be received with greater interest than that which tells of the life and work of Abraham Lincoln.

VI

So, how does our terrified world today react to this Lincoln story? In our grim struggle to capture men's minds and to win international friendships, what more persuasive argument do we have than the compassionate understanding, deep sense of justice, and the humanity of the Great Emancipator? Today, prejudice toward minority groups, racial discrimination, segregation, and religious bigotry seriously threaten the gains we have made for brotherhood since the Civil War.

In disclaiming membership in the "Know Nothing Party," Lincoln wrote to Joshua F. Speed in 1855, "How can anyone who abhors the oppression of Negroes be for a party that favors the degrading of minority groups of other races, including some whites? Our progress in degeneracy appears to me to be pretty rapid. As a Nation we began by declaring that 'all men are created equal.' We now practically read it, 'all men are created equal, except Negroes.' When the Know-Nothings get control, it will read: 'All men are created equal, except Negroes and foreigners and Catholics.'"

If we could somehow invoke the spirit of this Lincoln's letter, perhaps the cold war wouldn't approach its blasting stage so relentlessly. And who knows, that by easing world tensions, we may by this humble means achieve the miracle of peace and final disarmament.

VII

To the people behind the Iron Curtain, there is one American symbol of friendship they believe in, and that is in the name of Lincoln.

It is in faraway lands that many active Lincoln study groups are being organized today. In India alone, there are some 150 Lincoln societies and these groups flourish and eagerly study the principles and philosophy of their hero, Abraham Lincoln, and memorize his Gettysburg Address. Our State Department continually gets requests for copies of Lincoln's Gettysburg address from them. The words in this Lincoln masterpiece are easily translated. They are universally meaningful to people who yearn for freedom wherever there is oppression and tryanny. Lincoln spells out the American philosophy that in a free society a man can pull himself up by his bootstraps. He is our secret weapon and the best asset in our diplomatic pouches.

During the late lamented Hungarian uprising, crushed so ruthlesly by the Soviet, a rebellious radio station repeatedly broadcast the Gettysburg Address to hearten the freedom fighters.

Lincoln's words were part of the ferment that resulted in the bloody overthrow of Dictator Rhee in Korea; it was Lincoln's philosophy that sparked the protest marches of students in Ankara, just before the coup against dictatorial Premier Menderes.

In other lands, praise of Lincoln goes hand in hand with the denunciation of despotism. An Associated Press dispatch from El Salvador carried the news on February 10, 1960, that the Minister of Education had issued orders to the schools throughout the country to pay suitable "homage to Abraham Lincoln and to commemorate the 151st anniversary of his birth."

While the Soviet Union's official news-gathering agency, the Tass, severely restricts its acclaim of Lincoln, and Nikita Khrushchev arrogantly chants "Nyet, Nyet," the Russian people fondly remember that their renowned writer, Leo Tolstoy, characterized Lincoln as follows:

"Of all the great national heroes and statesmen of history, Lincoln is the only real giant. He overshadows all other national heroes. Lincoln was not a great general like Napoleon or Washington; he was not such a skillful statesman as Gladstone or the adroit Disraeli; but his supremacy expresses itself altogether in his peculiar moral power and in the greatness of his character. He had come through many hardships and much experience to the realization that the greatest human achievement is love. He was what Beethoven was in music; Dante in poetry; Raphael in painting; and Christ in the philosophy of life."

When President Eisenhower visited India last year he was given a spectacular ovation. What was the meaning of this outburst on the part of those millions in India? The answer was given to me by a Calcutta newspaper editor, who is a member of the Indian delegation to the United Nations. Those multitudes, he said, were not actually paying a tribute to President Eisenhower. They hailed him as the representative of the Nation that gave the world Lincoln. And logically enough, he said, they regarded their sainted Mohatma Ghandi as the spiritual heir or perhaps the reincarnation of our Abraham Lincoln.

On the occasion of the 96th anniversary of Lincoln's Gettysburg Address, Premier Jawaharlar Nehru, of India, made this remarkable statement to the Associated Press:

"As we look at a world torn asunder by suspicion, distrust and fear, and living in the shadow of terrible destructive weapons, we need more than ever to remind ourselves of Lincoln's message and learn to imbibe its spirit."

Isn't it obvious that the heritage of kindness, idealism, and political wisdom left by Abraham Lincoln for our own Nation, is being shared by people the world over?

If "government of the people, by the people, for the people" is not to "perish from the earth," then neighborly relations of peo-people to people must be promoted to spread on this earth. When this is achieved, Gettysburg will be less a memorial of the past and more a preview of man's destiny in a world of peace and brotherhood.

---

[a] Great Britain openly favored the Confederacy. Lack of forthright relations with her could have wrecked the Union cause. Lincoln supplied the discreet, vitally important diplomacy to cope with the threat of English intervention.

William H. Eaton

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following address by Hon. John Cashmore, borough president of Brooklyn, at the installation of William H. Eaton as president of the Society of Old Brooklynites. The installation ceremony was held in the surrogate courtroom of the Supreme Court Building in Brooklyn, on June 1, 1960. Mr. Eaton, a prominent Brooklynite—known to his friends as "Billy"—and the borough president lived in the same neighborhood in Brooklyn and their friendship and their close association has endured through many years. It is a pleasure for me to include in the RECORD Mr. Cashmore's fine tribute to his old friend and a distinguished and beloved member of our community. I know that the borough president's remarks were founded on his long and intimate knowledge of the character of "Billy" and of his deep and sincere admiration for his many fine works:

REMARKS OF BOROUGH PRESIDENT JOHN CASHMORE AT THE INSTALLATION OF WILLIAM A. EATON AS PRESIDENT OF SOCIETY OF OLD BROOKLYNITES, SURROGATE COURTROOM, SUPREME COURT BUILDING, BOROUGH OF BROOKLYN, N. Y., JUNE 1, 1960

Mr. President, Dr. Crane, and my friends of Old Brooklynites, to my mind, the Society of Old Brooklynites personifies Brooklyn at its best. I say that because you are dedicated to the preservation of the historical heritage that is ours—to the preservation of the culture that is ours—and to the promotion of a civic pride that should be the badge of every Brooklynite.

At a time that all too many are tempted to take America and the American way of life for granted, it is well that we have here in Brooklyn a society such as yours to keep alive the memories of the sacrifices that Brooklyn and the people of Brooklyn made to make America free.

All too few of our citizens are aware that in the very neighborhood where we meet tonight, the ground reverberated to the tread of Washington's troops.

All too few are aware that the battleground of Brooklyn was literally soaked in blood when our people joined in battle to throw off the yoke of tyranny. That men died by the thousands in prison ships in Wallabout Bay, was a fact fading from remembrance when your society helped to focus the spotlight of history upon it.

Today, we are face to face once again with the hard fact that the American way of life is something that must be fought for and defended. We are fortunate indeed to have a society such as yours to recall and to dramatize the contribution that Brooklyn has made to American independence.

Tonight you install a new president to succeed Dr. Crane who has worked so diligently in the interest of your society and in the interest of Brooklyn. In choosing your new president, the Society of Old Brooklynites honors one of the greatest old Brooklynites I have ever known, my friend of a lifetime, William H. Eaton. "Billy" Eaton has served Brooklyn with every ounce of his energy. For more than half a century, he has spent himself for Brooklyn. It was never a question of what Brooklyn could give him, but what he could give Brooklyn.

To one who loves Brooklyn as "Billy" Eaton loves Brooklyn, this honor you confer upon him tonight, is the greatest he would ever ask. As the elected President of this great community, I come tonight to bring the congratulations of its people to one of its finest citizens.

"Billy," this is a high honor indeed that has been bestowed upon you and in all humility, let me say, I feel privileged to play a part in it.

The Influence of the Federal Government on the National Economy—Address by Senator Butler

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. BUTLER. Mr. President, I had the pleasure yesterday morning of addressing some 400 public and parochial schoolteachers of Baltimore at their annual workshop on economics. Yesterday was Government Day, and I was afforded the opportunity of discussing "The Influence of the Federal Government on the National Economy." As I pointed out, "In order for us to maintain our position as leaders of the free world, the time has come for prudence in spending the hard-earned income of American producers by every level of government."

Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD my speech before the Baltimore teachers' workshop, as well as certain charts and explanatory comments which serve to complement my speech.

There being no objection, the address was ordered to be printed in RECORD, as follows:

THE INFLUENCE OF FEDERAL GOVERNMENT ON THE NATIONAL ECONOMY

I believe that the future of this country lies in your hands. I believe that because you teachers gathered here today are the prime molders of the minds of our youth who will lead this Nation tomorrow. And so what you think and what you teach will determine the course of the United States for generations to come. You are bound, therefore, with a serious and challenging responsibility. I know that you do not consider this duty lightly nor indifferent. These are indeed serious times, challenging times, when all of us must give fully and completely of ourselves.

It is not a time to bewail our troubles and mistakes to pick and probe feverishly at where we went wrong or how we could have done better. It is not a time to be discouraged or despondent. It is a time to realize that the Soviets want to bury us completely and thoroughly and that we must be prepared to bury them—if necessary.

These are challenging times, but it is not only the challenge of the Soviets, whose unremitting efforts to win the world to their cause has had some temporary success, of which I am speaking, but the challenge of those people here at home who would turn the present crisis, unwittingly perhaps, into what I consider a most imminent and fearful possibility—bankruptcy and economic ruin of the Federal Government.

I, for one, refuse to discard as archaic and inefficient the free enterprise and balanced budget methods which have produced this marvelous Nation, which is still the strongest and the freest in the world.

And so I am going to talk this morning about the influence of the Federal Government on the national economy and some of the dangerous emergency proposals which come too often before the Senate.

Ladies and gentlemen, there are many proposals currently before the Congress to establish new programs involving large expenditures by the Federal Government which were not included in the President's budget. Some of these measures may be worthy if there were not so many other existing commitments and they would certainly prove beneficial to a great number of our citizens.

Yet, as a member of the Senate Finance Committee and the Joint Economic Committee. I have become increasingly concerned with the impact of these many proposed programs on the Federal budget and the national economy and with the question of how we are to finance them.

The decade of the sixties will be a time of serious challenge to our Nation, and indeed to our way of life. The economic offensive launched by the Communist nations will require a rededication to the principles of our free enterprise economy. At the same time we must keep up our military strength, and we must marshal all our resources to maintain and strengthen our position of world leadership. To accomplish these ends will require a healthy, strong, and growing economy.

The budget which was proposed by President Eisenhower for the fiscal year 1961 calls for revenues of $84 billion and expenditures of $79.8 billion, leaving a surplus of $4.2 billion to be applied toward reducing our public debt of $284.5 billion. The public debt, which has now reached a per capita level of approximately $1,580 for each of our 180 million citizens is fantastically high.

Yet, if we add the liabilities of an estimated $350 billion of future obligations for retirement benefits for civilian Government employees and military personnel and future pensions and compensations to veterans and an estimated $98 billion of commitments for future spending for highways, public works programs, public housing, unexpended balances in the defense program, and a variety of other obligations. We arrive at the astronomical total of a $732 billion mortgage on America's future.

In the closing days of the Congress, every Senator and every Congressman will be examining many proposals requiring additional Feleral spending. An even cursory study of the budget reveals that once such programs become embedded in our statutes, they are never eliminated. Indeed, history shows that these measures grow and expand from year to year.

An excellent example of the practice we have followed for many years is provided by an examination of expenditures for public assistance programs. At the time that the Congress liberalized the old-age and survivors' insurance program in 1950, we contemplated that expenditures for public assistance would ultimately decline.

The intent of the Congress is clearly revealed in Report No. 1669 of the Senate Finance Committee dated May 16, 1950, which discussed the amendments embodied in H.R. 6000, 81st Congress. It stated that:

"The committee-approved bill is designed to have the insurance program become the basic method. The strengthening of old-age and survivors insurance will reduce the need for public-assistance expenditures. The broad extension of coverage, the increase in benefits, and the liberalized eligibility requirements of the insurance program will decrease the number of people who will have to depend on the assistance programs * * *."

This statement was made in 1950 when budget expenditures for public assistance totaled $1,039 million. The 1961 budget estimate for this program submitted by President Eisenhower on January 18, 1960, proposes expenditures of $2,087 million. In other words, although coverage had been extended, a program which was destined to decrease in importance doubled in size during a decade. This illustrates the need for extreme caution in embarking upon new programs which may require modest financial obligations at the time they are suggested.

The economic facts of life are such that we have only two alternatives we can use

to finance these expenditures. We must either go into debt, or we must increase our tax revenues.

The dangers and serious consequences of a continuous budget deficit need not be recounted. The experience of many European countries in the postwar period have demonstrated beyond a doubt that inflation and depreciated currency are not mere phantoms. Events here in the United States have proved that a firm stand must be taken to preserve the integrity of the dollar. Our current balance-of-payments problem should serve as a constant reminder that unless we maintain competitive prices in world markets and bring about a balance in terms of our international payments, we are headed for serious trouble. In 1949 U.S. gold stocks reached a postwar high of $24.6 billion. At the end of April of this year, they stand at $19.4 billion, a decline of $5.2 billion. It is self-evident that this trend must be halted if our economic system is to survive. In fact, the claims on our gold at Fort Knox, if they were all exercised, would completely absorb our reserves.

Ladies and gentlemen, an examination of the budget outlined by President Eisenhower last January shows that interest payments represent 12 percent of expenditures; general Government, 2.4 percent; major national security programs, 57.1 percent; international affairs and finance, 2.8 percent; veterans' services and benefits, 6.9 percent; agriculture and agricultural resources, 7 percent; labor and welfare, 5.7 percent; commerce and housing, 3.4 percent; natural resources, 2.4 percent; and allowances for contingenies, 0.3 percent. On the revenue side, corporation income taxes are expected to contribute 28 percent of revenues, individual income taxes, 52 percent, and excise and other taxes 20 percent.

The original budget prepared last January will bear little resemblance to the appropriations and authorizations provided by the present Congress. For example, the President requested an increase in postal rates which apparently will not be granted. Furthermore, within the past few days the Senate has adopted bills that would add more than $2 billion to the budget, which was presented by President Eisenhower last January, and the end is not yet in sight since there will certainly be additional spending bills, including programs not provided for in the budget before we finally adjourn.

For example, the tax rate on corporation profits presently stands at 52 percent. The Federal Government is the senior partner in every corporation with a taxable income in excess of $25,000. It derives more revenue from the enterprise than the investors who risk their capital to provide jobs for our people and the goods and services that we need.

Accordingly, if more Federal revenues are needed, they will have to be raised by increased personal income taxes in the lower and middle brackets. Yet we are all aware that today the average employee is most concerned with his take-home pay. If further tax withholding reduces take-home pay, organized labor will of necessity demand higher wages. These added labor costs will in turn have to be factored into higher prices. Further price increases will only aggravate the problem of foreign competition with which we are now faced and will ultimately result in more problems of unemployment, depressed areas, and a lower standard of living.

There have been many bills which were passed by both Houses of the Congress to establish new programs but which were vetoed by the President. In and of themselves some of them may have been worthy, but the problem now is one of priorities. It is important that every voter understand that if additional demands for Federal funds are pressed upon the Congress, they can only be met through increased taxes that will raise his cost of living and lower his take-home pay.

This is not a time when any of us should be solely concerned with the merits or demerits of specific programs but rather with the simple fact of how we can pay for them and how they will ultimately add to the growth of our tax base.

I would like to quote from a recent speech given by Mr. Maurice H. Stans, Director of the Bureau of the Budget at the annual dinner of the Tax Foundation in New York. Mr. Stans said:

"Except for its dimensions, the Federal budget is parallel to a family's budget, as a plan for living, with its goals, its fixed costs, its choices among variables, its contingencies, and above all its relevance to what we can afford within our means. The simple idea that whatever is spent must somehow be covered by what is earned would help to dissipate the widespread delusion that in some strange way when money comes from Washington it doesn't cost anybody anything."

Ladies and gentlemen, plans for participation by the Federal Government in our economy must be designed to meet only those requirements which cannot be covered through the exercise of local resources and initiative.

President Eisenhower in his budget message of January 18, 1960, said:

"I believe that the American people have made their wishes clear: The Federal Government should conduct its financial affairs with a high sense of responsibility vigorously meeting the Nation's needs and opportunities within its proper sphere while at the same time exercising a prudent discipline in matters of borrowing and spending, and in incurring liabilities for the future."

The high sense of responsibility and prudent discipline to which President Eisenhower referred should be ever before legislators as they consider any legislative proposals until this country has demonstrated over a reasonable period of time that our budget is balanced and our national finances are in proper order.

It is most important to allow local authorities the right to tax. We are in effect making an indirect contribution to State and local governments to assume added responsibilities by allowing them to issue securities, the income from which is exempt from Federal taxation. In 1951 the spending program of the States totaled $15.3 billion. It has more than doubled in the short span of 9 years to $32 billion in 1959.

In the years ahead there will be added demands because of population increases and the movement from concentrated urban areas to the suburbs. There has been increased pressure on the States in terms of their own financial problems which must be met by the same individuals who support the Federal Government. An unhealthy fiscal situation has developed because population growth and concentration have occurred in urban and suburban areas, with the total population increasing about 30 million between 1946 and 1957. Over half of this growth was in the nonproductive group of citizens who are in school, in the age group from 5 to 17, or those who have retired and are 65 years of age and over.

In spite of additional Federal programs, State and local governments have been burdened with added costs for public assistance and other social welfare programs. More schoolteachers are needed to meet the educational requirements of our expanded youth population. The number of motor vehicles has grown from 34 million in 1946 to 68 million in 1959. All these factors add to the cost of Government—National, State, and local. I am a fervent believer in having as many of these activities conducted by the States and their subdivisions as possible since I am convinced that any Government activity carried on under the close observation of those who are paying for it will probably result in greater efficiency. However, regardless of how these programs are financed, they are imposing an ever-larger burden of taxes on those who constitute the civilian labor force of less than 70 million out of a population of almost 180 million.

In order for us to maintain our position as leaders of the free world, the time has come for prudence in spending the hard-earned income of American producers by every level of government.

Mr. BUTLER. Mr. President, it was my great privilege to address a group of leading business and professional men of the tristate area of which Pittsburgh is the center, known as the Amen Corner group, in the spring of 1959. At this time I pointed out a danger which has since become a reality. I append hereto certain statements which I made before this group, including a table, which were inserted in the CONGRESSIONAL RECORD of March 23, 1959, to be printed at this point in the RECORD:

Our tax system deters thrift. In these days, when the Government requires the maximum possible revenue, progressive tax rates which exceed the point of diminishing returns represent fiscal irresponsibility at its worst. What is not generally recognized is the fact that our progressive income taxes apply particularly to investment income from the private sector of our economy. Anyone can readily secure a yield of 3 percent through the purchase of tax-exempt bonds which finance State and local enterprises of many kinds.

An investment in a corporate enterprise must produce at least 7.8 percent before taxes to provide an equivalent yield to a person with a taxable income of only $2,000. If the income of an individual is $10,000 the yield from a private corporate venture must exceed 10 percent before taxes to equal the 3-percent yield he can obtain from a tax-exempt security. If he happens to be in the top Federal bracket tax bracket the equivalent yield from a private corporate investment must be more than 69 percent. This is an absurdity.

"I do not have to belabor the point with this audience that there are few individuals in the upper-income brackets who are interested in financing new risk enterprises under such conditions. I hope, as a member of the Senate Finance Committee, to make a contribution toward the restoration of some sense to this utterly unrealistic progressive tax structure which was designed to punish success rather than to raise revenue. Mr. Khrushchev would not have made this mistake.

"American citizens are not permitted to convert paper dollars into gold; however, foreigners have this opportunity. In recent years we have been providing them with dollar resources to enable them to draw on our gold balances. Unless we maintain competitive prices in world markets and bring about a balance in terms of our international payments our economy is headed for serious trouble.

"In 1949 U.S. gold stocks reached a post-was high of $24.6 billion. At the end of last year they stood at $20.6 billion, a decline of $4 billion. The reduction in 1958 alone totaled $2.3 billion. In fact, the monthly figures show a falling gold stock for every month since January 1958. While a $20 billion gold stock provides an adequate base for our currency, it must be self-evident that a decline of about 10 percent a year can no longer continue without completely destroying our own economic system. This, perhaps, is the best way for us to fully appreciate the impact of unsound economic

policies, since an excess of demands for dollar payments abroad over purchases from us will sooner or later be reflected in our monetary reserves.

"Our country has faced and met great problems in the past. I have every confidence that our leaders in industry, labor, and Government are capable of meeting the difficulties which confront us today. They can, and will be met by a rededication by each of us to those ideals which guided our Founding Fathers in writing the Constitution and our Bill of Rights.

"We must reinstill these virtues in our youth, because it is quite apparent that our opponents behind the Iron and Bamboo Curtains are developing the willingness to sacrifice immediate pleasures in order to achieve their objectives. We must meet this challenge while retaining freedom. It is more difficult for us to impose self-discipline upon ourselves than to permit dictation by the state, but if we are true to our heritage, this is what we shall do.

Federal taxes paid by the 44 largest industrial corporations, ranked by sales, are required to finance 1959 expenditures for international affairs and finance

[Dollar amounts in thousands]

Company	U.S. income taxes paid in 1957	Sales	Assets	Invested capital	Employees

1 Includes U.S. and foreign income taxes.
*Asterisks indicate data was taken from corporation's annual report.

NOTE.—All data from July 1958 Fortune "Directory of the 500 Largest U.S. Industrial Corporations" except U.S. income taxes, which was taken from Moody's 1958 "Industrial Manual." Western Electric, which ranked No. 11, was omitted, as its data are consolidated with American Telephone & Telegraph, a public utility. Armour, which ranked No. 16, was omitted since it paid no Federal income taxes.

Fortune magazine in its July 1958 issue ranked America's leading industrial corporations in terms of their sales. On the basis of this list, I find that the taxes paid in 1957 by 44 of our largest industrial corporations do not equal $4 billion. In fact, they paid taxes to the Federal Government in the amount of $3,811 million. These taxes in turn were predicated on sales of $91 billion worth of products. The production of these goods required the use of assets costing $73 billion. The production to furnish these taxes required the employment of more than 4 million employees.

I have prepared a table which shows the actual budget expenditures and receipts in 1957, which is the latest year that figures are avaliable, showing the breakdown of individual personal income tax receipts by the various brackets, which is as follows:

TABLE I.—*1957 Federal spending and receipts*

EXPENDITURES

	Dollars (billions)	Percent of total
Interest	7.3	10.5
General government	1.8	2.6
Major national security	43.3	62.4
International affairs and finance	2.0	2.9
Veterans' services and benefits	4.8	6.9
Agriculture	4.5	6.5

Natural resources	1.3	1.9
Total	69.4	100.0

RECEIPTS

Corporation income tax	21.2	30.4
Excise and miscellaneous taxes	14.2	20.4
Individual income tax:		
$100,000 to $1,000,000 and over	1.9	2.7
$50,000 to $100,000	2.2	3.2
$25,000 to $50,000	3.1	4.4
$15,000 to $25,000	2.7	3.9
$10,000 to $15,000	3.9	5.6
$9,000 to $10,000	1.7	2.4
$8,000 to $9,000	2.2	3.2
$7,000 to $8,000	2.8	4.0
$6,000 to $7,000	3.3	4.7
$5,000 to $6,000	3.4	4.9
$4,000 to $5,000	3.2	4.6
$3,000 to $4,000	2.2	3.2
Under $3,000	1.7	2.4
Total	69.7	100.0

NOTE.—Of the $35,000,000,000 derived from the personal income tax, $28,000,000,000 (or 80 percent of the total) was in the personal income tax brackets under $25,000.

On the expenditure side I have listed the items in terms of priority. Interest payments must be met if the Government is to remain solvent. General Government expenditures are shown next; major national security is our next order of priority; international affairs and finance come next; followed by veterans' services and benefits. Then I have considered other domestic programs in their order of interest to the Congress, such as agriculture and agricultural resources, labor and welfare, commerce and housing, and natural resources.

On the receipt side I have listed the income by source in the following order: First, there is income from corporation income taxes; then excise taxes; followed by estate, gift, customs, and miscellaneous taxes; and then the receipts from the personal income taxes, which I have shown in terms of income tax brackets. This table, Mr. President, reveals some startling facts. If we take the first four expenditure items—namely, interest payments, general Government expenses, major national security programs, and international affairs and finance expenditures in the year 1957—we find that they preempted all of the receipts from the corporate income tax, all the excise, estate, and gift taxes, customs and miscellaneous receipts, as well as the receipts from personal individual income taxes down to the $7,000 to $8,000 brackets. By adding the next two priorities of budget expenditures—veterans' services and benefits and agriculture and agricultural resources—we then find the Congress has authorized the use of the receipts from all corporate income taxes, excise, estate, and gift taxes, customs, and miscellaneous receipts, as well as the payments to the Federal Government through personal income taxes down to the $5,000 bracket. Expenditures for labor and welfare, commerce and housing, and natural resources were paid for by taxes received from those citizens with taxable incomes of less than $5,000.

I have prepared two additional tables, as follows:

TABLE II.—*Summary of present rates of Federal taxes*

Corporation income tax:
Normal tax: 30 percent of taxable income.
Surtax: 22 percent of taxable income in excess of $25,000.

Typical excise taxes:	Rate
Telephone ----------percent--	10
Furs, jewelry, and other luxury items ----------percent--	10
Transportation of persons-------do--	10
Gasoline----------cents per gallon--	4
Automobiles ----------percent--	10

Typical estate taxes (flat exemption of $60,000).

On estates in excess of this amount Federal taxes are levied with certain credits for State taxes, as follows:

(A) Taxable estate equal to or more than—	(B) Taxable estate less than—	(C) Tax on amount in col. (A)	(D) Rate of tax on excess over amount in col. (A)
			Percent
$10,000	$20,000	$500	11
$20,000	30,000	1,600	14
$30,000	60,000	7,000	25
$100,000	250,000	20,700	30
$500,000	750,000	145,700	35
$1,000,000	1,250,000	325,700	39

TABLE III.—*Summary of personal income tax rates (after allowable deductions and personal exemption of $600 per individual)*

MARRIED TAXPAYERS FILING RETURNS

If the taxable income is:	The tax is:
Not over $4,000----	20 percent of the amount on line 5.
Over $4,000 but not over $8,000.	$800, plus 22 percent of excess over $4,000.
Over $8,000 but not over $12,000.	$1,680, plus 26 percent of excess over $8,000.
Over $12,000 but not over $16,000.	$2,720, plus 30 percent of excess over $12,000.
Over $16,000 but not over $20,000.	$3,920, plus 34 percent of excess over $16,000.
Over $20,000 but not over $24,000.	$5,280, plus 38 percent of excess over $20,000.
Over $24,000 but not over $28,000.	$6,800, plus 43 percent of excess over $24,000.
Over $28,000 but not over $32,000.	$8,520, plus 47 percent of excess over $28,000.
Over $32,000 but not over $36,000.	$10,400, plus 50 percent of excess over $32,000.
Over $36,000 but not over $40,000.	$12,400, plus 53 percent of excess over $36,000.
Over $40,000 but not over $44,000.	$14,520, plus 56 percent of excess over $40,000.
Over $44,000 but not over $52,000.	$16,760, plus 59 percent of excess over $44,000.
Over $52,000 but not over $64,000.	$21,480, plus 62 percent of excess over $52,000.
Over $64,000 but not over $76,000.	$28,920, plus 65 percent of excess over $64,000.
Over $76,000 but not over $88,000.	$36,720, plus 69 percent of excess over $76,000.

TABLE III.—*Summary of personal income tax rates (after allowable deductions and personal exemption of $600 per individual)*—Continued

If the taxable income is:	The tax is:
Over $88,000 but not over $100,000.	$45,000, plus 72 percent of excess over $88,000.
Over $100,000 but not over $120,000.	$53,640, plus 75 percent of excess over $100,000.
Over $120,000 but not over $140,000.	$68,640, plus 78 percent of excess over $120,000.
Over $140,000 but not over $160,000.	$84,240, plus 81 percent of excess over $140,000.
Over $160,000 but not over $180,000.	$100,440, plus 84 percent of excess over $160,000.
Over $180,000 but not over $200,000.	$117,240, plus 87 percent of excess over $180,000.
Over $200,000 but not over $300,000.	$134,640, plus 89 percent of excess over $200,000.
Over $300,000 but not over $400,000.	$223,640, plus 90 percent of excess over $300,000.
Over $400,000------	$313,640, plus 91 percent of excess over $400,000.

Table II summarizes the present rate of taxes other than personal income taxes. Table III, which shows the tax rates on personal income, is conservative as it is based on a married taxpayer filing a joint return. Under this schedule the 50 percent tax rate is reached with a taxable income of $32,000 whereas a single person is in the 50 percent bracket with a taxable income of only $16,000.

Table III shows that personal income taxes have already reached a level of 91 percent in the top bracket and that even the first $4,000 of taxable income for a married couple carries a rate of 20 percent. In this connection, may I remind my colleagues that social security taxes must also be paid on the first $4,000 at the rate of 3 percent. This payment is not a deduction in the computation of personal income taxes.

"My True Security—The American Way"—State of Florida Winning Essay by Dennis Cumberton, Miami Central High School, Miami, Fla.

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. FASCELL. Mr. Speaker, I was privileged recently to attend a banquet sponsored by the U.S. Junior Chamber of Commerce here in Washington, D.C. The occasion was the second annual My True Security National Awards program.

"My True Security—The American Way" is a Jaycee program designed to increase the American students' understanding of the importance of individual initiative and self-reliance in our free enterprise system.

Throughout the 50 States and the District of Columbia, more than 50,000 high school seniors in 1,700 schools took their time and energy to think, write, and speak on this vital subject.

The Jaycees are young men at work and in 3,800 communities their name is synonymous with action. As a former member and president of the Miami chapter, I am proud of my association with this organization which does so much to instill civic consciousness and responsibility and to promote leadership.

"My True Security—The American Way" is another of the affirmative programs emphasizing the fundamental beliefs of the junior chamber of commerce in our American system.

A distinguished national judging panel chose the national winners who were provided with scholarships.

We in Florida are very proud of our State winner in this contest, Dennis Jay Cumberton, who attended Miami Central High School, Miami, Fla. He is an outstanding young man and I enjoyed meeting and talking with him. I am pleased to present his thoughtful presentation on "My True Security—The American Way":

I like to think of my security as a living chain, complex in construction and operation, but composed of many simple parts or links. In this living chain, each part is important—for a chain is only as strong as its weakest link. As I examine my living chain, I find the links to be composed of the by-products of democracy and our American way of life, all of which constitute my true security.

The first and most important link is my family. A family, in essence, is a small nation in which each member symbolizes a citizen. When citizenship fails to unite for common protection, the whole nation fails—as was the case in ancient Rome. Conversely, if the family is secure and successful, the individual will be secure and successful. I owe any progress that I have made to my family's guidance and confidence, and know that I can always turn to them when in trouble or doubt.

My second link is my religion. Since the beginning of time man has had to find something that transcends his own mundane experience in which to believe and on which to base his morals. I am sure that a steadfast belief in God which has extended to belief in the essential goodness of my fellow man has served to instill in me a deep sense of belonging in the world and thus has fostered in me a feeling of security. A feeling of belonging is also derived from participating in service oranizations within the school such as Key Club and Student Council. Later such experience of service will be extended to those of a community nature, such as Kiwanis Club, Lions Club, or working for the United Fund.

My third link is my education. In this link I include the freedom to be educated, as well as the freedom to choose my profession. One major byproduct of education is a progressive growth in self-reliance and self-confidence. Self-reliance and self-confidence are good synonyms for security because they are composed of and derived from the same living links. It is these qualities, the byproducts of education, that give me a sense of security for I am ever aware that I can always make a useful place for myself in the world both in earning a living and by repaying society with constructive service.

My fourth link is the one of largest scope. It includes all the rights and freedoms guar-

anteed me by our American Constitution and also the sense of personal protection that stems from the knowledge of national security. I know that I am secure from undue search or seizure of my house because this fact is so stated unequivocally in the Bill of Rights of our Constitution. From our Constitution, I am also assured of my security as a citizen in regard to legal protection and rights. I know that I am innocent until proved guilty and that I cannot be held without cause, as is guaranteed by the writ of habeas corpus. Should I ever stand trial, I am assured of a trial by a jury of my peers.

By being permitted the privilege of voting in the future and by freedom of the press and by freedom of speech, I am assured that I will always have a say in and full knowledge of the proceedings and status of my Government. This knowledge will serve to give me a feeling of national security by keeping me informed as to our national defensive position with regard to the rest of the world.

Looking at my living chain as I have created it, I find that its elements; my family, my religion, my education, and my knowledge of my rights as guaranteed by the U.S. Constitution, form a chain of my true security—the American way. These links, this chain—comprise my true security because only through them do I find the necessary elements which give me the self-confidence and self-reliance that I need to succeed materially, morally, and constructively.

Will the Future Redeem the Past?

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. ROBERTSON. Mr. President, Hon. Charles Malik, former President of the United Nations, speaking at a prelude to independence ceremony in Williamsburg, Va., on June 11, delivered a brilliant and thought provoking speech entitled "Will the Future Redeem the Past?" I ask unanimous consent to have excerpts of that speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I propose today to meditate briefly on the past decade or two and to look ahead to the coming decade or two. I have been led to this undertaking partly through the inspiration of the whole concept of Colonial Williamsburg and its majestic execution, whose purpose is so perfectly expressed in its motto, "That the future may learn from the past"; partly because of the critical nature of the present moment of history.

Communism started from zero 43 years ago and today it rigidly controls one-third of mankind and has penetrated and softened up in varying degrees the remaining two-thirds: Was this phenomenal development inevitable? The victory of communism in the late forties in China means that the largest compactly homogeneous mass of humanity, numbering some 600 million people, are now sworn enemies of everything free and Western: Was this development inevitable? The Korean war, despite all its heroic exertions, ended in a draw: Was this outcome inevitable? In Southeast Asia there has occurred during the last 10 years an advance of communism and a retreat of freedom: Was this advance inevitable? * * * The Communist Party, receiving orders directly from Moscow, is certainly more active and influential today in Asia and Africa than 10 years ago * * *: Was this penetration inevitable?

Backing international communism as its embodiment and vehicle is the most superbly organized international political party in history, the Communist Party, with the most advanced techniques of intellectual, social, economic, and political penetration and subversion ever devised: Was the impotence of the West in developing any comparable counterforce inevitable? Backing international communism materially is the second most industrially advanced state in the world, the Soviet Union, which might at the present rate of development surpass the United States in 2 decades—Was this discrepancy in the rates of growth, and in the rates of change of the rates of growth, between East and West inevitable? This supporting industrial base appears to command atomic and nuclear weapons in abundance, whereas 10 or 15 years ago the United States had a monopoly of these weapons—Was this decline in Western relative strength inevitable? We are today more than 2 years and 8 months since Sputnik I, and while the West has made enormous advances in rocketry, it is not clear that in this revolutionary technological field it has caught up with the Soviet Union so far as thrust power is concerned: Is this persistent lag inevitable? * * *

The visible struggle appears to occur all on this side of the Iron and Bamboo Curtains—in Europe, in the Middle East, in southeast Asia, in the Far East, in Latin America; and when people expect a crisis to break out tomorrow, they do not expect it in Albania or Rumania or Russia or China, but in the home of freedom; freedom then is on the defensive and not communism: Is it fated that the West should be always on the defensive, always reacting? * * * In the nascent nationalism of Asia and Africa, which is otherwise a natural and good thing, there is an admixture in varying degrees of anti-Westernism, if not procommunism that leads to anti-Westernism: Was this spread of anti-Westernism as concomitant of the growth of nationalism inevitable? In the very nations that have attained the dignity of political freedom and independence other dimensions of freedom have been severely curtailed, namely, personal freedom, intellectual freedom, social freedom, spiritual freedom: Was this contraction of the domain of freedom inevitable? * * * Communism has been more persistent and effective in presenting to the Asian and African mind a well-thought-out interpretation of existence, the Marxist-Leninist ideology, than any outlook that has been forthcoming from the West: Was this timidity in the articulation of the ideology of freedom inevitable? * * *

The simple fact that the free world has not succeeded in 40 years in pushing back the tide of communism by 1 inch from where it really got political control leaves the strong impression that we are here dealing with an irresistible and irreversible thrust which will inevitably inherit and transform in its own image all the kingdoms and cultures of the earth: Is this creeping tide of communism completely irreversible? Perhaps the most distressing fact is the self-satisfaction and self-congratulation that prevails in the West; the softness, the laxity, the lack of determination and decisiveness, the general decadence, the uncritical readiness to settle for "peaceful coexistence"—are we then face to face with some ineluctable judgment of fate or God?

In terms of the ultimate world struggle, how are we to assess the net performance of the immediate past from the comparison of the two sides of the balance sheet which I have just drawn up? I can draw the provisional conclusion that while things could have been much worse, in my opinion they could have decidedly been much better. International communism is today on an over-all basis relatively stronger than 10 or 15 years ago, and the free world is relatively weaker; there is a marked overall advance by the one and a corresponding overall retreat by the other. In history it is impossible at any moment to work out a neat, final balance sheet, for at no moment "in history" does history come to an end. It all depends then on the future. The future could redeem the past or it could confirm it. But it will redeem nothing unless the question of the inevitability or otherwise of the developments of the immediate past is first squarely and honestly faced. For either you believe that these things were inevitable or you believe that they could have been helped. If you believe that they were inevitable; namely, that the outcome of the struggle in China, in Korea, in Indochina; that the Communist penetration of Asia, Africa, the Middle East, and Latin America; that the absence of any effective counteracting force to the Communist Party; that the relative decline in Western influence and Western economic and military strength, etc., if you believe that all these developments of the fifties of the twentieth century could not have helped, then you are already a Marxist. For Marx, Lenin, and Khrushchev hold firmly (and Khrushchev repeats it everyday) that the iron laws of history are precisely such that whatever happens, Communism will come out on top. I warn you therefore against declining to assume full moral-historical responsibility for what happened during the last 2 decades; for if you do so you are already a Marxist and Marxian communism will have already won in your soul.

The only hope therefore is to believe on a basis of truth and not of darkness or sentiment or dogmatism that nothing of what transpired was inevitable, and that everything could have been prevented or reversed. Only on the basis of radical moral responsibility can you overcome the fatalism of the cosmologists and the determinism of the dialectical materialists. The future will never redeem the past and we will only pass from one fiasco to another, from one pathetic drift to another, unless in contemplating the past we can put our finger with certainty on such and such an act and such and such a decision and such and such a person, and honestly say that this act or decision or person could have been different and therewith the course of events would have taken a radically different turn. If only people rose to the occasion, if only they were not overwhelmed by their softness and apathy, if only they overcame their greed, if only they were morally strong, if only they were not selfish and narrow, if only they were not petty and spiteful and stupid, if only they were big, if only they knew what was at stake, if only they were not hypocritical, if only they trampled under foot the wide and easy way.

I shall not go into any detailed moral-historical-political evaluation of the past. Taking upon ourselves the whole moral guilt of the past, believing that the present would have been entirely different if only people measured up to the historic requirements of the moment, and therefore determining that the future which will be the responsibility of this generation shall redeem the past, let us now quietly inquire into what must be done in the immediate future to reverse the trend of the immediate past.

Four conditions are absolutely sine qua non: Unity among the Western allies, deeper understanding and statesmanlike assistance toward the peoples of Asia and Africa, winning the technological competition especially in the matter of armaments, and winning the economic competition in productivity. If the Atlantic world breaks up,

whether from internal friction or external pressure, there will be complete disarray in the free world and little will be left to oppose effectively the onward march of communism anywhere. If the Asians and Africans are not understood on the deepest possible plane and if the Communists prove that they are more friendly and helpful to them, then Asia and Africa will gradually fall to their wiles. If the Communists do better in the technological revolution, especially with respect to weapons, then all will be lost. If the West does not outproduce them, both quantitatively and qualitatively, then the rest of the world will be sucked into their system.

On the subject of Western unity the question is whether the Western nations can morally rise above their narrow nationalisms into a realization that it their whole civilization that is once more today at stake. I believe they can. Nothing is half as important today as that the spiritual unity of Europe, America, and the Mediterranean world be understood and affirmed.

Putting aside the question of vision, will, softness of living, and unity of effort among the diverse factors involved, there is no doubt whatsoever that, by any standard of measurement, the material and human resources of North and South America, of Western Europe, of Japan, of Australasia, and of as much of Africa (and there is no reason why all of Africa should not be included) and Asia as may be persuaded to cooperate, can be so marshaled and coordinated as to outdo the Communist domain, in any field of human endeavor, by a ratio of at least 5 to 1. * * *

The West should stand firm at all costs against any further expansion of communism, including above all the test case of Berlin. In a possible showdown, the obvious strategic handicaps notwithstanding, there should be no question in anybody's mind that the West would not accept a weakening of its position in Berlin. Some Western commentators have darkly hinted that the West would not fight over Berlin. It is fair then to ask, over what would the West fight?

But merely holding the line is patently not enough. This was the error of the doctrine of containment. It is a passive, defensive, unchallenging policy; and such a policy, except as a necessary first step, is doomed to failure; firstly because this is a dynamic universe; secondly because you are dealing with the most aggressive enemy who will always swirl around and underneath and above all your containing devices; thirdly because a merely defensive or containing attitude means that you are so fat and satisfied yourself that all you wish to achieve is to get away with your own skin, and thus you have no vision, no concern for the rest of the world, and he who has no concern for others will sooner or later find that others, including his erstwhile friends, have no concern for him; and fourthly because you cannot be true to your own freedom if you do not wish and work for freedom for others. * * * Freedom creates justice, but not conversely; for justice could be something mechanical without the ultimate freedom of the spirit which demands and creates and recognizes and enforces justice. The West can only be true to itself if it says, "I am prepared to settle for peace with freedom and justice," and if it wants to use only one of the two, "I am prepared to settle for peace with freedom."

But only a believing, active, sustained, and bold looking forward to a free Eastern Europe, a free Russia, and a free China is worthy of the magnitude of the gigantic world struggle. A radical distinction must be made between the great peoples of these countries and their Communist governments. Policies should be devised and pursued in conformity with this distinction. The flame of freedom must be kept burning in the soul of the oppressed. The hope of liberation must never be allowed to fade away from their hearts. As free peoples they have an honorable and equal place in the company of the free. Their energies will be given the freest scope. Their spiritual and cultural contributions to the whole world are awaited and welcomed. With vision and leadership the West should be able to promise them greater material benefits than they have been able to achieve under communism; benefits which they themselves would acquire by their own free exertions. But they should be promised much more: they should be assured of the freedom to criticize, the freedom to think, the freedom to create, the freedom to live, the freedom to work, the freedom to choose and turn out their own governments, the freedom to lead on the basis of merit in a world freed of the poison of mistrust, subversion, and intrigue. * * *

The Communists never tire of assuring the rest of the world that "peaceful coexistence" only means that they will realize their unalaterable aim of communizing the world without war, and that where they do not succeed in this, they will keep in mind the possibility of nonpeaceful means. They are therefore absolutely determined to dominate the world with or without war. This was explicitly stated by the international Communist congress to which I referred. They therefore speak of the "doomed classes" and of "burying" you and me. We should not be misled by the terms they use, such as "capitalism," "imperialism," "American imperialism," "Anglo-Saxon or Anglo-American imperialism," "bourgeois society," etc. These are only revolutionary slogans employed by them to excite and enlist people in their international proletarian revolution. What they are saying behind all this jargon is that the international Communist movement wants to overthrow every existing government, regime, system, outlook, religion, and philosophy, and bring the whole world, all human thought, aspiration, action, and organization, under its absolute control. This is their declared, unchanged, and unchanging objective.

I am yet to hear one Western leader who, assured to his face that he is doomed and will be "buried," can muster enough courage and conviction, if not to use the vulgar phrase "bury" with respect to communism itself, at least to use some such civilized expression as that the days of communism are numbered and that communism will one day be completely forgotten. When Mr. Khrushchev assures Western leaders that their children or at most their grandchildren will all be Communists, I am yet to hear one Western leader who assures Mr. Khrushchev with the same gusto that his children or at least his grandchildren will live to regret and be thoroughly ashamed of the fact that their fathers or grandfathers were ever Communists. And whereas international communism believes and acts on the belief that the days of everything non-Communist are numbered, my deepest fear is that Western leadership believes no such thing with respect to communism. My fear is that the softening up process has reached such an advanced state that all now believe that communism is here to stay and that therefore the utmost they can do is to manage somehow to coexist with it. The deepest crisis of the West is the crisis of faith in its own values: whereas communism believes that non-Communist values must be eliminated from the face of the earth, and acts on this belief, the West no longer believes that Communist values themselves are doomed to utter destruction and oblivion, and therefore no longer acts on this belief. I am yet to meet or know of one important Western leader who entertains a dynamic vision for the Communist realm which includes the certainty that the children of present-day Communists will have completely repudiated communism and will have adopted the fundamental values of freedom. Let the West face up to this advanced state of decay in its own soul.

But what is preeminently at stake in Mediterranean-Western civilization today is its human and universal elements. It is man who is denied; it is the affirmation that there is nothing that binds and cements all men into one family that is the prime danger; it is the fragmentation of humanity into endless exclusivisms, whether national or cultural or racial or economic, that poses the deepest challenge. Western civilization is doomed until, jolted out of its complacency, self-satisfaction, and sense of apartness, it rediscovers and reaffirms what is genuinely human and universal in its own soul. This means not only economic and technical sharing with Asia and Africa, but intellectual, moral, and spiritual sharing. What is supremely good must be good for all. Those who keep on repeating, as though they discovered a transcendental wisdom, that their ideas, their way of life, their civilization, is "not for export," but only their industrial products, do not know that they are thereby digging the grave of their civilization and the grave of their way of life. Those who come to Asia and Africa and tell them, "You stay where and what you are and we stay where and what we are; we have nothing to give save our goods and gadgets," little know that the day will come, and perhaps is already here, when Asia and Africa will turn upon them and spit in their face. Man can live without goods and gadgets but he cannot live without something human and universal that joins him to his fellow men. A civilization in which the human and universal has atrophied can relate itself to others only through force, and force is not an enduring mode of relation, and it can always be broken by force. I am not speaking of diplomacy and propaganda; I am thinking of a whole philosophy of history. I am saying that a civilization is doomed if it is not creatively conscious of something universal and human it can and must give; and I am saying that Western civilization need not be doomed because no civilization conceived and developed the human and universal more than it did.

The Communists bring in a message. It affects the whole of human life. It provides a total interpretation. They are not afraid to be revolutionary; to say, this is good and that is bad. They are not afraid to shock and challenge the received customs and habits and ideas. They believe in something. The West does not want to be revolutionary, it is afraid of being revolutionary, it does not want to shock and challenge, it is civilized, it is afraid lest it offend. Its trouble therefore may lie precisely in the fact that the content of its belief is very thin. For that which you really believe to be true and human and universal you will want to share with others, you cannot keep under a bushel. The question is whether there is a profound

part of your being that you honestly feel you must share with others. The question is whether you honestly feel that you are not complete or happy so long as others are humanly incomplete, that you are not self-sufficient, so long as others are miserable or subhuman, a prey to every superstition and every dark fear. The self-sufficiency of the Anglo-Saxon world, its age-old protectedness by seas and oceans, is its greatest present spiritual trial. It has not needed the rest of humanity. But the world has suddenly become physically one, and minds and ideas are much more critically and instantaneously and perpetually interacting with one another. Only he therefore who feels with humanity, who is at one with all conditions of men, who is insufficient and incomplete without them, who is not protected and separated from them, can help them and lead them and love them and be loved by them. The incompleteness of the Communist until he completes himself in others is what gives him the dynamism, the vision, the appeal in the eyes of Asia or Africa.

If there were no universal and human elements in Western civilization the thing would be hopeless. But it happens that the deposit of humanity and universality in this civilization is the richest in the world. The civilization at whose heart pulsate Aristotle and Augustine and Aquinas and Dante and Newton and Shakespeare and Pascal and Kant and Lincoln, the civilization which has been blessed and transformed by Christ, needs only a mighty hand to shake it out of its slumber. And once shaken, once really awakened to the world responsibilities which it and it alone can shoulder, there is nothing it cannot dare and do.

The Americans forsook the Old World and their one desire was to forget all about it; the Russians stayed in the Old World and never ceased to interact with its east and west and north and south. In this simple difference in fundamental existential orientation the whole secret of the present and the future may be hid. Can the Americans quickly recover the intimacy of relationship with the Old World which the Russians never lost?

Negotiations and contacts must never be broken. The United Nations must never be abandoned or weakened. Cultural exchanges must be deepened and enlarged. The Russian people must be brought into intimate spiritual community with the West. Nationalism is not enough, and the new nations must be afforded the opportunity of belonging to larger worlds with wider horizons. The Universal Declaration of Human Rights which is one of the greatest documents of this age and which owes so much to the Virginia Declaration of Rights must be vigorously held up as a standard of achievement for all nations and all peoples. The West must know its ultimate values and believe in them. The field of struggle must be transposed to the intellectual and spiritual plane. The prevalent softness and complacency must be overcome. The area of decision must not be left to the initiative of the Communists. The West must itself choose it. And so long as the head of international communism in Moscow remains unchanged, there is no hope.

Can the future redeem the past? I believe it can. Will the future redeem the past? That depends on four things: on depth, on wisdom, on daring, and on leadership. I believe without high leadership daring to act in wisdom and depth the future will not learn from the past. These are things for which we should yearn and work. But in our own effort we may not achieve them. It is only as God's wills that depth, wisdom, daring, and leadership be granted the free world at this crucial hour in history, that the future will redeem the past.

James A. Farley Honored by St. Joseph's College, Philadelphia, Pa.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. GREEN of Pennsylvania. Mr. Speaker, recently an honorary degree of doctor of laws was conferred upon my good friend, the Honorable James A. Farley, chairman of the board of the Coco-Cola Export Corp., by St. Joseph's College, Philadelphia, Pa. I shall quote verbatim the language of the president of St. Joseph's College in awarding this unusual degree:

THE PRESIDENT AND FACULTY OF SAINT JOSEPH'S COLLEGE TO ALL WHO VIEW THESE PRESENT LETTERS GIVE GREETINGS IN THE LORD

It is not given to many men that they should see themselves become legends in their own lifetime. Few of us ever live to experience that feeling which comes from passing under the scrutiny of historians as a public figure who helped to reflect and to mould the spirit of an age.

Today we honor a man who has already trodden such a judgment path. One cannot read a book on American history or American politics dealing with that era, just before the members of this graduating class trailed their clouds of glory into the world, without encountering the exploits of Grassy Point's most famous son, indeed the son who made Grassy Point, N.Y., famous: James Aloysius Farley.

There is no need to recount here Mr. Farley's phenomenal rise from the office of town clerk of Stony Point to the office of Postmaster General of the United States. Furthermore, it would be quite impossible even to list all of our honored guest's accomplishments as a business executive in the realm of national and international commercial enterprises, much less his worthy achievements in promoting clean athletics and wholesome recreation, or in aiding numerous religious and philanthropic causes.

We prefer to single him out for the activity for which he became uniquely noted and for which he will be best remembered: his activity as a statesman and politician par excellence. Perhaps no better way can be found to cite him than to use the same terms which have been applied to him in the works of contemporary scholars, who have called him a man of "acute political genius" and "native sagacity," a man "whose personal honesty, intelligence, and capacity to command friendship and loyalty were to win for him a deserved reputation as the ablest political manager since Mark Hanna."

For nearly three decades, Americans of every shade of political opinion have admired James Aloysius Farley unstintingly for the integrity, the informality, and the personal warmth which he brought to the task of managing the farflung affairs of one of our two great political parties. In an age of fast-growing communication and sophisticated but impersonal techniques, his singular contribution to the operation of our democratic institution is especially cherished.

Wherefore in virtue of the powers conferred upon his Corporation by the General Assembly of the Commonwealth of Pennsylvania, we have created and do hereby proclaim Hon. James Aloysius Farley a doctor of laws (honoris causa), and that all the rights and privileges attached to this degree be safeguarded unto him, we have issued these letters patent, signed by our hand and sealed with the great seal of the college on this 5th day of June, in the year of our Lord, 1960.

The tribute was entirely fitting and was richly deserved by Grassy Point's famous son, Jim Farley.

Czechoslovakia Bars U.S. "Masaryk" Stamp

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. WILEY. Mr. President, as we know, the Post Office Department annually issues special stamps depicting in minature famous men and women, great events in history, organizations, industries and natural wonders.

In addition, the Department issues a special series "champions of liberty" stamps. The purpose of this series is to honor foreign leaders and fighters of freedom.

Recently, a special stamp was issued to honor Thomas G. Masaryk, the founder-president of the Republic of Czechoslovakia in October 1918.

As we know, Czechoslovakia is now under Communist domination.

Traditionally, the Communists have changed or distored history to put communism in a better light insofar as possible.

Following the issuance of the special stamp honoring Thomas G. Masaryk as a champion of liberty for Czechoslovakia, the Czechoslovakian Government took action to bar mail bearing this stamp from that country.

The action reflects an unwillingness to allow even a postage stamp depicting freedom fighters of the past to circulate among the people. In addition, it calls to mind the old adage which, in essence, says, "Uneasy rests the head of a dictator who has denied freedom to his people." At this time, I request unanimous consent to have printed in the Appendix of the RECORD two items: First, an editorial from the Green Bay Press Gazette entitled "Champion of Liberty," reviewing the action and its significance by the Czech Communist government and; second, a release by Postmaster Arthur E. Summerfield deploring the action barring the mailing of champion of liberty stamps to people in Czechoslovakia.

There being no objection, the editorial and release were ordered to be printed in the RECORD, as follows:

[From the Green Bay Press Gazette]

CHAMPION OF LIBERTY

When postage of one country is not acceptable to another, the latter is supposed to so notify the nation of origin under the Universal Postal Agreement. But authorities

in Czechoslovakia so far have been shy about doing so. They simply send back undelivered letters from the United States which bear the stamp honoring Thomas G. Masaryk.

Masaryk, the president of the Czechoslovakian Republic from its start in 1918 until 1935 when it only had a few years to go to be dissolved, is honored in the "Champions of Liberty" commemorative series. When the stamp was issued, Postmaster General Arthur Summerfield said: "These stamps * * * will mark not only the strong friendship between the peoples but their common aspirations for freedom."

But since the end of World War II, the adoption of a new constitution and the taking over of the entire nation by the Communists, the Czechs have shown little aspiration for freedom. Of all the Russian satellites, Czechoslovakia is supposed to be the most communized. If there are underground movements, there is little rumble of them in the rest of the world. From the outside it appears that the freedom-loving Czechs, so determined in opposing the oppressive Nazi rule and the slicing up of their country at Munich, have been worn down by the years of war and oppression.

But the very fact that the Czech government has made no loud noise about Masaryk indicates that there must be a lot of people in the nation who do him honor and the cause for which he lived and died. A people who have lived with liberty do not forget so easily.

POST OFFICE DEPARTMENT RELEASE No. 193

Postmaster General Arthur E. Summerfield today deplored the action taken by the Czechoslovakia Government in barring mail bearing U.S. "champion of liberty" stamps honoring Thomas G. Masaryk, the father of the first Republic of Czechoslovakia.

"On March 7, 1960, the U.S. Government issued two new postage stamps of the 4-cent and 8-cent denominations honoring Thomas G. Masaryk, the founder-President of the Republic of Czechoslovakia in October 1918," Mr. Summerfield said. "These stamps are part of a series paying tribute to the great contributions to freedom made by great foreign-born leaders.

"An impressive ceremony was held here in Washington on that date with large numbers of American citizens of Czechoslovakian birth or ancestry in attendance. Many of these freedom-loving Americans used these new Masaryk stamps for mail addressed to their friends and relatives in Czechoslovakia.

"To our amazement we were informed that mail bearing the Masaryk stamp was being delivered in Czechoslovakia with the Masaryk stamps removed and envelopes marked 'received without stamps.' We protested this practice but received no reply from the Czechoslovakia postal authorities. Later they began returning such mail marked 'not admitted.'

"The procedure being followed by Czechoslovakia is used when international mail is received which is objectionable to the country of destination. The Universal Postal Convention, to which the United States and Czechoslovakia are signatories, prescribes that each member country of the union has the right to determine what articles shall be prohibited in its service, and there is no effective way in which another country can take exception to such determination.

"When a nation establishes a prohibition, it normally notifies the other country or countries from which the objectionable matter is being sent. The Czech postal authorities failed to follow this universally accepted obligation.

"Our efforts to correct this situation date back to May 10, when we wrote the Czech postal authorities protesting the removal of the Masaryk stamp from letters.

"Then, on June 8, we cabled them again to protest the removal of the stamps. And, in the same cable, we also asked them for an official explanation of the many complaints which we had received meanwhile protesting their return of letters with the Masaryk stamp marked 'not admitted.'

"It is clear that we have made substantial efforts to get satisfaction from the Czech postal authorities. While they are technically within their legal rights in determining what mail may enter their territory, it is deplorable that they should bar communications from this country to loved ones in Czechoslovakia because of stamps honoring a brilliant scholar, author, and patriot who fought with the powerful weapons of ideas, logic and eloquence, and who won the admiration and active support of freedom-loving peoples everywhere."

Michigan's Ford Rises in GOP Race for V-P

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. BROOMFIELD. Mr. Speaker, all of us recognize the many talents of Congressman JERRY FORD, of Michigan. Despite his youth, he has provided responsible, imaginative leadership, splendid cooperation, a great amount of statesmanship and an outstanding grasp of the world issues we face now and in the future.

Therefore, it was with a great deal of pleasure and pride for my own home State of Michigan that I noted an article in last Sunday's Omaha World-Herald proclaiming him as one of the leading contenders for the nomination for Vice President on the Republican ticket next November.

JERRY FORD has been outstanding here in Congress, on the football field and in the Navy. He has shown his sagacity and his intellect on many occasions as ranking Republican member of the important military appropriations subcommittee.

JERRY FORD is indeed a man of the present and of the future. May I urge my colleagues to note carefully the article from the Omaha Sunday World-Herald, which follows:

MICHIGAN'S FORD RISES IN GOP RACE FOR V-P

The word from political insiders in Washington is that Representative GERALD R. FORD, Jr., of Michigan, should not be sold short in the Republican vice presidential sweepstakes.

The 46-year-old Michigander—he will be 47 by national convention time—is generally regarded as a darkhorse possibly, but he's a lot less dark than he was a few months ago.

United Nations Representative Henry Cabot Lodge of Massachusetts and Senator THRUSTON MORTON, of Kentucky, are the front runners right now. Some others, such as Secretary of the Interior Fred A. Seaton of Nebraska, get considerable mention.

NOT TAKEN LIGHTLY

But the prospect that Mr. FORD might wind up with the nomination is not taken lightly among seasoned politicos.

Some of it may be wishful thinking on the part of Mr. FORD's friends, but they say: He's "right" geographically. He's young, a persuasive speaker, a good campaigner. He's sound in his viewpoint.

Mr. NIXON, who is known to regard Mr. FORD highly, has told friends many times, that, if President, he would regard his Vice President as the administration's chief troubleshooter."

HAS RIGHT VIEWS

This man's views, says Mr. NIXON, should in general parallel his own. Mr. FORD's friends say his do.

A six-time House Member, Mr. FORD does not have the national acquaintance of Mr. Lodge or Mr. MORTON or Secretary Seaton. But again, Mr. NIXON has been heard to say that in these days of mass communications it does not take long for the country to get to know a man.

Mr. FORD was born in Omaha, but lived in Nebraska only a short time.

FOOTBALL STAR

Like Mr. NIXON, he is a Navy veteran. Also like Mr. NIXON, he played college football—but where the Vice President was a scrub at Whittier, Mr. FORD was one of the University of Michigan's great stars—captained the 1934 team, played in the East-West game and with the college all-stars at Soldier Field against the professionals.

In Congress he is regarded as a conservative, and he is the ranking Republican on the Subcommittee on Military Appropriations. When 50 Washington correspondents were polled recently by Newsweek magazine for their choice of five outstanding House Members, Mr. FORD got 25 votes on the Republican side, only two fewer than the leader, Representative CHARLES HALLECK of Indiana.

Executive Bypass of the Connally Amendment

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. GOLDWATER. Mr. President, earlier this year an attempt was made to destroy the Connally amendment. Fortunately for the people of the United States the attempt failed, and it failed due to the action of the subcommittee to which the Humphrey resolution was referred.

It is my understanding that the State Department is still trying to perform this surgery. In fact, I have been told authoritatively that a resolution was prepared, which was turned down by the Foreign Relations Committee, and I commend the committee for that action.

We must be constantly alert lest the State Department destroy this very important protection to American sovereignty, and I urge Senators who recognize the danger in the destruction of the Connally amendment to be constantly attentive in these closing hours of the first part of the second session of this Congress lest something be sneaked in that would accomplish what the consensus of the Senate has refused to accomplish by vote.

Mr. Raymond Moley has written an excellent editorial, entitled "Executive Bypass of the Connally Amendment Perils U.S. Interests," which appeared

in the Los Angeles Times on Friday, June 24.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXECUTIVE BYPASS OF THE CONNALLY AMENDMENT PERILS U.S. INTERESTS

(By Raymond Moley)

Having failed to get the Humphrey repeal of the Connally amendment off the ground this year, the State Department is now attempting to bypass it through executive agreements.

Such an executive agreement, which would supercede the Constitution and the laws, would place a large part of our rights on the seas under the compulsory jurisdiction of the World Court.

As was pointed out when the attempt was made to repeal the Connally amendment, we have only one judge on that Court while the Communists have two, and the Soviet has never subscribed to the World Court at all.

In the executive agreement in question there are four "conventions" and a protocol. The conventions cover a wide range of subjects in which controversy may arise between the United States and practically any seagoing nation.

Some of the subjects distinctly belonging within our sovereignty. Very important are the control of resources in territorial waters, fishing rights, and labor conditions.

Fishing rights have traditionally been determined by specific treaties between us and specific nations and the control of labor conditions on the seas would practically place under bodies in the United Nations and the World Court issues which might, if decided against us, greatly cripple our merchant marine and those nations such as Panama and Liberia which register so many American-owned ships.

There has been trouble enough in that field already with certain maritime nations in Europe cooperating with American maritime unions to get such ships, flying the so-called "flags of necessity," to register under the flags of Britain or the Scandinavian countries. That would deny us the use of them in case of war.

One of the most serious aspects of such an agreement concerns "territorial waters." Consider the closeness of the United States to Cuba, which seems at the moment destined to be a Soviet satellite. We have a great naval base there. There are also considerable properties still owned by Americans.

On the slightest pretext, Cuba, which has already joined in this protocol, could, under the influence of the Soviet, drag us into the World Court. Under such an agreement we would be powerless to sustain our legitimate rights to the south.

There has been something very covert and tricky about the way this executive agreement has been managed in the Senate, where, in order to be valid, there must be a two-thirds majority for it.

All of the conventions and the protocol were suddenly brought together for a vote. The package deal was accepted. But there were demands for a reconsideration of the protocol and the vote was 49 in favor, 30 against, and 21 not voting. Since such a matter requires two-thirds of the Members present and voting, it was lost.

Other Senators were alerted to the fact that the right of the United States to determine what matters were of purely domestic concern in international disputes should remain where it is, under the Connally amendment, in the United States alone.

The present danger is that in the rush to adjourn, this vital question may be slipped through with insufficient warning and consideration. As the end of the session approaches, haste, confusion, and politics will muddy the waters. And those who would surrender our sovereign rights love to operate in such waters.

Duties and Responsibilities of a U.S. Representative

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. LESINSKI. Mr. Speaker, for some time I have been noticing the development of a trend which, I believe, bodes well for our country. If my constituents are representative of the Nation as a whole, and I believe they are, more and more of our citizens are evidencing an increasing awareness of and interest in our Government and how it operates. In ever greater numbers, they are coming to the Nation's Capital to visit our historic shrines and to see the Congress of the United States in action. I personally have had, this year, a record number of visits by my constituents who decided to spend their vacations in Washington and learn more about the Federal Government. The questions they have been asking reflect their keen interest in national affairs. So long as our citizens maintain this interest in the operation of our Government, our Nation will be secure from the forces that threaten to destroy it.

One of the chief questions that my visitors have been asking is just what does a Representative do and what qualifies a man for this important position. To answer, I should like to set forth, in brief, some of my thoughts on the subject.

It is difficult, I am sure, for someone who has not served in the House of Representatives to understand how diverse and complex is the work of a Member of Congress, and how much more than just voting on bills is involved.

The duties and responsibilities of a Representative fall, I believe, into two general categories, one, a legislative function, and the other a service function.

Since most legislation considered by the full House of Representatives is written in its final form by the various committees of the House, a major portion of a Representative's time and efforts are devoted to the subject matter with which his committee deals.

In my own case, for example, I am a member of the Committee on Post Office and Civil Service, so many of my bills and much of my work are devoted to matters dealing with the Federal Government and its employees. Because of my seniority on the committee I have additional responsibilities as chairman of the Subcommittee on Census and Government Statistics which has broad responsibilities involving all the work the Federal Government does in collecting information from the public, processing it, and using it, and the impact of such work on the public. Such subcommittee work adds a great deal to the demands on a Representative's time.

The fact that a Member is assigned to a specific committee does not, of course, keep him from taking an active interest in the writing and enactment of other types of legislation. It should be noted, however, that major legislation usually carries the name of the chairman or a high-ranking member of the committee from which it is reported. A Member who is interested in legislation which is being considered by another committee may appear formally to give his views or he may discuss the matter informally with members of the committee.

When a bill is reported from a committee and scheduled for debate and vote by the full House of Representatives, a Member will read the committee's report to acquaint himself with the background of the legislation and then, taking into account his constituents' feelings about the subject, will decide upon whether to vote for or against the measure.

The average day for a Representative starts at an early hour. He will first go to his office to review the mail and dictate replies before he goes to his committee meeting which is usually scheduled at 10 o'clock. He may remain in the meeting until noon when the House convenes. Depending on what is scheduled for debate, he may remain in the House Chamber all afternoon, or he may return to his office to do the other part of his work, that of performing a multitude of services for his individual constituents or the communities in his district. He may consult with officials of the Federal agencies on housing problems, on veteran or immigration cases, on tax matters, on a public works project vital to the economic welfare of his district. It is almost an impossibility to make a complete listing of the special problems which he is called upon to help solve. He must, in addition, compose speeches and statements on subjects in which he is interested, and do research on legislative matters.

The Honorable Champ Clark, a great Speaker of the House of Representatives, gave a memorable speech on a Congressman's necessary qualifications for success and the importance and power of seniority in Congress. He said:

No man is a born Congressman. He must learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor. He must be a man of at least fair capacity, honest, industrious, energetic, courageous, and sober. His usefulness and influence are made by experience and practice. * * * If he has those qualifications and diligently exercises them, his honor, influence, and usefulness to his country and his constituents increases in gometrical rather than in arithmetical proportion with each of his additional terms in Congress. A man should be elected to the House for the good of the country, and never just to gratify his ambition.

He urged all congressional districts to select a man of those qualifications and then keep him in Congress as long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps amazingly in doing things.

I hope that this brief statement of mine will help our citizens understand a little more clearly the duties and responsibilities of a U.S. Representative.

J. Edgar Hoover Congratulates Dover Sponsors of Local School Essay Contest

---

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. BRIDGES. Mr. President, two prize-winning essays written by high school students in the city of Dover, N.H., appeared on June 29 in Foster's Daily Democrat, Dover, N.H. They were so excellently written that the authors received a letter of commendation from J. Edgar Hoover, Director of the Federal Bureau of Investigation. The essay contest was sponsored by Joseph T. Jalbert and William J. Kickham of Dover, former FBI agents.

Not only are these essays worthy of commendation by Mr. Hoover, but I feel they are thought provoking enough to call to the attention of the Senate. The two winners, Philip Grimes of Dover High School, and Patricia Ayer of St. Mary's High School have written their essays on the subject of communism, its evils and its dangerous implications. These two fine American high school students are a credit to their teachers, their school and their city. They present with clarity and perspective, the evils of communism throughout the world and the dangers of it in the United States. Their forthright thinking would do credit to persons older and with supposedly more judgment in matters of this importance.

I commend these two excellent essays to the Senate, particularly at this time when high school students in various parts of the Nation are taking part in unseemly demonstrations at graduation exercises which have a tendency to dishonor and discredit the American way of life. Both Philip Grimes and Patricia Ayer's essays emphasize the excellence of the American way of life and the godlessness and the degrading aspects of communism.

I ask unanimous consent that these essays be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

J. EDGAR HOOVER CONGRATULATES DOVER SPONSORS OF LOCAL SCHOOL ESSAY CONTEST

DOVER.—One of the features of the graduation exrcises at Dover High School and St. Mary's High School here was the award of prizes for essays in a contest in which the entries dealt with communism and methods of combating it in the United States.

Sponsored by Joseph T. Jalbert and William J. Kickham of this city, former FBI agents, winners were Patricia Ayer of St. Mary's High School and Philip Grimes of Dover High School.

Mr. Jalbert has recently received the following letter from J. Edgar Hoover, head of the FBI:

"I have received your letter of June 14 furnishing the identification of the winners of the essay contest sponsored by Mr. Kickham and you."

"In response to your request, I have written letters of congratulations to Miss Patricia Ayer and Mr. Philip Grimes at their respective high schools. Your sponsorship of the contest with Mr. Kickham is an excellent example of responsible citizenship and I am sure those students who participated benefited from the study and effort it required."

ESSAY BY PHILIP GRIMES, DOVER HIGH SCHOOL

Since ancient times there have been men—thinkers, dreamers, philosophers—who have hoped for a perfect world. In their utopian state, no one would be very rich or very poor. All men would live like brothers, working for the good of all and sharing equally, so that there would be no poverty or injustice and little need for law and government.

Most of these dreams of a so-called "perfect state" never proceeded past the stage of a mere idea. Yet toward the middle of the 19th century a somewhat similar ideology was developed by two Germans, Karl Marx and Friedrich Engels. They based their reasoning upon the theory that throughout history there has been an unceasing struggle between the rich and the poor. To them this conflict was waged by the wealthy property owners against the unfortunate workers, whom they classified as the proletariat. On these grounds, Marx and Engels urged workingmen in all countries to rise up against the domineering capitalists and end the existing system by revolution. After the revolution had destroyed the government, a dictatorship of the proletariat would be established. Finally, with all procapitalist supporters crushed, a classless society would emerge, and the dictatorship would gradually disappear. Thus communism would reign supreme.

"Despite their vigorous appeals, notably in their "Communist Manifesto," Marx and Engels failed to arouse the workingmen into revolution. Though they died in the anguish of defeat, Marx and Engels by means of their ideology had implanted a tremendous character upon the minds of a few power-hungry men.

Such a man arose in Russia in the early part of the 1900's. Vladimir Lenin, self-appointed successor of Marx and Engels, contorted the ideology of these two philosophers. Although firmly believing in a classless society, he advocated a permanent dictatorship. Thus, after the Russian revolution of 1917, he became the first head of the Communist Party in Russia. With his followers he organized the Political Bureau, which directed the nation's political life, controlled all business and agriculture, and made many decisions that men and women in democracies are allowed to make for themselves.

And so, from Lenin to Khrushchev, the twisted ideology of Marx and Engels has spread to all continents of the world. Each day communism makes new gains, enlists new recruits. Today no nation is free from subversive Communist elements. Democracy is being shaken from its lofty pedestal by the momentum of the Communist quake.

There is no finer example of democracy than in the United States of America. At present, communism has concentrated its hostility on this Nation as the most powerful among countries not yet under its sway. The United States thus finds itself under attack by an enemy whose motivation for hostility is not any visible or practical grievance or limited aspiration, but rather the basic will to destroy the order of life in the United States in order to make room for a Communist rule.

The enemy has moved on many fronts. In the field of international power relations, Soviet Russia has pursued an aggressive policy seeking to isolate the United States in order to destroy her power. With or without war, by means of diplomacy, trade, propaganda and subversion, she has pressed on her attack. In social and political categories, her objective has been to influence, paralyze, or disintegrate the processes of our common life. Finally, in the realm of ideology, the enemy has attempted to employ many kinds of intellectual and cultural activities, such as education, science, literature and art, in order to destroy all loyalties other than those to Communist leadership.

This unprecedented attack differs so greatly from the natural pattern of relations between nations or political groups within nations that many people fail to grasp the full potency and extent of the threat. It is this ignorance of communism in all its aspects which could provide the one fatal blow to democracy.

It is, therefore, the primary obligation of every freedom-loving individual to make an earnest effort to assist national agencies in the occult war against communism. But what is the most effective means of assistance?

Vladimir Lenin ironically provided this means when he stated, "Give us the child for 8 years and it will be a Bolshevik forever." If Lenin believed that true Bolsheviks were created through education from childhood, why should not true adherents to democracy be created through an identical manner? In this educational process the child from kindergarten through college would be instructed in the evils of communism. A mere study of the daily life of a Chinese youth in a commune or the activities of a freedom-starved Hungarian would arouse youth. America's tomorrow, to realize the corruption and horror of such a system. By knocking the facts and the futility of Communist goals, the student could more fully appreciate his America and strive to protect it and its principles of democracy.

It is known that communism preys upon ignorance. But this ignorance would not be present in America, if her youth were instructed in communism. And so simply by educational means, America could successfully combat the growing tides of communism and maintain her status as the world's showcase of democracy. President Eisenhower effectively sums up his philosophy in a statement he issued in 1956:

"Competition for men's minds begins when they are students. This is when they must be taught to discriminate between truth, the American form of government, and falsehood, the Soviet form. When they have all the facts, I am confident they will make the correct choice, as they have done for the last 181 years."

ESSAY BY PATRICIA AYER, ST. MARY'S HIGH SCHOOL

The dictionary defines "communism" as "any system or social organization in which goods are held in common." The word "communism" comes from the Latin word "communis" from which we get our English word "common." Modern communism, which you read about in the newspaper, is a very different thing. It is based upon the writings of Karl Marx, a German philosopher. He advocated a state of society in which the

government, land, and machinery should be controlled by the workers who should get the entire product of agriculture and industry. Communism came out of our Western civilization; it was produced from the atheism and materialism of the 19th century. Under communism liberty is abolished. The rights of the individual are done away with; communism interferes with and regulates every sphere of the life of its citizens. It does not tolerate groups or individuals who oppose the government. It maintains itself by force and terror, by elimination of all criticism, by the silencing and wiping out of all opposition. Communism undoubtedly is the greatest epidemic with which the world was ever affected. It is anti-God and certainly anti-Christian, and it is pushing itself across the world by force and propaganda. Courting you with promises communism will bring all the dreams anyone ever dreamed of. You will work less, have more, you will have everything you need and everything will be fine.

If you fall for it, and communism actively seizes power, then you are transformed into slaves and packed off to the slave camps. The Communists claim they represent the workingman. Never in history have the workingmen been so thoroughly transformed into slavery as they have been in communism. Regimented, enslaved, chained to their jobs, arrested at will with nothing to say about their working conditions, they have no redress against their grievances. If America is scandalized at communism, it is merely because the Soviets are wholesaling what Western civilization once retailed. Communism makes inroads because of the vacuum created in the Western world through loss of faith in God. One need only notice the type of soul to which communism appeals in our own civilization and one finds a suggestion of the types of civilization to which it will appeal.

Communism is a crude and cruel materialism. It is certain that most Americans should have a more realistic view of the enemy. America's young people will have to combat it even more effectively than do the adults, and they can't fight an enemy about what they do not know. The most effective weapon against the evils of communism would be to tell our young people exactly what it is. People should alert themselves and learn the true nature of communism. Ignorance of communism has resulted in a certain widespread apathy and indifference toward this "ism." Indifference toward communism can be fatal when national survival is at stake. Communism should be shown for the intrinsic evil that it is, by being taught in every high school and college.

Where there is justice for all, communism has no foothold. Respect for human dignity is important. If there is no respect for human rights, how can we destroy the evils of communism? Exercise your rights to vote. Inquire and read up on candidates running for office. Find out their opinion and stand on communism. Make sure that your candidate will fight communism, in no way compromising with evil principles and aims. If a Communist gets into office, it was the voters that put him there. Never vote for a person because he is good looking and has a good personality. Vote only if you think he is the best qualified to fill the position.

The greatest shame of our world is that we have the truth, but little zeal. Communists have zeal, but they have no truth. Communism is like a fire that is spreading itself all over the world. Someday instead of turning downward, that fire will begin to burn upward, bringing life and peace and joy to men instead of hate, destruction, and death. Our Western World lacks that fire. There are seldom any deep loves or passionate devotions to great causes; expediency and self-interest are too general. Our fires of patriotism and zeal are being reduced to embers. Are we cold, dull, and apathetic? Our Western civilization should not just sit back and watch communism take over. Civil rights would become a more cherished heritage after they have been totally suppressed by communism. While exposing the evils of communism to our young people, we need also to embrace them with a deeper sense of the responsibilities and privileges of living in a democracy under God, and so give pupils a sounder knowledge of the basic differences between a democratic form of life and that of communistic ways of life. If we can do all this with the same enthusiasm the Communists muster in propagating their philosophy, and apply it to the perpetuation and extension of moral principles and love of God and love of man, we can look forward with confidence to a free world of freemen everywhere.

The Sugar Act

SPEECH
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12311) to extend for 1 year the Sugar Act of 1948, as amended.

Mr. ASPINALL. Mr. Chairman, I shall vote for this legislation to extend the Sugar Act for 1 year and to give the President the authority to fix Cuban sugar quotas.

As all of the Members know, the present Sugar Act legislation expires December 31, 1960. As we consider this legislation today, the only alternative to extension of the Sugar Act is for the Congress to take no action, which would result in utter chaos in this very important domestic industry, not to mention the disruptive effect such a course would have on the world market.

Given these alternatives, a Member has little choice but to support this legislation as reported, with amendments, by the Committee on Agriculture. I appreciate the fact that in considering this legislation the committee has had to face extremely complex problems affecting our relations with the volatile Government of Cuba, and I appreciate the work the committee has done in bringing this legislation to the floor.

It is regrettable, however, that it could not have been brought to the floor earlier, when more time would have been available to give to these problems the careful consideration that is necessary.

It is also regrettable, in my opinion, that the committee has seen fit to recommend only a 1-year extension of the act. I think this would have been a much better bill if the committee had recommended a 2-year extension of the act, rather than a 1-year extension.

I am sure that the members of the committee in charge of this legislation would be the first to agree that the problems involved are complex and controversial. It is time for a thorough review of the Sugar Act legislation and its related problems. In its report on the bill the committee itself, I am pleased to note, recognize this. The committee report says, in part:

> The fact that the act is by this bill extended for only 1 calendar year (through Dec. 31, 1961) is to be taken as an indication of congressional policy that this is not an appropriate time for another 4-year extension but that the whole act should be reviewed and reconsidered next year in the light of conditions in sugar-producing areas at that time.

It would have been much more logical, in my opinion, for the committee to recommend a 2-year extension, so that a thorough study could be made in the first session of the 87th Congress and legislative action based on that study could be taken in the second session of the 87th Congress.

I am afraid that with a 1-year extension we are going to come up to the closing days of the first session of the 87th Congress and be faced with much the same situation we have here today. Again, we will have to consider this legislation on a rush basis. Anyone would have a difficult time convincing me that in the first session of a new Congress it is going to be any other way. There simply will not be enough time next year to give this program, and its related problems, the thorough study that is needed and then come up with legislation based on such a study.

Mr. Chairman, the Committee on Agriculture itself in a committee report on legislation to extend an existing program, the farm labor program, argued most persuasively for a 2-year extension. I find it difficult to understand why the committee has chosen not to apply its own highly logical reasoning to the legislation we are considering today, so that the Congress would have a full term in which to give careful consideration to revision of the basic legislation rather than being forced, once more, to act hastily in the closing days of a session.

I should like to add that, in my opinion, a 1-year extension rather than 2 years is not in the best interests of the farmers who grow sugar beets or sugar cane. Farmers need to be able to plan their operations for the ensuing year with some degree of certainty as to what the situation may be, and a 1-year extension of the Sugar Act does not meet that need.

Daughters of Republic of Texas Saved the Alamo as a Shrine

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. YARBOROUGH. Mr. President, a great deal has been said and written, and of course rightfully so, about the heroes of the Alamo where Crockett and

Bowie and all the others choose to die for liberty instead of live under tyranny.

But recently a new and different story was written about saving the Alamo, and it turns out that while our heroes defended it, our women have been the ones who saved it from commercialism and made it the shrine of which Texans and all Americans are proud.

The article about how the Daughters of the Republic of Texas saved the Alamo was written by Mr. Jack Butterfield for La Prensa, San Antonio's English and Spanish newspaper. It is an interesting and well-written article. I ask unanimous consent to have printed in the Appendix of the RECORD the article from the June 22, 1960, issue of La Prensa, entitled "We Owe Our Alamo to the Weaker Sex."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE OWE OUR ALAMO TO THE WEAKER SEX

(By Jack C. Butterfield)

The men of the Alamo created the greatest monument on earth to raw courage and self-sacrifice; but it was the women of Texas—specifically a devoted group known as the Daughters of the Republic of Texas—who rescued it from commercialism and made of it a shrine commensurate with the honor due those heroes—a shrine of which the State of Texas is justly proud.

The Daughters of the Republic of Texas was the outgrowth of the dream of two women, Miss Bettie Ballinger and Mrs. Hallie Bryan Perry. Having had no experience in organizational work, they enlisted the help of the Honorable Guy M. Bryan, president of the Texas Veterans Association, who issued a call for all interested women to meet at the home of Mrs. Andrew Briscoe. Fifteen ladies responded who completed organization of the Daughters of the Republic of Texas November 6, 1891. With rare tact and wisdom, they elected Mrs. Anson Jones, widow of the last President of the Republic of Texas, as president, a position which she held during the remainder of her life.

The oldest living expresident is Mrs. O. M. Farnsworth, who served in 1933–35, and devoted more than 50 years of faithful service to the cause. She is the granddaughter of Deaf Smith, one of the outstanding heroes of the war of Texas independence.

Membership in the organization is the privilege of a select few. Eligibles are the descendants of those who participated in the Texas revolution; of the 300 families who comprised Austin's first colony on the Brazos River; and of those who held public office, or otherwise rendered service to the Republic of Texas. As service to the Republic usually was paid for in land grants, the record of those grants prior to 1845 is a valuable guide to membership.

The objectives were, broadly, to perpetuate the memory and spirit of the men and women who achieved and maintained the independence of Texas, to encourage historical research into the early records of Texas, and the preservation of the many monuments to the glory of the Republic and those who made it possible. While there are many such monuments in their care, the chief concern of the Daughters is, naturally, the Alamo.

What is now known as the Alamo originally was the Mission of San Antonio de Valero. It was established near the presidio of San Antonio de Valero in 1718, but moved to its present location in 1722. Today it is the heart of San Antonio but when the move was made it was into a wilderness half a mile from the town and presidio of San Antonio de Bejar, while the mission retained the name of Valero.

The present buildings were started in 1744 and, being solely for religious purposes and not a fortress, they consisted of a church, with convent and courtyard adjoining, which were designed to house the padres. Adjoining this, to the west, was a large plaza enclosed by a stone wall 10 feet high, wherein dwelt the converted Indians.

The church originally had twin towers, but they were blown down during a storm in 1762, carrying the upper part of the front wall and the arched roof and dome over the sacristry with them. The church was never rebuilt but remained a roofless ruin, filled with the debris from the towers and roof. A small room in the convent was converted into a chapel where religious services were held.

All missions in Texas were secularized by royal decree in 1799, and were gradually abandoned for religious purposes. The padres were recalled to Mexico and some of the missions became temporary homes of military companies. The company which occupied the Mission of San Antonio de Valero was from the town of Parras, in Coahuila, Mexico, and was known as Los Alamos de Parras. Inevitably the soldiers became Los Alamos, and their domicile El Alamo.

Another version as to how it received the name was that the mission was built in a grove of cottonwoods, "alamo" being the Spanish name of that tree. At the beginning of the present century there was a cluster of cottonwoods growing along the ditch which ran back of the Alamo. When the ditch was closed the trees died.

The Alamo, however, soon became a melancholy ruin in the wilderness, frequented chiefly by freighters and campers. Thus it stood at the time of the Texas Revolution, the church roofless and filled with debris, the stout walls of the convent deteriorating, and the walls of the plaza and the buildings they enclosed sadly in need of repair.

At the time of the Fall of the Alamo, the mission was the property of the Catholic Church, but it had not been used for religious purposes for fully a quarter of a century. After the Fall, Santa Anna decreed its destruction and the plaza walls were razed and the convent walls torn down to two or three feet above ground. The church itself was such a ruin that no attempt was made to destroy it further.

It remained an abandoned ruin, half a mile from the town of San Antonio, neglected by church, State and the people, until the war with Mexico. In 1849 the U.S. Government rented it from the Catholic Church, restored the convent, rebuilt, cleaned and reroofed the church, and used them for the quartermaster's depot. To Maj. E. B. Babbitt, who was in charge of the work, goes credit for creating the simple dignified facade which today is known to people all over the world as The Alamo.

The U.S. Government occupied it now and then until Fort Sam Houston was established in 1876, when the Alamo again was abandoned. It had been surrendered to the Confederacy at the beginning of the War Between the States and a fire had occurred in the church in 1861 and again it was a roofless, debris-cluttered ruin.

The Catholic Church sold the convent portion of the Alamo to Honore Grenet in 1878. He built a hideous frame structure atop the walls, with a tower at either end and a wooden arcade on the south and west. He conducted a wholesale grocery business and used what had been the convent patio as a horse lot.

In 1883 the State of Texas bought the church of the Alamo from the Catholic Church for $20,000, but beyond appointing a custodian, they did nothing toward restoration of the property.

In 1886 the executor of the estate of Honore Grenet sold his property to the Hugo Schmeltzer Co., who occupied it as a wholesale grocery and liquor store. They continued to use the original patio as a horse lot and built a long shed against the east wall as a shelter for their animals.

The arcade on the south and west sides, built by Mr. Grenet, was condemned as unsafe by the city. The Hugo Schmeltzer Co. was going out of business and their property was offered for sale. In 1903 a syndicate was formed for the purpose of buying it, as well as the property lying east of it on East Houston Street, for the purpose of erecting a hotel. The Daughters of the Republic of Texas had been trying to induce the State to buy the property, but the legislature was not in session and the Governor had no power to authorize the necessary appropriation.

It appeared as if the Daughters had lost the struggle to save the Alamo but, when things looked darkest, Miss Clara Driscoll, a young Daughter whose grandfather was one of the heroes of San Jacinto, in order to forestall the syndicate, paid $500 for a 1 month option on the property. Finding that nothing could be done in so short a time, she paid an additional $10,000 for an option for 1 year.

At the end of the year, the State having taken no action, Miss Driscoll bought the Alamo property outright. At her insistence a clause was inserted in the deed to the effect that she was buying it on behalf of the Daughters of the Republic of Texas for the purpose of creating a park and otherwise beautifying the property.

Eventually the State bought the property from Miss Driscoll, and on October 4, 1905, Gov. S. W. T. Lanham gave control and custody of the Alamo property to the Daughters of the Republic of Texas, as a whole, not to any specific chapter.

The Daughters finally had attained their goal—the custodianship of the Alamo; but it was conveyed to them "to be maintained in good order and repair, without charge to the State." How the repair and maintenance were to be paid for was strictly up to the Daughters of the Republic of Texas.

The Alamo and its beautiful setting today attest the complete success of their efforts. The arched roof, the church, and the dome over the sacristy, which originally were of masonry, have been rebuilt of concrete; but the towers were not rebuilt, as it was felt that facade created by Major Babbitt had become so much a concept of the Alamo thfoughout the world that it should not be changed.

Grenet's wooden monstrosity has disappeared, revealing again the walls which were rebuilt in 1849 with the original material left on the spot by the Mexicans when it was destroyed by Santa Anna's order in 1836. The vine-clad walls present a more appealing and pathetic reminder of the sacrifice of their own lives by 187 men that Texas might become a reality, than had the convent been rebuilt; but the horse lot is not a part of the formal garden.

By 1935, through purchase by the State, a donation of a fire station site by the city of San Antonio, and help from Miss Driscoll—now Mrs. Clara Driscoll Sevier—the entire block surrounding the Alamo had come under control of the Daughters of the Republic of Texas. Through a WPA project the buildings were razed, the block was surrounded by a stone wall, with an artistic arcade leading from the church to East Crockett Street. A museum also was built, facing East Houston Street; and Mrs. Beretta donated the Alamo Library in memory of her husband, John King Beretta. It is a reference library only, where interested people can find the data they want on anything pertaining to Texas, particularly the Alamo. The rest of the property has been transformed into a formal garden.

Although their work and responsibility thus were more than trebled, the Daughters

took it in stride. They have the care of everything in and around the Alamo except Alamo Plaza itself.

The Alamo church and convent stand out in bold relief, but the other buildings are smothered by a mass of trees and shrubbery and surrounded by the formal garden, which is always a thing of beauty. There is scarcely a day of the year when some flower or shrub is not blooming.

Occasionally one hears a visitor at the Alamo remark: "It seems very few Texans fought at the Alamo." They are wrong. Although many were newcomers on the scene, Crockett and his Tennesseans had been in Texas scarcely a month when they entered the Alamo; every one of the 187 men of the Alamo was a Texan; and gave his life to prove it.

Since the Daughters took charge, March 6—the anniversary of the Fall of the Alamo—it is a day dedicated to the memory of those heroes who died in its defense. The Church of the Alamo once more becomes a church wherein solemn services are held to commemorate their sacrifice in behalf of Texas.

The Daughters take particular pride in the fact that all which has been accomplished is through their own efforts, without State or other governmental aid, and that entrance to the buildings and the grounds is absolutely free. No fee ever has been charged and no contributions are solicited—although voluntary contributions are received with thanks.

As it stands today, the Alamo is as much a tribute to the enthusiasm and perseverance of the Daughters of the Republic of Texas in rescuing it and transforming it into a worthy shrine, as it is a monument to the heroes whose sacrifice it commemorates.

U.S. Seapower

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. HOSMER. Mr. Speaker, with exceeding wisdom the Congress this week finally placed its blessing on the construction of an additional large aircraft carrier by the Navy. In an era when our oversea land bases are becoming more and more subject to the vagaries of foreign political winds, it is more than ever necessary to the Nation's defense that we have aircraft carriers in being. In effect these are large, mobile bases, subject only to the control of the United States and capable of going anywhere the interests of the United States indicate.

The current June issue of News Front magazine contains an excellent summary of the place of the Navy in the country's necessary military force, which reads as follows:

THE NAVY'S MISSION: DETER OR DESTROY

Seapower, transformed beyond the recognition of a Nelson or a Mahan, still remains, the U.S. Navy insists, the Nation's chief resource should nuclear war come, and a major deterrent to that dread eventuality.

But the mighty capital ships, slugging it out with their great guns against their enemy equivalents, have been replaced by what are, in effect, mobile missile platforms, on or beneath the surface of the sea.

The target no longer is hostile seapower—no possible enemy possesses an equivalent surface navy—but the heart of that enemy's war potential, its bases, communications centers and industrial complexes.

The new "ships of the line" are, in place of battleships, the great attack carriers, of which the Navy now has 14, and the nuclear-propelled fleet ballistic missile submarines, of which three already have been commissioned, two more are entering service this year and a total of 9 are being built.

Both can deliver nuclear attacks to virtually any point on earth, and both, because they can swiftly shift location, are almost immune to land-based missile retaliation.

The submarines will fire, from beneath the surface, the nuclear-armed 1,200-mile missile Polaris. The U.S.S. *George Washington*, first of the FBM submarines, will be equipped with the Polaris in the fall.

The immunity of the nuclear-powered submarine, which can remain far beneath the surface for days and weeks while in rapid motion, to distant missile attack seems obvious.

But the carrier also, according to testimony at the recent House Appropriations Committee budget hearings, possesses the same immunity to a surprisingly large extent. Capt. Roger Mehle, Chief of the Navy's Air Weapons System Analysis Staff, displayer a radarscope photo to the committee, and stated:

"This is an actual photograph of the radar return from the western portion of the Mediterranean on a typical day. It covers about 196,000 square miles. It is uncluttered by any defensive electronic countermeasures such as decoys or chaff bombs which would increase the apparent number of targets.

"Nevertheless, under these ideal conditions, it shows less than 25 percent of the total number of ships which were actually at sea in the area. In this picture are the ships of the 6th Fleet, including two attack carriers.

"But where are they? It is impossible to pick them out.

"It is from vague and confusing information of this type that an enemy airborne or spaceborne radar would attempt to relay to its territory the precise position of our carriers.

"But let's assume that a chance guess has singled out one of the carriers. At least an hour would elapse before the arrival of the enemy missile.

"During this period, the carrier will have moved in an unpredictable direction as much as 30 miles.

"The missile will have been expended against a target this is not there."

The Navy's 14 attack carriers are, at present, distributed six in the Atlantic and eight in the Pacific areas. Of the Atlantic's six, two are always attached to the 6th Fleet in the Mediterranean (within bombing and missile range of the U.S.S.R.'s European core) and three to the 2d Fleet in the North Atlantic. Of the Pacific attack carriers, two to three severe with the 7th Fleet in the Far East (within striking distance of Red China) and three to four with the 1st Fleet in the Pacific proper. Again one is always in overhaul.

The existing attack carriers, all of which are rotated at frequent intervals, consist of four *Forrestal* class supercarriers (77,000 gross tons), two *Midway* class (60,000 gross tons) and eight *Essex* class (40,000 gross tons). But the small *Essex* carriers, with their comparatively limited flight deck space, are finding it more and more difficult to handle modern jets. They will be retired, as fast as replacements are available, to antisubmarine duty.

These, as now planned, include a modernized *Midway*, scheduled to join the fleet this year, two new *Forrestals*, scheduled for 1961, and the nuclear-powered Forrestal-type *Enterprise*, scheduled for 1962. (The Navy, at present, plans no more nuclear carriers, which cost three or four times as much to operate as conventional ships, without compensating superiorities. The case is far different with submarines, which, with nuclear power, can remain submerged indefinitely. Of the 37 nuclear vessels built or authorized, all but three—the *Enterprise*, a frigate, and a destroyer—are submarines.)

Increasing the long-range attack potential of the FBM submarines and the attack carriers are five other missile submarines, and three missile cruisers (others are being converted), all armed with the subsonic, 500-mile Regulus missiles. Among destroyers and frigates, two already are armed with guided missiles, and five more are being built.

In addition to deterrence and, in the event of war, allout attack, the Navy has still another mission of major importance. This is, should war occur, to keep the world's sealanes open to the shipping of the United States and its allies, and to protect bases and cities from submarine-launched missile attack. The U.S.S.R. is believed to possess at least 450 submarines, including 85 to 100 long-range vessels on combat status at any moment.

The problem posed by this potential enemy force is grave, and one which, admittedly, the Navy has yet to solve completely. Adm. Arleigh Burke, Chief of Naval Operations, told the Appropriations Committee that there has been "marked improvement in our antisubmarine warfare capacity" and that "even more significant progress" can be expected. But, he added, "submarine advances have been ever more rapid, and we are not yet able to feel confident in our ability to meet the threat—especially that posed by the anticipated sub-launched missiles."

The Navy's nine remaining carriers are assigned to ASW duty, and a carrier forms the core of each of the two Task Groups set up in 1958 to perfect ASW tactics and teamwork. Each includes, besides the carrier's planes and helicopters, a squadron of destroyers, several antisub submarines (the most effective weapon so far), and long-range patrol aircraft, seaplanes or land-based.

Of the 20 new ships in the Navy's $11.7 billion fiscal 1961 budget ($12.1 billion, with carryover), 13, including a deep-diving submarine, are designed for ASW service and research, and 14 destroyers are undergoing ASW conversion. Increased range of radar, torpedoes and planes, improved missiles for repelling enemy air attack, automatically homing torpedoes, and sonobuoys (listening devices) which can report back automatically by radio after being dropped from the air—all are adding to ASW readiness and effectiveness.

Altogether, one-ninth of the budget, or $1.4 billion, is assigned to ASW construction, procurement and research (not including operation, maintenance, etc., of existing ships and aircraft).

But the difficulties remain great, principally because the oceans cover three-fourths of the earth's surface, and all are open to potential enemy submarines. How then find and destroy them in this vastness? Present radar cannot detect a submerged vessel, and sonar's range is only a few miles.

But the very oceanic immensities which complicate the Navy's task of defense against submarines make easier the carrying out of its other two missions—to deter the potential enemy or, if that fails, to destroy the enemy's capacity to make war. Huge as the Red-ruled land mass is, sea-launched missile attack can now penetrate it from any direction, as the three sub-ice trans-Polar voyages of U.S. nuclear submarines proved, even to Khrushchev.

The United States. Admiral Burke testified, must be able, in today's uneasy post-summit situation, both to attain "limited political and military objectives" and to inflict "heavy, unacceptable damage on the U.S.S.R." should the latter start "suicidal" nuclear war.

The Navy is ready to accomplish either—or both.

THE NAVY'S COMBAT STRENGTH

Combat aircraft carriers, 14.

Antisubmarine carriers, nine.

Nuclear-powered fleet ballistic missile submarines (three more to be commissioned in 1960), two.

Other submarines (including 5 nuclear-powered), 112.

Cruisers (including 6 guided missile), 14.

Destroyers, frigates, etc. (including 2 guided missile), 226.

Planes (75 percent combat, 45 percent jet), 6,852.

Combat personnel, 385,000.

Total uniformed personnel (not including 175,000 Marines), 619,000.

Constitutionality of the Civil Rights Commission

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. THURMOND. Mr. President, if there has existed any doubt that the present Supreme Court employs double standards in the protection of individual rights, all doubts were removed with the decision on the constitutionality of the rules of the Civil Rights Commission. An able editorial published in the Greenville News, Greenville, S.C., on June 23, entitled "Justice Warren and Senator McCarthy" summarizes the application of the two sets of standards. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUSTICE WARREN AND SENATOR MCCARTHY

The shade of Joe McCarthy, a man who for all his shortcomings had a sense of humor, must have gotten a lusty laugh from the latest pronouncement of the Warren court.

For all the sins with which he was charged—the star chamber proceedings, the denial of the right to confront one's accuser and to know the specific charges leveled against one—all of these things the liberal-leftists pilloried him for have now received the solemn stamp of approval by the Supreme Court.

They are, if the liberal-left is correct, now the "law of the land."

However, as we have no doubt the Court will hastily point out, they may be used only in certain circumstances. Specifically, under this decision, they can be used when Federal agents get the idea that Negroes are being denied the right to vote.

The case which brought on this decision arose in Louisiana. There, the Civil Rights Commission was studying alleged voting discrimination against Negroes. Acting under its own rules of procedure, the Commission hid the identity of those who made the charges against local officials and it denied the officials the right to cross-examine or confront their accusers.

Lower court decisions held that the Commission could not do these things on the rather puzzling ground that they had not been authorized by Congress. We may be glad that the seven-man majority brushed aside this and went straight to the question of whether such procedure is constitutional. We can only be abysmally dejected that the majority found in the affirmative.

How to explain this paradox—that a Court whose members, individually and collectively, have so frequently denounced such behavior suddenly find it both necessary and appealing? The answer is not difficult. The Court has shown many times before that it has certain standards for matters involving racial matters which are of a totally different nature than those standards applied to other questions.

It has denounced the use of the tactics called McCarthyism when congressional investigations are involved. These are not to be tolerated for a moment when it is a question of identifying Communists or gangsters. But the yardstick somehow subtly changes when color enters the picture.

Justice may be colorblind but not the Chief and Associate Justices of the Supreme Court.

Two men—Justice Douglas and Justice Black—had the courage and perception to see through this maze of contradiction. As Justice Douglas declared in a dissenting opinion, "important as these civil rights are, it will not do to sacrifice other civil rights to protect them."

It is strange indeed to find such staunch "liberals" as Justices Douglas and Black on the opposite side from Chief Justice Warren. They too have displayed the tendency to bend rules to suit their purposes. The concise and damning indictment by Justice Douglas quoted above seems to prove that there are some things even they cannot stomach.

Address of Roger A. McDuffie, at Dedication of New University of North Carolina Pharmacy Building

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. DURHAM. Mr. Speaker, on April 24, 1960, the new School of Pharmacy Building at the University of North Carolina was dedicated. As a member of the pharmacy profession and as an alumnus of the University of North Carolina, I am very proud of this fine new building and equipment. I should like to insert in the RECORD the remarks made on that occasion by Mr. Roger A. McDuffie, a practicing pharmacist in North Carolina and an alumnus of the university and a member of the Board of Examiners of Pharmacists of the State of North Carolina. Recently Mr. McDuffie was named Pharmacist of the Year for North Carolina. I believe his remarks will be of interest to every pharmacist throughout the United States:

DEDICATION OF THE NEW PHARMACY BUILDING, UNIVERSITY OF NORTH CAROLINA, CHAPEL HILL, N.C., APRIL 24, 1960

(Address by Roger A. McDuffie)

Mr. Chairman, distinguished guests, ladies and gentlemen, I think that I was selected for this job simply because I represent the average pharmacist of North Carolina.

Geographically speaking, I come from the center of the State—Greensboro.

Educationally speaking, my background is average, having obtained my college training about halfway between the time when no college training was required and today, when 5 years of college training are required for a B.S. in pharmacy.

As for age, I like to think of myself as average. You know, pharmacists live to a ripe old age. There is an old saying in this State (which I like to believe) that a pharmacist never dies until one is needed in heaven, and I am told there is no shortage up there as there is in North Carolina.

Financially speaking, I guess I owe about as much as the average.

Today, April 24, 1960, is the greatest day in the history of North Carolina pharmacy.

The dedication of our new pharmacy building marks the realization of the hopes and ambitions of the pharmacists of North Carolina since the end of World War II. This was not accomplished by the mere asking. It was accomplished by hard work and a good selling job. Even though we had the friendly cooperation of the administration of the university, it was not until the citizens of North Carolina and the legislature, in particular, realized that in order to supply the needs of a great and growing State we must have a larger and more modern pharmacy department.

The pharmacists of another century realized the need for college and laboratory-trained men and women. Some of their leaders were Howell, Zoeller, Hancock, Bradham, L. Richardson, and Horne, and others. Some of these men were well-known to you. Largely through their efforts the school of pharmacy was established on this campus in 1897, with Dr. E. V. Howell as dean.

The school of pharmacy has occupied four different homes on the campus. First, it occupied the first floor of the New West until 1912. From 1912 until 1925, it occupied Person Hall—now the Art Building. From 1925 until the fall of 1959, it occupied the whole of Howell Hall, which was the old Chemistry Building; and its fourth home—the building upon which our attention is focused today.

Now, let me take you back about 50 or 60 years. Mr. C. T. Council is one of the few men I know who studied under Dr. Howell in the New West. I learned from Mr. Council that in 1905 the pharmacy faculty consisted of Dr. Howell who taught pharmacy, Mr. I. W. Rose was in charge of laboratory instruction, a medical student who was a graduate in pharmacy taught Materia Medica. The chemistry was taken in the chemistry department.

In reminiscing, Mr. Council remarked that an interesting thing today is to reflect to the days of 1905, when there were no electric lights. The students studied by lamplight and took their baths in the gymnasium; however, he did not state how often he visited the gymnasium. But he did state, most emphatically, that he had never regretted having studied pharmacy. I'd like to add in my own words that pharmacy will be eternally grateful that Mr. Council is one of us.

Like many of you, I am well acquainted with pharmacy in Person Hall. Dean Howell and Mr. Beard were the main teachers, and the students took chemistry, botany, math, and electives in the general college.

I can't help but reminisce—please pardon. Those of you who studied under Dr. Howell, I think, will agree with me that he was the most impressive teacher you ever had. His jokes, which were a tie-in with the lesson, will never be forgotten. I employed one of the first girls to graduate in pharmacy—and she was good. Some of my friends kidded me by saying that I employed her chiefly to learn Dr. Howell's latest jokes.

Following Dr. Howell's death in 1931, Grover Beard became dean. There never

was a harder working or more conscientious man. He worked and worried not only with the problems of his own department but also with the problems of every drug store in the State. He headed the department during the depression and the lean years. Everyone who knew Grover Beard will testify that he stood for the right and the best and that he marched in the front ranks of pharmacy, both locally and nationally, and kept perfect step. These were the days when the band was not playing. It was before the days of antibiotics and $10 prescriptions.

Dean Beard died in 1946 and was succeeded by Dean Jacobs who died in 1950. Good old Jake—he was as steady as the Rock of Gibraltar. He had the ability to get along with folks and kept perfect harmony. Jake didn't talk much but what he had to say carried weight. He will go down in history as a good dean.

For a short period following the death of Dean Jacobs, Mr. I. W. Rose served as acting dean. Although too old to be made dean, Mr. Rose was master of the situation and the emergency thrust upon him. He kept the boat steady in midstream.

Here's one of the finest compliments that can be paid any man. Many of Mr. Rose's former students in sending in their contributions to the Pharmacy Foundation added this little footnote: "Please place this in the I. W. Rose Memorial Fund."

Ed. Brecht was made dean in 1950. I was right much amused when he was being considered for the deanship. Some people shook their heads and said, "Too young." The answer was—"Stonewall" Jackson was only 39 when he died, and Alexander Hamilton took his seat in the Continental Congress at 25. Too young, maybe—but he was smart enough to grow with the job and he did.

Pharmacy today is far more complex than in the days of Person Hall. Drugs today are far more potent and require greater knowledge and skill in their handling.

Our new pharmacy department is equipped in every detail to graduate finished products who can handle all situations in modern pharmacy.

The guts of any department lie in the caliber of its faculty. We are, indeed, fortunate to have a well-rounded faculty—all young men—all dedicated—men who grew up with the aroma of valerian and asafetida in their nostrils—and men who have made pharmacy their lifework and have a vital and personal interest in their students.

Some of our faculty, like Frank Graham and Bob House, grew up on this campus, received their training in this university, and remained to serve. This is well. Some of our faculty came from other States. This is well, too, as it wards off any inclination to become ingrown.

In digging back into the history of pharmacy in North Carolina, I found this very interesting law, enacted in 1881 and sponsored by the pharmacists of that day. This law required that in order to become registered as a pharmacist the applicant must graduate from a college of pharmacy or as an alternate serve 4 years as an apprentice under a registered pharmacist.

It is interesting to note that in 1881 there were only four schools of pharmacy south of the Mason-Dixon line. Little wonder it is that at that time the vast majority of aspiring pharmacists chose the 4 years' apprentice training.

A few people now say that pharmacy is becoming too academic—acquiring too much literary digest. But such is not the case. We must keep up with the march of progress. And we have. And we must keep abreast with the other health professions.

Stated very briefly: From 1918 to 1922 the law in this State required 1 year of college work. From 1922 to 1926, 2 years of college work were required. In 1926 it became 3 years, and in 1935, 4 years. Today the requirement is 1 year of prepharmacy, graduation from a 4-year college of pharmacy, and 1 year apprenticeship. However, the apprenticeship may be obtained in the summer months when not in school.

Now as to the future—I will not make any predictions, but with the equipment and the faculty that we have, with the friendly cooperation of every department in the university, with the 100 percent backing of every pharmacist in the State, and under the leadership of Ed Brecht, who has been appraised as smart—and levelheaded—intelligent, farseeing, dedicated, and possessing that little item called the common touch, the ability to get along with people; and, above all, a capacity for work and getting things done that is amazing to me—I point specifically to the completion of the new pharmacy building and the success of the pharmacy foundation—with all of these items on our side, I have no fears about the future in North Carolina of one of the oldest and most honorable professions known to mankind.

Is Coexistence Feasible?

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. CARROLL. Mr. President, recently I received a letter from a longtime friend of mine, Justice O. Otto Moore, of the Colorado State Supreme Court. Justice Moore enclosed a copy of a speech given before the Alumni Association of the University of Denver on the subject "Is Coexistence Feasible?"

In Justice Moore's opinion, this talk by Prof. Josef Korbel of the university displays a keen insight into the issues of the cold war. The Justice feels, as do I, that this speech is well worth including in the RECORD.

I have known Otto Moore for many years. Indeed, he served as my deputy when I was District Attorney in Denver. He is widely known as the "Father of Colorado's Old Age Pension Amendment." A highly admired and respected private attorney, he was elected to the Supreme Court in 1948 and reelected in 1958 where he continues to serve with great distinction. I am sure that my colleagues in the Senate will be interested to read this speech which has been so highly recommended by Justice Moore.

Dr. Korbel, an expert on Russia's relations with the West, has much to say to us at this critical point in our country's history. With the collapse of the summit and the cancellation of the Tokyo visit, we must turn from the illusive perils of personal diplomacy to the reality of the cold war. Dr. Korbel examines our position with a cool perspective.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IS COEXISTENCE FEASIBLE?
(Address by Josef Korbel)

I

For several years we have heard Nikita Khrushchev advocating a policy of peaceful coexistence between the Communist and the democratic world. He traveled far and wide; to Geneva, London, and Paris, to India, Burma, and Indonesia. Last September he spent almost 2 weeks in the United States and distributed words of kindness and warmth among industrial magnates as well as workers; he kissed babies and appealed to God. With some people he left the impression of being a jolly good fellow who would make a good Senator for any State of the American Union. Compared with the enigmatic and cruel Stalin, Khrushchev looked to them as a jovial statesman who sincerely sought cooperation with the United States in building a peaceful world. These people preferred to ignore numerous lessons of history and the final goals of the Communist powers; they took by mistake change of tactics for change of heart.

Last month lightning struck in Paris. It pierced the atmosphere of ease and rosy expectations and pulled us down from clouds of soft dreams to hard realities. The ebullient Khrushchev revealed his other, his true face. His language dropped to a new low of vulgarity of which even Vishinsky had not been capable in the old days. He vilified the President of the United States in a manner which Stalin had applied to Adolf Hitler during the war. The Western World passed through a gruesome experience of coexistence which is quite different in nature and form from the peaceful coexistence it was led to believe in and accept at face value. The cold war has reached again a deep-freezing point.

For 2 years, Khrushchev insisted on a summit conference, conveying the impression that conventional diplomatic negotiations cannot bring us closer to the solution of the problems which separate the Eastern and Western Worlds. And they are many, grave and complex at the same time: the cessation of atomic tests, control of outer space, regulation of armament, its inspection and supervision, protection against surprise attack, the question of Berlin and unification of Germany, cooperative assistance to the vast populations of the underdeveloped countries, and last but not least, the ever-present but seldom admitted host of problems connected with the existence of the aggressive Communist China.

We were told, and some of us became convinced, that only a new approach—by summit diplomacy—offers a hope for settlement of at least some of these disturbing questions as only the leader of the Soviet Union, Nikita Khrushchev, had the power to make decisions and grant concessions. It was at his insistence that the Paris conference convened last month but it was equally his truculent behavior which wrecked the summit meeting before it could even begin. Under the wreckage was buried the myth of diplomacy by summitry, by sweet smiles and kind words, which were to supplement and perhaps even replace the strenuous, patient, determined, unheralded labors of professional diplomats and other experts. Under the wreckage has been also pulverized the pretense of, and trust in, Khrushchev's good will and possibly, too, the belief in his supreme power in the Kremlin. In these respects the Paris experience has been an eye-opener; it has thrown a new light on the scene of Soviet politics, or better to say, it has illuminated the more familiar nature and methods of the Soviet foreign policy. It has signaled to us the true meaning of the Communist coined term: "peaceful coexistence."

II

The Paris crisis has rendered to the free world in spite of deep disappointment another service. Presumably it all was caused by the unfortunate airplane incident. Khrushchev admitted knowing about espionage flights in the past and he knew also, without admitting it, however, that they are part of a worldwide routine practice which, as dis-

tasteful as it is, has become a necessity in the international power relationship, infested with suspicion, secrecy, and lust for more power. The American Government which handled the case—I venture to submit—with remarkable maladroitness facilitated Moscow's decision to gain extra mileage on its journey to coexistence. Khrushchev branded the flight as a bellicose act and threatened with retaliation. And yet, we have noticed with no small relief that the incident has not developed into a shooting war. This is, indeed, an encouraging sign pointing to the feasibility of coexistence in the arena of military contest.

In the past, individual incidents provoked wars, or rather served as a pretext for aggression, planned in advance. The Franco-Prussian War in 1870 started with an artificially prepared incident. World War I opened with the assassination of Archduke Ferdinand, though it was only the last straw in the long series of critical situations. It was Kaiser Wilhelm's conviction of quick victory which he expected, as he put it, "before the autumn leaves will fall off the trees," which precipitated the world conflagration of 46 years ago. It was Hitler's miscalculation of the extent of involvement in the conflict which prompted his exploitation of the Danzig crisis.

The Soviet leaders are hopefully not prone to such or similar miscalculations, and their treatment of the U–2 incident and other incidents which occurred since 1945 permits a conclusion that they do not believe in a possibility of a victorious war as short as it might be this time. Though the United States appears to be, according to the opinion of several experts, behind in the development of long-range missiles, her combined military power provides enough of a deterrent to the Soviet lust for obliterating this country and its allies. Admittedly, this is an uneasy balance of power, as it rests on the intangible foundations of mutual terror and danger of mutual annihilation, but it is the only effective policy in absence of an effective regulation and control of armaments. It is a military coexistence—the only one which the Soviets understand and are of necessity ready to respect.

However, we must not be misled by their repeated statements on peaceful coexistence, nor can we see in them a novelty in Soviet foreign policy.

Lenin spoke frequently about coexistence which he frankly viewed as a temporary expedient for the period needed for the entrenchment of the Communist Party. But he also stated with equal frankness that "the existence of the Soviet Republic side by side with the imperialist states for a long time is unthinkable. In the end either one or other will conquer and until that end comes, a series of the most terrible collisions between the Soviet Republic and the bourgeois states is inevitable."

Stalin clarified Lenin's thinking on coexistence as if it were not clear enough. He stated: "We cannot forget the saying of Lenin to the effect that a great deal * * * depends on whether we succeed in delaying war with capitalist countries, which is inevitable but which may be delayed either until proletarian revolution ripens in Europe, or until the colonial revolutions come fully to a head, or, finally, until the capitalists fight among themselves over division of the colonies. Until then, the basis of our relations with capitalist countries consists in admitting the coexistence of two opposed systems."

Mao Tse-tun, who appears to exercise increasing influence in the Soviet policy, put it bluntly: "Every Communist must grasp the truth that political power grows out of the barrel of a gun, in fact, we can say that the whole world can be remodeled only with the gun."

Do, then, Khrushchev's speeches on coexistence bring something new—a new policy, a new goal? He believes in the possibility of total Communist victory without violence, even through parliamentary elections, as he recognizes a new relationship of power in the world in which one-third of mankind is subjected to Communist control. In such a situation the sheer weight of the Soviet power, combined with subversion and infiltration, can bring about, as we saw in the case of Czechoslovakia, a nonbloody revolution. But he tells us with the same breath of the inevitability of violence should capitalists resist and try to forestall their doom. Or, as he puts it, he will bury them, unless they would bury themselves voluntarily.

The record of the Communist leaders testifies significantly to the real meaning of the professed policy of peaceful coexistence. Lenin even in the short period of his rule waged an aggressive war against Poland in 1920 while he posed as a supporter of Polish national independence. Stalin signed treaties of nonaggression—which is nothing else than adherence to the principle of coexistence—with the Baltic States and Poland, only to invade and annex them later. He entered into an alliance with the countries of Central and Eastern Europe and guaranteed their natoinal sovereignty. Today they all are captives of the Soviet Union. Mao Tse-tung and Pandit Nehru proclaimed the so-called Pancha Shila, five principles of coexistence, expressing respect for territorial integrity. Today, the Chinese Army is embanked in strategic spots deep in the Indian territory. And Khrushchev—Khrushchev notified the Hungarian nation in an eloquent manner how he understands coexistence when it tried to shake off in November 1956, the Soviet and Communist yoke. He let the whole world know that he recognized coexistence on his terms only. He topped the long and convincing record last month in Paris to prove again that coexistence is subjected to the needs of the moment and to Marxist exclusive interpretation.

Nevertheless, if we can be satisfied with the minimum expectations that coexistence means in fact absence of atomic war our hopes for peace may be reasonably nestled in the comforting feeling that the Soviets would not start a war in a situation which does not offer a good chance of bringing it to a successful conclusion. True, the Soviet leaders have differentiated in their theoretical writings between just and unjust wars and they have considered any action, even aggressive and preventive action, undertaken in the interest of the proletariat a just war, but they have been equally vehement in warning against any adventures which might jeopardize their achievements. Though their practical record points to the problematic value of their assurances on coexistence it does indicate their rejection of adventurism in politics, and their capability of seeking accommodation to the realities of strength. In fact, one may be allowed to state summarily that the Communist aggressive policy was facilitated, nay invited, by the weakness of the opponents. In that single fact lies the clue to the policy of the free world if it prefers to coexist on the surface of this land rather than underneath.

III

Accepting, then, absence of war as a necessity, the Communist world, however, has not abandoned its ultimate goal. It wishes to compete with the Western World and to win in the field of ideologists. Khrushchev stated recently, "Messrs. capitalists accuse us of simultaneuosly proclaiming the policy of peaceful coexistence and talking about the struggle between the Communist and the bourgeois idealogies. Yes, this struggle goes on, because it expresses the interests of different classes. * * * Our ideas will conquer mankind."

* * * * *

However, I hasten to add a clarification lest an incomplete survey of the ideological struggle lead to a serious misunderstanding. When Nikita Khrushchev challenges us to an ideological competition he does not contemplate it as an intellectual exercise nor does he conceive of it as fair play under a set of rules applicable to both sides. He really has in mind not an ideological but a political struggle and in this respect the competition assumes most ominous features. The Iron Curtain has been pulled as a barrier to prevent Western influence on its Eastern side while the Soviet policy has a free field on its Western side.

* * * * *

Our mass media, with their highly developed technique of communications, which are meant to serve as an instrument for better knowledge of individuals and nations, have been frequently exploited by Soviet statesmen to their advantage. Bound by their own ethics of reporting as fully as practicable any event of importance, the free world's mass media publish, broadcast or televise statements of Soviet leaders which are frequently calculated to confuse and weaken the resistance of persons who are not versed in the deceitful Communist semantics. Khrushchev's visit to the United States last September is a good case in point. It was due to a shrewd exploitation of mass media that he could have left with many people the impression that after all he was a good guy with whom one can conduct business in good faith.

How different is the situation on the other side of the Iron Curtain. There, the mass media are under a strict, centralized control, presenting important events in the free world only to the extent and in the light of the Soviet Government's interest. There, the voices of freedom have been silenced and if they come from the outside world, trying to reach people on the waves of broadcasting their efforts are largely frustrated by an elaborate system of jamming. And if we say that ideological competition is a two-way proposition and suggest that the nations behind the Iron Curtain be given an opportunity to express themselves freely about their political preference as the Western World permits Communists to challenge its own political system we are faced with a flat and indignant refusal. This is not a ideological struggle, this is a power aggression short of bullets and bombs. It is peaceful coexistence on Soviet terms.

IV

Another field in which Khrushchev invites competition is economy. He is convinced of the superiority of the Communist economy over the system of free enterprise. He expects that the impressive growth of the Soviet economic power will attract millions of people in Asia, Africa, and Latin America who live in abject poverty as an example to follow to bring them quickly through planned and socialist industrialization to the first step of prosperity.

Again, the competition is unfair, but this aspect of the problem bothers the Soviet leaders least of all. The two economics, that of the Communist East and democratic West, operate at two entirly different levels and for entirely different, in fact, mutually exclusive purposes. The Soviets ignore the price their citizens have paid for the Government's industrial output—personal freedom which is to us in the West the central consideration of economic development. They think of their economy primarily in terms of the power it brings to the Soviet state; we view the West's economic systems primarily in the light of material satisfaction they give to its populace. As we cannot,

however, escape looking at the challenge of economic competition in a different way than a power struggle the consequences of these fundamental differences call for grave concern on our part.

Over 50 percent of the Soviet total production is channeled back into capital investment and military equipment. The industrialized democracies meet this challenge with just about one-half of the Soviet figure. The inevitable result is that we are exposed to the dangers of a military gap which may grow even further while they are closing the production gap and may even surpass us, as Khrushchev has proudly stated on frequent occasions. The Western democracies' economy has grown at a pace of 4 percent a year; the Soviet rate has been 7 percent. Considering the purpose of this impressive economic development we can ill afford to sit back and enjoy complacently the satisfaction of growing fatter while they grow stronger. The day may well come when the Western governments would be unable to conduct a purposeful foreign policy and assure their people of national security, due to an inadequate military and economic position.

The alternative of freedom or subjection may be solved in the vast regions of uncommitted and poverty-stricken nations. Only a long-term policy of economic and technical assistance which will be pursued as a matter of national interest and not humanitarian philanthropy can divert these nations from looking across the borders to the so-called great Socialist experiment in Russia and China. Only an enlightened attitude of massive help can bring these people to the realization of their inherent right to live in dignity as human beings. Only when we do not need to worry about economic competition with the Soviet world.

The final question then arises whether coexistence of the two systems of governments, of the two ways of life, is feasible. The answer is yes—yes, coexistence is feasible if the Western World becomes truly aware of all dangers of the Communist policy and draws some imperative conclusions.

Democracies have always been slow in realizing threats to their existence. It needed an invasion of a neutral Belgium in 1914, a bombing of the city of Warsaw in 1939, a Pearl Harbor in 1941 to wake them out of lethargy. However, this time they cannot afford the luxury of dozing and waiting for an alarm clock sounding the final warning from a faraway scene. This time, we may be dead before we wake up.

Unprecedented dangers call for unprecedented measures. The Western World's struggle for coexistence with the Communist world cannot be limited to expedient and hastily conceived reactions to Communist moves. It must be primarily based on a long-term, widely spread and cooperative program of political integration, economic growth and military preparedness. It must be inspired and conducted by daring and imaginative leadership which would be unflinching in its demand of supreme material sacrifice to the preservation of the only real and surpeme value of life, freedom.

Such leadership of the Western World can be provided only by the United States. Such is the call of destiny, the command to greatness. The alternative is no other than sinking into shameful oblivion.

One hundred years ago the famed French historian, Jules Michelet, uttered some prophetic words. Warning against Russia of the future, which would pretend to be a revolutionary and progressive power he had the vision, "Yesterday, Russian propaganda told us: I am Christianity. Tomorrow it will tell us; I am socialism." He saw Russia emerging as "Socialist tyrant, messiahs of the serfs, a barbarous messiah, terrible to Europe," and he wrote, "I solemnly call upon young America: 'Let America justify our hope, let her be deaf to all petty interests, free of all petty rancours, devoted to the great general interest of human progress, closely associated with the civilized West, with the cause of liberty, which she has supported so recently and which she has made so gloriously victorious.'" The call of a century ago becomes a necessity today.

However, the challenge can be met successfully only if the Western World first of all puts its own house in order, if it removes the intolerable racial barriers, the remnants of fascism, if it finally moves in the direction of an integrated community of Atlantic union.

Negotiate with Communist powers we must. But we can hope for a satisfactory outcome of such negotiations only if they find it in their own interest to sit behind a conference table. And we can make such a proposition interesting to them only if we are united and powerful.

However, for free men power is something much more than guns and gadgets. Material power and comfort degrade and enslave the man who has neglected the foundation of all and any strength, an ideological and moral conviction. The free man pursues happiness in the awareness that it is only sorrow which can give to joy proper appreciation; he can escape the boredom of plenty only if he experiences the worry of misery; he can enjoy the bright sunshine of the day only in contrast to the darkness of the night. The free man does not hunt the phantom of material satisfaction which inevitably evades him unless he is alert to cultural values of life. The free man respects others as he respects himself; he is faithful to himself without being egocentric; he has a sense of solidarity without being conformist. He is a man of public responsibility without allowing the public to encroach on matters which are reserved solely to his personal discretion. The free man is dedicated to the cause of such freedom, and works for it with calm and determination. He has a noble and ennobling purpose to live for.

Is the Western society composed of free men? Its cultural and spiritual heritage has certainly provided solid foundations for such a society. If we have betrayed them, if we have betrayed ourselves, then, I am afraid, our society cannot hope for coexistence with Communist society; then the Western man will succumb to the modern Neanderthal man of the East.

My Trip to Washington

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. AUCHINCLOSS. Mr. Speaker, when the eighth grade class of the Manalapan Township School of Englishtown, Monmouth County, N.J., visited Washington, I had the pleasure of meeting with them. There were about a hundred in the group and I offered prizes for the four best essays written by the members of the class about their trip to Washington with their teachers who accompanied them to be the judges. I have just been notified of the winners and I am very pleased to have these essays written by these young Americans printed in the CONGRESSIONAL RECORD.

The first prize was won by Gerald Kuschuk, Woodward Road, Englishtown, N.J., and his winning essay follows:

MY TRIP TO WASHINGTON

(By Gerald Kuschuk)

I shall never forget my trip to Washington. It was the climax of years of anticipation on my part and my fellow classmates. It was very inspiring to be in the same city where great men of the past and present have shaped the destiny of our Nation and perhaps the destiny of the world.

The U.S. Capitol Building is a magnificent structure, housing the legislative branch of our Government. Beautiful paintings and tapestries decorate the walls of the rotunda. Statues of great American statesmen line the corridors. Most interesting of all are the actual rooms, in which the Senators and Representatives meet to make the laws in the democratic fashion which exemplifies our democracy.

Our class was taken on a short ride into Virginia to visit Mount Vernon, the home of George Washington, the first President of the United States. It was in this house, with its now antique furnishings, that an ordinary citizen surrendered his private life to go on to the fame and glory of being the Father of his Country. Under his rule, 13 individual Colonies were fused into 1 united Nation.

We visited Arlington National Cemetery with deep reverence in our hearts. Here lie the remains of the Unknown Soldiers of World Wars I and II and of the Korean war. A member of the honor guard constantly marches near their tombs. We were fortunate enough to witness the changing of the guard. This is a most impressive ceremony, and we all enjoyed watching the precision with which it was performed.

The Lincoln and Jefferson Monuments are two landmarks to which all tourists and visitors are attracted. Their simple beauty enhances the personalities of the two great Presidents to whom they are dedicated.

The Washington Monument is a huge concrete tribute to our first President. Each landing is dedicated either to a State of the Union or a famous American hero. The entire city is visible from its top. It is brilliantly lighted at night and is visible from a great distance.

I am sure many of us would enjoy working in the Bureau of Printing and Engraving. The guided tour was both interesting and informative. In the exhibition room, all types and denominations of money were displayed. Most of us had never seen or even dreamed that bills of such denominations existed. We saw a $100,000 bill and a $500 million Treasury note which was one of the highlights of the tour.

The most memorable part of our trip was the tour through the Federal Bureau of Investigation Building. Located here is the chief law enforcement agency of the United States, together with its crime laboratories, shooting ranges, and offices. This agency, under the able direction of J. Edgar Hoover, is constantly seeking out those who would harm the security of the people of the United States. It was very interesting to see the same criminal weapons that such infamous people as Dillinger, Capone, and Ma Barker used.

We left our Nation's Capital, weary, but happy to have seen the spiritual and moral forces which make our Nation the model for the free world.

The second prize was won by Carol Marinko, Taylors Mills Road, Englishtown, N.J., and her essay follows:

ENGLISHTOWN, N.J., *May 20, 1960.*

Hon. JAMES C. AUCHINCLOSS,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE AUCHINCLOSS: First of all, may I thank you for taking time out of your busy schedule to have visited with us, the eighth-grade Manalapan Township School students.

My trip to Washington, D.C., 1960, will be a memorable one for me in many ways. It gives me great honor and pride just to say that I have been to the Capitol of the United States of America.

In spite of repairs on the Capitol Building, the buildings and grounds were impressive, with an air of quiet dignity and beauty. One thing that impressed me was the bronze Statue of Freedom upon the dome of the Capitol.

It was a pleasure to visit Mount Vernon. Everything about it was so historically interesting. It proves after all that great men and women, along with the humblest of citizens, did and still do appreciate God's gift to man—the beauty of a garden. Please God, help us to keep it so.

Our visit to the Congress and House of Representatives gave me a newer feeling of appreciation and responsibility for our Government, and its difficult tasks ahead. It brought home to me clearer than ever, my own personal responsibilities toward my Government. I thought to myself—here is one country where people from all the nations on earth live in one land by voting for the men they want to represent them and for the laws which each outlying district in these United States wishes. Many times we hear gripes about this or that but many times we forget to realize that some citizens do not take enough trouble to vote or write their Representatives and Congressmen or make themselves heard. The men who make our laws were voted in by people who cared enough about their country to vote for the men who would represent them and would work to have laws passed to benefit the separate problems of each district. Our district problems of a varied nature are brought before Congress and heard. We Americans like our system of government best. We have the power to make changes by democratic processes, through proper channels, when we do not like any conditions. As we see the discord, the riots and the bloodshed in many other countries and the comparatively orderly way our men in office are voted for and put in power, its importance to our country's people becomes intensified. All I can think is: "Please, dear God, help us to keep it so, and help me always to realize my importance as a citizen."

Last but not least, what impressed me was our visit to the Tomb of the Unknown Soldier, and Arlington National Cemetery.

It is so difficult to find the words to express my highest, and truest feelings about those crosses, row upon row, and words alone cannot do justice to those who gave their lives for the protection of our freedoms in this land of ours. It gave me a feeling of awe and humble gratitude to be alive in this land of ours. May we only be worthy of their great sacrifices. That is the very least we owe to those who gave their lives for the ideals of the United States of America—religion, life, liberty, and the pursuit of happiness. Help us to keep it so.

Very sincerely yours,

CAROL MARINKO.

The third prize was won by Robert Yacknowitz, Gordons Corner Road, Englishtown, N.J., and his essay follows:

MY TRIP TO WASHINGTON

(By Robert Yacknowitz)

There are many "Washingtons" a person could write about. The Washington Monument, the State of Washington, or Washington, D.C. I do not believe that the students of an eighth grade class, or anyone else, can show his true feelings about Washington by the way he acts or expresses himself. Even limited are words to describe Washington, for the real Washington cannot be seen—the real Washington exists only in the hearts of the people who visit her. The composition I am writing tells about the real Washington.

Washington itself is beautiful, however, there is nothing so great as its atmosphere. Washington is toured best at night, for this is when the atmosphere is the greatest. A person must stop and realize that Washington is the nerve center of a nation full of democratic ideals. This is what gives Washington its great atmosphere. Standing on the steps of the Lincoln Memorial looking toward the Washington Monument, with a breeze rustling through his hair, should make a man stop and think of the wonderful freedom of the United States, for somewhere out there beyond Washington are lands without the democratic ideals of the United States. There are people out there who would give anything to trade places with him. Many people live in fear of a revolution or take part in one and get killed. This is not true in the United States. People in the United States do not worry about their Government. They may live in fear of war, but this fear is not great because the Government that we have is trying to prevent it.

On the bus to Washington there was gayity, excitement, and anxiety, for no one knew what lay ahead. All during the trip there was noise and excitement except when we were told to be quiet. The greatest amount of respect is not shown by silence but it is felt in the hearts of everyone who visits Washington. Even the noisiest people in the group, deep in their hearts feel great respect for Washington.

A person cannot have Washington described to him. To get the true feeling of Washington, he must stand on the steps of the Lincoln Memorial and look at the Washington Monument, wondering to himself what goes on beyond it. He must look at Lincoln himself and wonder if he will stand up. He must come to Washington and get that strange feeling himself. The feeling that comes from the heart.

The fourth prize was won by Roy Daum, Daum Road, Englishtown, N.J., and his essay follows:

MY TRIP TO WASHINGTON

(By Roy Daum)

My trip to Washington impressed me from the minute we reached the city until we left it. It was not only the national buildings that were so beautiful, but the city itself. Alongside of every street there were grass and trees to make Washington look more beautiful to us.

Two places in Washington seemed to stand out among the others. This first one seemed to have special significance. It was Arlington National Cemetery. Here, as we entered we saw rows and rows of graves of soldiers killed in action in the two world wars and in the Korean incident. When we walked up to the Tomb of the Unknown Soldier, something strange came over me. I cannot describe it, because it is beyond words. The tomb was white, with many sacred words carved in the granite. I realized that this soldier, whoever he was, stood for the thousands of men who had not survived the endless battles, and whose bodies had never been found. God alone is the only one who knows the identity of the unknown soldier. The changing of the guards fascinated me. The immense crowd became silent, so silent, that I could hear the distinctive click of the guard's boots hitting the marble floor. It remained silent until the changing of the guard was over. The tomb is guarded 24 hours a day. This was a very humble experience of my Washington trip.

We arrived at the Federal Bureau of Investigation Building on the afternoon of the second day. W were then divided up into groups. Our guide took us on a tour of the building. Here we were shown many of the departments. In this building many of the Nation's toughest crimes are solved. The Federal Bureau of Investigation handles many crimes, from the counterfeiting of money to kidnapping and murder. In this building, also, are the fingerprints of every known criminal in the United States. At one of our stops at the Federal Bureau of Investigation, one of the investigators demonstrated his skill in shooting a 38-caliber pistol and a Thompson submachinegun. I thought that this building was very educational, interesting, and thrilling.

I was very sorry to leave Washington so soon, but I felt that I had learned a great deal about our National Capital. Going through the Capitol Building and Washington Monument made me feel very proud of the country I live in.

U.S. Foreign Policy

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles published in the Washington Evening Star of June 30, 1960; the first written by David Lawrence and entitled "Eisenhower Critics Inconsistent," and the second written by Gould Lincoln and entitled "A Far Cry from Stephen Decatur."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Star, June 30, 1960]

EISENHOWER CRITICS INCONSISTENT—DEMOCRATIC SENATORS WHO DISAGREE WITH HANDLING OF U–2 ARE SCORED

(By David Lawrence)

Has the "prestige" of the Senate Foreign Relations Committee "reached a new low?" The Senate has just been given a report on the U–2 affair which in part is concurred in by some of its Members, while others dissent. It lacks coordination and consistency. Ten Senators—all of them Democrats, including Senator KENNEDY—officially put themselves on record as implying that the President should have lied to the world. Six Republicans and one Democrat insist that it was absolutely necessary for the President to tell the truth.

The same committee's chairman, Senator J. WILLIAM FULBRIGHT, Democrat of Arkansas, after presenting the report to the Senate, alleges that the administration is lying now about certain aspects of the incident. In a speech to the Senate, he says:

"We are told that this particular flight was in a special category; that it was seeking information of extraordinary importance which might not be available later. However, we are not told, even under conditions of the utmost secrecy, what that information was. In view of the sensitivity of some of the other things we were told, this reticence on the part of the executive branch raises the question of whether the informa-

tion sought on May 1 was in fact as important as it has been represented. There is ground here for the conclusion that the alleged extraordinary importance of this information is the administration's cover story for its own costly mistake."

To accuse one's own Government of lying to a Senate committee doesn't seem to bother the Senator, who, in the same speech, also declares that President Eisenhower should have refused to take responsibility for the U-2 business and, instead, should somehow have evaded the truth. For, while Mr. Eisenhower did not really know in advance of the particular flight on May 1, he did give general authorization in advance and said so to the American people and the world. Yet Senator FULBRIGHT says to the Senate:

"The gravest mistake was when the President assumed responsibility for the flight."

Senator ALEXANDER WILEY, of Wisconsin, ranking Republican on the Foreign Relations Committee, and Senator FRANK LAUSCHE, Democrat of Ohio, in a separate report concurred in by five Republican Senators, rebutted this same point as follows:

"Conditions following the May 1 flight having developed as they did, it was unavoidable for the President to make a statement with regard to it. If he had to make a statement, he had to state the truth. Moreover, if he had not told the truth by avoiding personal responsibility, the four demands Khrushchev made upon him in Paris would not have been altered."

But what is puzzling are the contradictions in the main report, which frankly says that "the sort of information provided by the U-2 is of enormous value in assessing Soviet capability to mount a surprise attack," and then argues later on as follows:

"In looking back, if one accepts the conclusion that the failure of the mission furnished an excuse for Khrushchev's wrecking of the summit conference, then, in the absence of compelling reasons to the contrary, there is good reason to conclude that the flight should not have gone."

But the Secretary of Defense says the reasons were compelling and the Senate majority report itself concedes the great value of information obtained by the U-2 flights, which were needed to help protect the American people against surprise attack by the missiles of the Soviet Union.

Possibly the prize example of inconsistency and lack of coordination among the Democratic Members is to be found in Senator FULBRIGHT'S own speech, when he says:

"In any event, my argument is not that the President should not have told the truth; my argument is that he should not, as the head of our Nation, have become personally involved in the incident, one way or the other."

This appears to be one of those distinctions without a difference. For the query will be immediately posed as to how a President of the United States can keep himself from becoming personally involved in any official action taken by his own administration. One can hear already the outcries from the Democrats demanding an investigation of why the President, assuming that he did blame someone else, didn't know in advance what was being done and why he has subordinates who do such things, and so on. Indeed, Mr. Khrushchev would not have been satisfied with such a patent evasion of official responsibility and would have continued to demand the removal and punishment of those same subordinates.

There was a time when the Senate Foreign Relations Committee had considerable prestige. Today its report stands as a glaring example of how to furnish arguments to the Soviets for use on the air waves to try to discredit the United States and to help bring it to a new low in prestige—which phrase an American Senator, chairman of the Senate Foreign Relations Committee, uses in an indictment of his own Government.

[From the Washington Star, June 30, 1960]

A FAR CRY FROM STEPHEN DECATUR

(By Gould Lincoln)

We have gone a "fur piece" down the road since the days of Stephen Decatur, a U.S. naval hero in the early 1800's. It was Decatur, responding to a toast, who said: "Our country: In her intercourse with foreign nations may she always be right but our country, right or wrong." Today it has become popular in certain quarters to decry the President of the United States and the country's intercourse with foreign nations. The chairman of the Senate Foreign Relations Committee, no less—Senator WILLIAM FULBRIGHT, of Arkansas—at a time when this country and President Eisenhower are under bitter attacks by the Communists of Soviet Russia and China, has seen fit to charge that the prestige of the United States is at a "new low" due to the U-2 incident and Japan's withdrawal of her invitation to the President to visit Tokyo.

PLAYS MR. K.'S GAME

Mr. FULBRIGHT'S address to the Senate followed a few hours after President Eisenhower, reporting to the Nation on his recent trip to the Far East, laid the blame squarely on the Communists both for the blowup of the summit conference in Paris and for the riots in Japan which led to the withdrawal of his invitation to visit that country. And he said: "We in the United States must not fall into the error of blaming ourselves for what the Communists do, after all, Communists will act like Communists." He added: "Above all we must bear in mind that successful implementation of any policy against Communist imperialism requires that we never be bluffed, cajoled, blinded or frightened. We cannot win out against the Communist purpose to dominate the world by being timid, passive or apologetic when we are acting in our own and the free world's interests."

The chairman of the Foreign Relations Committee, in his bitter criticism of what he called the "bumbling and fumbling" of the administration, said the country could not "begin to regain our position in the world until we can disabuse ourselves of the habit of self-delusion, of viewing defeats as victories and of advertising blunders as strokes of genius." He went on to say that Adlai Stevenson, another Democrat, had been right in his May 19 statement that this Government had given Russian Premier Khrushchev the "crowbar and sledge hammer" to wreck the Paris conference. And Mr. Fulbright added on his own: "We might even go further and say that we forced Khrushchev to wreck the conference by our own ineptness."

Apparently the Democrats have now elected to make political capital out of the U-2 incident and the withdrawal of the invitation to President Eisenhower to visit Japan. In their efforts to discredit Mr. Eisenhower and the Republican administration, they seem to overlook the fact they are helping to play Khrushchev's own game, which is not only to divide the American people, but to make us appear weak and inept in the minds of our allies. This is not a pretty picture. It may in the end prove mighty poor politics.

Part of the Democratic effort, too, is to belittle President Eisenhower because of his good-will trips to many nations of the world. All their criticism is based on the fact that the visit to Japan did not come off. They overlook the wonderful receptions accorded Mr. Eisenhower when he visited capitals of our European allies, and then later India and other nations of the East, and later still when he toured South America.

President Eisenhower, in his report to the Nation, strongly pointed out that the Communist leaders had come to regard these good-will visits of the President of the United States to the nations of the world as a blow to the Communist drive for world domination. So much had they become aware of this danger, the President said, that they had used false reasons for withdrawing the Khrushchev invitation to the President to visit Russia, and later had gone to great lengths to stir up riots in Tokyo that, in the end, compelled the Japanese Government to withdraw its invitation, too. The President couldn't be righter. Yet his critics in this country insist that these actions on the part of Red Russians and the Red Chinese are to be overlooked because of our own "bumbling and fumbling." How do these Eisenhower critics expect the American people to react to the critics' own blunders?

ATTACKS NOT NEW

Such attacks by Democrats on the Eisenhower administration and its handling of foreign relations of this country are not, in reality, new at all. When the late John Foster Dulles was Secretary of State, the Democratic shout was that we had lost all our friends abroad; that Mr. Dulles was constantly bringing us to the brink of war, and that he was either too adamant or too yielding. Indeed, Mr. Dulles was criticized for constantly traveling about the world on many missions. In those days the same charge was made, that the prestige of the United States had fallen to a low degree. Mr. Dulles died. The expressions of regret coming from our friends abroad were sincere—and they expressed their feeling of loss because of the death of a strong, valiant leader against world communism. We rediscovered, if we did not know it already, that we—and Mr. Dulles—had plenty of friends abroad.

The Democrats will have a tough time, if they try it, making the American people or our allies believe that President Eisenhower has sold them short in defense measures against the Communists, or that he has failed to lead a courageous crusade for world peace.

Upton, Mass., Celebrates 225th Anniversary

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. PHILBIN. Mr. Speaker, the year 1960 will long be remembered by several communities in my district because it is the year when outstanding programs of events were held to mark noteworthy anniversary dates.

A short time ago the city of Marlboro, Mass., conducted impressive exercises to celebrate its 300th anniversary and I was privileged and pleased to be able to attend some of these events. Earlier this week, it was a distinct honor for me to direct the attention of the House to the 175th anniversary celebration of the city of Gardner, Mass. When the Congress reconvenes next month, I will address the House on the 300th anniversary of the settlement of the Quaboag Planation which will be celebrated during September 16, 17, 18 by the towns of East Brookfield, Brookfield, North Brookfield, West Brookfield, Warren, and New Braintree,

all in my district. These towns were formed from the original settlement known as the Quaboag Plantation.

Today, Mr. Speaker, I am proud indeed to bring to the attention of the House the 225th anniversary of the town of Upton, Mass., which will be the subject of a community celebration during the approaching July 4 holiday weekend. While Upton was incorporated as a town in 1735, its history goes back to the very earliest days of American history since it is located in an area where King Philip's War began in 1675 with an Indian raid against a small settlement.

Some researchers say that Upton's history perhaps goes back to even earlier times. A stone cave or hut discovered some years ago in Upton is described as being similar to huts found in Ireland of sixth century Pictic origin. Iceland has similar huts and some investigators have stated that the hut possibly may have been constructed by Norsemen since the Indian tribes in the area were unskilled in masonry.

Many descendants of the original band of early settlers still reside in Upton which comprises some 21 square miles in area with a population of about 3,100. The town was formed from the nearby towns of Mendon, Uxbridge, Sutton, and Hopkinton.

Settlement of the Upton region began in 1717 when Capt. Ebenezer Wood and his family carved a home in the wilderness. Soon former Essex County neighbors and friends joined him and a small community sprung up. The settlement grew slowly because the times were troubled. The constant threat of Indian wars and actual fighting between ominous periods of peace did little to encourage the growth of frontier settlements, but despite all these hazards Upton continued to progress to the point where, by 1730 the settlers felt that a new town should be formed.

The residents were finally successful in their efforts to form a new town on June 25, 1735, and the first town meeting was held on July 28, 1735, in the Sadler homestead which still stands today.

Mr. Speaker, this coming weekend the community of Upton will conduct simple but impressive exercises to mark the town's 225th anniversary. Townspeople will note the progress of 225 years in recalling the accomplishments and deeds of the courageous early settlers. Under the direction of General Chairman Clarence A. Lamson, a devoted anniversary committee has contributed time and effort to work out a memorable community celebration in observance of Upton's 225th anniversary.

The 3-day anniversary celebration opens this Saturday with a bicycle and doll carriage parade, an event which should awaken nostalgic memories among the many who participated in similar enjoyable exercises in past years.

Later in the day the Upton Little League will play the town's bearded men who formed earlier this year the Niagara Bush Association in anticipation of the anniversary celebration. The association is made up of Upton citizens with beards of various sizes and shapes especially grown for the anniversary activities.

Rounding out the day's events will be old fashioned New England bean suppers conducted by individual churches where old and new friends will meet to relive the days and joys of yesterday.

The program of events for Sunday features a pageant of Upton's history in the afternoon, a Little League baseball game, and at night the familiar holiday band concert of yesteryear.

On Monday, the anniversary committee is featuring an old fashioned July 4 parade, complete with floats. A firemen's muster and an anniversary dance in Town Hall are other highlights of the day's events.

The Upton anniversary program, which has been planned for the entertainment of the townspeople and the many visitors from neighboring communities, is truly impressive. One particular aspect of the program, Mr. Speaker, should be signaled out for special mention: it is a simple and dignified program which might well be a duplicate of the programs held to celebrate Upton's 100th or 150th anniversaries—and those are memorable celebrations which can be relived in Upton this weekend.

Mr. Speaker, in recognition of Upton's 225th anniversary celebration, I am introducing today a special resolution extending the greetings and feliciations of the House to Upton on the occasion of this anniversary. I know that my colleagues will be pleased to join with me in paying well deserved tribute to this progressive community in my district and its people who have contributed so much down through the years to the growth and advancement of our great country.

The text of my resolution reads as follows:

Whereas the year 1960 marks the 225th anniversary of the incorporation of the town of Upton, Massachusetts; and

Whereas from the time of settlement in 1728 the people of Upton have figured conspicuously in the founding and growth of this Nation; and

Whereas the observances of the 225th anniversary of Upton is being celebrated with impressive community ceremonies which will attract many visitors to central Massachusetts; and

Whereas Upton is a progressive community rich in historic interest, distinguished for its fervent civic spirit, and faithfully devoted to American institutions and ideals: Now, therefore, be it

Resolved, That the House of Representatives extends its greetings and felications to the people of Upton, Massachusetts, on the occasion of the 225th anniversary of this community and the House of Representatives further expresses its appreciation for the splendid services rendered to the Nation by the citizens of Upton during the past 225 years.

Civic Leader Cites Accomplishments of American Labor Movement

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. PROXMIRE. Mr. President, recently one of the outstanding civic and community leaders in my State of Wisconsin spoke on the accomplishments of labor unions in our State and Nation. I ask unanimous consent, Mr. President that the thoughtful and perceptive comments of Mr. James Megellas, president of the Common Council of the City of Fond du Lac, Wis., be printed in the Appendix to the RECORD. I bring Mr. Megellas' remarks on the American labor movement to the attention of my colleagues, because of his outstanding record of civic and community service.

There being no objection, the speech was ordered printed in the Appendix of the RECORD as follows:

SPEECH OF JAMES MEGELLAS, PRESIDENT OF THE FOND DU LAC COMMON COUNCIL, AT THE ANNUAL BANQUET OF THE SHEBOYGAN COUNTY AFL–CIO COUNCIL AND INDEPENDENT UNIONS

During the year 1959 we repeatedly heard a great deal about what is wrong with labor and charges that unions are too powerful. It is rather strange in view of labor's constructive record that in this day and age there are still people who cling to the notion that America would be better off without trade unions. I say this is utterly ridiculous.

Tonight I would like to talk about "not what is wrong with labor" but "what is right with American labor."

Today there are more than 16 million Americans in organized labor. They are here in Sheboygan, in my hometown of Fond du Lac, in the State of Wisconsin and in America. They work in the shops, they work in the mines, they work in the factories. They work in our forests, they drive our trucks. They operate our railroads. They build our schools and churches. These same people are members of the PTA's churches, civic association, veterans' groups, fraternities, school boards, city councils, and legislatures. They contribute unselfishly in time and money to charitable organizations and drives. They are good citizens. They are the backbone of the country in peace as well as in war.

The labor movement in this country has done a great good for the Nation. The accomplishments of the American labor movement in achieving a better standard of living for workers are unchallenged. As a result of the efforts of American trade unions, workers in this Nation have a higher income, work fewer hours, enjoy more protection and benefits such as pensions and vacations and work under healthier and safer conditions than in any other nation in the world.

Sweatshops have been almost completely eliminated. Child labor has been almost completely abolished. The American worker has achieved a sense of human dignity never before achieved in America or in the world.

I need not remind this group that the labor movement was the first to speak up and fight for universal free public education for all children, regardless of race, color or creed. Labor was among the first to speak up for social legislation. Social security laws, which bring dignity to working men and women in their old age, would never have passed if it had not been for the efforts of labor. Workmen's compensation, the 8-hour day and unemployment compensation are the product of the labor movement. And it has played an important role in lifting the standard of living for millions of Americans who have never even belonged to a union or paid a dime in dues.

Let me quote a paragraph from the preamble to the AFL–CIO constitution, "We shall combat resolutely the forces which seek to undermine the democratic institutions of our Nation and to enslave the human soul. We shall strive always to win

full respect for the dignity of the human individual whom our unions serve."

I am not a member of organized labor myself but I would be proud to be one. I believe that what is good for America is good for labor. I cannot subscribe to the philosophy of what is good for General Motors or big business is necessarily good for America. The welfare, security and the protection of the public interest should and must have priority over the interest of any economic group.

I become quite disturbed when I hear about the so-called power of labor. The public is being led to believe that the trade union movement has become too powerful. We should ask ourselves "too powerful for whom?" "Too powerful for what?" Do labor unions exploit the many for the benefit and enrichment of the few? Certainly not. The direct opposite is the truth. I see no harm in power, if it is power dedicated to human values, if it is power for good—and that is what the trade movement seeks. Yes, labor has used its economic strength to improve working conditions and the standard of living for all Americans, not merely union members.

But this is not the only arena of endeavor in which labor has deployed its forces. Labor has continuously fought against racial and religious discrimination. Labor has been carrying on a drive to wipe out poverty and human misery not only here in America but anywhere it may exist in the world. Labor was quick to recognize the threat of communism in this Nation and has been waging an unrelenting war against communism and Communist infiltration in the labor movement. Under the Red flag there are no strikes, no slowdowns, no absenteeism, no labor problems at all. Neither are there any individual freedoms or liberty.

Yes, organized labor has a record of accomplishments and service of which it can be justly proud.

However, labor cannot rest on its oars. For to stand pat would create stagnation and in effect the labor movement would be moving backwards.

With the turn of a new decade organized labor will be facing new challenges. The challenges of automation and new scientific and technological advances. This decade may very well become known as the soaring sixties. I can envison in the very near future labor producing not only all the needs and requirements of our expanding economy and population but for the free world as well and doing it in a 30- or 35-hour workweek.

The problems of labor and the Nation will then be that of providing additional recreational facilities and educational opportunities for its brothers and sisters. However, no new gains or progress will be achieved without resistance and opposition, for organized labor is not without its enemies. There is no question but that there will be continued efforts to retard the progress of the labor movement in this coming session of Congress. The keynote was sounded in the 1959 session.

Therefore, it is imperative in this year of 1960 that we, members and friends of organized labor assembled here this evening, resolve ourselves to the rededication to the principles and the great tradition of organized labor for the betterment of all mankind.

Address by Gen. Rafael L. Trujillo

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. DORN of South Carolina. Mr. Speaker, one of the greatest men the Western Hemisphere has ever produced is Rafael L. Trujillo. He is a God-fearing patriot who is dedicated to the defeat of atheistic communism in the Western Hemisphere. False rumors have been circulated against him by Communists and their left-wing stooges. General Trujillo is standing like a stone wall against the onslaughts and intrigue of the enemies of our civilization. He needs the support and backing of every loyal American.

We must resist left-wing attempts in the United States to destroy him and turn his great republic over to the followers of Castro and Khrushchev.

Mr. Speaker, I commend to the attention of the Congress the following address by this great and dedicated man:

ADDRESS BY HIS EXELLENCY GENERALISSIMO RAFAEL L. TRUJILLO AT THE OPENING CEREMONIES OF THE ST. JOHN THE BAPTIST INDUSTRIAL, AGRICULTURAL AND LIVESTOCK FAIR, SAN JUAN DE LA MAGUANA, DOMINICAN REPUBLIC, APRIL 19, 1960

Gentlemen, on the 22d of December last, I traveled to San Juan to pay homage to the memory of the heroes who, with their swords, put an end to our wars of emancipation. Today, I have returned to open the St. John the Baptist Fair, held to commemorate another historical event that is the first landmark in the wonderful transformation which, in the space of 21 years, has been wrought throughout this vast part of our homeland.

On the 19th of April 1938, when I was on a visit to this city, I promised the people of the region to raise it to the status of a province. Eight months later, on the 1st of January 1939, there arose in the eastern part of the country, the star of Benefactor Province. This is the happy event we are celebrating here today under the cloak of the name of he who announced the coming of our Lord; proof of our love of progress and of our Catholic piety and devotion.

Recently, I also promised the people of San Juan that by this date, they would be incorporated into the general electrification plan of the country. Within less than 120 days, I have fullfilled that promise.

Since yesterday afternoon, this city now has the electric current it needed and, very soon, with the enlarging of the present industrial and agricultural enterprises and the establishment of others, it will be possible to enjoy the full benefits these will provide.

I am happy to announce that the plan for general electrification will not stop at this city. It will be extended to Elias Piña and to other parts within this city's jurisdiction and I am animated by the hope that this province will contribute to the development of the vital forces of those municipalities which, through their geographical location, most require to be strengthened.

"I believe that if the people have faith in me, it is because they have always seen my readiness to provide them with the greatest possible happiness without thought to whatever obstacles or sacrifices it may be necessary to overcome or to make in order to achieve this. Nevertheless, my task has not been an easy one since there have been many inherited and acquired habits that have done everything possible to obstruct me.

Even now, after a number of years, I find myself forced to face a lack of understanding and the machinations of those who, moved by reasons of spurious personal interests, endeavor to ignore the teachings of history and to restore violence and disorder as methods of government.

All my endeavors were placed at the service of peace, and later, to wage an incessant battle to preserve it and to make it permanent. In order to achieve this, it was necessary to reestablish the rule of law and respect for legally constituted authority, authority damaged by 80 years of separation from constitutional and legal norms.

In order to preserve the peace, it was necessary to eliminate the causes of political unrest by fostering a balance between the social elements that produce that moral phenomenon called peace. Everything that has been done throughout the country in the space of the last 30 years in the various fields of our national activities, everything that exists as material proof of the designs to promote the common well-being, is the miraculous product of that supreme possession called peace.

Anti-Dominican interests abroad have conspired against us and against our peace. But it will be defended with firmness and tenacity because, in my hands, none of the Christian and democratic institutions which form the basis of the Republic, will ever be allowed to perish.

In the midst of a world agitated by the ferment of extremist ideas that preach subversion of everything by means of force, I will continue without letup to fight for the securing of peace.

This St. John the Baptist Fair is precisely an exhibition of the fruits of peace. If the Republic's provinces have been able to assemble here in this magnificent feast of labor, giving proof of the stability of the nation's economy, it is because of the atmosphere of order in which men in the fields of agriculture, industry and commerce have been able to establish and expand their enterprises with assurance and confidence, under a mantle of liberty.

Other fairs similar to this one will be held throughout other provinces as proof of the progress achieved by them during the last three decades, and with the idea of stimulating the feelings of that brotherly harmony which encourages our people in this rebirth of our nation.

It has always been my wish that every Dominican participate in the task of government and that this should be carried out in a spirit of justice. I have called for the collaboration of those whom I believed to be capable of helping to improve the public services, or of invigorating the will for that general reconciliation which has always been outstanding in my political activities, and I have carried official action, without regionalist discrimination of any kind, to every corner of the country, it having been my constant desire that every single Dominican should benefit from the prosperity brought in its wake by the efficiency of the regime I founded on the ruins of the past.

I believe in private enterprise and in the efforts of the individual to produce wealth. In accordance with this conviction, I proposed that an adequate legislation be voted and every institution established that would assist those who dedicate themselves to furthering our economy. The inhabitants of this region, those who have given so much proof of their assiduity and love of peace, may rest assured that at no moment will they ever lack the Government's protection and assistance.

New distributions of land to the peasants; new irrigation canals and the improvement of the existing ones and regard for the storage of whatever water may be necessary, will be carried out for the purpose of opening up new land for cultivation. My land, water and road policy is in force. Land for sowing. Water for irrigation. Roads for the transport of crops.

I call upon everyone to dedicate himself, in the shodow of the prevailing peace, to the noble task of expanding his cultivable land, of improving the conditions of his cattle, of overhauling his methods of cultivation and production and to do everything the light of his intelligence and the strength of his arm may prompt him to do to wrest from the

ground of this fertile valley, everything that may be beneficial to its inhabitants and to the nation as a whole.

Nothing and no one can stop our forward march. My task has the backing of the people whom I have always defended and protected. The victories won in the fight to achieve stability and a respectable position for our homeland, signify the crystalization of the great efforts put forth to overcome innumerable difficulties.

In order to preserve and to enlarge the fruits of these victories, victories that have provided Dominicans with a new way of life, I know I can rely on your loyalty and patriotism. The south has never failed to respond to the call of honor and glory.

Gentlemen, on behalf of His Excellency the President of the Republic, I am now delighted to declare open this St. John the Baptist Fair, eloquent testimony of the fertile working spirit developed in the country and of the profound religious feelings of its people.

The Van Zandt Bill H.R. 12395, Requiring Users of Inland Waterways To Pay a User's Charge Will Serve To Eliminate Unfair Competition Existing in our Nationwide Transportation System

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. VAN ZANDT. Mr. Speaker, since May 25, 1960, when I introduced H.R. 12395, it is gratifying to observe the widespread interest in the proposed legislation.

The bill would establish the Inland Navigation Commission and authorize the provision and collection of fair and reasonable charges for use of inland waterway navigational improvements, constructed, maintained, or operated with Federal funds, and for other purposes.

There is scant opposition to the user charge principle. Presidents Franklin D. Roosevelt, Harry S. Truman, and Dwight D. Eisenhower have all publicly urged the imposition of such charges for the use of publicly provided transportation facilities.

The Van Zandt bill, H.R. 12395, would correct an inequitable situation in the field of transportation arising from the fact that those who operate on our inland waterways have never paid a user charge.

It should be emphasized that users of the federally subsidized inland waterways, built and maintained at taxpayer expense, have never paid the Government anything for either the construction of or operating on these costly facilities. Federal expenditures for navigation on the inland and intracoastal waterways have aggregated more than $2.6 billion and have been increasing rapidly in recent years. Such expenditures have risen steadily from $57.2 million in 1955 to $145 million in 1959.

Mr. Speaker, there is no denial of the fact that barge-line operations on our inland waterways form a mature and financially strong industry. As such, that industry should be required to take its place in transportation, on a self-sustaining basis, bearing its own costs under conditions of fair competition with other modes of transportation. Mr. G. C. Taylor, president of the Mississippi Barge Lines Co., stated before the Subcommittee on Surface Transportation of the U.S. Senate, 85th Congress, on behalf of the Inland Waterways Common Carriers Association, that the common carrier barge-line members handled 24 billion ton-miles of freight in 1957 and collected revenues of $96 million. Mr. Taylor also stated that their rates averaged about 4 mills per ton-mile as against 14 mills for the railroads. An analysis of these nine common carrier barge-line members on the Mississippi River System that reported to the Interstate Commerce Commission indicates that the average rate of return on investment for transportation purposes in 1957 amounted to 16.74 percent of unamortized investment before income taxes and 10.38 percent of unamortized investment after income taxes.

These figures clearly reveal that the barge lines can well afford to pay their own way rather than to continue to expect the overburdened American taxpayers to "pick up the check" for them. Therefore there is nothing to justify annual appropriations year after year from funds paid into the Treasury by general taxpayers.

"Transportation Lines on the Mississippi River System and the Gulf Intracoastal Waterway for 1959," a Corps of Engineers publication, lists a total of 1,012 carriers on these waterways, which are classified as follows: 34 common carriers, 13 contract carriers, and 965 exempt carriers. The latter class is privileged to operate on the waterways without regulatory control, and it assumes no responsibility for public or common carrier service. It is estimated that an additional 230 inland waterway carriers operate on the Atlantic and Pacific coasts, making a total of approximately 1,240 for all inland waterways.

These carriers handled 109 billion ton-miles of cargo in 1958. Assuming revenue or value in lieu of revenue of 4.5 mills per ton-mile, the volume would equal $490 million. These data confirm that inland waterway barge line operations are a large and well-established industry. There is no longer any pretext of justification for these operators, in union with other proponents of navigation projects, to come to the Congress annually asking for, or, in fact, demanding, large appropriations from the Treasury to provide, improve, and maintain waterways which facilitate their commercial operations for private gain at taxpayer expense.

Mr. Speaker, the taxpayers of this country should have long-overdue relief from the burden of financing the ever-increasing demands of the waterway operators and their advocates. They clamor for appropriations from the Treasury not only to cover the operation and maintenance cost of existing navigation improvements, but in addition, the cost of extravagant enlargements and extensions of existing waterways. These users of our waterways also enjoy the benefits from the creation of new projects year by year—all of this with no provision whatever for reimbursement of the Treasury for the facilities and services furnished them by the public. These extortionate demands are always asserted, and justification attempted by a claim of cheap and economical transportation. I ask in all fairness: How can transportation be called economical or cheap when it falls upon the Federal Government to absorb a great share of the cost? How can this transportation be termed economical when the burden is carried by the general tax receipts of the Federal Government and, therefore, by all the taxpayers rather than the users of the waterway and the operators of carrier lines?

The present value of the depreciated federally built structures on our inland waterway system is estimated to be approximately $1.5 billion, with annual operating and maintenance expenses of approximately $44 billion. These expenditures by the Federal Government are pure subsidies. They constitute an outright gift of $1,200,000 with an additional maintenance donation of $35,000 year after year to each and every one of the 1,240 operating carriers. Obviously, these subsidies would not be evenly divided or accrue among the various operators; rather they accrue to a relatively few large corporations and industries that can well afford to pay the full cost of the transportation services and facilities they receive.

Approximately 93 percent of all barge traffic on the Mississippi River system, which includes the mainstem of the Mississippi River and its tributaries, is limited to eight classes of commodities. These commodities are listed below, with the percentage of total traffic represented by each class:

Coal	39.7
Petroleum	27.7
Sand, gravel, and crushed rock	12.1
Waterway improvement materials	3.8
Grains	3.0
Iron and steel manufacturing	3.0
Shells, unmanufactured	1.9
Industrial chemicals	1.3

All other class of commodities produce less than 7 percent of the total barge traffic. This further emphasizes the limited numbers of industries and corporations which gain directly from the ever-increasing Federal expenditures on inland navigation improvements and maintenance.

A user charge of approximately 1.5 mills per ton-mile on cargo vessels and a nominal user charge set up for other craft, would be established under the provisions of the Van Zandt bill, H.R. 12395. My bill would provide adequate revenues to insure that (1) the present useful inland waterway improvements could be equitably amortized; (2) that the operation and maintenance of the inland waterways could be financed; and

(3) that adequate funds would accumulate to provide for the repair and replacement of existing structures and the provision of new structures as required by the waterway users and approved by the Congress. Mr. Speaker, H.R. 12395 will, in fact, free the long-abused taxpayers of this country from an unjust and ever-increasing burden of expenditures for transportation facilities for the advantage of a very limited group. It will place the responsibility for financing these facilities squarely upon the commercial interests who can best judge the economic value of their own demands. In conclusion H.R. 12395 will not impede, but will positively enhance, the efficiency and economy of our transportation system. Furthermore, it will lend dignity and responsibility to the demands of carriers that operate on our inland waterway system. And finally it will be instrumental in eliminating the waste that now exists in our inland waterway navigation programs.

Houston Chronicle Urges De Zavala Homesite Be Saved for State Park

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. YARBOROUGH. Mr. President, it was recently my privilege to call to the attention of the Senate a resolution passed by the commissioners court of Harris County, Tex., asking the General Services Administration to change its plans about selling land adjacent to the Lorenzo de Zavala cemetery and homestead.

De Zavala was the first Vice President of the Republic of Texas and one of the signers of the Texas Declaration of Independence. His family homesite is of great interest to Texans and other Americans and should be preserved as a shrine. But the identity of this historic site will be lost if the GSA sells surrounding adjacent land to commercial interests.

I have asked the GSA to reconsider its planned sale of this property at the San Jacinto Ordnance Depot on August 1, 1960, and am making legislative inquiry into feasibility of introducing a bill to deed a portion of this property to Texas for a State park.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial on this subject from the Houston Chronicle of June 19, 1960, which was headed "De Zavala Homesite Should Be Saved for State Park."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DE ZAVALA HOMESITE SHOULD BE SAVED FOR STATE PARK

An effort to save for posterity one of Texas' most historic spots has been inaugurated by patriotic organizations. It is an effort in which city, county and chamber of commerce should and no doubt will join.

The site in question, rich in history, lies right across the Houston Ship Channel from the San Jacinto Battleground—from the monument and the Battleship *Texas*. There is located the site of the home of Lorenzo de Zavala, vice president of the first government of Texas and a signer of the Texas Declaration of Independence. Not far from the site of the home—which served as a hospital for the wounded of the Battle of San Jacinto—is the De Zavala family cemetery in which that founder of the republic and David Thomas, attorney general of the interim government, are buried.

Speed is essential in the move to save this historic area from becoming industrial property and make it a State park for the benefit of future generations. For the land is a part of the San Jacinto Ordnance Depot, which the Federal Government plans to sell at auction on August 1.

Wednesday night, the San Jacinto chapter of the Sons of the Republic adopted a resolution calling upon Representatives ALBERT THOMAS and BOB CASEY to ask the Government, first, not to sell Tract 26 of the ordnance depot property on August 1, and second, to give a portion of it to the State of Texas for use as a State park.

Other patriotic organizations such as the Daughters of the Republic of Texas and the Sons of the American Revolution no doubt will join the S.R.T. in leading the movement for designation of the area as a State park. Commissioners court, city council, the chamber of commerce and every patriotic and civic group in Houston should join in this endeavor. Wires to Senators JOHNSON and YARBOROUGH as well as our congressmen would help, too.

The homesite and cemetery lie within the point of land between the ship channel and the San Jacinto River. The 10-acre cemetery already is part of the San Jacinto Battleground Park. If the Government would add perhaps 60 acres or so, the entire peninsula could be made a part of the park, or could be made a "De Zavala State Park" blending in harmoniously with the battleground.

On the other hand, if the property were sold and a chemical plant or oil refinery built on it, the beauty and utility of the battleground as a place to visit would be impaired seriously.

This is a project all Houston and Texas should get behind.

Enough Is Enough

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House, I include the following compelling editorial published in the Washington Evening Star of Friday, July 1, 1960:

ENOUGH IS ENOUGH

The State Department's confession that our official policy of "restraint" in dealing with Fidel Castro has been a failure suggests an intention to crack down on the Cuban dictator. We hope this interpretation is correct, for enough is enough. And Mr. Castro's Communist-oriented regime has indulged once too often in the game of biting the hand that feeds it.

This latest nip came with the confiscation of the Texaco oil refinery, whose managers had refused to refine a batch of Russian petroleum shipped to Cuba in a barter deal. More confiscations will follow, and Mr. Castro is threatening to seize all American-owned property in Cuba if Congress finally passes the bill empowering the President, in his discretion, to reduce imports of Cuban sugar.

We trust that neither Congress nor the administration will be intimidated by this threat. It is much too late for any illusions respecting Mr. Castro. He has made a career out of slandering the United States and paving the way for Communist infiltration of Cuba. There is every reason to suppose that he will keep on doing this, and that he will find one excuse or another for confiscating or destroying property owned by Americans. Why should the United States continue to support the Cuban economy and thereby support Mr. Castro? Why should we continue to pay a premium price for Cuban sugar—a price higher than the rest of the world pays—and thereby give Mr. Castro an annual subsidy of $150 million? We hope the sugar bill will be passed, and that the President will not hesitate to use the authority it gives him to lower the boom on the 2-bit dictator who has destroyed Cuban-American relations and who is well on his way toward wrecking Cuba.

Rugged Individualism Versus Security

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Sumter (S.C.) Daily Item of June 27, 1960 entitled "Have We Abandoned Rugged Individualism for Security?" This outstanding editorial points up the need for our people to turn their attention more toward opportunity than mere security.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAVE WE ABANDONED RUGGED INDIVIDUALISM FOR SECURITY

"With some validity it could be said that security has become the 'opiate of the people' in America. You do not get boldness or dedication to public service or even responsible citizenship from those who choose as much idleness as possible as a way of life. They cease to be masters of the state, as the democratic thesis demands: they become its wards. When the citizen accepts the government as his guardian, democracy is in decay."

The above is an extract from an address delivered recently by Dr. Henry M. Wriston, former president of Lawrence College and now president of the American Assembly at Columbia University and chairman of the President's Commission on National Goals.

In his address Dr. Wriston discussed the need of "rugged individuals who like insecurity and will take chances."

"There was a time," said Dr. Wriston, "when the individual was at the core of

our political, religious and economic thought. Indeed, the key to our history is the concept of freedom.

"Somewhere in the 1930's, or thereabouts, rugged individualism became associated with industrial piracy, with defiance of moral checks, with exploitation of one's fellow men. If I may borrow an expression familiar in Britain, when we denounced rugged individualism, we 'threw the baby out with the bath water.' We went too far, for nothing is more obvious than that leadership is a word which describes a quality of individual not of a society."

Dr. Wriston pointed out some of the harm which has befallen this Nation because of the passion for security. College students, he says, are told to aim for certain jobs because there are plenty of vacancies and therefore not much danger of unemployment. They are advised to train for certain vocations because the pay is good, rather than because such employment of one's talent and energies bring intellectual, spiritual and emotional satisfactions. This kind of defensive counsel, the doctor said, will never help to produce leadership.

"A guidance counselor who has made a fetish of security, or who has unwittingly surrendered his thinking to economic determination may steer a youth away from his dream of becoming a poet, an artist, a musician, or any other of thousands of things because it offers no security, it does not pay well, there are no vacancies, it has no future," said Dr. Wriston.

Rugged individualism made this the great country it is and as Dr. Wriston has said if we have abandoned it we have thrown the baby out of the window with the water. Had it not been for this rugged individualism many of our great inventions of today would not have come about. Many of our great men of the past would have been mere men.

Here is another paragraph from Dr. Wriston's talk to which we would direct your attention:

"There is nothing in the Bill of Rights that promises that the freedom there guaranteed can be enjoyed in comfort or in a serene atmosphere. In the long history of freedom discomfort has always accompanied speaking on controversial matters. There never has been a time when there were not social sanctions against candor. But if freedom is to amount to anything, one must be ready to pay the price, when a man speaks out, he must be ready to receive, if not absorb, criticism.

"I am asserting that those who misrepresent the normal experiences of life, who decry being controversial, who shun risk, are enemies of the American way of life, whatever the piety of their vocal professions and the patriotic flavor of their platitudes."

There is so much truth in this statement. Many newspapers of today take no editorial stand on controversial matters because they are afraid of making enemies. It may be a lot more pleasant to write about the birds and the bees but Dr. Wriston says those "who decry being controversial, who shun risk, are enemies of the American way of life" and we are inclined to agree with him. While no one wants to make enemies, yet if one does in the discharge of a duty there should be no great worry over it.

One of the great troubles with America today is that there are too many people who will not speak out. A businessman is afraid to speak out because he fears he might lose a dollar or two in trade, a professional man who is afraid to speak out because he might lose a client, a politician is afraid to speak out because he fears he might lose a vote. And so you have it.

We need more rugged individualism in America.

Resolution of City Council of Philadelphia, Pa.

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. SCOTT. Mr. President, in the rush for recess and the national political convention, which take some of us in the opposite direction, I wish to call attention again to a very important ceremony which will take place in the city of Philadelphia on July 4.

Two great events will be celebrated. The 184th anniversary of the independence of our country, and the formal presentation of the 50-star flag to the State of Hawaii.

It will be my honor and pleasure to make this presentation to my friend and colleague, the junior Senator from Hawaii. We look forward to welcoming him and all others who wish to take part in this historic occasion.

I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the City Council of Philadelphia, inviting all Members of Congress to attend the ceremonies at Independence Hall on July 4.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 59

Urging members of the State Legislature of Pennsylvania and of the Congress of the United States to form a delegation of distinguished legislators to come to Philadelphia to attend the ceremonies on July 4 at Independence Hall

Whereas this Nation observes the 184th anniversary of its independence on July 4, 1960; and

Whereas the city of Philadelphia, where the Founding Fathers created the historic document of liberty, the Declaration of Independence declaring the Thirteen Colonies a free and independent nation, will observe this occasion with appropriate public ceremonies in Independence Hall at 11 a.m.; and

Whereas this celebration will salute the new State of Hawaii and will feature as its keynote speaker the Honorable HIRAM L. FONG, U.S. Senator from the State of Hawaii; and

Whereas a historic moment will be shared at this observance when the 50-star flag, which becomes official on this Fourth of July, is raised for the first time at the spot where American liberty came into being: Therefore

Resolved by the Council of the City of Philadelphia, That we hereby urge the members of the State Legislature of Pennsylvania and of the Congress of the United States to form a delegation of distinguished legislators to come to Philadelphia to attend the ceremonies on July 4 at Independence Hall, as an inspiration to their constituents all over America to join also in the national pilgrimage to this hallowed shrine.

Resolved, That the city representative forward invitations and certified copies of this resolution to Hon. David L. Lawrence, Governor of Pennsylvania; Hon. John Morgan Davis, Lieutenant Governor; Hon. Hiram G. Andrews, speaker of the house; and Hon. M. Harvey Taylor, president pro tempore of the State senate; and to Hon. Sam Rayburn, Speaker of the House of the Congress of the United States; Hon. Carl Hayden, President pro tempore of the U.S. Senate; the Representatives in the Congress from Philadelphia and the U.S. Senators from Pennsylvania, with the request that they bring this ceremony to the attention of their illustrious colleagues.

Two Articles, "A Fighter for Freedom" and "A Life Devoted to Others," Concerning the Tragedy and Death of Milada Horakova and Democracy in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. WOLF. Mr. Speaker, a few days ago I took the floor of Congress to discuss the tragedy and the unhappiness that surrounded the death of Dr. Milada Horakova and to call attention to the 10th anniversary of her death. On June 27, the Brandon Sun, Brandon, Manitoba, Canada, carried two items, both discussing directly and indirectly the question of freedom and what has happened to freedom in Czechoslovakia.

To those who love freedom, to those who fear for the future of democracy in America and other countries now supposedly in the free world, I hope we can take a lesson from the tragedy and death of Milada Horakova and democracy in Czechoslovakia. I recommend the two items for the full consideration of my colleagues:

A FIGHTER FOR FREEDOM

Women's organizations in the United States, Canada, and many other countries of the free world are remembering today the 10th anniversary of the tragic death of Dr. Milada Horakova.

After 10 years the name may not be familiar to newspaper readers. Yet it is a name which should not be forgotten by people to whom freedom is not an empty word, for Milada Horakova gave her life for freedom. She was executed, together with three other Czech patriots, by the Communist regime in Prague on June 27, 1950. A few days later, speaking in the House of Commons in London, Winston Churchill said: "I fully share the grief and indignation which you feel at the cruel judicial murders in Czechoslovakia." And Mr. Ernest Davies added: "I can assure the House that the (British) Government utterly deplore these political trials, which are directed against people who have loyally served the cause of freedom."

Protests against the executions were voiced in the United Nations, in parliaments, by international women's organizations, by prominent men and women all over the world.

Who was Milada Horakova to arouse such response to her death?

No account of her career as lawyer, social worker, parliamentarian, and prominent figure in the political life of her country and in international women's organizations can

do justice to her stature as an exceptional woman, an exceptional human being. In her death she became the symbol of a fearless fighter for freedom not only in her country but around the world.

She first became a "criminal" when, in August 1940, the Nazis had arrested her and her husband for helping persons wanted by the Gestapo, for aiding families of Nazi victims—for helping her fellowmen. Democratic ideals and love of freedom were so deeply rooted in her that she never betrayed them through 5 years of torture, misery, and humiliation of the Nazi concentration camps. Freed by the American Army, she returned to her country and immediately resumed her fight for freedom against the new danger of Communist totalitarianism. She met the Communists at every turn, knew their perfidy and intrigue at firsthand—both in the Women's National Council and in Parliament. Even after the February 1948 coup, when the Reds imposed their dictatorship on Czechoslovakia with all the power of the U.S.S.R. behind them, Milada Horakova did not give up the struggle for freedom and never lost hope.

The Communists took their revenge. Together with a group of 13 patriots, Milada Horakova was given a theatrical trial which was to demonstrate the power of the Red regime and to crush the spirit of those who followed her example of never betraying the cause of democracy and freedom.

Shortly before the Communist court passed the death sentence, Dr. Horakova declared:

"Under the new concept of law we are called traitors, but we still know that if we had freedom of action again, we would act no differently than we have acted all our lives truly serving the noble ideals of liberty, democracy, social progress, and humanity. That loyalty is now considered treason. We stand here unshaken while expecting the severest penalty. In this most trying moment we take strength from the realization that we were not alone in our actions, that our cause will not die with our going. There are men abroad in the free world who will win our battle and prove that our cause was just. I shall gladly accept this punishment, this sacrifice, knowing that it will strengthen others in resisting communism."

It was this rare greatness of spirit which stirred the world 10 years ago and which those who understand its message are commemorating today.

MILADA HORAKOVA—A LIFE DEVOTED TO OTHERS

Born on December 25, 1901, in Prague, Milada from childhood showed a certain talent and determination, combined with a gift of warm human feeling. She could be deeply moved or inspired; enthusiasm was no mere flash for her, but entailed an obligation.

The First World War, liberation for the nation, and the founding of the Czechoslovak Republic came while she was a high school student. After that she studied at Charles University in Prague, and took her doctor of laws in 1926. Even before graduating she started to work with Senator Plaminkova, the leader of the equal rights movement and president of the Czechoslovak National Women's Council.

She married in 1927 and started work soon after in the social welfare office at Prague city hall. For years her chief was Dr. Peter Zenkl, founder of the grand social program and institutions of the capital city, later mayor and Vice Prime Minister. Her closest colleague was Ruzena Pelentova, director of the welfare department, for whom she headed the legal section.

Milada's daughter was born in 1933 and brought daily joy to her heart, for she was as fine a mother as she was a lawyer and public servant. Politics was not her interest until after the Second World War; she did not even join a political party at first, though she later joined the National Socialists, founded on the principles of President Masaryk and led by Eduard Beneš.

Dr. Horakova soon won recognition in both the women's movement and the city welfare department. She worked with Senator Plaminkova on a number of laws establishing complete civic equality for women in all fields. In social work, she specialized in legal protection for children, their health, and guidance. These efforts took her abroad to frequent conferences; she was active in a number of international organizations and was elected to responsible offices in several. She spoke French and German, and was a good public speaker.

Milada Horakova's strong personality led to outstanding service during the cruel Nazi occupation; the loss of national independence was a challenge for her to underground work. In the resistance group called PVVZ-UVOD she worked on drafts for the legal reconstitution of the Republic beside many dangerous and responsible assignments. The Gestapo finally arrested her and her husband in the summer of 1940 and imprisoned them until the end of the war.

Those were years of constant degradation, tyrannous inquisition with physical torture in Pankrac Prison in Prague and Terezin Fortress. None of this broke her, however. Instead, she became a ministering angel to fellow prisoners, and many are the lives she saved through clever intellectual duels with their tormentors, her utter courage in unbelievable physical exploits. In October 1944, she stood before the Nazi Superior Court in Dresden and heard the state prosecutor demand the death penalty, followed by the judges' sentencing her and a large group of Czechs to 8 years' imprisonment. That saved her from the worse fate of extermination camp, but nevertheless of the 41 convicted with her, only 11 lived through to the end of the war.

Horakova was in prison at Aichach in Bavaria in May 1945 when the American Army liberated the region and she returned to her family in Prague. She lost no time in starting to work again. First she was elected president of the Women's National Council to succeed Senator Plaminkova, who had been executed by the Nazis on June 27, 1942. Then she entered national politics, was elected to the Provisional National Assembly and then to the Constitutional Assembly. These and many other positions she accepted with a complete sense of responsibility and devotion. "My life has been returned to me as a gift," she said, "and I am obliged to devote it to others. I shall go straight along that road."

Knowing her ability and wide popularity, the Communists attempted to win her over to their side before "the inevitable victory of the revolution." She refused every approach, resigned all public offices, and went underground again in the struggle to regain national liberty.

The Red regime arrested her on September 27, 1949, left her in prison for 9 months without contact with counsel or the outside world. When brought with 12 others before a people's court of one judge and two party henchmen, but no jury, it was apparent from the cynical attacks by the prosecutor and shameful articles in the press that the purpose of the trial was to portray the accused as "enemies of the working class." That was ironical after Horakova's life as a social worker among the poorest of the poor, and after innumerable laws initiated by the Socialist Party through the years specifically to protect and raise the standard of living of the working class.

Throughout the trial Milada's character shone through that gloomy courtroom as a beacon of courage and indestructible patriotism.

The 1959–60 Budget

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. KEATING. Mr. President, the Federal budget for fiscal year 1960, which ends at midnight tonight will show approximately a one-half-billion dollar surplus. This is almost double the $217 million surplus which was estimated at the beginning of the current fiscal year. It reflects a moderate decrease in Federal expenditures and a rise in tax revenues somewhat greater than that originally estimated by Treasury Department officials.

This sizable and important budgetary surplus is more than just a statistic. It represents the fulfillment of a pledge by this administration that every possible effort would be made to keep Federal expenditures in line, and to see to it that increased expenditures are compensated for by increases in the tax revenues.

The President's position is clear cut. He believes that responsible government depends upon and must be geared to sound fiscal and budgetary policies. Looking to the future, it is necessary that we not only balance the Federal budget—but that we go one step beyond this and achieve a surplus—especially in prosperous years. The need for a surplus is imperative in order that the day will come when we will cut down our Nation's herculean $285 billion Federal debt.

In my mind, the Federal budget is something of a barometer of fiscal and governmental soundness. Although by no means an exact or even highly sensitive indicator, it nevertheless guides us as to whether we, as a nation, are pursuing policies which in the long run will keep our Nation strong. Furthermore, it also tells us something about the impact of government in our society and in this way gives us a clearer and better picture of our overall national economy.

Admittedly we cannot and must not worship at the "holy grail" of a balanced budget. We must examine our needs and understand the potential of the Federal Government to deal with them in terms of dollar and common sense. The budget, as a measuring device, helps us to do this.

The 1960 fiscal year half billion dollar surplus, for all of the reasons which I have indicated, is an important and significant achievement. I am delighted today to call it to the attention of the Senate and ask that an excellent editorial from today's New York Times be printed in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 1, 1960]

THE 1959–60 BUDGET

When the Nation's fiscal year 1959–60 came to an end yesterday the Treasury was able to report that, in round figures, its receipts for

that year had exceeded expenditures by $500 million. There were intimations that when the final tabulation has been completed, in a fortnight or so; the figure may reach $600 million.

A surplus of $600 million in a budget of $77 billion is impressive or unimpressive, depending upon what one takes as a basis of comparison. This surplus, for example, is the smallest of the three achieved during the Eisenhower administration, which began in fiscal 1953–54. The two others, which came in fiscal 1956 and fiscal 1957, were both of the same general magnitude, roughly $1.6 billion, or approximately three times the dimensions of the surplus just reported. As a matter of fact, there is a widespread feeling that under sound budgetary precepts the prevailing economic conditions during 1955 and 1956 should have produced considerably larger surpluses than the $1.6 billion of those earlier years when the budget was in black ink.

Regardless of whether the 1960 surplus turns out to be $500 million or $600 million, it will remain a major accomplishment for those who recall the skepticism that greeted President Eisenhower when he set a balanced budget as the basic objective of fiscal policy a year and a half ago. The country had slipped into a deficit to the extent of $1.5 billion in fiscal 1958, and when Mr. Eisenhowever, in January, 1959, announced his determination to return to a balanced budget by 1960 the country was in the midst of what was to prove the deepest plunge in red ink in its peacetime history. When the final results for fiscal 1959 were in they showed that budget receipts had fallen to $68 billion, the lowest figure since 1956, while expenditures had soared to $80.9 billion, a total that exceeded that of 1953, the peak year of the post-Korean rearmament boom, by $6.7 billion and contrasted with the low point for spending under the present administration, the $64.6 billion to which it had been reduced in fiscal 1955.

The decision of the President on this occasion came at a time when the predominantly Democratic Congress was in little mood for economy. But it came at a time when it struck a tremendous response with the public. In this week's budgetary figure we have the answer to the question: "Whose views prevailed on that vital issue?"

An Opportunity for the Good Neighbor

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a letter to the President from a recent issue of the Washington Daily News and a letter of thanks from Mr. Persio C. Franco for the open letter to the President be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AN OPPORTUNITY FOR THE GOOD NEIGHBOR

DEAR MR. PRESIDENT: Chile is suffering a great catastrophe. Thousands have died in earthquakes still rocking the southern part or the Republic. Thousands more will die, undoubtedly, from injuries, hunger, and exposure, because it is so difficult to get food, medicine, clothing, blankets, and emergency shelter to them fast enough, and in adequate quantities.

Conservatively, about 10,000 persons are homeless. Some estimate 50,000, and even more. Seasons are the reverse of ours in the Southern Hemisphere, and winter is setting in there. It is cold and rainy. Frosts and freezing weather are due.

The Red Cross is doing its utmost, but it has no plenary powers to cut redtape and order all facilities available to the United States to be put to use in this emergency.

Aware of this, you have already sent our military planes and helicopters to deliver emergency rations and medical supplies. Twenty-four cargo planes today began transporting two Army field hospitals with 420 doctors and nurses, from the United States to Chile.

But this is a truly great disaster, and much, much more is needed, and will be needed for many months.

After the hot coffee and the inoculations, after the emergency rations and field medical care, thousands of Chileans will face a bitter winter, roofless in an area sparse of extra living space, and with their means of livelihood smashed.

If a disaster of such magnitude struck a country even as big, rich, and well organized as ours, it would still require a major national effort to alleviate the suffering it would cause.

The Chilean Government is doing everything it can, but it cannot call up nonexistent resources.

Mr. President, you have already exercised your powers as Commander in Chief to help our friends in Chile. As Commander in Chief, you can, we believe, do even more.

Our military forces have in storage vast quantities of blankets, tents, and rations

The Agriculture Department has enormous quantities of surplus food.

The Navy has ships.

Supplies held by various Government bureaus could be loaded, for instance, on fast flattops, if you just pass the word, as Commander in Chief.

By off-loading the planes (as was done a few years back when the aircraft carrier *Franklin Delano Roosevelt* visited Chile), a big cargo of much needed material could be taken to Valparaiso, or perhaps even to Puerto Montt, which is closer to the disaster area.

This is the kind of help that will be most needed, not only for the next few weeks, but in the bitter winter months ahead, and it is the kind of help that only the United States is equipped to give promptly.

It goes without saying that Chile knows the United States is her good neighbor, just as we know that Chile is ours.

However, the United States has been the target of an incessant propaganda all over South America. Millions of persons there believe that our country is indifferent to their human needs. Many believe the anti-Yanqui propaganda they hear—that greed alone motivates our actions.

Recently you caused to be made public an exchange of letters with Chilean students, who asked you not only about the attitude of our Government toward the Government of Cuba, but also about our policies toward Latin America in general.

In the reply to these students, which you helped to prepare, you spoke also to all of Latin America.

In getting all possible aid to Chile as quickly as we can, your actions will speak as loudly as your words, and will refute the slanders carefully spread by those who would destroy the good will and the solidarity of the Americas.

MOVED BY MESSAGE TO IKE ON CHILE

Your open message to President Eisenhower "An Opportunity for the Good Neighbor" concerning the present terrible catastrophe in Chile has moved me to tears. It is a magnificent expression of human compassion.

It reminded me of Ella Wheeler Wilcox's immortal words: "The truest greatness lies in being kind." I will frame that page of your newspaper to hang in the sitting room of our humble home.

PERSIO C. FRANCO.

U.S. National Purpose

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. McDONOUGH. Mr. Speaker, the United States of America is a nation dedicated to the principles of national freedom and the recognition of the importance of individual rights and personal liberty.

Our Nation is founded upon these principles, and since the United States emerged from the American Revolution as a free nation, Americans in every generation have fought and died to preserve American independence and to maintain individual liberty for our citizens.

Today there are some who have expressed grave concern over what they term our lack of national purpose. Mr. Stanley U. Roberts, editor of the Wave Publications of Los Angeles, Calif., has met the challenge of those who doubt our national purpose in a stirring editorial which is especially appropriate on this eve of our celebration of Independence Day, 1960.

Mr. Roberts' editorial which follows is a timely and inspiring message to all Americans clearly defining our heritage of individual liberty from which emerges our national purpose:

Take aim: Whether it is known as a purpose, an aim, a goal, or by any other name, candidates, national magazines, metropolitan newspapers suddenly have become concerned over what they have branded as our lack of a national purpose.

When he spoke at baccalaureate services for this month's crop of graduates from the University of Southern California, the Rt. Rev. James A. Pike, bishop of the Protestant Episcopal Diocese of California, pointed out that "it continues to look as though our only purpose is to save our own skins," and if this continues, we will have less than our competition.

The speaker predicted that a national purpose will become vividly evident again when more individuals "have a clear and sound personal purpose and actively manifest it in public affairs."

It may be merely a matter of degree, but all of these publications and individuals appear to have lost sight of the fact that this Nation, and the citizens who comprise it do have a national aim, one that probably is the most radical and idealistic in the history of nations.

That aim is cited in the Declaration of Independence and the preamble to the Constitution of the United States of America. Its safeguards are spelled out in the 10 amendments to the Constitution which are known as the Bill of Rights.

There is a tendency to believe that the intervening 184 years since the signing of

the Declaration may have made the thinking in the three documents obsolete. It is true that forms and technology have experienced broad and sweeping changes in that time, but history in the memory of the present generation shows that there has been no change in the fundamental forces that drive men. The powers which might have been vested in kings in 1776 today are in the hands of dictators.

The inspiration which induced the Founding Fathers to form a radical government dedicated to the preservation of individual rights and freedoms is as important today as it was then. Today's greatest witnesses to this are not those individuals behind the Iron Curtain who never have known any real freedom, but those citizens of formerly free countries which have succumbed to the modern dictatorship of Russian communism.

This could have been the "clear and sound purpose" to which the bishop referred at the baccalaureate service.

There certainly could be no finer goal than the preservation of the most radical form of government in history, once known as the "American dream" because it is dedicated to the individual and his rights.

The United States and its citizens do not lack a purpose. We do need a never-failing realization that we have had the finest through the entire history of our Nation and that is is worth keeping at any cost.

Economic Growth—I

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. CURTIS of Missouri. Mr. Speaker, the Wall Street Journal, of Thursday, June 16, 1960, carried a feature article by W. Allen Wallis "Catch Phrase of the Day: Though Economic Growth Includes Real Issues, It Masks Dubious Political Aims—United States Leads Russia," which I desire to bring to the attention of my colleagues. It follows:

CATCH PHRASE OF THE DAY: THOUGH ECONOMIC GROWTH INCLUDES REAL ISSUES, IT MASKS DUBIOUS POLITICAL AIMS—UNITED STATES LEADS RUSSIA

(By W. Allen Wallis)

(Mr. Wallis is special assistant to President Eisenhower and executive vice chairman of the cabinet committee on price stability for economic growth. This article is excerpted from a speech made to business and financial journalists.)

Unparalleled improvement in material levels of living, though dramatic, is far from the most important part of the story of American economic growth.

Two other features are even more significant: first, the nonmaterial benefits of economic growth, in the form of improvements in the quality of our life; and, second, the broad diffusion of both material and nonmaterial benefits to all the people.

Growth is not an end in itself. We do not live to grow; we grow to live better. And we do live better, not only by consuming better but also by working under better conditions.

Economic growth has provided us with leisure to enjoy the fruits of our efforts and to engage more fully in a richer variety of cultural and recreational pursuits. It has made possible higher levels of education and enlarged opportunities for creative activity. It has greatly widened the choices open to the average citizen, and it has given him vastly increased opportunities for developing and utilizing his individual capacities. It has given new dimensions to individual dignity and endeavor. In short, our economic growth has brought us more and better means of satisfying our wants, and it has also brought us better wants.

Throughout history it has been taken for granted, as it is taken for granted in many parts of the world today, that the inescapable lot of most of humanity is to live out their lives in toil, misery, ignorance, and disease. A unique feature of our economic growth has been the broad sharing of progress among all groups. We represent the nearest approach to a classless society.

What we tend to take for granted may well prove transitory unless we understand the sources of our past economic progress.

Economic growth is one of the catchphrases of the day. Behind the phrase there are, to be sure, real and important issues; but they are not simple issues. Economic growth is difficult to define and more difficult to measure.

Generally, people think of economic growth as an increasng supply of goods and services. This is all right as far as it goes, but it doesn't go very far. As population increases, a larger supply of goods and services is needed to maintain a constant level of output. An economy may get bigger—or "grow" in an absolute sense, perhaps even as a world power—without adding to individual welfare. Obviously, growth must involve rising levels of per capita output if it is to mean increased welfare.

But this is not all. Growth in any meaningful sense must mean not just more things, but more things that are useful and that people want. Evolution in the composition of output is as much a part of economic growth as is expansion of the volume of output. Similarly, if growth is to be meaningful the output must be well distributed.

FREE CHOICES

In our economy, changes in the composition of output reflect the free choices of the people, and the valuation of the output reflects the values placed on goods and services through voluntary purchases and sales. Private output conforms to choices made in the market, and public output to choices made through political processes by freely elected representatives. In a centralized economy, both private and public output reflect the choices and values of the authorities, and the values placed on goods and services also represent authoritarian decisions. There is no valid criterion of the extent to which the nominal growth achieved by a centralized economy is meaningful growth in terms of the aspirations and desires of the people.

Clearly, true growth must refer to economic welfare. This means we must consider not only goods and services but nonmaterial aspects of growth. As our productive capacities have risen, we have chosen to take part of our growth in the form of leisure and improved working conditions.

If the concept of growth is complex and elusive, as I have been trying to indicate that it is, the problem of measuring growth is fearsome. Not only do we lack adequate data, but the qualitative and nonmaterial aspects of growth are impossible to quantify.

Six of the most common gages of economic growth are the percentage rates of increase in real gross national product, that is, gross national product adjusted for price changes; real gross national product per capita; industrial production; output per manhour worked; output per unit of labor and capital combined; and real disposable personal income per capita.

Before considering what each of these gages appears to show, let us consider certain major shortcomings that seriously limit what any of them really show. These ubiquitous flaws, which create troubles for anyone trying to compare growth rates between countries or between times for a given country, are: deficiencies of data, vagaries of valuation, aberrations of averages, and treacheries of timing.

About the deficiencies of data I will say little, except that the basic figures on gross national product or industrial production even for this country—and ours are the best in the world—involve liberal use of estimation and guesstimation, of interpolation and extrapolation, of approximation and adjustment.

The valuation problem I have already alluded to. The list of things produced includes such heterogeneous products as apples, nuts, bolts, cloth, appendectomies, tractors, missiles, financial writing, and speeches. To measure the list by a single number it is necessary to put a value on each item. In a market economy, we can value most things by prices people voluntarily pay and accept.

Even in our economy, however, a large and increasing share of output is governmental, and can be valued in terms of things used up. But just using up something by no means guarantees that an equal value is created; sometimes it is more, too often it is less.

The magnitude of the valuation problem is shown by the comparatively simple problem of comparing Russian gross national product with ours. The two lists of products must be valued by the same prices, otherwise the comparison will reflect differences in prices, not just differences in gross national product. If Russian prices are applied to their output and to ours, our gross national product is nearly four times theirs. If American prices are applied to the outputs of both countries, we are only twice their size. Russian gross national product is commonly described as 40 percent of ours. This results from splitting the difference.

Averages can be tricky, and every one of the growth measures is an average of divergent rates of growth prevailing in different parts of the economy. It is possible, for example, for the overall average to go up even if every separate part is constant or even declining.

To see that this is possible, suppose that a country has half its economy in agriculture, and that growth is slower in agriculture than in the other half of the economy (both these things are true of Russia). The average rate of growth for the whole economy will be halfway between the rate for agriculture and the rate for nonagriculture. Now suppose that the economy changes, and the nonagricultural segment is larger than the agricultural. Even if the rate of growth stays the same in both agriculture and nonagriculture, the new average rate of growth for the whole economy will be nearer the nonagricultural than the agricultural rate, and therefore higher than before.

AGRICULTURE'S RATE

This kind of thing is in fact happening in Russia. In the United States, on the other hand, the opposite is happening. Agriculture here has an extraordinarily large rate of growth, so we are able to shift resources into things like services where growth is slower; and this pulls down the figures on our average rate of growth.

Another affliction of our measures of growth is the problem of a proper timespan, whatever criterion is used. Likewise every kind of growth, economic growth proceeds at an uneven pace. Measurements must be made at times far enough apart to average out seasonal, cyclical, and erratic fluctua-

tions. They must, for example, cover a full business cycle as an absolute minimum, and preferably several cycles. Measurements of growth must begin and end at comparable cyclical stages. A fictitiously high rate will result if we start at a cyclical trough and end at a peak, or a fictitiously low rate if we go from a peak to a trough. Peak to peak measurements are best, for peaks of successive cycles trace the course of economic growth in fairly smooth and regular fashion.

These limitations on proper time periods prevent making—honestly—a number of comparisons in the period since World War II that would be interesting. In that period there have been only three peaks, 1948, 1953, and 1957 and the middle one, 1953, was the peak of the Korean war boom. Thus, there is one and only one period that meets the requirements for a meaningful measurement of growth; namely, 1948–57.

While some politicians have presented comparisons of the growth rate from 1947 to 1953 with that from 1953 to 1959, this can only be described as unwary, unwise, or unscrupulous, for 1947 was a war reconversion trough, 1953 was both a war peak and a cyclical peak, and 1959 was a year of expansion but neither a trough nor a peak. Such unwise, unwary, or unscrupulous comparisons naturally invite other politicians to compare growth from 1945 to 1952 with growth from 1953 to 1960. On one basis, the rate of growth in real GNP is double in the earlier period; on the other basis, it is double in the later period. You pick your party, then you pick your periods; and so you prove that your party has done twice as well as the other party.

The treacheries of timing are especially hazardous in comparing growth rates of different countries. For the United States, 1948 to 1957 is a valid peak-to-peak period for measuring growth. For some other countries, however, it may be a peak-to-trough or trough-to-peak period.

JUDGMENT AND SKILL

All these difficulties mean, not that measurements of growth are futile and fruitless, but that to interpret them requires considerable care, skill, judgment, objectivity, and sophistication about both economics and statistics. Since this audience has those qualities, let's proceed to survey the principal measures of growth, paying particular attention to the recent record in relation to the long-term record.

Real gross national product from 1909 to 1957 grew at an annual compound rate of 2.9 percent per year. The longrun growth trend has been fairly stable in spite of large departures above and below it. Between 1948 and 1957, the annual rate of growth in total real production was 3.8 percent, somewhat higher than the longrun rate.

Real GNP per capita. From 1909 to 1957 the annual rate of increase in real GNP per capita was 1.5 percent. From 1948 to 1957 the rate was 2 percent per year, again somewhat higher.

Industrial production, as measured by the Federal Reserve Board Index, increased from 1919 (when the index begins) to 1957 at an average annual rate of 3.7 percent. Between 1948 and 1957 the annual rate of increase was 4.4 percent, a little higher, but within the range of statistical variation that characterizes this series.

Real private output per man-hour worked increased from 1889 to 1957 at an average annual rate of 2 percent. From 1948 to 1957 the rate was 3.1 percent, or about 50 percent higher.

Real output per unit of labor, and capital combined, useful as a measure of overall efficiency, increased from 1889 to 1957 at an average annual rate of 1.7 percent. From 1948 to 1957 the annual rate of increase was 2.4 percent, about 40 percent higher.

Real disposable personal income per capita measures the income available to individuals, after taxes, to use as they please. The annual rate of increase from 1929 (when the data began) to 1957 was 0.6 percent, a rate pulled down by depression and pushed up by war booms. From 1948 to 1957 the average annual rate of increase was 1.9 percent, despite high taxation and rapid population increase.

Even this brief look at the record shows the falsity of careless allegations that our economy is slowing down.

The issue of economic growth has entered the arena of contemporary politics through a course which has characterized many issues in the past quarter of a century. That is that after we have gotten over the hill by private endeavors, and are on our way at a brisk pace, urgent demands arise that the Government expedite and direct us.

Characteristically, individuals, private institutions, or general social forces break the paths and provide the initial momentum. Once the vision of an important goal gains currency, and once we are on our way toward attaining it, suddenly we become impatient for a magic carpet to put us there instantly. Our impatience is exploited by those promoting various political schemes.

Much of the current emphasis on economic growth is of this character. All sorts of plans are put forth under the banner of growth, with little or no analysis of the way they might promote growth—except growth in Federal spending. The same spending plans, on the other hand, are often described as reason for wanting growth.

The fact that too many of the considerations raised in discussions of growth cannot be taken seriously should not blind us to the fact that there are a number of important considerations that merit close examination.

The Soviet threat is one of these.

The Soviet threat is real and has many points of thrust. It would be perilous to underestimate the danger. But how is it related to our own economic growth? Some people fear that the Russians will "catch up" to us someday and so fulfill the Khrushchev boast about burying us. Others fear that rapid Soviet growth will increase Russian military potential so greatly as to jeopardize the free world's defenses. Still others fear possible adverse "demonstration effects" of rapid Soviet development—that underdeveloped and uncommitted nations will turn to communism as a way of achieving national strength, politically and economically.

First, it should be pointed out that we have a commanding lead over Russia in terms of both total and per capita output. Even if Russian growth rates continue higher than ours, the absolute gap between us will continue to increase for some time to come.

Second, we don't know how large the gap really is—except that it is large. As was mentioned earlier, international comparisons, even if we had good data, are a difficult and unrewarding business. We don't know whether Russian GNP is one-half of ours or one-quarter of ours.

MISLEADING COMPARISONS

Third, international comparisons of rates of growth can be even more misleading than comparisons of levels of output. The Russians, starting from a lower economic base and in a period of postwar reconstruction, should be expected to have a fairly high percentage rate of expansion. Moreover, they are able to take over the accumulated technology already developed and exploited elsewhere. Furthermore, they are transferring masses of people out of low-productivity employment in agriculture to industry with its more highly valued output per man-hour. They still have approximately 50 percent of their labor force in agriculture; we have only about 8 percent. Our employment is expanding in services, where improvements in output per man-hour are slow and limited. In other words, Russian growth is more rapid because they are still in the area where improvement is easy and the way has been shown, whereas we are more heavily involved in the difficult tasks of expanding productivity in medicine, journalism, education, engineering, and other services.

In short, there is no possibility that the Russian economy will overtake ours, at any time in the visible future—certainly not in this century.

Unmet social needs is a slogan we hear these days as a call for accelerated growth. According to this argument if we grow faster we will be better able to provide a greater variety of public services and to eliminate what we now regard as poverty.

One of the more pretentious versions of the needs argument is that we have shameful public squalor in the midst of vulgar private opulence. This argument has a strong authoritarian smell, an odor of desire to enforce the advocates' tastes on others through governmental machinery.

The argument about public squalor would be laughed out of court if confronted with the facts of the past decade on construction of schools, improvements in teachers' salaries, superhighways built, increases in the support of research, expansion in aid to the needy, diseases conquered, urban redevelopment, hospitals built, or indeed almost anything else. Growth in public services has been enormous in the past decade. The unmet social needers resort to pointing out plaintively that we don't yet have everything that they think we should want, and to lamenting that private opulence dulls interest in social revolution.

The public squalor argument is, in fact, simply this decade's battle cry of socialism, which—intellectually bankrupt after more than a century of seeing one after another of its arguments for socializing the means of production demolished—now seeks to socialize the results of production.

The real growth imperatives arise from the fact that a strong economy is a growing economy. An economy with a high per capita income such as ours generates a large volume of private saving which must flow into capital accumulation if the economy is to sustain itself. In other words, the continued vitality of the system requires growth.

But beyond such technical matters, we desire growth to promote our private ends and national purposes. It is that simple; we want growth because it enlarges the opportunities of our children, because it expands our capacities to pursue goals of our own choosing, because it increases the range of choices open to us, because it is a rewarding outlet for our creative energies and imagination, because achievement invigorates and stimulates. In short, through economic growth we lead richer and fuller lives.

Moreover, we desire growth for the preservation of our way of life. By continued growth we demonstrate to ourselves, and perhaps to the world, that our system of free enterprise and representative government is indeed strong and able to fulfill rising aspirations and to enhance the dignity of free men. We need to grow to demonstrate that our system is not headed for inevitable collapse, but will survive even in a world of oppression and hostility.

For a variety of reasons there is general agreement that economic growth is an important goal of economic policy. But growth is only one of several major goals of economic policy.

Economic freedom, stability of employment, stability of the general price level,

economic efficiency, and economic security all are important. Properly conceived and pursued, economic growth is compatible with all these other goals; but it becomes incompatible when pursued too ardently or by inappropriate means. Policies to promote growth or any other goal must reflect a compromise among competing goals.

Growth entails certain costs, and attempts to achieve greatly accelerated statistical growth rates may be costly in terms of human hardship. New machines may reduce prematurely not only the value of old machines but also the value of human skills acquired through long training and experience. New products may reduce the incomes of those producing old products. New industries in new locations may uproot homes and communities near old industries. Unless the costs of economic growth are equitably distributed, it is only reasonable to expect strong resistance to growth and its accompanying changes.

SOVIET COMPULSION

To get high rates of growth through more rapid capital accumulation means that people must save more, either voluntarily or by compulsion. In the Soviet Union people are forced to sacrifice current consumption and liberty to meet targets of capital formation imposed by the authorities. As much as Americans want economic growth, compulsions and depressed levels of consumption are costs which they would not willingly pay except in dire emergency.

The underlying forces that promote national economic growth are basically the same as those that account for the economic progress of individuals. An individual's desire for a higher and more secure standard of living for himself and for his family is the basic stimulus. To this end he studies, plans, works, saves and invests. He searches out new ways of doing things, and develops new techniques and processes.

Hence, one of the most effective means of stimulating economic growth—and at the same time one of our fundamental objectives in seeking economic growth—is to provide expanding opportunities for every individual to realize his own potentialities to the utmost and to open wider vistas for his children; to encourage initiative, independence and integrity; to preserve and enlarge the moral worth of the individual; and to approach more closely to our ideals of personal freedom, justice and fairplay, broad and equal opportunity, the rule of law, and mutual respect and charity.

Growth requires a flexible and adaptable economic system with freedom to experiment. New industries must spring up, and others must decline. New methods must be accepted and old ones discarded. Labor and capital must shift easily and cooperatively in response to economic rewards and penalties. The combination of an abundant flow of new ideas, a willingness to take risks, and the speedy adoption of successful new methods is a condition for a high rate of growth.

TRANSLATING NEW IDEAS

The translation of new ideas into practical processes is speeded by a high rate of saving, through which new equipment can be financed and put into use. Saving also contributes to growth even where new methods are not involved, since it makes possible a larger stock of plant and equipment, housing, and other physical capital, which add to our potential supply of goods and services. In this way, the prudence and responsible foresight of people in providing for future needs makes an essential contribution to our growth.

The future chapters of our story of economic growth are still to be written. We can be confident that these chapters will be happy ones if we have the wit and wisdom to preserve and strengthen the forces of progress that have produced in America an abundant economy, a great nation, and a free people.

The Legal Dispute in Virginia

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. THURMOND. Mr. President, there are actions now pending in the Federal court in the State of Virginia to force the reopening of schools closed to avoid integration. Let us hope in this instance that the court does not engage in its all too frequent practice of amending the Constitution in order to decide this case. The stakes in this legal dispute are extremely high. On June 27, 1960, there appeared in the Greenville News, a newspaper published in Greenville, S.C., an editorial entitled "Stakes are High in Virginia," which clearly illustrates the far-reaching effect of the pending decision. I ask unanimous consent that this editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STAKES ARE HIGH IN VIRGINIA

Southerners determined to resist forced integration of the public schools will anxiously watch two interrelated events in Virginia.

Soon a Federal court will act on a move by Negro leaders to force the State to reopen closed schools. The court has been asked to require the State to operate the schools whether it wants to or not and to operate them on an integrated basis.

But the vast majority of Virginians seem determined both to resist this action and to support the operation of private schools where they are desired by local school patrons.

Fundraising campaigns are underway now in Prince Edward and Warren Counties and in the city of Charlottesville for the support of local private schools. The amount of money needed for the operation of these schools is not small. The Prince Edward School Foundation seeks $300,000, the Charlottesville Educational Foundation Building Fund is asking for $250,000, and the Front Royal Academy, in Warren County, seeks $350,000.

We hope these goals are reached and oversubscribed. The success or failure of these efforts to provide education on a private basis as an alternative to forced race mixing will be anxiously watched throughout the South and the Nation.

If the fundraising effort is successful, we may well see the birth of something like an educational revolution. The trend for too many years in education, as in other sociopolitical affairs, has been away from the local level and toward centralization. A certain amount of concentration of effort, the pooling of purchases and the like, as in Greenville County, is necessary and beneficial. But carried to extremes, as it has been in many areas, it quickly becomes detrimental.

It is even possible that some change will be made in the direction of the educational process itself. The new schools, if they come into being, will have to be operated modestly and without some of the frills that the National Education Association and organized education generally have laid so great stress on in recent years. Without these distractions, perhaps it will be possible for the teachers to restrict themselves to teaching.

Equally feverently we hope that the action to force Virginia to open and operate integrated schools will fail. This point has been a key in the South's struggle to avoid indiscriminate mixing of the races ever since the Supreme Court's antisegregation decision of 1954.

In that decision, the Court ruled that States may not operate schools and admit or reject applicants solely on the basis of race. It did not hold, and no lower judge has interpreted it as having held, that a State must operate schools or must operate them on an integrated basis.

The Court has said what a State or its agencies cannot do. It has not yet said what it must do. There is a vital distinction between the two and one that is important not only to education but to the philosophy of government itself.

As the Richmond News Leader put it the other day:

"It is vital that this principle be preserved. If Federal judges are permitted to twist the Constitution around, so that the Federal judiciary may affirmatively require States and their subdivisions to do particular things, the last vestige of a Federal Republic will have been scrapped.

The courts might with equal validity attempt to compel the States to operate efficient prisons, or efficient colleges, or efficient sanatoria, or efficient mental hospitals, or efficient maternity clinics."

The stakes are high in Virginia. What happens there will affect us in the South immediately and the entire Nation in the long run.

Need for a Branch Post Office at Hollis, N.Y.

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. HALPERN. Mr. Speaker, I present for appropriate reference a petition from a number of residents of Queens Village and Hollis, N.Y., in respect to the construction of a branch post office at the intersection of Francis Lewis Boulevard and Hillside Avenue in Hollis. The proposal is designed to remedy a serious deficiency in postal facilities in the area, and I urge that the petition be favorably considered. Under unanimous consent I include the petition in the RECORD at the conclusion of my remarks:

Hon. SEYMOUR HALPERN,
Member of Congress,
Washington, D.C.:

At the present time there are more than 10,000 people who cannot buy a postage stamp, register a letter, get a money order, or send any parcel post packages in our area with which you are familiar because the Hollis Post Office is from three-quarters of a mile distant and the Queens Village Post Office nearly 2 miles. In a first class post office district there should be a finance station or a branch post office installed for the reason that people, especially with children, cannot travel that distance without cars and since nearly all of the cars used during the day they cannot go to the post office at night

because the post office is closed. The revenue which should go to the Jamaica Post Office is being sent to Brooklyn, N.Y., Flushing, and Long Island City.

Please do what you can to see that a finance station at least is put into operation in the vicinity of Francis Lewis Boulevard, and Hillside Avenue to serve its patrons. The station could very well be called Hollis-wood, N.Y.

Shirley W. Traxler, Margaret Manning, Cecile Gold, Eleanor Pollock, Helen O'Brien, Ann Niklas, S. P. O'Halloran, Ruth Tompkins, Alice Bender, Patricia Mandel, Ruth M. Storch, Florence B. Rubin, Rhoda Gelman, Patricia Scudillari, Simone Trozzo, Margaret Morrow, Alice Pennuci, Jane Geist, Jeanne Janecki, W. Mayman, Morton Pickman, president, Hollis Crest Corp., Parkway Crest Apts., Inc.

Plight of U.S. Carpet Industry

EXTENSION OF REMARKS
OF
HON. B. EVERETT JORDAN
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. JORDAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech made yesterday by Mr. Herbert L. Shuttleworth II, president of the American Carpet Institute, at a meeting of the institute here in Washington. I hope all Senators will taket he time to read this enlightening address on the alarming effects increasing imports are having on the U.S. carpet industry.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We have a gravely serious problem facing us. Despite our making full use of the peril point procedures, which Congress wisely put into the Reciprocal Trade Act, rates of duty have been successively lowered over the years. You can readily see that following each reduction the volume of imports has risen sharply. The increased imports have been the direct result of lower prices. The average per square yard invoice value of imported Wilton and velvet carpet this year is $3.42, to which approximately $1 is added to cover handling and duty for a total of $4.42 per square yard. This competes with our average wholesale per square yard value of $7, a difference of about $2.60 per yard. The reason for lower prices on imported carpets is primarily one of lower labor costs, which apply not only to the direct manufacture of carpet, but to indirect costs, such as buildings, supplies, raw materials, transportation within the exporting country, taxes, fringe benefits, and many other factors which are essential in arriving at the total cost of manufacturing.

Neither the Belgian nor Japanese industry has made any contribution to product development or product styling. Both industries have taken the best selling styles, colors, and textures established by the American industry. This is another reason why the effects of the import competition have been so pernicious. Imports have acted as a serious price depressant in most major markets.

Prior to World War II there was a 60 percent ad valorem in effect. At that time less than 200,000 square yards of carpet were imported into this country. Based on actual imports during the first quarter of this year, you will note that 10 million square yards will come into our market this year.

Belgium and Japan are the chief exporters to this country. Neither of these nations depended upon our American market prior to World War II. Belgium had a carpet industry prewar, but it has grown significantly during the past several years. Up until World War II there was no Wilton and velvet industry in Japan.

I point this out to you in order that you can fully appreciate the fact that Wilton and velvet carpet imports are a new commercial phenomenon and do not rest upon an historical industrial pattern in world commerce. It is significant to note in this respect the current emergence of the Japanese industry.

I quote briefly from a consular report, a copy of which is available for you if you would like it. It is dated September 22, 1958:

"The Wilton and velvet carpet industry of Japan obtained its start from orders placed by U.S. forces stationed in Japan after World War II. Exports to the United States were undertaken with the departure of the troops, beginning in 1955, and have grown from 270 square feet in that year to over 3,500,000 square feet in 1957."

"The same report also stated that the Japanese producers, under the 'Administrative Guidance' of the Ministry of International Trade and Industry * * * have voluntarily agreed not to increase their productive capacity for Wilton and velvet carpeting."

Testimony before the Tariff Commission in 1958 also indicated that the Japanese industry would not grow beyond its then capacity. Events since that time have proven such representations to be utterly without foundation. Japanese imports increased 230 percent in 1959 and continue to grow this year.

In 1958, when imports had actually reached 12 percent of domestic production and there seemed to be absolutely no limiting factors on the horizon to halt, or slow down, the rate of import growth, the industry instituted action under the escape clause provision of the Reciprocal Trade Act. After extensive investigations by the Tariff Commission and week-long public hearings, the industry was denied relief by a vote of three to two. Apparently the majority of the Commission felt that the industry was not being seriously injured at that time, nor was it threatened with serious injury. Both "actual" injury and "threatened" injury are mandatory for the Commission to consider under the law, as you gentlemen enacted it. It would seem, in this instance, that the majority was wrong in their opinion which was given in January 1959—particularly with respect to our industry being "threatened" with serious injury. Under such circumstances, we can only ask, "What constitutes a 'serious threat'?"

You will note that in the short space of 1 year imports have grown from 12 percent of domestic shipments to 23 percent of domestic shipments. During 1959 imports rose 52 percent; during the first quarter of 1960 they rose 60 percent over 1959.

It now has become unmistakably clear to our industry that we must have relief from import competition or we are, simply stated, doomed to extinction.

The industry currently is seeking relief under article 28 of the GATT Agreement. This article clearly provides the privilege for any GATT participant to modify or withdraw previously made concessions before the expiration of any 3-year period, beginning on January 1, 1958. The current period of so-called firm vitality expires December 31 this year. We believe this is an entirely proper means by which our Government can afford some relief to our industry. It is certainly the best means for immediate correction of an intolerable situation.

If article 28 of the GATT Agreement means what it says, it would seem our industry would present a classic case to be dealt with under the provisions of the article.

The concessions made by our Government were made when Belgium was the only major exporting country. Belgian labor costs average approximately 39 cents an hour, which compare with an average labor rate in our industry of $1.75 per hour. Japan is now a major factor in this situation, and their average wage rate is 19 cents an hour.

The volume of imports in yards and dollars and the volume of imports in relation to domestic production have both drastically changed since the last concessions were made.

The general level of the economy in Belgium and in Japan has materially improved since the last concessions were made.

We believe that our industry is entitled to the following:

Imports, at the current 21 percent ad valorem rate, should be limited to 5 percent of domestic shipments.

On imports above 5 percent a duty of 40 percent ad valorem should be imposed.

If it is felt desirable that the initial 5 percent should be allocated among exporting countries, our industry has no objection to this being done.

We feel this is an equitable solution to our problem which will enable the domestic industry to grow and prosper, will not deny a fair share of the market to importers, and will allow importers to participate in the growth of the domestic market.

We earnestly solicit your support and assistance in helping us convince the President that our Government should comply with our request to modify the concessions now in effect on Wilton and velvet carpets. We also would be most grateful for any suggestions you may have which would enable us to accomplish the fair and equitable program that we are endorsing.

What Has Happened to the American Pioneering Spirit?

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the RECORD an editorial column entitled "Across the Editor's Desk," written by Dick Hanson, that appeared in the magazine Successful Farming in the June issue.

He raises the question upon which all should deeply contemplate: "What has happened to the American pioneering spirit?"

Those are not his words; but it is clearly the question in his mind, which should be in the mind of all of us, when he calls attention to the fact in the last sentence of his editorial:

The pioneers hit the trail expecting hard work, while today too many taking the Washington trail expect to get out of it.

Indeed we need a revival of the American pioneering spirit. That is what

made this country great and strong. It is the way to keep her great and strong.

The editorial follows:

ACROSS THE EDITOR'S DESK

(By Dick Hanson)

Years ago, groups of Americans packed up their families and household goods and headed west. These people were the leaders of what a few years later was to become a great movement. Why did these people go into this vast, unmapped wilderness? There were many reasons, but the main attraction was opportunity. Opportunity was there if a man had the foresight and the strong hands to seize it. These people wanted to be independent, masters of their own destinies.

Today, there is another movement of Americans—but in the opposite direction. This movement is to the east and the end of the trail is in Washington, D.C., the seat of our sprawling Federal Government. One reason for the movement is the same as it was for the pioneers—opportunity. But there the resemblance ends. The opportunity is of a different nature and the strong hand that seized opportunity in the West years ago seems now to have been replaced by many descendants with hands turned palms up.

It is an amazing and almost frightening experience to visit Washington today. With little effort, you will discover that great numbers of people are there for only one reason—they have a problem and they want the Government to solve it for them. It is just that simple.

I have sat and listened to many groups discuss their particular problems. Too many times these discussions are ended by someone proposing that a representative delegation go to Washington and ask for help. So, the delegation travels east only to discover that the idea of having the Government solve their problem is not a unique one. They immediately run into countless other delegations who are also asking Government to solve their problems.

Somewhere along the line, many people have gotten the idea that Washington holds the answers and that all you have to do is turn over your problems to big Uncle and he'll solve them. Representatives from agriculture are not alone in this belief. All segments of our economy are involved, some far more than others.

Strange as it may seem to some people, our Government did not originate the phrase, "It is more blessed to give than to receive." How often have you heard, "If I don't get my share, someone else will?" This is certainly not an attitude that is conducive to solving problems, yet it is the attitude of many individuals and groups of individuals today. They want something for nothing—the prize without the price. There is an idea that the Federal Government does things with "free money"—that if Uncle Sam does a job it doesn't cost anything.

Is it old fashioned or naive to believe that maybe a little more work and a little less running to Washington might solve some of these problems? Admittedly, Government can and should help, but there is a difference between helping and doing the entire job. Government should do those things that we can't do for ourselves, or in cahoots with our neighbors. I have been in countries where the government does make all the important decisions for its people. It was not pleasant.

The trail to Washington gets wider and deeper each day, just as the pioneer trails did with the movement of people west—but again, there is a difference. The pioneers hit the trail expecting hard work, while today too many taking the Washington trail expect to get out of it.

Wisconsin Military Hero and Civic Leader Pays Tribute to War Dead

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. PROXMIRE. Mr. President, I am proud and happy to have an opportunity to call to the attention of my colleagues a speech delivered at a Memorial Day observance in Sheboygan Wis., by Mr. James Megellas, president of the Common Council, Fond du Lac, Wis.

Mr. Megellas is particularly well-qualified to speak on the day set aside to honor our Nation's heroes, as he is one of Wisconsin's most decorated war heroes. During World War II he received the Distinguished Service Cross—America's second highest decoration for gallantry—and the Silver Star with Oak Leaf Cluster, Bronze Star with Oak Leaf Cluster, the Purple Heart with Oak Leaf Cluster—twice wounded in action. In addition, he was the first American ever to receive the highest decoration of the Government of Holland, and was honored by the Belgian Government, receiving the Belgium Fouragere. Gen. James Gavin chose Jim Megellas as the outstanding officer of the 82d Airborne Division.

I ask unanimous consent, Mr. President, that this speech by Mr. Megellas be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered printed in the Appendix of the RECORD as follows:

SPEECH OF JAMES MEGELLAS, PRESIDENT FOND DU LAC COMMON COUNCIL, FOND DU LAC, WIS., ON MEMORIAL DAY, 1960, AT FOUNTAIN PARK, SHEBOYGAN

It is a great privilege for me to be with you in Sheboygan today to participate in your Memorial Day observance. I consider Memorial Day as the outstanding patriotic day of the year.

Today throughout the width and length of our great Nation, grateful Americans have gathered in every city, village, and hamlet just as we are gathered here in Sheboygan to pay tribute to the heroes who fought and sacrificed in the wars of fredom and self-preservation of our young and great Nation.

It is only fitting that on this day we should honor those gallant Americans who lost their lives in order that this Nation might live. It is only fitting that we should recall the hardships they endured and the sacrifices they made. For they died in the prime of life forsaking the opportunities and the joys of the years ahead of them.

They died on forcign soil never again to see the land they loved so dearly, never again to see their families and their loved ones. They died that the rest of us might live and develop our highest hopes and dreams.

In speeches all over the Nation today, speakers will be extolling the virtues and courage of our departed comrades. They will be reminding us how they gave their lives for their country. On this last point I must disagree with those speakers. For contrary to public belief they did not give their lives for their country. But instead it was taken from them. Any combat veteran will tell you this. They valued their lives just as highly and dearly as we value ours. The self-preservation instinct is probably the greatest instinct in man. We have all seen how an animal when cornered will fight for survival with its last ounce of energy. And so it was with our departed comrades, for they knew only too well that to be of the greatest service to their country they had to stay alive so they could fight on.

However, they knew full well the personal dangers involved and they accepted these dangers no matter what the odds. For they knew theirs was the righteous cause. The history of our Nation is replete with acts of heroism. Many times men volunteered for missions from which there was little or no chance to return. Yet when the going was the toughest the harder they fought for survival. They were fighting against not only enslavement for themselves, but for freedom for all mankind.

Let us ask ourselves today, what kind of men were these fallen heroes? They were the cream of our manhood. For, of necessity, fighting wars is a young man's task. It requires the utmost physical stamina and mental courage. They came from all walks of life; from the farms, factories, offices, and shops. But regardless of where they came from, they had one common trait—unselfish devotion to their country, their comrades and God. To these men we must dedicate ourselves to that cause for which they gave the last full measure of devotion.

Today as we go out into the cemeteries to place flags on the graves of our departed heroes, their voices will be ringing out in the still air; "be vigilant, lest that which we endured and experienced should happen again to others." Were they able to speak to us this is probably what they would say: "Feel sorry not for us for we have found everlasting peace in the House of the Lord, while your struggle is a never ending one."

It was once said that the Lord would bestow freedom and liberty only upon those who were willing to fight and sacrifice for it.

The struggle for survival of this Nation has not been an easy one. From the first days of the American Revolution, through the entire history of our Nation, many Americans have sacrificed, fought, bled, and died to perpetuate the concept of the equality and dignity of man. It was during one of our darkest days in the desperate struggle for independence, when General Washington at Valley Forge, with a comparative handful of tattered, half frozen, hungry, and poorly armed patriots decided to cross the Delaware River and attack the British at Trenton, that Thomas Paine, a great American wrote:

"These are times that try men's souls, the summer soldier and the sunshine patriot will in this crisis shirk from the duty of their country, but he who stands it now deserves the love and thanks of man and woman."

The United States is not the product of a series of lucky coincidences. It was founded by people who chose to fight to gain their freedom. Until the establishment of the United States, no nation had ever been "conceived in liberty" or "dedicated to the proposition that all men are created equal." America was the crowning achievement of innumerable men and women, most of whose names never got into history books, who with painstaking labor and incomparable fortitude wrought from the hopes and dreams and experience of the ages the first edifice of government truly fitted to the dignity of the human spirit.

The concept that government is made for man and not man for government is an idea which not even yet has touched the lives of countless millions throughout the world. America was founded upon principles of freedom and justice stemming from a sin-

cere belief in the honor and worth of each individual. Back in the stirring days of our Declaration of Independence, of Valley Forge, and the writing of our Constitution they were very precious and personal principles, and they had first place in the lives of our people.

Freedom is not like a prize that can be won for all time and locked away as a perpetual treasure. It must be earned anew each passing day. It is a living thing that must be constantly nurtured by toil and sacrifice. Democracy is not like a granite statue which stands completed when the sculptor has smoothed away the last rough spot. On the contrary, it is like a ship that needs constant attention by every officer and member of the crew to keep it in repair and moving steadily forward, weathering the rough buffeting of every storm, wind, and wave.

America has a glorious past. We derive inspiration from countless examples of men and women who have made our Nation great. However, we do not belong to the past. This country of ours is a forward-looking Nation whose living history is being made from day to day. It has broader horizons today that its founders probably never dreamed of, new problems to be solved, new challenges to be met. Its strength is the strength of forward-looking patriotic citizens, standing together, each with an indispensable job to do, and the character and courage to do it.

Today our cherished America is once again in danger and once again preservation depends upon our meeting the challenge and our willingness to make sacrifices for our individual rights and liberties.

Let us understand what communism is by looking at the record—a tragic record of oppression, deceit, and corruption. Oppression of the human body, deceit of the human mind and corruption of the human heart.

How can we reconcile communism with our way of life when we recall these tragic events:

The anguish of Heartbreak Ridge, the tortures and brainwashing of the prison cells, and the death marches of North Korea and Red China.

The ruthless suppression and the butchery in Hungary and East Germany.

The rape of Tibet and the creation of turmoil in the Middle East to deprive those poverty stricken people of an opportunity for democracy.

The attempts to infiltrate and destroy the legitimate governments in South America and in the case of Cuba, using the Castro revolution as a steppingstone for their aims of seizing power and control in the Western Hemisphere.

Two of the greatest threats confronting the American people today are apathy and complacency. Complacency toward the threat of communism and the failure to understand what it is and what it does to people. Only by understanding communism can we rid ourselves of the disease of complacency that eats away at our determination to face up to this diabolical menace.

In these days of the cold war in which we are involved in the greatest ideological struggle of all time, too many of us are being lulled to sleep on the sweet notes of a false security.

I cannot help but recall on this occasion another opportunity I had to speak to a gathering of Sheboygan citizens at Kiwanis Park last Labor Day. Labor Day 1959, was on the eve of the Khrushchev visit to America. I would like to repeat my remarks of that day. I said that we were making a colossal blunder in inviting Khrushchev, the "butcher of Hungary" to this Nation to extend him the hand of friendship. While the leaders of many cities were extending a cordial welcome to this tryant, I emphatically declared that he would never be welcome in Fond du Lac unless he and the Kremlin would agree to the reunification of Germany and to grant an opportunity for self-determination to 900 million human beings enslaved under the Red sign of the hammer and sickle. While there had been an agreement on exchange of visits between our President and the Russian Premier it is now obvious in light of recent developments at the ill-fated summit conference that Khrushchev never intended to play host to our President in Russia.

I merely make this point to further emphasize that we are dealing with a cunning, ruthless, and intensely dedicated and devoted Communist that has violated every treaty and agreement to which the Communists have affixed their signature. We must realize that we are not dealing with gentlemen, but with atheistic materialists, who have been taught by their god, Lenin, that every kind of deception must be used to further Communist conquest of the world and to destroy our democratic way of life.

I would be remiss in my role as speaker on this Memorial Day observance if I did not remind you of the responsibility we have as Americans to perpetuate the great principles of human right and dignity for which so many gallant Americans died. If we do not now meet this responsibility we will be losing faith with the men we are honoring today.

As individuals we must awaken to the obligations and duties of citizenship at this time when other freemen look to us for leadership. We must recognize we are citizens first and that selfish or special interests of any group within the framework of our democracy must take second place. We must fully understand the nature of the threat to our security and freedom and that this threat is by no means limited to the military sphere. Selfishness, softness, and complacency can be just as deadly to our future as any lack of military power. The crises of these times demand patriotism of the highest order. If the American people understand this fact, I have no doubt that we will meet the challenge and threat of communism and demonstrate that the strength of freemen is far superior to that of any system based on human slavery.

Let us then, on this Memorial Day rededicate ourselves to the great democratic principles for which millions fought and died on foreign battlefields throughout the world to preserve.

And let us remind ourselves, too, of the other millions who today carry the scars of war upon their bodies and their minds. There can be no better time than on this Memorial Day of 1960 while we are paying homage to our war dead for us to resolve that the cause for which they endured and died shall not have been in vain.

Advertising: The World's Nonsecret Weapon

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp., at the convention of the Advertising Association of the West, held at Mexico City, Mexico, on June 27, 1960:

ADVERTISING: THE WORLD'S NONSECRET WEAPON

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., convention of the Advertising Association of the West, Mexico City, Mexico, June 27, 1960)

When my good friend and colleague Felix Coste, abetted by Chick Collier and Hugh Smith, dangled before me the prospect of a visit with you I assure you I did not hesitate to accept.

The opportunity to meet personally with you people who are playing such an indispensable and vital role in our economy, and to have this take place in this beautiful city which I know so well and where I have so many friends—is something I have been looking forward to with keen pleasure.

Now I want to compliment you, individually and as a group, for the remarkable economic progress which has taken place in the area you serve—the Pacific coast area. Last year you led the Nation in sales by a good margin. Your consumers have 23 percent more motor vehicles per capita than the rest of the country. Supermarket sales alone averaged 23 percent greater than the rest of the country. Your energy, ingenuity, and imagination are responsible in a major way for this record. And, above all, you have rooted your great contribution in truth, community responsibility, and a professional pride which has recently brought you national admiration. Truth—the policy and practice of truth—comes before everything else. Certainly, you can't have community responsibility and professional pride without truth.

One of our great international advertising agencies, McCann-Erickson, Inc., has for many years identified itself in all languages with a slogan with which I am sure our Central and South American friends are familiar: "La Verdad Bien Dicha"—"The Truth Well Told." And this represents a way of business life to which at least 98 percent of the people in advertising thoroughly subscribe.

I think that the interests of the people for whom we work and the interests of the people we work with around the world will best be served in this coming decade if we remember one very simple precept that this is: To let the truth shine through in all things that we do.

Truth is the most powerful force that we have to build with in the years ahead, and, if need be, it is the ultimate weapon with which we will safeguard that which we will build.

Now, let's take a look at marketing communications and the business of advertising as a standard bearer of truth throughout the world. Let's take a look at it from the businessman's point of view as well as from the politician's point of view.

Politics and advertising have this in common, that they thrive best in a free society where both are subjected to the continual harsh light of publicity, claim and counterclaims, criticism, and opposition. About the only difference I see between the two is that a politician is a little bit like a banker. A banker draws up a statement at the end of his fiscal year—a politician subjects himself to the approval of the public every 2 or 4 years, as the case may be. But with a piece of merchandise and with advertising, every day is election day, and every product and every advertisement is continually and completely subject to the verdict of public opinion. In both cases it is truth and character that stand out.

If we look over the field of famous trade names, the ones that are permanent are the

ones that have been truthful and honest, that year in and year out have given full value for the dollar. If you stop to think of the amount of faith the average buyer puts in the merchandise he buys in the American market today it is the finest possible tribute to the veracity of the American printed advertising word. If you look at the politicians the world remembers, from Washington, Jefferson, Jackson, Lincoln, and Cleveland down to our own day, it is not the clever and expedient whom we remember but those who were known in their day for their stubborn addiction to the truth.

I do not know what your concept of a politician is. Perhaps it is erroneous as my own idea of an advertising man used to be. I used to think that advertising men were long-haired artists who dreamed up ideas. Perhaps you think a politician is an adroit character who spends his time glad handing in a smoke-filled room. But just as in advertising the harsh reality of sales results weeds out the opportunist in favor of the statesman who renders a public service.

Let me give you a definition of politics that I have carried with me for a quarter of a century, written by Andrew Oliver in Boston more than 150 years ago. It goes like this: "Politics is the most hazardous of all professions. There is no other in which a man can hope to do so much good to his fellow creatures—and neither is there any in which, by a mere loss of nerve, he may do as widespread harm. There is not another in which he may so easily lose his own soul, nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all its temptations and degradations that beset it, politics is still the noblest career any man can choose."

With the change of a few words that would be an equally good definition of advertising.

We hear a good deal of talk these days about the need for advertising censorship and regulation. I know of no field that needs regulation less or that has disciplined itself more. There is no governmental body whose wisdom could be as great or whose discipline could be as harsh as that of the open competitive market. If we stop to think about it, competition functions in much the same way as His Majestry's loyal opposition or as a minority party. State an untruth, be it ever so small, and your competitor is quick to point it out and to force you to correct it. Here and there a fly-by-night may publish an exaggeration and before competition and the public have time to catch up with him he will be gone. But the permanent manufacturer who represents 98 percent of the products we live by has long since learned that truth and honesty in advertising are the only policy that enable him permanently to live with his public.

To return to the economists who have been in government in past years, some of whom are still around, they are still writing books and articles. And they still cannot agree among themselves. I am thinking now of several examples. One of these has written a book which has had a lot of attention. In it he concludes that the American people are much too well off. They have not only all that they need but all that they want. And also that they have a lot of things that they not only don't need but that they should not really want at all. They are just too darned prosperous.

When I read points of view like this I ask myself what, then, has humanity been working for all these centuries, if it has not been to provide an increasing number of people with the comforts—yes, luxuries, if you will—which make our sojourn on this planet a pleasurable experience. I am not one of those who believe that prosperity is the inevitable companion of social deterioration. Nor do I believe that you have to be hungry to be religious or destitute to be honest.

I do get worried about the future of our way of life when I hear zealous propagandists attempting to seduce our people into an attitude of disdain for the sweat, the noise, and the nonartistic aspects of business.

You talented and energetic people in advertising are the master builders of this better life we are enjoying today. You must not only defend it at home but seek to promote it abroad.

That is why I think it is especially propitious that we meet here in this gracious city, one of the great world capitals today. Your Pacific coast area has strong historical and cultural associations with the lands and the peoples in Central and South America. Why should it not be your special task to cooperate with our Latin American friends in the development of higher standards of living through advertising?

It is apparent that our freedom-loving Latin American friends must deal with the same antiquated Marxist attacks on advertising as we must combat at home. Everywhere there is an urgent need to create a greater public understanding of the fact that advertising reduces rather than increases the cost of products through its stimulation of increased sales volume. And that increased sales volume and increased competition result in product improvement. The really dramatic benefits of this process descend to the people advertising serves—the mothers and fathers and children who find job opportunities expanding, while their lives are made longer, healthier, and happier.

Now I suppose you are aware that the Coca-Cola Co. has been doing a lot of advertising and merchandising and selling for some time—starting in 1886 in Atlanta with outdoor advertising and since then employing all major media at home and abroad. We are especially proud of the fact that with few exceptions Coca-Cola bottling plants abroad are owned and operated by citizens of the country where they are located. People directly and indirectly employed by the Coca-Cola Export Corp. outside the United States would total approximately 6,500. I know the story is the same in the foreign operations of countless American companies.

We at home need this interchange of business just as our neighbors need it. One of the many great developments which will take place in the sixties will be the consolidation of international economies. Foreign business will become an increasingly important factor in the successful operation of American companies, as well as of foreign companies. The world is indeed getting smaller; communication by message and travel is wearing down national boundaries.

Advertising will be crucial—I will say indispensable in the expansion of free world prosperity. If you men and women in advertising do your job honestly, truthfully and with a sense of world responsibility, you will be serving your country in a way comparable to our most effective diplomatic effort.

Equipped with these percepts, advertising is made to order for international communication. With its advantages of picture and symbol, it can transcend language and social barriers. With picture and symbol it can talk to the hearts and minds of men in ways that words, however useful, cannot equal. There is a saying in Spanish: "Ojos que no ven, corazon que no siente." It means, "When the eyes do not see, the heart does not feel." The wisdom of these words can be our inspiration. All over the free world modern merchandising methods, like self service supermarkets, are leapfrogging from centuries-old ways into the mid 20th century. Think what this means in terms of the responsibility of advertising to establish package identification, brand image, and corporate image.

One important admonition: If advertising is to bring its benefits to ourselves and our neighbors, we cannot work by remote control. We need to go into this job with nothing less than missionray zeal. We must study and absorb the culture and the history of the countries we are dealing with. We must develop proficiency in their languages. We must do what we know is the most effective kind of selling and public relations: we must make calls. We must integrate with those people we wish to sell and influence. We need also to devote serious attention to the development of more trained personnel among the nationals of the countries we are serving. There is a need for more well rounded advertising men and women in our neighboring countries. This will probably require an investment on our part, but it should be undertaken on a program basis of sufficient scope to insure a steady buildup of advertising and merchandising know-how throughout the free world.

This coming decade will produce pressures such as we have not yet felt or even envisioned in our conduct of world trade. Therefore, unless we do stick to certain fundamental principles and communicate these to other people adequately, we will lose the privilege of leadership that the world has grown to look to us for.

Marketing communications, the practice of which is in your hands, is an invaluable part of this privilege leadership. You, as its practitioners must use it wisely. It is for you to communicate the truths of sound business practice that we as a nation have learned and have pioneered, as well, over the years. It is for you to communicate that business must be allowed to make its own unfettered judgments. It is for you to communicate that the individual must have right to make his own free choice.

These are the freedoms that have made us what we are as a nation. We are by no means perfect. But this system of ours has produced more for all, more of what makes for happiness, and culture, and peace, and order, than any nation has in all history.

This liberty, the last best value given to man on earth. This is the truth that is ours—mine and yours. Value it, cherish it, protect it and let it shine through in everything you do.

The Real Bigotry in U.S. Politics

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. THURMOND. Mr. President, the June 29, 1960, issue of the News and Courier of Charleston, S.C., contains a column of editorial correspondence which I feel particularly merits the attention of the Congress. It is entitled "The Real Bigotry in U.S. Politics," and it was written by the able and distinguished newsman and author, Col. W. D. Workman, Jr., of Columbia, S.C. I ask unanimous consent that this excellent column be printed in the Appendix to the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Charleston (S.C. News and Courier, June 29, 1960]

THE REAL BIGOTRY IN U.S. POLITICS

(By W. D. Workman, Jr.)

Democrats and Republicans on the national level piously condemn bigotry in politics, but they continually practice it under the guise of seeking minority votes.

It is negative bigotry which they condemn—bigotry which reflects an obstinate intolerance of Catholics, of Negroes, of Jews, of labor unions, or of any other readily identifiable group. Such antipathies, the great men of politics declare, are un-American.

Yet do they not practice bigotry of an affirmative sort when they seek out and solicit the political support of precisely such special groups. Wherein lies the moral distinction between condemning one man for opposing the election of a Catholic President, and soliciting the vote of another man on the basis of his catholicism?

The positive practice of bigotry is much more polished than the negative, and it is cloaked in high-sounding phrases. It becomes, in the language of William Wordsworth, "something of an honorable bigotry," reflecting a special interest in a special group.

It is this sort of bigotry which prompts political parties to woo the votes of minority groups as minority groups, rather than as plain Americans. It accounts for the creation of special committees, the devising of special programs, and the inclusion of particular planks in party platforms—all designed to cater to the peculiar interests of the special group.

This appeal is tailored to attract Citizen X's support, not as an average American, but as a member of some class-conscious or caste-conscious group. If he be a Negro, he is reminded of the high offices to which Negroes have been named under a given administration, or will be named under a changed administration. If he be Catholic, he is shown the Catholic representation in the Cabinet. If he be Pole, or Lithuanian, or Jew, or other, he is persuaded that the particular party has done more, and will do more, for his particular group.

Foreign-language newspapers, broadcasts, and handbills are employed with great effectiveness in the metropolitan areas of the North and Midwest, where distinguishable ethnic groups abound. Vote seekers habitually play chameleon as they move from enclave to enclave, seeking always to identify themselves and their programs with persons and problems closest to the hearts of whatever group happens to comprise their audience of the moment.

In many cities, a pattern of ethnic distribution of public offices has evolved, giving substance to what Ed Flynn stated in his book, "You're the Boss":

"Our whole system of government is based on proportional representation."

While all this is understandable and perhaps necessary in many parts of the Nation, it seems strange to that one part of the Nation which has remained less affected by immigration—the South.

The Southern States underwent their "melting pot" roles early in American history, and since then they have been relatively unchanged in ethnic or cultural composition. The early day assimilation of diverse elements into the body politic of the South was so complete that virtually no undigested segments of the population remain as distinctive ethnic or religious groups. Except for the black-white line separating whites from Negroes, there are few groupings—of language, of nationality, or of religion—which compartmentalize southerners.

Consequently, southerners find it difficult to comprehend the stress placed on minority bloc voting elsewhere in the Nation. Likewise, they find it astounding to realize just how many Americans are relatively new to the United States. For example, the average southerner finds it difficult to grasp statements such as these, taken from the 1947 report of President Truman's Committee on Civil Rights:

"One out of every four Americans is still either a foreign-born white or the child of foreign-born white parents. One out of every five white Americans speak some language other than English in his home."

But just as there is need for the southerner's realizing how different is the complexion of the rest of the Nation, so is it highly desirable that the non-South appreciate the basic Americanism of the southerner.

The man of the South admits to a regional consciousness far surpassing that which characterizes other regions, and he is somewhat accustomed to being charged with bigotry and prejudice, even though he does not acknowledge the aptness of the application.

But amdist such charges, the southerner raises the countercharge that bigotry is no more prevalent in his region than elsewhere in the land. And in these days of liberalism run amuck, he is inclined to cite Horace Greeley's remark:

"There is no bigotry like that of 'free thought' run to seed."

Ceremony of Disposal of Unserviceable Flags

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. BECKER. Mr. Speaker, on behalf of the National Americanism Commission of the American Legion, I am inserting herewith in the RECORD official data covering "Ceremony for Disposal of Unserviceable Flags."

It is important that every American know the manner of properly disposing of unserviceable flags, and this article will clear the atmosphere because of certain misunderstandings. This is not only a ceremony adopted by the American Legion in convention assembly but in accordance with the law, as stated in this memorandum.

The American Legion has rendered another great service, and I am happy to include this in the RECORD so that all people will have an understanding of just what to do with our flag when it is no longer serviceable.

The article follows:

During the last few weeks there has been some criticism (by non-Legion groups and individuals) of American Legion sponsored public flag disposal (burning) ceremonies. We believe that most of this criticism springs from misunderstanding. The "Ceremony for Disposal of Unserviceable Flags" is published on pages 57–60 of the Manual of Ceremonies of the American Legion. This memorandum is intended to explain both the propriety and legality of this long-established ceremonial practice of the American Legion.

The "Ceremony for Disposal of Unserviceable Flags" was approved by the national convention of the American Legion meeting in New York, N.Y., September 20–23, 1937, and has been an integral part of American Legion ritual since that date. A copy of the resolution in question (exhibit A) is attached. The purpose of the American Legion in adopting this ceremony was to encourage proper respect for the flag of the United States and to provide for disposal of unserviceable flags in a dignified manner. Resolution No. 373, approved by the national convention of the American Legion meeting in Chicago, Ill., September 18–20, 1944 (exhibit B), reemphasized the purpose of proper public flag disposal ceremonies and encouraged greater use of this ceremony by the American Legion.

The ceremony in question is a eulogy to the flag of the United States and to its symbolism. By current standards of demeanor, it is admittedly a unique, overt expression of patriotism. The following brief excerpt from page 59 illustrates the general tenor:

"A flag may be a flimsy bit of printed gauze, or a beautiful banner of finest silk. Its intrinsic value may be trifling or great; but its real value is beyond price, for it is a precious symbol of all that we and our comrades have worked for and lived for, and died for—a free Nation of of free men, true to the faith of the past, devoted to the ideals and practive of justice, freedom, and democracy."

It is difficult to understand how such a ceremony could be regarded as inherently disrespectful. We therefore pass to the question of legality.

A set of rules of civilian flag courtesy popularly known as the flag code was first formulated by the National Flag Conference meeting in Washington, D.C., June 14–15, 1923. The flag code was an attempt by prominent patriotic organizations to collect together in one instrument: Statutes, Executive orders, and rules of established custom and usage relating to the flag of the United States. Rule 14 provided in part that unserviceable flags "should be destroyed as a whole privately, preferably by burning or by some other method in harmony with the reverence and respect we owe to the emblem representing our Country." The American Legion interpreted the underscored portion of Rule 14 as discretionary authority for the establishment of a dignified public flag disposal ceremony. As a precautionary measure, we sought the advice of two recognized experts and authors in the field of flag custom and usage: Col. James A. Moss and Col. Harrison S. Kerrick. Both of these gentlemen expressed the opinion that such a public flag disposal ceremony would reflect proper respect to the flag of the United States.

On December 22, 1942, Public Law 829 (77th Cong., 2d sess.) was approved, giving official sanction to most of the provisions of the flag code. Public Law 829 is contained on pages 2–6 of the Americanism Commission pamphlet "Let's Be Right on Flag Etiquette." Your attention is directed particularly to section 4(j), which provides as follows:

"The flag, when it is in such condition that it is no longer a fitting emblem for display, should be destroyed in a dignified way, preferably by burning."

Thus, the word "privately" is no longer relevant in determining either the legality or the propriety of a particular flag disposal practice. The controlling test now is that a flag "should be destroyed in a dignified way, preferably by burning." We are of the opinion that the American Legion "Ceremony for Disposal of Unserviceable Flags" is a dignified tribute to the flag of the United States and to its symbolism. We therefore conclude that this ceremony is both legal and proper, and that it is an effective instrument for promoting enchanced respect for the flag of the United States.

The Catholic News Speaks Out Against Recognition of Communist China

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. KEATING. Mr. President, Red China's continuing acts of aggression and repression have emphasized to all the world that its gangster government continues to live by its own rules. They show that the Peiping regime has not in any way reformed its policies.

All of this should serve to make clearer than ever before that Red China should not be recognized by our Government and should not be seated in the United Nations. A recent editorial in that fine publication, the Catholic News, drives home well these points. This newspaper, which has been in the forefront of the effort to expose the perfidy of the Communist Chinese and the need for continued firmness in the face of their unlawful acts, argues eloquently against any change in our presesnt relations with the Peiping government. Because of the importance of this message in the context of recent events, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Catholic News, June 25, 1960]

THE CHINESE REDS AND GENOCIDE

The International Commission of Jurists with headquarters at The Hague in a unanimous report of its nine members states that "the Chinese Reds have committed genocide against the Tibetans in that (1) they will not permit adherence to and practice of Buddhism in Tibet and (2) they have systematically set out to eradicate this religious belief in Tibet." The Commission also found that the Chinese Reds have violated most of the human rights proclaimed in the U.N. Declaration of Rights, including the right to life itself.

The Commission, headed by Purshottan Trikamdas, secretary of the Indian Bar Association and including three Indian jurists and one each from the Philippines, Ghana, Malaya, Thailand and Norway, has sent its 200 page report to all delegations at the United Nations.

The Commission charged that the Chinese Communists, in pursuit of their design in Tibet, have killed religious personages because of their beliefs and practices because such belief and practice were an encouragement to others. They have also, it said, forcibly transferred large numbers of Tibetan children to a Chinese materialistic environment in order to prevent them from having a religious upbringing. The Communists refused to permit the members of the Commission to enter Tibet, which therefore based its findings on "a wide range of statements and documents."

Yet, according to former Gov. Charles Edison of New Jersey "there exists a vociferous element in political life today which is consistently attempting to reverse our China policy and to bring about U.S. recognition and support of the Peiping regime."

Not only is there no evidence that the Peiping regime has in any way indicated any spirit of repentance of the violation of those rights guaranteed by the U.N. Charter, but it is continuing its policy of murder and genocide.

To counteract this, Governor Edison urges that "every American citizen in both major parties expressing his support of the current U.S. policy of nonrecognition of Peiping and of opposition to that regime's delegates being seated in the United Nations."

A Day at Centennial High School, Circle Pines, Minn.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 1, 1960

Mr. HUMPHREY. Mr. President, one of the most recent newspapers in Minnesota is the Circulating Pines, published in Circle Pines, Minn., in the midst of a growing new suburban area.

This lively and challenging newspaper recently received an honorable mention in the newspaper contest sponsored by the National Editorial Association in Atlanta.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article which won the award, "A Day at Centennial," prepared by Mrs. Grace Gibas and published November 5, 1959. This article is a uniquely interesting and lively "inside look" at a contemporary Minnesota high school.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Circle Pines (Minn.) Circulating Pines, Nov. 5, 1959]

A DAY AT CENTENNIAL

(By Grace Gibas)

You don't have to have an excuse to visit Centennial School—an excuse that you'll write about a day at Centennial for the Circulating Pines for instance. But it helps. Once youngsters get into eighth grade they aren't exactly delighted at the thought of mama visiting their rooms at school.

But if you have a desire to compare today's junior high with the good old days—we won't say how many years ago—maybe it's worth the risk of a little embarrassment to your children. Of course, you might disguise yourself.

Times have changed. There are more men teaching in junior high than there were in our day for one thing. And the pace is noticeably stepped up—less time between classes and a shorter lunch period. Students weren't reporting on pictures taken from a satellite of the side of the moon we can't see in ninth grade science in our day either.

Clothing styles haven't changed much though. Girls still favor sweaters and skirts, though their white tennis shoes and anklets are more informal than the heavy silk or cotton stockings our generation wore. Boys shirts are more colorful, and we couldn't help wondering if today's boys haven't bigger feet. At least we don't remember boys having such difficulty finding adequate space under their own desks for their feet. But maybe we've just forgotten.

We jogged up to Centennial School last Friday—and we do mean jogged. We thought the 1950 Ford would disintegrate completely on the stretch of washboard between North Road and Centennial. Fortunately however the doors didn't even come untied. We entered the school in the middle of the second period. The first period class had been Algebra, and after all we thought why expose ourselves to remembrance of things painful and unsuccessful.

ENGLISH

The 28 students in Miss Thompson's English class were studying an assignment when I walked in. Their studious concentration was quite impressive. We looked over the grammar text book and decided the authors had come about as close to making grammar irresistible as it is humanly possible to do.

The trip from English class down the hall to the science classroom was quite an experience. The dedication with which students rush determinedly from one classroom to another is one of the most inspiring things at Centennial. It didn't take us long to learn that there is really only one simple rule for survival. There is an invisible line down the center of each hall, and traffic moves as it does on the roads of our country down each side of this invisible line. The rule is simply this: "Don't try to cross against traffic."

In leaving a classroom if one must cross to the other side of the hall we found that most of the students had solved the difficulty by bolting through the door of the classroom like a bullet shot from a gun. This way they got across before there was any traffic. Real ingenuity comes into play in trying to figure out how to get into your next class if it lies across the stream of traffic. For the timid (that's us) the safest procedure is to flatten oneself against the wall until the torrent has slowed down to a mere trickle and then duck through. The awful risk one runs with this method however is being late to class.

SCIENCE

We learned some interesting facts in Mr. Dahlin's science class. Did you know the other side of the moon is more mountainous than the side we see? Do you know the principle behind the hydraulic press? Do you know that one acre of apple trees gives out 48 tons of water by evaporation in a month? Well, we know all this, thanks to reports the students gave and illustrated by drawing on the blackboard. (Only the board was green.)

Fortunately Mr. Dahlin repeated in a strong clear voice the gist of each report after it was given or we wouldn't have learned so much. Most students bowed their heads reverently over their papers and addressed them earnestly in soft and tender voices. Their devotion to their papers was quite touching, only it did make it pretty hard to hear what they were saying.

SPANISH CLASS

There were only 12 students in Beginning Spanish. They learned expressions such as "tenga usted cuidado" and "asi es la vida" to the tune of "When The Saints Come Marching In" played by the band in the room next door. Then they studied the difference between ese and aquel to the tune of "Rudolph the Red Nosed Reindeer." Miss Landers tried drowning out "Rudolph" by putting on a record of rhythmic Mexican music. But the students weren't letting either the Saints or Rudolph lure them from their concentration on Spanish. They covered a lot of ground during the hour.

Miss Landers relieved us of the only worry we had had in visiting Centennial when she invited us to eat lunch with the faculty. The prospect of being thrown on the hospitality of eighth and ninth graders frankly had us scared stiff.

LUNCH

The 20-minute lunch period went by so quickly that it is a little difficult to recall it in detail. We remember walking into the lunchroom, skimming by a line of students waiting for their cards to be punched. Miss Landers had her card punched twice before we had time to so much as open our purse, and then we were at the counters with trays in hand. As we passed down the counter at lightning speed, the cooks placed the food on our trays with deft movements and split second timing that must have taken months to perfect. We were given fish sticks with tartar sauce, fried potatoes, carrot sticks, bread and butter sandwiches, an apple and milk.

Then we sat down at a long table with faculty, and here is where we made our big mistake. We conversed as we ate. Before we knew it the time was up, and our food only half eaten. We reluctantly consigned the remains to a garbage can, dashed like mad for the lavatory and then on to social studies.

But we arrived too late. Sheepishly we crept into a seat and began to brood. Here these students had been standing in line as we skimmed past them, but they had arrived at social studies class on time, and we were late? If we hadn't talked could we have still swallowed all the food, gone to the lavatory and made it to class on time? Not us. The answer came back every time. We're the type that chews slowly and enjoys every mouthful. Clearly the times had moved ahead of us. We were nothing more than a relic of a leisurely way of life already buried in the sands of time.

And then hopefully we hit on an idea. What if we simply had omitted the trip to the lavatory; we'd undoubtedly lost a good 4 minutes there. But this line of thinking failed to bring us a solution, because we couldn't figure out when else that little trip could have been made. In the 3 minutes between classes? But how? Four from three still leaves a minute on the late side. This line of thinking simply raised a question which had to be answered. We asked it delicately of Miss Thompson after school. "Er, when do, er, for goodness sakes when do these children get time to go to the lavatory?"

Miss Thompson said students could sign up for lavatory privileges during class time but she thought most managed between classes. Again we had to conclude that the times have passed us by. Girls were very self-conscious in our day. They would have died rather than ask a man teacher for lavatory privileges.

SOCIAL STUDIES

Our brooding was brought temporarily to an end when the ninth graders in Mr. Rost's social studies class gave reports on the 1939 reorganization of Minnesota government. But a report on various methods of taxation set our minds to wandering again. These young people aren't really going to understand taxes until they start paying them, we thought. Still some of the students seemed quite interested in their Minnesota government even though their practical experience with it is fairly limited. Perhaps their parents talk about taxes and government at home.

It was the end of this period that we had our first experience with seventh graders. As the dignified ninth graders left the room, seventh graders swooped in bringing enough extra energy with them to run a hundred horsepower reactor. They were exhilerated, they were joyful, they were bursting with good spirits.

Did we imagine it or did an expression of pain pass over Mr. Rost's face? Perhaps not, but there was no mistaking the do or die spirit he seemed to acquire. Seldom have we felt more guilty than we did walking out of that room and leaving him single-handed to meet his fate.

GEOGRAPHY

The difference between eighth graders and ninth graders isn't as astonishing as that between seventh graders and ninth graders but it is still amazing. Ninth graders are young adults. They have acquired dignity. They simply ignore adults. But eighth graders still have some of the bubbling charm of children. They are exuberant. They are curious and friendly. And they are about half the size they will be in another year. (At least the boys appear that way.)

"What are you doing here?" we were asked simultaneously by all the children in the vicinity of the seat we took in Mr. Reinfeld's eighth grade geography class. "You aren't going to tell on us if we cheat, are you," said one. "Maybe you're here to see that we don't cheat," he added on second thought. They all looked suspicious when we explained we were merely visiting. They clearly showed that they knew we must have ulterior motives of some kind. And of course we did. What could be more ulterior than planning to write what we were seeing and hearing.

Mr. Reinfeld gave them a test on the geography of the western part of the United States. We took the test ourselves, just for the fun of it, and to our dying day no one will ever drag from us the humiliating score we made. We just laugh to ourselves when we remember our trusting neighbor who asked us to tell him the answers. How naive can children be. Do they honestly think a person can remember facts he learned 30 years ago?

Wait a minute. If we can't remember facts we learned then just what good did those years at school do us?

Actually they were very important years. We may not remember that Montana mines copper, but Montana has always been a magic name to us, a State of mountains and an invigorating atmosphere. We learned that learning was fun and we learned how to go about finding out what we didn't know.

And how much that can't be measured do children learn from the attitudes of their teachers—that every individual personality has importance, that children are best taught in an atmosphere of kindness and understanding, that there must be order instead of chaos, that self-discipline is important, that they must have consideration for others, that they must be neat and prompt and responsible.

Obviously today's children are being prepared to fit into a civilization in which ulcers are the mark of the successful person. Time is all important, and it is a real handicap to be slow. Food is something you eat on the run because there are things more important than eating. The schools reflect the times. One just hopes these young people can take the added pressure and strain.

HOMEWARD BOUND

The last period of the day was devoted to activities or to studying.

As we jogged home (and we do mean jogged) we were very glad we had spent a day at Centennial. We felt like doing just what the kids do when they get home—laying the refrigerator bare. Now we understand why after a flying stop at the bathroom they head for the kitchen and eat bananas, apples, peanut butter sandwiches, wheaties, and popcorn. And we understand why they munch at their leisure over a book. We also understand why they just can't gear themselves up to the effort of cleaning up the mess they've made. After all they've had quite a day.

Address by the Honorable Kenneth B. Keating, Senator From New York, to the Graduating Class of Albany Law School, Albany, N.Y., on June 7, 1960

EXTENSION OF REMARKS

OF

HON. DEAN P. TAYLOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. TAYLOR of New York. Mr. Speaker, Senator KEATING recently delivered a commencement address to the graduating class of the Albany Law School, my alma mater, Albany, N.Y. On this occasion he was the recipient of an honorary doctor of laws degree from the university.

In his excellent address he urged law schools to assume a more vigorous role in shaping the course of the law. He also, in stirring words, appealed to the young men of the graduating class to approach the practice of law with a full awareness that lawyers are a vital part of our democracy whose function is to serve the public good always.

Mr. Speaker, I know that Senator KEATING's erudite remarks will be of interest to many Members, and under leave previously granted I insert them in the Appendix of the RECORD:

Commencement is a most appropriate designation for the day of graduation. This is the beginning; the beginning of a new stage in your careers.

On such an occasion, it is useful to look back as well as ahead. In planning our goals and objectives, it is helpful to consider our present bearings before charting our next step in life.

Justice Holmes once remarked that a law school does not undertake to teach success. In his words: "That combination of tact and skill which gives a man immediate prominence among his fellows comes from nature, not from instruction."

Perhaps this was an overstatement. A great law school does more for a student than fill his mind with unending legal data. It teaches him to understand the law as a tool for preserving society. It teaches him to respect the law as a safeguard against oppression and arbitrariness. It teaches him to apply the law as an instrument for social and political progress.

It teaches him to relate the law to other professions and disciplines which serve the public good. It teaches him to revere the law as one of the principal guardians of liberty and morality.

This kind of education affects our natures just as an understanding of art affects our appreciation of great paintings. I know that after 3 years of legal training and after you have passed a bar exam—which I am sure will be a mere formality for most of you—you will feel very learned in the law and will be absolutely certain of a great number of legal doctrines.

It has been said that the young lawyer has three cardinal virtues: faith, hope, and charity—faith in his own infinite knowledge, hope for the obtuseness of judges and juries, and charity for the older lawyers who have all the business; and that the greatest of these virtues is faith.

I am sure that most of you realize that you are just at the threshold of the study

of law—but if you don't, the sooner you are enlightened the better.

Law is a process, not a thing. It is constantly growing in depth and scope in the manner of a living organism not an inanimate object.

It must be stable, but it cannot stand still if it is to serve its eternal purpose. For the law must adapt to its environment and adjust to the needs it fulfills, just as a person must, to survive and thrive.

That is why the study of law is a never-ending pursuit. It is a pursuit which will enrich your lives and ennoble your spirits. No one who understands the never-ending growth of the law ever expects to be its master. But anyone who dedicates himself to its study will achieve a more splendid character, a wiser outlook, and a better nature for his efforts.

The growth of the law and the dedicated lawyer go hand in hand.

Unfortunately this is not the picture all practicing lawyers present. Some members of the bar understand law only as a profitable business, and are oblivious to their obligations and opportunities as members of a great profession. These lawyers betray a great tradition. They renounce—often unwittingly—a valuable inheritance. No matter how many continuing legal education courses they sign up for, they will never be educated lawyers. The gap in their understanding of the mission and purpose of the law will remain permanently unfilled.

Sometimes these lawyers present a tempting example to the fledgling practitioner. Their lack of dedication does not seem to affect their ability to acquire rich and even important clients. They frequently achieve material opulence despite the absence of any spiritual substance in their makeup. It is a sad fact that some clients actually admire these lawyers just because they are cunning and calculating.

The important measure of a lawyer, however, is not made by his clients but by his brothers at the bar. There is no greater satisfaction to a lawyer than the respect of his colleagues. The recognition you receive from your brethren will be infinitely more rewarding to you when the time comes to look back upon your careers than any superficial praise you receive from a client who gets something through your efforts to which he is entitled or sometimes is not entitled.

In the words of Theodore Roosevelt, therefore, I urge you to eschew the life of "ignoble ease" in favor of the "strenuous life"—the life of toil and effort, of labor and strife.

I counsel you, as he did his countrymen, that "the highest form of success * * * comes not to a man who desires mere easy peace but to the man who does not shrink from danger, from hardship, or from bitter toil, and who out of these wins the splendid ultimate triumph."

If you are imbued with this spirit, I welcome you to the profession of the law. I predict a rewarding and a challenging life for you. I know that America needs your services. I am grateful for whatever circumstances have led you to the practice of law.

If you do not possess this nature, then I implore you to give up this ambition. We already have enough lawyers of shallow character. Find some other outlet for your interests—do not further corrupt our profession.

I hope there is none in this group who has failed to grasp the noble mission of the law. But if there are such opportunists here who seek to use the training they have received only for material gain, I want to do my best to discourage them from ever completing the transition from law student to lawyer.

They should know that law is one of the most crowded professions in this country. According to the 1958 lawyers' census conducted by Martindale-Hubbell, Inc., there were over a quarter of a million lawyers admitted to practice. Department of Commerce figures indicate that over 35,000 lawyers are right here in New York, which is more than twice the number in any other State. There are more lawyers in the United States than dentists, bookkeepers, or real estate agents. There are even more lawyers than clergymen, which certainly is something to ponder.

These figures should not discourage the worthy among you, which I am sure, having had considerable experience with Albany Law School graduates, includes every member of this graduating class. The profession may suffer from having too many lawyers, but never from having too many good lawyers.

My sincere conviction is that the legal profession still has a tremendous untapped potential for service. Too many people fail to consult lawyers until they are past the point of counsel and need only a stanch advocate to rescue them. I believe that a proper educational program would induce many more citizens to seek the advice of counsel before they have taken an irrevocable and unwise step. We have not developed preventive law at anywhere near the level of preventive medicine, for example.

There is also a great demand for lawyers in the Government service. There are more lawyers in Government service today than total graduates from this law school in its more than 100 years of existence. The increasing scope of Federal regulation and the constantly expanding activity of all levels of Government promise to keep the demand for lawyers for Government at a high level.

All that I have indicated about the attitude of lawyers in private practice applies to an even greater degree to lawyers entering Government service. Such lawyers assume in addition to the general obligations of all members of the bar to the public the special obligations of the public servant to the public. A lawyer in Government who does not live up to the highest ethics of his profession can do irreparable harm by destroying public confidence in the Government itself.

There also is a growing demand for law teachers. I hope that such a career will appeal to the best among you. The law schools of this country can be vital forces for shaping the course of the law. A law teacher enjoys an independence of spirit, a freedom from commitments and a forum for expression which can make him a powerful influence in directing legal developments.

Dean Roscoe Pound long ago recognized the unique opportunity the law schools enjoy of becoming effective instruments for legal reform.

In a speech almost 35 years ago, he said: "In these institutions we may find the permanence of tenure, the conditions of work—continuity, opportunity of dealing with problems as a whole, possibility of surveying a wide field, extending beyond the limitations of jurisdictions and localities and parties—the independence of politics, and the guarantees of training, ability, and scientific attitude, which are essential to effective research and which will command public confidence. * * * In no way may the lawyer be so sure of achieving his task of making straight the paths of American justice, as by doing his part to assure to our law schools the means of carrying on the scientific investigations on which the law reforms of the future must go forward."

I am uncertain whether the law schools have accepted or fulfilled this assignment. I know that individual law professors, including many of this faculty, have made a very significant contribution to the law. But these have been independent efforts, which while nurtured by the associated schools, have usually not been undertaken as part of the task of a law center.

The law schools have been plagued by fund shortages. But I would hope that high on the list of goals of every campaign drive for funds would be that of obtaining the necessary resources for this kind of undertaking. To a large extent, work of the nature I have in mind for the law schools is now being performed by private foundations—but under handicaps and with preconceptions which would not impede similar law school endeavors.

For the law schools ever to perform this function, they will have to have the full support of the alumni whose ranks you are about to join. Do not think of yourself as graduating from this institution in the sense of leaving it. It would be more constructive to think of this day in terms of changing the nature of your relationship to your alma mater. For three of the most important years of your lives you have been taking from it; give some thought now to what you can contribute to it in your new status.

There is no end to the valuable projects which could be undertaken by law schools functioning as law centers. Study of the operations of the Government would be my No. 1 suggestion. It is frequently pointed out that while Congress investigates the other agencies of Government almost without respite, none of the other agencies can investigate the Congress with the same thoroughness.

I have some sympathy with this complaint, and I believe that Congress has not been vigilant enough in keeping its own house in order and attuning its operations to present day demands. A respected and responsible law school, under the proper auspices, could do a superlative job in correcting this legislative oversight.

There is a need also for lawyers in the fields of legal administration. Problems of tremendous scope exist in translating our conceptions of justice into the processes of the law. The courts are desperately understaffed. The regulatory agencies are plagued by conflicting functions, objectives and policies.

Institutes of judicial administration still are relatively new. No agency at all exists for supervising and coordinating the work of the regulatory agencies.

I hope young lawyers will take a special interest in the problems of administering justice. No law is self-executing and even the best intentions can be frustrated by ineffective or inefficient procedures. These problems do not receive the thoughtful attention they deserve. The interrelation between procedural and substantive growth in the law is too often overlooked. In my opinion, this task of keeping the machinery of justice from breaking down is of supreme importance.

These are only some of the paths open to you as young lawyers. I could discuss numerous other branches of the practice with you because, in truth, the variety of endeavors in which a good lawyer can usefully engage is without end. The important thing is not which course you pursue but what purpose you serve.

Whether you are handling a closing in a real estate transaction, safeguarding the rights of a defendant in a criminal case, or organizing a corporation, keep in mind always that you are functioning as a vital part of our democracy, in the tradition of a great profession, with a responsibility to serve the public good always.

There are many stories of young lawyers, but I have always enjoyed the one

about the neophyte, who, being unused to the practices of the U.S. Supreme Court, addressed tthe dignified Justices as "gentlemen" instead of calling them "your honors." He immediately apologized.

Chief Justice Taft, in accordance with his customary attempt to make lawyers who were appearing before the august body feel at ease, replied, "Don't apologize for calling us gentlemen. That is what we try to be."

And gentlemen is what you must be. Be humble without being docile, for you have much to learn but must seek out knowledge. Be studious but not timid, for reflection will reveal the spirit of the law but action is its body. Give yourselves to community causes. Defend the liberty of your fellow men. Take pride in your country. Do not avoid conflict or seek easy success. This great school has prepared you to meet challenges less fortified men must shun.

You are no longer privileged to pursue easy, detached lives. You are part of the inner fabric of society and you must never reject the tasks your fellows will thrust upon you.

Justice Cardozo put it well when he said: "Law is not a cadaver, but a spirit, not a finality, but a process of becoming, not a clog upon the fullness of life, but an outlet and a means thereto, not a game, but a sacrament."

Keep these words always before you. And if you will always act with the understanding that you are part of a sacred mission—I promise you will achieve true success.

As you embark upon your chosen field of endeavor, please, I pray you, do not be haunted by the specter of security. Security is appropriate to old age. It is not the business of you young men who leave Albany Law School today. Cultivate rather the uncertainties of challenge—and make your only security that of knowing that struggle, not repose, is the best reason for living. Indeed, let us express sorrow for any young man who spends his life making the bed in which he will lie in his old age. He arrives at the destination, but he has missed all the scenery.

This day you leave the Albany Law School. But, in a sense, it is not a true departure. It can never be. For as long as you live a part of you will be here—must forever be here—in these halls and rooms you have known and loved. What remains for me to say but Godspeed—and may the lives of each one of you be the proud gifts you bring back one day to offer, as tokens of affection, to the school that your hearts will never leave.

The Cotton Export Subsidy Program

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 1, 1960

Mr. THURMOND. Mr. President, on Monday, June 27, the U.S. Tariff Commission handed down another decision against the best interest of our domestic economy and also against the proper administration of our trade program as envisioned by the Congress and the late Cordell Hull when the Reciprocal Trade Agreements Act was passed in 1934.

The Commission's rejection of the National Cotton Council's petition seeking relief from the adverse effects of the cotton export subsidy program's unfair advantage to foreign cotton textile manufacturers has not been received well at all in South Carolina or the southeastern area of the United States, where cotton and textiles play such a prominent role in our economic life. I ask unanimous consent to have printed in the Appendix of the RECORD two excellent editorials on this subject. They are "Tariff Commission in a Dream World" from the June 30, 1960 issue of the Greenville News, Greenville, S.C., and "Textile Industry Gets No Relief" from the June 29, 1960 issue of the Augusta Chronical, Augusta, Ga.:

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greenville News, June 30, 1960]

TARIFF COMMISSION IN A DREAM WORLD

The Tariff Commission's rejection of a petition asking that quotas be placed on foreign textile imports demonstrates again that official Washington is still bemused by the old and honorable dreams of free trade.

These dreams were largely Southern in origin. For many decades the South favored free and untrammeled flow of goods between nations while the North and West were protectionist. And it was chiefly by the untiring efforts of Cordell Hull of Tennessee that protectionism, long the keystone of American policy, began to be abandoned.

Much has happened since Mr. Hull's day, however. The pattern of international trade has been drastically altered to conform with new political alinements and American foreign aid programs have reshaped the economy of many major powers.

The term "free trade" cannot be used with the same meaning today that it had 20 years ago. The "free trade" theory of economics held within itself certain distinctions and limitations that simply do not exist any longer.

Reduced to simplest terms, it was assumed that an economically undeveloped country would progress only very slowly because of the lack of capital and trained labor. As it gradually increased production of a given kind of goods, industries producing similar goods in more advanced countries would have ample time to adjust to the new conditions.

Among countries alined with the United States today, however, capital is about the easiest thing in the world to get. A dozen international lending agencies are available and even eager to make loans. The U.S. Treasury is constantly tapped for economic assistance to the so-called backward nations.

Money with which to build new plants, buy the latest equipment and train workers, is accessible to any Western-oriented country almost without limit as to amount or purpose.

This was not the stuff of which Mr. Hull's dream was made.

The bureaucrats in Washington have one foot in a bygone day. If they continue to operate the two programs of free imports and free industrial expansion, they may wreck the textile industry of the United States.

And who will be next?

[From the Augusta Chronicle, June 29, 1960]

TEXTILE INDUSTRY GETS NO RELIEF

A U.S. Tariff Commission majority has dealt a staggering blow to the Nation's textile industry in its rejection of a National Cotton Council petition for limiting foreign cotton textile imports.

The four-member majority not only turned down the industry plea for quotas, or a tariff-quota combination, but ruled that import duties are not needed to offset the Government's cotton export fees.

In doing so, it failed to stem a swelling tide of textile imports that threatens to wreck the domestic textile industry and upset the cotton price-support program in this Nation.

The gravity of the textile import problem is reflected in post-World War II export-import statistics. In 1947, U.S. textile exporters found a world market for $1.4 billion worth of textile manufactures, while imports amounted to only about one-fourth of this volume. This net textile export balance diminished until, by 1955, U.S. imports of textile products of $585 million had grown to 95 percent of our $615 million export trade. By 1958, a net textile import balance was firmly established, and in 1959, American imports total $337 million in contrast to exports of only $634 million.

Later statistics indicate that this trend is continuing, with imports of textile manufactures currently running some 140 percent of the U.S. export trade. And textile imports, if allowed to remain unrestricted, may be expected to cut even deeper into the American market in coming months. Not only do foreign manufacturers have the advantage of cheap labor and lower costs, but they buy cotton, including U.S. growths, at prices about 25 percent below those U.S. mills must pay.

The Japanese voluntary quota arrangement eased the problem to some degree in 1957, decreasing cotton cloth imports temporarily. But U.S. manufacturers cannot hope for any similar relief in the future, because imports are now pouring in, not only from the traditional Japanese and European competitors, but from an ever-widening circle of low-wage manufacturers based in Hong Kong, India, Korea, Pakistan, and Formosa.

Adding a deplorable note of irony is the fact that the United States, through the ICA, is financing the construction of many of these newer foreign mills that add to the woes of our own established textile manufacturers.

Viewed in the light of these facts, the Tariff Commission's action is indeed alarming. The United States must take some action to limit this low-cost foreign competition if the American textile industry—a basic element of the Nation's economy—is to continue to provide good jobs for millions of Americans and quality products for national and world consumption.

Having been denied by the Tariff Commission, the textile industry now must turn to Congress for action. As Senator STROM THURMOND said in commenting on the commission decision, this case "proves the imperative need of Congress to take action in the next session to regain control of its constitutional authority over our trade program."

Commemorating World Refugee Year

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. RABAUT. Mr. Speaker, on May 19, 1959, the President proclaimed the period from July 1, 1959, to June 30, 1960, as World Refugee Year. Some 70 nations in the free world joined in celebrating this event in answer to a United

Nations resolution adopted in December of 1958.

The purpose and the hope of World Refugee Year were to stimulate action—private, governmental, and international—in support of refugee assistance of all types throughout the world.

It is too early to say what concrete results have been relaized in the last 12 months. It is apparent, however, that the basic aim of encouraging support for refugee assistance has been fulfilled and that a campaign has been launched which with continued support will do much to resolve the many problems of the world's uprooted and homeless people.

The world refugee population was not significantly altered during World Refugee Year. Some progress was made in Europe, but there are still some 18,000 living in the barren, soul-depressing atmosphere of the refugee camps there. I would like to quote the following passage from the final report of the Zellerbach Commission which describes this atmosphere:

One has only to visit a European camp and to talk to some of the refugees who have been there for years to understand why prolonged existence under these conditions erodes the spirit of man. After years of inactivity, the refugees become accustomed to a way of life requiring neither effort nor initiative. They accept the compressed living quarters, the total lack of privacy, the lack of sanitary facilities as normal. Worse still, they even lose their capacity for indignation at a fate that is little better than a living death. They may marry and have children in the camps, because it is natural for human beings to do so. But they helplessly accept the malformation of their children's character which goes on before their eyes. There is nothing more appalling than the spectacle of refugees so attached to their dreary corner of a barrack building that they refuse to leave it—like the Yugoslav inmate at Camp Landshut who, after spending 5 years there with his wife and children, said to one of the Commission staff: "Don't bother to get us out. We are all right here. Just let us live and send up parcels."

The progress made in Europe during the past year was more than offset in numbers of refugees added in other of the trouble spots of the world. Tibetans continue today to crowd into neighboring countries of India, Nepal, and Bhutan. The cliffs of Hong Kong team with an ever-increasing number of Chinese fleeing from the mainland. The problem of what to do with a million displaced Palestinian Arabs is no nearer to any apparent solution now than it was a dozen years ago.

These are merely some of the problems in the world refugee picture. They could not all possibly be solved in a year's time, nor were they expected to be.

I would like to take this occasion to commend the U.S. Committee for Refugees for its untiring efforts in behalf of refugee assistance. In addition to fund raising and encouraging fund raising drives by other voluntary organizations in the United States, the Committee undertook an ambitious and successful campaign to arouse public interest in the plight of refugees. As stated by its executive director in his recent report "the U.S. Committee reached the American through his newspapers, magazines, radio, and television; through the service club, church, or other community organizations to which he belongs, and through the good example and stimulus of his fellow townsmen." I believe that there are now over 70 cooperating committees organized by USCR on State and local levels which will continue to work in an effort to render assistance to refugees.

Finally, I would like to call attention to the fact that there is presently before Congress a modest refugee relief proposal—House Joint Resolution 397—which should certainly be approved before we adjourn this year. This legislation has passed the House and is presently before the Senate. It is not as ambitious an undertaking as some would like to have seen adopted in view of the situation brought to light during World Refugee Year. It is the most that can be hoped for at this time, however, and should, therefore, receive unanimous approval.

World Refugee Year is now over. But the problems with which it was concerned remain to plague the conscience of mankind. Let us hope that the charity, interest, and enthusiasm engendered during World Refugee Year will be carried forth undiminished and that we will not leave the refugee to his hapless fate, feeling that we have done our part and need do no more.

Sugar Act of 1948

SPEECH
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12311) to extend for 1 year the Sugar Act of 1948, as amended.

Mr. COFFIN. Mr. Chairman, I want to express my agreement with my distinguished colleague the gentleman from Florida [Mr. SIKES]. I think it is important that we demonstrate here that we are sensitive to the importance of our relations with our good frends in Latin America, not only with the countries listed in the Committee report but with the other sugar-producing countries of Brazil, Colombia, Guatemala, Ecuador, and El Salvador. I recognize the inevitable complexities of legislation which in effect exercises economic sanctions as an instrument of foreign policy. As has been pointed out it is essential to consider the legitimate needs of Latin American countries and to weigh their interests most carefully. Brazil is as large as the United States and is the third largest sugar-producing country. She is prepared to supply substantial tonnage if given the opportunity. Guatemala, as we know, has dramatically thrown off the threat of Communist domination and is prepared to supply quantities of sugar. Even though her contribution may be relatively modest, this is of great economic importance to her and her participation should therefore be of importance to us. The other three countries I have named can make modest contributions, as well. It will take consideration and restraint to insure that a proper balance is maintained in this measure to place curbs on those whose actions are inimical to the United States and to see at the same time that our friends are not in any way damaged or endangered.

Federal Employees Pay Raise Legislation

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I would like to comment on the President's recent veto message and the action taken by the House today in overriding the veto.

I am deeply gratified by the size of the vote and I am sure the American people will know by this showing that 344 Members of the House would not have taken such action if, as the President states, this bill "violates every concept of fairness, every rule of reason and logic."

Fully recognizing the President's right to take such action, I nevertheless cannot stand silent and read a statement that is as unfair to Federal employees as this one is. The President has been quoted as being shocked by lobbying tactics utilized in recent weeks to insure passage of a pay raise bill. I, for one, am shocked, and I think that I am joined in this feeling by virtually every Member of this body, by the President's use of such language. Yes, I have been urged to support H.R. 9883. Classified employees and postal workers have urged me to support this bill on the grounds that it is desperately needed in order for them to cope with today's ever-increasing cost of living. It appears strange to me that the President is singling out representatives of Federal employees' unions for strong criticism, while remaining silent for 7 years on the tactics utilized by the National Association of Manufacturers, the chamber of commerce, and hosts of paid lobbyist-attorneys from downtown Washington. In past Congresses we have even had Cabinet members present in the Speaker's lobby using every known pressure tactic to influence the will of this body.

The postal workers and classified Federal employees were not paid to visit me. In fact, many of these employees had to take time off, without pay in some instances, to ask their Representative to support legislation for their benefit. In recent days, an absurd complaint has been lodged against Mr. William C. Doherty, president of the National Association of Letter Carriers, concerning possible violation of the Hatch Act. Mr.

Doherty for many years has gained the widest possible admiration and respect for his untiring efforts on behalf of the Letter Carriers Association and is recognized by one and all as one of America's outstanding citizens. It is deplorable to me that this personal attack has been instigated against him. With well over 250,000 Federal employes in the Washington metropolitan area, I am proud to stand as their spokesman and to insist on fair and equitable treatment.

Whenever I read the President's veto message on Federal pay legislation, and this is the third time I have read such a message, I wonder who in the world advises the President of the United States to take such a position against his own employees. In the 6 years I have been privileged to represent the Fifth District of Maryland, from my own personal knowledge I have seen many Federal employees' families where the breadwinner is forced to take two and often three jobs and the wife is required to work just in order to make ends meet. The President tells us that the consumer's price index has advanced only 2.1 percent since the last pay increase was enacted. I have no doubt that the President's figures, as supplied by the Bureau of Labor Statistics, are correct. But this is completely beside the point. Congress has always lagged behind in granting Federal employees their wage increases. When this raise is granted, as a class they will still not be brought up to the average wage outside the Federal Government. Regardless of whether the cost of living has gone up 2 or 3 percent since the last raise, they started with an inequitable wage balance to begin with.

At this point, I would like to include in the RECORD a table of statistics prepared by the Bureau of Labor Statistics completely substantiating this point. It is inexcusable that the President did not study this chart before making his 2.1-percent statement, in an obvious attempt to mislead the American public.

Classified salary increases compared with advances of Consumer Price Index

Year and month	Salary increase		Increase of Consumer Price Index
	Percent	Cumulative percentage	
Aug. 15, 1939			
July 1, 1945	15.9		31.4
July 1, 1946	14.2	32.4	43.4
June 30, 1948 [1]	11.0	46.9	76.8
Oct. 29, 1949 [1]	4.0	52.8	[2]
July 1, 1951 [1]	10.0	68.1	88.0
Mar. 1, 1955 [1]	7.5	80.7	93.7
Jan. 1, 1958 [1]	10.0	88.8	[3] 109.7

[1] Increase effective 1st day of 1st pay period which began after this date.
[2] CPI dropped in 1949 but resumed steady advance in 1950.
[3] To June 1958 when increase was approved by Congress.

Source: Bureau of Labor Statistics and Civil Service Commission data.

Once again, this administration recommends that pay action be deferred pending still another survey. No one suggested a survey when the administration, with alarming speed, negotiated a steel settlement with the cost to the American public deferred until after the general election. The Vice President has remained strangely silent where the welfare of Federal employees is concerned.

The executive branch recognizes that there are inequities existing in the present Federal employees pay scale. I have no quarrel with this. I have long recognized this. An attempt was made by some of us in this Congress to focus attention on these inequities by the introduction of legislation designed to eliminate many of them. The administration failed to cooperate and to support a long-overdue adjustment in today's hodgepodge pay scale system. Are we to punish the Government's own employees because this administration for almost 8 years has failed to recommend to Congress a plan whereby this long-overdue adjustment could be realized?

The House today, by its vote, has obviously answered this question in the negative.

I supported such a study, as recommended, and introduced legislation 2 years ago to provide for such a study. We have had studies in recent times and what has been the result? The Cordiner Committee, appointed by the President, in 1957 allegedly studied the rates of pay of all individuals employed by the Federal Government. No implementing action has been requested. And what did the O'Connell Committee have to say? I quote: "Salaries fixed by statutes have not been adjusted in a timely and adequate manner in response to general changes in non-Federal salary levels."

The President has seen fit to criticize Congress for not awaiting the results of a national salary survey being made by the Department of Labor. I see absolutely no reason for awaiting a compilation of figures from every rural nook and cranny of the United States when the clear facts on the record demonstrate that Federal employees in the Washington metropolitan area, one of the highest cost-of-living areas in the United States, are not being treated fairly by their employer, the Federal Government.

I commend the House for its action today and let there be no mistake about it, I invite all of my constituents to continue to advise me of their feelings on pending legislation, even though their doing so appears to be distasteful to the President. It is a constitutional right of which neither this nor any other President can deprive them.

Relief to Small Businessmen

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. FRIEDEL. Mr. Speaker, the problem of maintaining an economic climate in which small business can survive is ever present. Because of the downward trend of small business during the past several years, it is indeed refreshing to know that one of our distinguished colleagues, the Honorable JAMES ROOSEVELT, of California, has taken up the cudgels on behalf of over 200,000 small businessmen who earn a precarious livelihood from their long hours of toil in gasoline service stations.

On June 28, 1960, Representative ROOSEVELT appeared before the Subcommittee on Commerce and Finance of the House Interstate and Foreign Commerce Committee and presented in his usual eloquent style a most logical and persuasive argument on behalf of H.R. 9894. Because of the importance of this subject and also to give that statement wider publicity, I request leave that it be inserted in the pages of the CONGRESSIONAL RECORD.

Congressman ROOSEVELT's statement is as follows:

STATEMENT OF HON. JAMES ROOSEVELT, MEMBER OF CONGRESS, BEFORE THE SUBCOMMITTEE ON COMMERCE AND FINANCE OF THE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, HOUSE OF REPRESENTATIVES, JUNE 28, 1960, IN SUPPORT OF H.R. 9894 WHICH WOULD PROHIBIT GASOLINE PRODUCERS TO ACT AS AGENTS FOR, OR TO RECEIVE COMMISSIONS ON, THE SALE OF TBA ITEMS

Mr. Chairman and members of the subcommittee, it gives me great pleasure to appear before your subcommittee this morning. As you no doubt know, I have the honor of being chairman of the Subcommittee on Distribution Problems Affecting Small Business of the House Small Business Committee. That committee being a select committee has, consequently, no jurisdiction to pass on legislation, but concerns itself primarily with investigations and the making of recommendations to appropriate legislative committees, such as yours.

Early this year, I introduced in the House H.R. 9894, a bill which is designed to obviate the deleterious effects of certain practices in the distribution of motor vehicle parts, equipment, accessories, and supplies which tend to cause destructive and unfair methods of competition, thereby adversely affecting commerce. This measure was introduced by me as a result of 5 years of careful study and investigation by the subcommittee of the House Small Business Committee.

This measure simply provides that no producer who sells gasoline at wholesale for ultimate resale at retail, shall act as agent for or receive any commission because of the sale of any product of any manufacturer or distributor of motor vehicle parts, equipment, accessories, or supplies (TBA).

In the interest of clarification, I should like to point out that this bill—H.R. 9894—is not a divorcement bill to which, perhaps, certain segments of the industry might take exception. Nor would it prohibit any producer or affiliate not engaged in selling motor vehicle parts, equipment, accessories, or supplies at wholesale for ultimate resale at retail, from selling any of such merchandise directly to consumers at retail and profiting therefrom.

During the 84th Congress, the House Small Business Committee issued its report (H. Rept. 1423) in which its subcommittee found that the small gasoline service station operator "needs immediate and permanent relief to enable him to fulfill his role as an independent businessman. The present laws, procedures, and enforcement policies are inadequate to achieve effective and permanent relief."

That recommendation was reached as a result of voluminous testimony heard dur-

ing 1955 by the subcommittee. It reached the conclusion that the freedom of choice of the retail dealer, with respect to the manner in which he operates his station, is circumscribed by the economic power of his oil company supplier, whether or not such power is specifically exercised against him. The subcommittee further found that coercive and discriminatory practices against retail gasoline station operators by certain of their oil company suppliers was quite prevalent. This was especially so with respect to tires, batteries, and accessories (TBA).

Further hearings were held in 1956, which gave the subcommittee additional cumulative evidence of unfair practices which made the lot of the small businessman in the industry hard indeed.

Most petroleum companies own or control gasoline service stations which they lease to others on a short-term basis. Through the oil corporations' power to cancel, or refuse to renew such leases arbitrarily, such gasoline producers are able to prevail upon the persons leasing such gasoline service stations to accept the profit margins set by the producer, to conduct their businesses as directed by the producer, and to sell only the motor vehicle parts, equipment, accessories, and supplies, and other products chosen or sponsored by the petroleum company.

Two years later, during the 85th Congress, the subcommittee, as a result of a continuing stream of complaints received from small service station operators, conducted another investigation and held hearings in Washington, D.C.; Denver, Colo.; Los Angeles, Calif.; and Chicago, Ill. During the course of these hearings, it became crystal clear from the testimony that employees of some of the major petroleum suppliers continued to exercise unfair pressure toward their lessees and other dealers in regard to the sale of TBA items.

One of the findings of the subcommittee in 1957, in its House Report No. 1157, was to the effect that "the extent to which small business distributors and retailers of petroleum products are truly free and independent is severely limited by their awareness that their suppliers can wield great economic power."

The experience of the subcommittee in investigating the problems of the lessee-dealers of petroleum products at the retail level through service stations and the continuing flood of letters that it received in regard to alleged coercive and unfair trade practices on the part of certain of the petroleum suppliers, demonstrated the need for further investigation. Therefore, in 1959, additional public hearings were held which were devoted to the problems flowing from the distribution of TBA items and other related automotive products handled by retail gasoline service station dealers and by wholesalers. During those hearings many witnesses, who were representatives of the retail and wholesale segments of the industry and who came from every section of the United States, testified. These witnesses made charges against certain petroleum companies—charges that those companies, through pressure and through coercive means—forced and compelled its retail gasoline dealers to handle only those TBA items in their stations which were sponsored by the petroleum companies.

Actually 35 companies were named by the witnesses at those hearings last year and in the subcommittee's desire to be eminently fair, it gave the petroleum companies an opportunity to present their rebuttal to the charges made against them. Each of these companies were invited to appear at a subsequent public hearing which was held during April 1960, to answer the charges which were made against them, if they so desired.

We found that while 35 petroleum companies were named, 4 of these firms were merged with other named companies, so actually there were 31 invitations to appear; 22 companies replied to the letter of invitation—9 did not; 13 companies said, in effect, that they did not consider the charges made against their companies as something that required an appearance of witnesses on their behalf. Some of those 13 companies submitted affidavits challenging certain charges that were made in December, and other companies set forth in their letters of response unsworn statements denying certain other charges that had been made.

During the hearings, spokesmen for certain petroleum companies testified that it was the announced policy of their firms to permit their retail dealers a so-called freedom of choice respecting TBA items. However, upon further questioning by members of the subcommittee, it was ascertained that the companies' sales representatives were under certain quotas to sell such TBA items, which quotas were based on what the petroleum companies thought that their retail dealers ought to buy and what the maximum potentials of such dealers are. It is but natural to expect that these sales representatives would do their best to reach their expected quotas and utilize any means they deem appropriate to push their company's sponsored TBA items. This is true despite statements made by the companies that their retail dealers have a freedom of choice as to what TBA items they may handle. I submit that H.R. 9894 would remedy this and be a solution of the problem.

In this connection, it is worthy of note that the sales representative is the one who contacts the service station operators in connection with lease renewals as well as with the sale of his company's products. An examination of the various leases for such service stations discloses that the matter of the renewal of such leases is optional only with the oil companies. In that respect such agreements are unilateral. Thus, in having the sales representative who regularly calls on the service stations, being at the same time in a position to tell the service station operator that he, the oil company's salesman, could decide whether or not the lease for a service station would or would not be renewed, is indeed a deplorable situation.

From this it can be readily gathered that the operator of a service station is under a tremendous pressure to comply with the demand, whether expressed or implied, of such sales representative that he handle the petroleum company's sponsored TBA items exclusively. Nor should it be forgotten that such small and independent service station operator has what is to him a considerable investment in his business which the petroleum company could wipe out with either a cancellation of the lease or through a refusal to renew. It is, therefore, apparent that the dealer operating his station under a lease from the oil company supplier is not in fact independent and is subject to control by the oil company supplier. The freedom of choice of the dealer with respect to the manner in which he operates his station is very much circumscribed by the economic power and might of his oil company supplier whether or not such power is specifically exercised against him.

The tremedous inequality of economic bargaining power between the major oil companies and their small retail service station operators can be gaged from the fact that these corporations rank among the largest and most powerful in the world.

The Fortune Directory of August 1959, which lists the 500 largest industrial corporations in the United States, ranked according to sales, shows the following petroleum companies:

Company	Rank	Sales	Assets
		Thousands	*Thousands*
Standard Oil (N.J.)	2	$7,543,571	$9,478,603
Socony Mobil Oil	6	2,885,684	3,237,328
Gulf Oil	7	2,769,377	3,430,019
Texaco	9	2,327,939	3,111,527
Standard Oil (Ind.)	14	1,863,990	2,769,317
Shell Oil	18	1,665,989	1,648,271
Standard Oil (Calif.)	19	1,559,160	2,451,069
Sinclair Oil	27	1,190,377	1,499,901
Phillips Petroleum	32	1,066,554	1,515,498
Cities Service	35	1,015,317	1,288,378
Sun Oil	47	721,773	666,927
Continental Oil	60	596,503	619,662
Tidewater Oil	62	552,944	810,731
Atlantic Refining	65	538,110	770,797
Pure Oil	80	473,362	534,966
Union Oil of California	96	408,033	684,558

In this connection we should consider the practically infinitesimal position, economically speaking, of the average gasoline service station operator. The Internal Revenue Service of the U.S. Treasury Department, published in May of this year, statistics of income from the income tax returns filed. I was most forcefully struck by the comparative meagerness of the financial returns of the proprietors of service stations.

The Bureau of Internal Revenue reports that an examination of income tax returns of 206,582 gasoline service stations under sole proprietorships showed they earned a net profit of only $564,154,000. Through a process of simple arithmetic—by dividing one of these numbers into another—one arrives at the figure $2,731, which represents the average net profit derived by a proprietor of a gasoline service station. These figures are the figures supplied by the U.S. Internal Revenue Service. Mind you, only $2,731 net profit for a year's compensation for backbreaking toil through long hours. This figure I submit, gentlemen, in these days of the high cost of living, is pitifully small indeed.

It is small wonder then that the turnover—that is, percentage of transferred and discontinued business—in the service station business is the highest in any principal business classification in our entire economy.

Figures released by the U.S. Department of Commerce during 1959, showed average annual service station turnover of 37 percent for each of the years 1957 and 1958.

It is abundantly clear that the petroleum companies hold the means of economic life or death of countless members of this segment of our small business economy.

It is on behalf of these small people that I appeal for protection against the economic might and power of the major oil companies. While I do not infer necessarily that bigness in itself is a sin, I submit that bigness does often sin. One should not forget that these small and independent operators of gasoline service stations have all their worldly goods invested in their businesses. Is it not natural to assume that these small people would readily bend to the pressure and coercive practices by the big corporations?

It is interesting to note that one of the hearing examiners of the Federal Trade Commission in *The Matter of B. F. Goodrich Company and The Texas Company* (FTC docket No. 6485), recognized that dealers appearing to testify were under considerable pressure because they were naturally interested in not jeopardizing the renewal of their leases.

The acts and practices of the petroleum suppliers which involve coercion of its dealers are prejudicial to the public interest and have a tendency and capacity to restrict, restrain, or lessen competition in the sale of TBA products and constitute unfair methods

of competition and unfair acts and practices in the commerce within the intent and meaning of the antitrust laws.

It is, therefore, the purpose of H.R. 9894 to remove the impediments to the distribution of TBA items in interstate commerce, which impediments arise from the dominance and control of the retail market by producers. This bill is designed to restore true, unfettered, and unsubsidized competition in the distribution of motor vehicle parts, equipment, accessories, and supplies through prohibiting the practices which have led to such impediments.

The antitrust laws are perhaps the most important statutes in the United States Code, and have become a part of the warp and woof of our economic fabric. These laws originated in an era of trusts and combinations, when predatory and monopolistic interests openly sought to control the marketplace by the suppression of competition. In the last analysis, such laws are really conservative enactments to preserve democratic capitalism. It is altogether proper and fitting that committees of both Houses of Congress, from time to time, give their attention to the way and manner in which these important statutes function so that they may be improved and amended in order to better fulfill their objectives.

H.R. 9894 is a logical measure designed to protect free and competitive enterprise. It is intended as a further implementation of the board aims and purposes of the antitrust laws in general. It is a truism that no free society can survive on any foundation other than one which guarantees a maximum of individual enterprise and a minimum of power in the hands of a few. The American tradition emphasizes not only private enterprise, but also competitive enterprise. The antitrust acts constitute both a symbol of this tradition and a significant contribution toward making it effective. All through the history of business enterprise it has been accepted as self-evident that personal and political liberties thrive best in those areas where economic freedom is protected and preserved.

H.R. 9894 is but a means to insure that the free enterprise system in the retail business of gasoline service stations be maintained and that coercive measures on the part of their suppliers be not utilized against such dealers. Therefore, I most earnestly urge that this subcommittee report this bill favorably to the full committee. The need for this legislation is urgent and I sincerely trust the full committee will recommend that this bill be enacted into law.

Federal Bureau of Investigation—V

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. DEVINE. Mr. Speaker, the following article is the last of a series appearing in the Columbus, Ohio, Dispatch relative to the outstanding record of the world's greatest law enforcement agency.

As a former special agent in the Federal Bureau of Investigation I am happy to have the opportunity to insert these articles in the RECORD. My respect and admiration for the Bureau and Mr. Hoover increases with the passage of time. The article follows:

FEDERAL BUREAU OF INVESTIGATION—V

WASHINGTON.—Fact gathering is the reason we have an FBI.

It is currently charged with collecting facts regarding alleged violations of 160 Federal investigative matters assigned to the FBI.

Alphabetically these range from antitrust investigations to violations of the White Slave Traffic Act.

They include kidnapings, bank robberies, civil rights matters, crimes on Indian and Government reservations, thefts from interstate shipments, fraud against the Government, and other Federal offenses which have not been specifically assigned to other Federal investigative agencies.

The FBI has played a prominent role in the solution of many of the most vicious and baffling crimes.

The FBI solved the November 1, 1955, airplane explosion over Longmont, Colo., which tok the lives of 44 persons, including the mother of the criminal involved, John Gilbert Graham. Graham ultimately was executed for his part in wholesale murder, perpetrated by him in an attempt to collect insurance which he had taken out in connection with his mother's travel. It was he who secreted explosives in her luggage. Dynamite wrecked the airplane and took the lives of the innocent and unsuspecting victims.

On January 12, 1956, almost 6 years from the date of the $2,775,000 Brink's robbery in Boston, the FBI arrested six Boston hoodlums on charges of being members of the robbery gang.

All six men were convicted in State court. It is one of the most celebrated cases in FBI history and a clear example of the intensity of FBI investigation.

For sheer intensity of investigation consider the kidnaping of Charles Fletcher Mattson, 10, in December 1936.

Young Charles Mattson was kidnaped from his Tacoma, Wash., home and within a few days his nude body was discovered in a snowbank approximately 12 miles away.

The FBI entered the investigation—and stayed in.

Throughout the years there has been no indication of interstate transportation of the victim—an essential element in any Federal kidnaping violation. Nevertheless, inasmuch as the FBI came into the case at the beginning, it has remained in the case throughout the years.

As of this writing, this investigation constitutes one of the two unsolved major kidnaping cases encountered by the FBI.

In August 1956, the kidnaping of 1-month-old Peter Weinberger was solved by the FBI. Special agents had identified the handwriting of Angelo LaMarca on the kidnap notes after examining nearly 2 million handwriting specimens on public documents in the New York area.

Young Peter Weinberger was taken surreptitiously from a carriage near his home. An alert was sounded and the fact the Weinberger baby had been kidnaped became public knowledge.

Just about all of the evidence available to the FBI consisted of the ransom note. The FBI felt the need to identify this handwriting as quickly as possible. As a result, utility records and other public documents were checked, thus leading to the ultimate uncovering of LaMarca.

Since 1919, the FBI has been responsible for conducting investigations where stolen automobiles are transported across State lines. These offenses are on the increase. The fiscal year ending June 30, 1959, was a peak year. FBI investigations resulted in 5,198 convictions in auto theft cases, and in the location of 1,070 fugitives. During that same year, the FBI located stolen cars in 16,957 instances.

Definitely auto theft is big business. In its daily operations, the FBI is countering the efforts of professional thieves who change motor and serial numbers and otherwise alter cars and then put these motor vehicles back into legitimate traffic.

Cars stolen in the United States have been found in Oslo, Norway, in Turkey, Cuba, Mexico, Canada, and in other countries.

In one instance, the FBI recovered 148 stolen cars taken primarily from Eastern States and channeled into the automobile auction business in Southern States after the motor numbers had been changed. Generally fictitious titles had been provided.

In a number of instances, the so-called salvage racket has been employed. Under this clever arrangement, a thief approaches a junkyard and buys the remains of a wrecked motor vericle. Duirng the course of sale, he receives a valid title. Thereafter, he arranges to steal an identical car, following which he changes serial numbers to agree with those on the title papers. It is then relatively easy for him to arrange for this car to be sold in so-called legitimate commercial pursuits.

Although the FBI's jurisdiction is specifically limited according to certain congressional enactments, Presidential directives and instructions issued by the Attorney General, it nevertheless provides cooperative services to agencies representing municipal, county, and State law enforcement establishments. It is thus possible for the FBI to assist them in the better fullfillment of their responsibilities.

Law enforcement agencies in the Columbus area have been making extensive use of the FBI's training facilities.

The FBI provides lecturers on a regular basis to the Columbus Police Department in connection with both recruit and inservice training for experienced officers.

Sheriff Stacy Hall, of Franklin County, Ohio, not only uses FBI instructors consistently, but is most active in all FBI National Academy graduate functions.

Lt. Jerry Seigel, of the Franklin County sheriff's office, Sheriff Hall, Chief George W. Scholer, Captain Knight of the Columbus Police Department, Lt. Joseph Seryak, of the Ohio State Highway Patrol, Chief George Rice, of Chillicothe, and numerous other prominent law enforcement officials of this immediate area are graduates of the FBI National Academy.

This is a 12-week course at FBI headquarters established by Director J. Edgar Hoover in July 1935. Primary purpose of the training is to provide for career members of the law enforcement profession, particularly those who will serve as instructors for their departments and those who are career executives, a course of training designed to better fit them to fulfill their individual responsibilities.

This select "West Point of law enforcement" has graduated more than 3,000 police officials. The aim of the FBI is to make the school exclusive. It caters to the needs of carefully selected individuals of most deserving attributes who will be of maximum assistance to their local agencies.

Ohio graduates meet semiannually, generally in Columbus, for a 1-day refresher seminar.

Col. Scott B. Radcliffe, superintendent of the Ohio State Highway Patrol, invites FBI instructors to participate in each patrol school. So does the Columbus Police Department. The Buckeye State Sheriffs' Association regularly uses the FBI teaching staff.

The FBI National Academy is supplementary to the local schools conducted by the various field offices of the FBI. Each year the FBI conducts more than 100 separate schools in Ohio localities for the benefit of local agencies.

Law enforcement in the United States is well mobilized and dedicated not only to the preservation of our American way of life, but to the guarding of the public against the assaults of the criminal element.

Approximately 13,000 authorized agencies contribute fingerprint cards and identification data to the FBI. Because of this unified effort approximately 1,500 fugitives are identified each month by the FBI for law enforcement agencies. Fingerprints do it. Although the FBI has no jurisdiction to conduct investigations for "missing persons," notices are nevertheless posted by the identification division as a cooperative service. Each year hundreds of missing persons are located; many are restored to their families.

Series of law-enforcement conferences conducted by the FBI help to stimulate closer cooperation within the profession. They provide a medium for the mutual exchange of ideas and discussion of problems confronting law enforcement on all levels.

During 1960 nearly 200 law-enforcement conferences were held concerning auto theft. Conferences in 1959 related to interstate transportation of stolen property and jewel thefts.

In November and December 1958, the FBI sponsored a series of 176 law-enforcement conferences devoted to the problems of bombings and threats of bombings involving religious and educational institutions. In all, 8,112 officers representing 3,667 law-enforcement agenices attended. With characteristic foresight, Director Hoover ordered these conferences to be held in view of the bombing of the temple at Atlanta, Ga., and the bombing of a school in Tennessee. He foresaw the possibility of additional bombings and threats to bomb which might be outside of FBI jurisdiction. He wanted local agencies to clearly understand their individual responsibilities and the fact that these responsibilities were not transferable to other agencies.

With regard to bombs aboard interstate carriers, particularly aircraft and trains, the FBI has full jurisdiction. The FBI is also called upon to assist State and local agencies in connection with bombings and attempted bombings of religious and educational institutions. The facilities of the FBI identification division and laboratory are available, and the FBI will also cover out-of-State leads—those outside of the jurisdiction of the agency investigating the bombing.

The reputation the FBI has gained over the years as a frontline guardian against crime and subversion is the result of hard labor, selfless dedication, and many sacrifices.

The demands of any public servants are great, and the demands of service in the Federal Bureau of Investigation are, of necessity, rigorous and exacting. The men of the FBI are men of integrity interested in securing the facts and the facts only. Their only loyalty is in doing a good job—no matter what the violation involved.

They strive always to do that job, never for a moment neglecting the motto of the organization they serve—"Fidelity, Bravery, Integrity."

Captive Nations Week

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DERWINSKI. Mr. Speaker, due to the insistence on the part of the Democratic Party leaders to ignore the taxpayers and suspend congressional work for purpose of their preconvention activity, I would call the attention of the Members to a very important commemorative occasion which deserves our complete attention and support.

I hope that we can all put aside partisan feelings and cooperate in the observance of Captive Nations Week, July 17–23, to display to the world the concern of individual U.S. Congressmen for lack of freedom that exists in these unfortunate countries now engulfed behind the Iron Curtain.

I need not remind you of the tragic consequences of the Yalta and Potsdam agreements that drove these people into political slavery. Groups of dedicated American citizens who are concerned with the plight of people in Roumania, Hungary, Bulgaria, Czechoslovakia, Poland, Lithuania, Latvia, Estonia, Yugoslavia, East Germany, Ukraine, and other segments of the Russian Empire will be using that week to remind all Americans of the desire to maintain interest in these Iron Curtain countries and work effectively toward their eventual freedom.

Since freedom is such a precious thing, we who often take its blessings for granted could learn much observing and understanding the suffering of those who have lost their freedom to the ruthless atheistic Communist regimes.

Captive Nations Week must be remembered by all of us. I appeal to you to give it your attention in the period between the national conventions.

Address of Congresman Harold R. Collier at National Serbian-American Rally

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. BROOMFIELD. Mr. Speaker, because I believe it has timely significance, the text of an address given by my colleague, Representative HAROLD R. COLLIER, of the 10th District of Illinois, at the annual Serbian-American rally held at the Sherman Hotel in Chicago on Sunday, June 29, is inserted for reading by the Members of the House of Representatives:

On this occasion, it is fitting and proper to take you back to the historically eventful morning of March 25, 1941, when, shortly after 10 a.m., news broadcasts and wire services around the world carried word that Yugoslavia had signed a pact with the Axis nations.

At that time the Nazi war machine had rolled through Europe and the Balkan States were to be the inevitable victims of Hitler.

With this word the flame of freedom sputtered as if to die and the nation that had offered some ray of hope in resisting aggression seemed destined to fall.

Yet within this land there were 8 million Serbs who, as the author, Ruth Mitchell, stated in the title of her book published in 1943, "chose war" in preference to the servitude of tyranny.

This comparatively small, freedom-loving populace suffered the perils and the atrocities of this brutal epic in history, with a stubborn courage that is now legendary in World War II, as legendary as the name Mihajlovic.

Certainly it is not necessary for me to dwell upon the conditions under which the Serbs carried on their own war as a guerrilla fighting force, matched against one of the greatest organized armies in history.

I am sure that they will live on as long as the uncompromising desire for liberty and freedom remains in the hearts of Serbian people wherever they may be.

The story of the heroic fight of these people was not new to the Serbian nation, for the history of these people, which dated back so many centuries, was punctuated with a fight for survival.

Yes; we can go back to the year of 850, when the Serbs rose against Byzantium and formed an independent state under King Vlastimar.

Several times the Serbian state fought for its freedom, was conquered, but arose again.

Throughout history, up until the beginning of the 19th century, the Serbian national movement repeatedly gained new impetus.

In 1804 the Serbs first rose against their invaders and joined their Balkan neighbors to gain temporary liberation from the Turks after 400 years of domination.

Serbia was ruled intermittently by two rival dynasties, Obrenovich and Karageorgevich, until 1918. Under their reign, other parts of Old Rashka were liberated.

And so you can readily see, from this, that from 850 to the present time the Serbs have had, in all periods of their history, at least one independent Serbian state governed by the rulers who invariably spring from the people.

And, while Serbia no longer exists as an independent nation today, it certainly provides an object lesson, and perhaps even some encouragement to other freedom-loving human beings of all nationalities who may be today under the heel of totalitarian rule.

Throughout the centuries, the burning desire for freedom and independence has been characteristic of the Serbian people. In fact, their willingness to make any sacrifice to fulfill this desire under any conditions has shaped the course of history in the Balkans. And well it may shape the destiny of freemen in their struggle against oppression in the future.

In today commemorating the historic Battle of Kossovo in 1389 and recalling the epic of King Lazar we must pause and gather the full meaning of the motto of the Serbs at that time—"Golden Liberty and Holy Cross"—for no slogan of freedom-loving men was ever more indelibly written and none has been more lasting. The Serbs of that time knew that no birthright was more golden than liberty—the right of a man to be the master of his own destiny—to breathe as a freeman with the right to worship his God as he pleased. And that slogan must never die as long as there remains those of us who are dedicated to liberty, justice, and devotion of our Creator.

Reviewing, as we are, the story of a great struggle of a nation of people of this dedication, we can only hope and pray that we have learned a deep and lasting lesson from Yalta and Teheran—though certainly we may never be able to alleviate the sad plight of several nations which resulted from the policy of appeasement of tyrants in these historic meetings of the Big Four. May this lesson prevail in any and all future dealings of our heads of state with Communist leaders.

The plight of every captive nation today should be a warning to free nations of the threat which faces them in this great struggle for the minds of man—a struggle that

demands vigilance against the threat of godless communism.

For communism, no matter how decentralized it may be, offers no compromise of freedom and certainly not the heritage which has long been our birthright as Americans.

In Yugoslavia today, despite the variation or diversion from the Kremlin hierarchy, there can be no dispute that the Communist Party, built upon the philosophy of Marxism, maintains control over the economy of the country.

And let there be no mistake that the Communist Party is still the only party permitted Marshal Tito in that country.

We know, too, that the party utilizes the national trade union, Sindikat, to control the workers' councils and this group absolutely dominates the worker-management system.

That progress is being made under a Communist system which is allegedly, or at least temporarily, divorced from that of the U.S.S.R. is not to believe that it has anything in common with democracy.

In the past several years, we have seen communism as a way of life make disappointing inroads in many parts of the world.

Only the strength and determination of those who believe in American ideals has maintained the balance which exists today. It is this kind of strength and determination which has sparked this meeting today—and which must never die in the future.

Whether within the framework of decentralized Marxism as it exists in Yugoslavia today there is any ray of hope that the system will ultimately collapse under its own weight and yield to a system devised by freemen is yet problematical.

More important, however, in a broad understanding of communism today, is the Soviet pattern and the tentacles of this economic octupus which are stretching, too often in camouflage, into unsuspecting corners of the world.

Free nations and free people will remain so only as long as they are vigilant of the threat of the Kremlin.

To ignore the fact of Czechoslovakia, and the story of Budapest written in the blood of freedom fighters is sheer folly.

To fail to understand the spy system of the Soviet Union or to minimize it in the face of recent international incidents which embraced the U–2 episode, the summit collapse and the demonstrations in Japan, would be catastrophic thinking on the part of the American, singular or collective, vividly brought home in Cuba and China.

One week and 1 day from tomorrow, the people of this Nation will celebrate the 183d anniversary of America's independence.

We have engaged in two great wars since the turn of the century to preserve this independence and to make the world safe for democracy.

Yet today we are still engaged in a struggle, one in which the Soviet leaders are employing the threat of might and the cunning of deceit and propaganda to undermine our determination to remain free.

While, perhaps, we are too inclined to accept this blessing of freedom that we have maintained for 184 years, certainly the average Russian must be as bitterly disgusted and weary of world conditions as we are.

For as human beings, created by the will of God, they must resent, though they dare not protest, the menacing shouts that issue from the Kremlin.

And their nerves must be ragged by now because this continuous threat is added to a standard of living far below our own.

Today and every day, and particularly on this coming Independence Day, it would seem that we must rededicate ourselves to keeping intact the freedoms which our forefathers won and so many boys have died to keep.

And remember, too, on this memorable day, how bitterly our ancestors fought to leave a legacy of freedom in a world plagued with a determined move to communize it, we dare not be complacent.

While the world is at the crossroads, I believe that time is running out for the masters of the Kremlin and that time, in other words, is on our side.

If we are patient and determined, and if we are willing to make sacrifices to keep ourselves strong and free here at home, and if we do not allow ourselves to be bluffed into appeasement, we and the millions like us around the world can preserve our own independence and offer the light of hope to those behind the Iron Curtain.

I believe that God has so willed it.

Further Reduction in Tariff Rates Could Sound the Death Knell for Many American Industries

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. VAN ZANDT. Mr. Speaker, American industry is vitally concerned with the hearings to be conducted by the U.S. Tariff Commission beginning July 11, 1960. Many industrial and manufacturing firms fear that further reductions will be made in tariff rates and thus add to the economic woe of basic industries throughout the entire Nation. There is also grave concern over the action that may be taken by the Committee for Reciprocity Information in a further reduction of tariff rates at the conference in Geneva next September. Already many American manufacturers have submitted briefs to both the US Tariff Commission and to the Committee for Reciprocity Information which is an interdepartmental committee of the Tariff Commission.

For the past several years I have repeatedly called the attention of the House of Representatives to the plight of American industries caused by flooding the American marketplace with cheaply manufactured foreign goods that rob American wage earners of their jobs and hence their means of earning a livelihood.

Among my many efforts to curb the uncontrolled importation of foreign goods manufactured at slave labor wages was the introduction on January 21, 1960, of H.R. 9841, a bill designed to adjust conditions of competition between certain domestic industries and foreign industries with respect to the level of wages and working conditions in the production of articles imported into the United States. The proposed legislation was drafted in cooperation with Senator KENNETH B. KEATING, Representative of New York, who introduced the bill in the U.S. Senate as S. 2882. It is regretted that it has not been possible during the past six months to obtain action by the House Ways and Means Committee on the Keating-Van Zandt version of legislation needed to curb the evil effects of flooding the United States with foreign-made goods manufactured at slave labor wages.

In addition to writing to the Committee for Reciprocity Information regarding the need to delete from the public list many products of our domestic manufacturers that if subjected to a further reduction of tariff rates will result in real chaos, I have also written to the U.S. Tariff Commission concerning the plight of the Rockwell Manufacturing Co., Pittsburgh, Pa., which manufactures several products among which are taxi meters and water and gas meters all of which have been adversely affected by the sharp reduction in tariff rates.

Since hearings are scheduled to begin before the U.S. Tariff Commission on July 11 and are expected to continue for 6 weeks, I have written the Commission in support of the views of Ralph K. Ulrich, vice president, Rockwell Register Corp., and sales manager, Register Division, Rockwell Manufacturing Co., Pittsburgh, Pa. Mr. Ulrich submitted a statement on June 27, 1960, to the U.S. Tariff Commission in which he clearly explains the inequitable situation that has resulted from the tariff reduction in 1951 which slashed tariff rates 50 percent on taxi meters or parts thereof, finished or unfinished. Mr. Ulrich points out that from the standpoint of the dollar volume, imports increased from $5,848 in 1951 to $38,436 in 1952 and since that time the average annual imports have climbed to over $92,000. Additional statements regarding other products will be filed by the Rockwell Manufacturing Co., in time for the July hearings.

It is significant to state that the production of taxi meters is only one of the many products manufactured by the Rockwell Co., which is one of the most highly respected industrial concerns in the Nation. This particular company which operates a modern plant in my congressional district at Du Bois, Pa., made an enviable record during World War II and the Korean conflict through its contribution to the war effort. The firm which employs highly skilled mechanics proved its ability to retool with surprising speed and engage in Government contracts requiring a high degree of precision work.

Mr. Speaker, it is unthinkable that the Federal Government, through ill-conceived reductions in tariff rates, would endanger the future operation of firms like the Rockwell Manufacturing Co., whose reservoir of highly skilled mechanics may well be needed should further national emergencies arise that threaten the security of this Nation. At this point in my remarks I wish to include my letter of July 1, 1960, to Mr. Donn N. Bent, secretary of the U.S. Tariff Commission, together with the statement filed June 27, 1960, by Mr. Ralph K. Ulrich, vice president, Rockwell Register Corp. and sales manager, register division, Rockwell Manufacturing Co., Pittsburgh, Pa.

It is my fervent hope that both the U.S. Tariff Commission and the Committee for Reciprocity Information will

weigh well the factual information being submitted by various American manufacturers against further tariff reductions, because unless the precarious situation confronting American industry is fully recognized and a tendency to reduce tariff rates is curbed the future is bleak for many firms throughout the Nation who find themselves helpless to compete against the inroads being made by cheaply manufactured foreign goods now flooding the American marketplace. The letter and statement referred to in the preceding paragraph follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 1, 1960.

Re Rockwell Manufacturing Co., Pittsburgh, Pa.

Mr. DONN N. BENT,
Secretary, U.S. Tariff Commission,
Washington, D.C.

MY DEAR SIR: Since DuBois, Pa., is in my congressional district and the Clearfield-DuBois area is among the two areas in Blair and Clearfield Counties that have been certified for the past several years as labor surplus areas by the U.S. Department of Labor, a great amount of time and effort has been devoted by me in trying to rehabilitate the economy of that section of Pennsylvania.

My reason in stressing the chronic unemployment problem which continues to plague my congressional district is due to the fact that it is among the labor surplus areas in the Nation frequently referred to by President Eisenhower as "pockets of unemployment" in contrast to a measure of prosperity enjoyed in other areas of the Nation.

It is against the above-described background of unemployment that I write you in support of the plea of the Rockwell Manufacturing Co. with respect to the menacing situation that prevails because of the marked increase since 1951 in the importation of foreign-made taximeters. In this connection, under date of June 17 the Rockwell Manufacturing Co. wrote you and furnished 20 copies of a written statement relative to the Tariff Commission hearings scheduled to begin July 11, 1960. The request was made for permission to appear at the public hearings at which time Mr. Ralph K. Ulrich, vice president, Rockwell Register Corp. and sales manager of the Rockwell Manufacturing Co., would appear as a witness.

The Rockwell Manufacturing Co. has a plant located at DuBois, Pa., in my congressional district, where it is recognized as one of the key industries in that area. Therefore, I am deeply interested in the plea that no further reduction be made in the existing tariff rate on taximeters.

It is significant to state at this point that since the 1951 reduction of the tariff rate on "taximeters or parts thereof, finished or unfinished," from 85 percent to 42½ percent, the importation of lower priced foreign-made taximeters has increased by leaps and bounds.

For example, the Department of Commerce reveals that following the reduction of the tariff on taximeters by one-half in 1951, a marked increase occurred in the importation of foreign-made taximeters. In 1951, total imports amounted to $5,848; while in 1952 the volume increased to $38,436. It should be emphasized at this point that since 1952, the average annual imports have skyrocketed to $92,000. It is evident that the reduced tariff rate has not only seriously affected the domestic taximeter manufacturer but any further concessions to foreign manufacturers would sound the death knell to the industry in the United States.

I wish to emphasize my grave concern over any attempt to further reduce the tariff rate and to urge that serious consideration be given to the plight of the domestic taximeter industry in the wake of the 1951 tariff reduction which has had adverse effects on firms like the Rockwell Manufacturing Co. It is my considered judgment that the tariff rate should be adjusted upward; otherwise the taximeter industry is facing extinction.

In conclusion, I should like to have this letter made part of the public hearings and at the same time recall to public attention the great part played by the taximeter industry during recent wars when its highly skilled mechanics filled the urgent need for the precision work required in manufacturing war material and equipment which demanded the utmost in skill and dexterity.

Sincerely yours,

JAMES E. VAN ZANDT.

STATEMENT OF RALPH K. ULRICH, VICE PRESIDENT, ROCKWELL REGISTER CORP., AND SALES MANAGER, REGISTER DIVISION, ROCKWELL MANUFACTURING CO., PITTSBURGH, PA., SUBMITTED TO SECRETARY, U.S. TARIFF COMMISSION, WASHINGTON, D.C., JUNE 27, 1960

COMMISSION HEARING

(Schedule 3, metals and manufactures 368(g) taximeters and parts thereof, finished and unfinished.)

The Rockell-Ohmer taximeter is produced by the register division of Rockwell Manufacturing Co. The Ohmer taximeter, the most widely used domestic taximeter in this country, has been known to the taxicab industry for over 45 years. Because of our desire to continue in the taximeter business and to insure the continued employment of highly skilled labor, we are making this statement to point out certain facts and figures covering the danger of any further tariff reduction on taximeters imported into the United States. We are also covering the extremely precarious position of this industry because of the low priced competition from overseas which exists today under the existing tariff rate.

Since it is our understanding that the function of the Commission is to make a "peril point" investigation as provided in section 3 of the Trade Agreements Extension Act of 1951, as amended, we are confident that it is not the intent of this Commission to take action which would lead to further serious curtailment in the manufacure and sales of domestic taximeters.

We will herein produce evidence that since the reduction in 1951 of the tariff rate on "taximeters or parts thereof, finished or unfinished," from 85 percent to 42½ percent, lower priced foreign-made taximeters have been imported in increasing quantities which have become alarming to American taximeter manufactulrers.

2. Because of the nature of the taxicab industry the taximeter business is limited in size. There are approximately 69,000 licensed taxicabs in 484 cities over 25,000 population in the United States, 11,860 or over one-sixth of which are in New York City. Of these 69,000 taxicabs approximately 52,000 are metered. The remainder operate on a zone rate basis. It is estimated there are over 50,000 taxicabs in cities and towns under 25,000 population, relatively few of which are or will be metered because of what is considered a reasonably satisfactory flat rate operation. There are perhaps 12,000 taximeters in use in the larger size small cities under 25,000 population, making a grand total of approximately 64,000 taximeters in use.

Since anticipated life expectancy of taximeters extends over an average of 12 to 15 years, the annual replacement requirements of the industry will not exceed from 4,000 to 5,000 units. Additional new meter sales will vary depending upon conditions and upon additional cities changing over from zone to metered rates. There has been practically no increase in the number of licensed taxicabs in use during recent years which would indicate no anticipated expansion in the industry in the foreseeable future.

3. It is evident from figures made available to us by the Department of Commerce that following the reduction of the tariff on taximeters by one-half in July 1951, foreign manufacturers of taximeters have found it very profitable to sell in this country. In 1951 the total dollar value of imports under this category amounted to $5,848. In 1952 imports were $38,436. Since 1952 the average annual imports have amounted to over $92,000 which represents an alarming percent of the estimated number of units sold annually by the industry. Please refer to exhibit I for data on imports by years from various countries.

Since 1954 the Department of Commerce has not provided us with detailed figures of the number of units imported from each particular country. However, based on 1952 and 1953 reports, it is evident that manufacturer's selling prices c.i.f. New York varied from $37 to $90 with the most popular models averaging $50 to $65 per unit.

4. Because of the importance of New York City as a market for taximeters, importers of foreign-made meters have so far concentrated their efforts in this area. It is estimated that already nearly half of the taximeters in use in New York City are of foreign manufacture with the percent increasing at an alarming rate. On an annual basis, it is estimated that over 65 percent of New York City taximeter sales are foreign-made taximeters. Our new meter sales in New York City have dropped continuously since low priced foreign-made meters were introduced in 1951; whereas otherwise, on a national basis we have maintained a fairly uniform volume of taximeter business. It gives the domestic taximeter manufacturer the feeling of gravest concern to anticipate just how soon the same paralyzing results will be duplicated in other sections of the United States.

5. The intricate construction of the taximeter results in a high labor content of the final product. The Commission is, of course, familiar with the differences in wage rates as between the United States and countries in Western Europe and Japan. For example, the wage rate for a skilled operator in Sweden is 94 cents, in Germany it is 55 cents, and in Japan it is 25 cents. This compares with our wage rate of about $2.50 per hour. For this reason foreign-made taximeters can be supplied to the United States at generally less than half of the production costs of American manufacturers, and it is not possible for the domestic industry to compete with imported products on the same basis. In an effort to meet foreign competition, U.S. manufacturers of taximeters have been forced to forego normal price increases since 1951. However, in the period 1951–60 labor costs have increased by 46.7 percent according to the Bureau of Labor Statistics. At current prices profits in the taximeter industry are extremely discouraging.

6. The 1951 tariff reduction has already given foreign manufacturers a definite advantage in the U.S. market to the point where the existence of the entire industry is seriously threatened. My company manufactures a variety of products, and the discontinuation of our taximeter production, while it would cause us to suffer a serious capital loss of our investment in plant, machinery, tools, and dies specifically designed for the manufacture of taximeters, and in the good will and reputation of this Rockwell-Ohmer product, which has been developed over 45 years, it would not seriously effect our organization as such. We believe that, if necessary, we can protect our shareholders by having our meter manufactured in Europe and arrange for importation and distribution in this country. We cannot, of

course, insure and protect the employment of the highly skilled mechanics who have specialized in the manufacture of taximeters over many years. We believe that our position is an exception in the industry, which is mainly composed of a number of small, well-managed companies concentrating exclusively on the production of taximeters. For these other companies, the perilous position in which the industry finds itself today is far more serious. They may be faced with the closing down of their entire plants and organizations.

7. You will note from exhibit 1 that our major foreign competitors are in Sweden and Germany. In each case we are concerned with one single manufacturer in Sweden and one manufacturer in Germany. Both companies are large, highly capitalized industrial organizations, employing several thousand. The previous tariff reduction in 1951 has given them a definite price advantage over the local industry, and they have already obtained a substantial share of the U.S. market for taximeters. Any further reduction of the tariff on taximeters can have only one result and one intention, and that is the virtual dissolution of this American industry, largely composed of small individual American businesses. Two manufacturers have discontinued the taximeter business during the past 5 years. One, the Pittsburgh Taximeter Co., had been one of the leading manufacturers of taximeters for many years.

8. As previously stated, there are approximately 64,000 taximeters in use in this country. If the U.S. taximeter industry is forced out of business, individual operators and owners would have great difficulty in maintaining these meters due to their inability of securing spare and replacement parts.

9. The U.S. taximeter industry is composed of four manufacturers supplying the domestic market, and while this industry may not appear to be large as such, its importance in wartime and periods of national emergency is out of all proportion to its size. During World War II, the Ohmer Corp. (which is now the Register Division of the Rockwell Manufacturing Co.) produced the Servo motor assemblies for the Norden bombsight, aircraft gun-turret controls for the flying fortress, control (steering) columnns for the B-29 superfortress, and other bombers, components for radar equipment, and many miscellaneous aircraft parts and subassemblies which call for extreme precision working abilities up to .0002 of an inch. We have in our file citations from practically every segment of the Armed Forces, testifying to the skill and precision of our employees in governmental contracts.

During the Korean emergency this division likewise carried out contracts involving precision work in connection with the manufacture of oxygen regulators and other complex defense production items. We feel certain that this Commission would not wish to be responsible for the loss of the skill and availability of these essential keymen in the event of a future emergency.

EXHIBIT I

Imports of taximeters and parts thereof into the United States of America

Year	Country of origin	Units	Value in U.S. dollars	Total annual value in U.S. dollars
1951	Sweden	86	5,848	5,848
1952	do	553	29,862	
	Germany	53	3,498	
	Japan	2	160	38,436

Title: Slovaks Commemorate 1,100th Anniversary of Sts. Cyril and Methodius

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. FLYNN. Mr. Speaker, there are in my First Congressional District of Wisconsin, many groups of descendants of the fine racial stocks of middle-European peoples. Many of these fled oppression and tyranny. Many of them migrated to this country because their great skills as craftsmen were known and they came to help in the building of our young country. For whatever reason they came, they and their descendants have made great and wonderful contribution to the building of this country, to the framing of its doctrines of freedom, the forming of its attitudes of charity and love of peace, to the development of its rugged and forthright character, and to its religious nature and faith. They have made great contribution to our culture, to our music, our dancing, and our folklore. The United States of America is truly blessed in history to have been able to provide the land and the haven to these fine people, amongst them, the tremendously colorful and robustly freedom loving, deeply religious Slovaks.

There are many Slovaks in my district. Their contribution to Wisconsin and to the Nation as a whole has been great, yet they have retained much of the culture of their native land. Colorful Slovak costumes are still worn at weddings and christenings. Their dances are beautiful, sometimes lively and lusty, sometimes slow and graceful, always exciting. Their musicians play most wonderful Slovak music. I had the greatest pleasure recently of witnessing these folk expressions at the National Folk Festival here in Washington last month—and I tell you it was an experience long to be remembered.

Mr. Speaker, the purpose of my rising today to address this House, this symbol of the free United States, is to join in the commemoration of an anniversary precious in the hearts of this stout and rugged people who, for more than a thousand years have fought for freedom, and through the greatest tribulations have held fast to their aspirations and their deep religious fervor. The Slovaks on July 4, National Slovak Day, whether at home or abroad, whether free or still in bondage, will commemorate as they have for centuries, that great moment in history when the intrepid and beloved Saints, Cyril and Methodius, left Macedonia to bring the religion of Christ to this group of Western Slavs in the shadows of the Tatra Mountains, more than 1,100 years ago. Just as the Irish venerate St. Patrick, the Poles cherish St. Stanislaus, and the Welsh revere St. David, so do the Slovaks pay honor and tribute to Methodius, first bishop of their beloved Nitra, and to his scholarly brother Cyril, the inventor of the first Slavic alphabet.

It is particularly fitting that the Slovaks' "great day" should be a religious anniversary. Anyone who is familiar with their magnificent history and has drunk deeply of their folklore in song and story, could not expect it to be otherwise. For, to a Slovak, religion and freedom are concomitant; love of country and devotion to God go hand in hand. In all of their turbulent and colorful history, Slovaks have held steadfastly to their faith, and no amount of oppression, however long or arduous, has been able to stamp out their yearning for liberty and freedom.

I would like to quote briefly from a short history of Slovakia written by nostalgic Slovakians in this country:

Along the northern shore of the central Danube where the eastern slopes of the Alps touch the western slopes of the Carpathian Mountains lies a country unknown to many Americans.

It was the first organized state in central Europe, a busy, noisy crossroads for nations seeking a home in the early centuries of the Christian era.

The country and its people from these earliest times to the present have had to deal with conquerors and tyrants, to win the necessities of life from a stubborn soil and through it all hold on to their growing culture, freedom of spirit, and way of life.

The Slovaks belong to the group of western Slavs and are one of the oldest historical nations in that sector of Europe. Already in the ninth century, they developed the first independent statehood known as the Kingdom of Great Moravia (A.D. 830-907). Even at the time of their subsequent incorporation into the Kingdom of Hungary, their Christian faith and political endurance was tested many times during the incursions of the Tartars in the 13th and of the Turks during the 16th and 17th centuries. In these struggles for national soil and cultural heritage they developed strong aspirations for independence. * * *

Even though its beautiful land serves as a huge prison behind the Iron Curtain, the Slovak Nation has not lost, but continues to confess fearlessly, its faith in God as the source of its strength and hope.

When the forefathers of our Slovak fellow citizens came to this country, it

was not, therefore, just by chance that they were endowed with solid potentials for fine American citizenship. For one quality they had in abundance—faith. Religion for them was not just an isolated phase of their lives. Their devotion to God was an integral part of their lives and the more than 300 parishes in America founded by Slovaks and their descendants serve as eloquent testimony to their rich spiritual heritage. And it was this very heritage, coupled with the Slovakian love for liberty that has made it possible for them to integrate themselves so firmly in our American democracy and to understand so well the essentials of loyal citizenship. A good Slovak could not help but be a good American because he has always known his true relationship with God, that man is a creation of God and is graced with qualities that are his, at birth, as a special gift from God.

In these days of intellectual and moral confusion, we ought to ponder the lustrous words of the Declaration of Independence. "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

In all history, of all the nations, the real national strength has been powered by a spiritual dynamism. The decay of nations is rarely the product of material deterioration or defeat in armed conflict. These are results, not causes. A nation really decays when it begins to weaken in its spiritual motivation. To continue strong, a nation must have faith in its traditions if it is to have faith in itself, and each citizen must feel he partakes of these traditions. All lovers of liberty can well emulate the doughty inhabitants of Slovakia today and for centuries past, who have refused to live under enslavement by the Turks and Magyars, and who will in the end repudiate the hammer and sickle for the torch of liberty. Each Slovak identifies himself with these traditions of love of liberty, knowledge of man's creation by and in the image of God, and, therefore, an inviolable entity not to be enslaved by other men. Each Slovak cherishes the memory of the great Sts. Cyril and Methodius, who taught and led his ancestors into the ways of faith and knowledge of freedom's meaning.

Our Slovak fellow citizens are possessed of a magnificent heritage, one which we all can cherish and take to ourselves with pride as part of the tradition which makes the United States great. We can take pride, with them, in a tradition which rejects enslavement of the spirit by whatever means, and in these turbulent days, hold on to this simple faith, holding our heads high, humbly proud in the knowledge of the heritage that is America. That heritage is in good hands when it is entrusted to the likes of the more than 1½ million Americans of Slovak descent. We have no nobler destiny than this, as Americans, to follow in the footsteps of such as these free spirits. I, too, and you, can thus cherish and take for our own, the great inspiration of wondrous men and great spiritual leaders such as the saints, Methodius and Cyril, whose lives the Slovaks are memorializing on July 4, our own Independence Day.

The Passing of a Great American—B. C. McElroy, Sr., of Marshall, Tex.

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. PATMAN. Mr. Speaker, on June 23, 1960, the hearts of Texans were saddened by the passing of a great American, Benjamin Cameron McElroy, Sr., at Marshall, Tex.

Mr. McElroy, 85, had lived a long, full and useful life. He served as postmaster at Marshall for 15 years, retiring from that position at the close of 1949. Few citizens have served in as many civic undertakings and he was the fifth president of Marshall's Chamber of Commerce. He was a director of the First National Bank, on the board of the First Federal Savings & Loan Association, was an honorary Rotarian, for many years was a director of the Compress Association of Texas, and took an active part in various other Marshall undertakings.

Many beautiful tributes have been paid to him, but one editorial tribute in particular by Millard Cope, publisher of the Marshall News Messenger, I would like to include at this point. I concur wholeheartedly with the statement. The life of Benjamin Cameron McElroy, Sr., was dedicated to helping his fellowmen. His community, his county, the State and the Nation will be poorer by his absence.

The editorial is as follows:

B. C. McELROY

The death of B. C. McElroy closes a Marshall career that began more than half a century ago, when he came here as compress manager, and during which few persons became so deeply endeared to the entire community.

Time after time Marshall showed its appreciation and respect for Mr. McElroy, honoring him in various ways as he devoted time, efforts and talents to community progress; always kindly, always friendly, always lending a helping hand to a friend.

For a decade and a half he served Marshall as postmaster, after years in the cotton compress and other business ventures. It was as postmaster that he was best known to the present generation, until his retirement at the close of 1949; but old-timers remember his activity with the cotton compress and his activity in every field of business and civic enterprise.

After more years of service as a director of the First National Bank than any other, he was named an honorary director when illness prevented his attending board meetings. Like honors were paid him by the board of directors of the First Federal Savings & Loan Association when he no longer was able to be active in the organization. The rotary club, too, made him an honorary member in tribute to his long loyalty to the club.

He and the late Col. Myron G. Bialock teamed together as the Marshall Chamber of Commerce team responsible for highway development here and in this area, his efforts being to bring people to Marshall. Mr. McElroy was the fifth president of the chamber of commerce and for years was active on the highway committee, as well as in other phases of activity.

He became widely known in the cotton compress field in his earlier years, being honored by the State association in election to the board of directors. He was an outstanding layman, serving for many years on the vestry of Trinity Episcopal Church, and, just as he received so many honors locally from those who appreciated his efforts, he drew praise from James A. Farley as Postmaster General for his outstanding service to the patrons of the Marshall Post Office.

Mr. McElroy's contributions to Marshall were broad and varied, always with a human touch, and he devotedly served on the city's interracial committee that for so many years gave this community a high distinction for its understanding between the races.

Mr. McElroy was a friend of all. Kind, considerate, helpful, and devoted to his friends, Mr. McElroy's life was one for which Marshall shall always be grateful and appreciative. His deeds shall serve as a monument to his efforts. None did so much for so many, always unselfish; always striving for a better community in which to live; always constructive; and never with malice. No Marshall citizen has left a finer example for the generations to come.

Left to carry on in his place are a fine son, Cameron McElroy, Jr., who is chairman of the board of an international engineering concern—Turnbull, Inc.; a grandson, Cameron McElroy III, of Dallas; and two great grandchildren, Cameron McElroy IV, and Mary Lucille McElroy. His gracious and devoted wife also survives.

Fifty-Star Flag

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Chelsea Record, Chelsea, Mass., on June 29, 1960, pertaining to the first official 50-star banner:

NEW FLAG THIS FOURTH

A ceremony at 11 o'clock on the morning of July 4 will give the final official recognition to the new State of Hawaii and the first salute to the new flag of these United States. The Quartermaster Corps, as required by law, will produce the first official 50-star banner and by tradition a unit of U.S. Marines, in colonial uniforms, will raise the national emblem over Independence Hall in Philadelphia.

From that moment on, the continental Nation and its two sister outposts will be as one. A larger, and certainly far richer, family of States than dreamed of by the men who met in Philadelphia 184 years ago to weld the final link in the chain of freedom they had so laboriously begun many years before. This land was a virgin one

then not much exposed to the settlements nor tameness of man.

Its natural wealth, exposed and hidden, added greatly to the enthusiasm of the sparse population of 1776. The richness of the land, the attraction of its endless forests and the very newness of its political freedom invited men to explore the vast terrain they could call their own. Little unexplored acreage remains today, but the undeveloped wealth and potential challenges of this land to its inhabitants remain undiminished.

Observers from the original Independence Hall era would find it disheartening to see to what extent Americans of the 20th century depend upon the Government for many necessities and some luxuries. But the Revolutionary Fathers would be pleased by the results of nearly two centuries of American initiative and industry.

In 1776 the United States was a loosely knit collection of a few fledgling States, each of them poor to a greater or lesser degree. This seed grew into the greatest stronghold of individual liberty human history has recorded.

Shall it be the destiny of the present generation, or the one now growing to maturity, or the one which will follow, to begin the dissolution of the American dream? There are men of influence today, as there were in 1776, who prefer other systems. Will their unrelenting attempts to divert the aims of the Founding Fathers into more confining channels be shunted aside in the future?

Anniversary of Philippine Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. POWELL. Mr. Speaker, in keeping with the independence of the Philippines the 4th of July, I wish to extend my warmest congratulations and best wishes to His Excellency, the President, Mr. Carlos P. Garcia, His Excellency the Ambassador, Mr. Carlos Romulo, and all the people of the Philippines.

Perhaps the most significant, modern feature the Philippines has so characteristically unfolded to the world is her recent attainment as the site for the first World Tourist Conference in Asia and the Pacific Area. Already quite renowned in travel lore as the "Pearl of the Orient," the Philippines have contributed immeasurably toward the drive to advance the cause of peaceful progress.

Advancing steadily into the climb of the jet age, as seen in the amalgam of her architecture, traditions, mores, and art, not to mention those intangibles in her national life that has made her nation the first in Asia to emerge from colonialism to independence after the Second World War, she has humbly accepted the best from other cultures to embellish her own nation, molding and enriching the Philippines she is today.

Nurturing her wounds suffered from the ravages of war, the Philippines have risen above her shortcomings and is counted today as one of the robust working democracies in the community of the free world. Formerly crippled, today she now stands firmly under the inspiring leadership of President Carlos P. Garcia, with her own government attending her own problems to secure her people with the maximum internal stability and prosperity.

She has lifted the veil of the mystic East to swing open her doors of hospitality to correct the deeply rooted traditions and fears inspired by ideological conflicts and political antagonisms.

A beacon, indeed, to world peace, the Philippines are certainly to be congratulated on this memorable day of their independence.

Landmarks an Asset

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. FLOOD. Mr. Speaker, as an extension of my remarks in the RECORD today I include a very interesting and informative editorial from the Wilkes-Barre Times Leader of Wednesday, June 29, 1960:

LANDMARKS AN ASSET

Announcement that the Swetland House will be opened again to the public on July 1 recalls to the community the generosity and farsightedness of Mrs. Franck F. Darte, of Wilkes-Barre, who gave the house to Wyoming Historical and Geological Society, provided for its renovation and furnishing and then, through a substantial endowment, assured permanent preservation of the landmark which is so intimately connected with the history of Wyoming Valley.

Mrs. Darte's gift has done much to enhance the stature of the community and prestige of the historical society.

Progress, as it is sometimes termed, has caused the loss of many landmarks in Wyoming Valley. From a multitude of examples, only a few need be cited to make this point. Older residents will remember the Pickering house, which stood on South Main Street, Wilkes-Barre, the Exchange Hotel, and the original Hoyt house, both of which stood on Wyoming Avenue, Kingston. All three have been razed in the past 30 years to make way for commercial development.

The Pickering house was the home of Timothy Pickering who was adjutant general to George Washington during the Revolution and later held posts in Washington's Cabinet and, until 1811, served as a U.S. Senator.

The Hoyt house, built by Ziba Hoyt, one of the region's earliest settler, was the boyhood home of Henry Martyn Hoyt who served as Governor of the Commonwealth from 1872 until 1876. The Exchange Hotel, built around 1800, was probably the oldest public building in northeastern Pennsylvania.

Fortunately, proponents of progress, who formerly gave little thought to the preservation of historic sites, are becoming aware that landmarks, such as the Swetland House, have more than a curiosity value. They form an important link in the chain of our local and national heritage and connect us with a past of which we can be proud.

There are few in the community who are unaware of the history of the Swetland House and of Luke Swetland—Mrs. Darte's great-great-great-grandfather—who came here before the American Revolution and built the house at the turn of the last century. For those who are unaware, Mrs. Darte's gift assures them the opportunity to learn, and the generations which will follow us will be able to say "There is the Swetland House" rather than "the Swetland House stood here."

Tax Used as Gag on Freedom

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Herald, Rock Hill, S.C., of June 27, 1960:

TAX USED AS GAG ON FREEDOM

Earlier this year, the Evening Herald editorially lashed out at an Internal Revenue Service ruling that advertising to air political views was not tax deductible.

The test case was one against an electric company which tried to deduct expenses for advertisement in which the company had tried to warn the public about Federal encroachment. The Evening Herald agreed with the company stand that it was a business expense in that it was trying to protect the company's business.

The Evening Herald called the ruling "censorship by taxation."

A speech under the same title was delivered this month before the Arkansas Press Association. It was delivered by Alex H. Washburn, editor and publisher of the Hope (Ark.) Star.

Washburn gave a personal example of how he had tried to deduct from his income tax $6,000 which he spent in circulating a petition for a vote on the law exempting livestock and poultry feed from State sales tax. He said it was important to his business because it is in competition with sales-tax-free Texarkana, only 34 miles away.

The Internal Revenue Service said he could not deduct the expense and he is now fighting it in court.

He said: "The Treasury long ago collected income tax on the $6,000 I spent in the 1955 petition campaign. Of that money, $3,000 went to the canvassers who circulated the petition, $1,500 to lawyers, and $500 to Little Rock printers—and all these people paid income tax on these receipts, or were liable for same under the law.

"Now the Government attempts to double its take on that $6,000—claiming a second tax from me, who spent the money instead of receiving it. Merely because I went over the State with a petition and implemented an editorial fight I had been waging in my newspaper for years.

"I repeat: This is not a matter of income tax—the income tax law is merely the instrument by which the Federal Government is seeking to censor and fine a newspaper editor.

"An Asiatic dictator would send his police to handle a hostile editor—but not in America. In America we are enlightened. In America we send in the tax collector, to make the same threats, and do the same job."

This is not just the newspaper's fight. It affects everyone.

Taxes are collected on so-called lobbying expense, upon money spent to plead for justice to the public through advertise-

ments, and upon dues paid to organizations which spend part of the time advocating improvement or changes in governmental agencies.

It conceivably could affect everyone who pays dues to an outfit like the National Education Association or the American Legion, whose representatives spend much of their time talking to Congressmen.

A bill by Representative HALE BOGGS, Democrat, of Louisiana, has been favorably reported out of the House Ways and Means Committee. This bill would reverse the Internal Revenue Service ruling by congressional action.

The bill is expected to reach the floor of the House for action soon, and could be enacted this session.

A word to your Congressman that you favor repeal of this tax on freedom might be all that is needed to assure passage.

Income Taxes

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. FASCELL. Mr. Speaker, I received a letter the other day from a lady in my district which expresses very interestingly, I think, the attitude of many of our people regarding income taxes and gives an impression shared by most of us regarding the difficulty experienced in translating the regulations to our individual situations. I thought the Members would enjoy reading this letter as much as I enjoyed receiving it. The letter follows:

CORAL GABLES, FLA.,
June 15, 1960.

Hon. DANTE FASCELL,
U.S. House of Representatives,
Washington, D.C.

SIR: I believe I can safely say I'm just about as patriotic as the next person—pledge allegiance to the flag of America before breakfast, wear red, white, and blue on all national holidays, stand at attention during the TV signoff, etc., but I'm getting mighty sick and tired of the deplorable condition of our honorable Government.

Being an honorable Representative, I would appreciate your using some of your honorable influence to get an honorable committee to revise our honorable income tax laws to give us honorable citizens a halfway chance of making a decent living. On top of having to pay an exorbitant amount of money each year we also have to pay some one to figure out the redtape set up to mystify and confuse the general public.

I'm sure you will agree that something is wrong when a person can make more money by not working than by working or when a business is actually ahead when it loses money. Now, does that make sense to you? It is no wonder no one has any initiative any more. You work hard to make a buck and the I.R. is there to take 99 11/100 percent of it before you even get to the bank. I would personally like to join the exodus to Switzerland but by the time I pay my honorable taxes I don't have enough money left to buy a ticket on a pogo stick.

I realize it takes a great deal of money to run a government and support 75 percent of the world, and I really don't mind paying taxes as long as I can understand why I am paying them. The income tax form might as well be written in Sanskrit for all the good it does. How about throwing out all the mumbo-jumbo and writing it so that we can understand it without referring to section C, paragraph 19, subclause 22 of clause 7, page 12.

Any clamor you can raise in the House in this regard will be greatly appreciated.

Very truly yours,

BETTE LESLIE.
Mrs. Frank N. Leslie.

Fair Labor Standards Amendments of 1960

SPEECH
OF
HON. JACOB H. GILBERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12677) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in activities affecting commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes.

Mr. GILBERT. Mr. Chairman, I am griveously disappointed in the final results of minimum wage legislation. The Ayres-Kitchin substitute for the committee-approved Roosevelt bill, which passed the House, is completely inadequate and, in my opinion, has been correctly labelled a "political fraud."

The House had before it for consideration H.R. 12677, the Roosevelt bill entitled the "Fair Labor Standards Amendments of 1960." This protected the little man, the small businessman. I favored its passage, free from crippling amendments, maintaining that anything less than the bill as reported by the House Labor Committee would be completely unacceptable to me and to the many millions who depend upon us for meaningful wage-hour legislation this year. Futile political gestures and pretenses of relief are a betrayal of the millions of workers of our nation who are not only deserving of, but entitled to, the benefits proposed in the Roosevelt bill.

After lengthy hearings and thorough consideration, the House Committee on Education and Labor reported a sharply scaled down Roosevelt bill. It represented a compromise but was fair and reasonable. Although it did not provide as much protection to as many low-income workers as quickly as I had hoped for, it did provide greatly needed improvements in the present law. I introduced a bill for a direct increase in the minimum wage to $1.25 per hour, H.R. 11080. The committee bill provided for an increase in the minimum wage to $1.25 an hour over a 2-year period for employees already covered by the law and over a 3-year period for newly covered workers. Also, the bill extended coverage to some 3.5 million low-wage workers in large businesses. These millions have been in dire need of protection for many years; their sad plight can no longer be ignored; it was the duty of this House to take cognizance of the hardships suffered by our underpaid workers and to give them the relief provided in the committee bill.

Consider the high percentage of our Nation's workers who receive as little as 60 cents an hour. Consider the new high we have reached in living costs; increases in food prices, medical and dental care, necessities such as medicines, household needs, clothing. How can a worker take care of his own needs, much less the needs of a family or family obligations on a wage of 60 cents per hour? He barely exists; substandard living is his portion. The minimum wage for wage earners now covered by the Fair Labor Standards Act is inadequate and detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers.

I hoped that this body would come to the rescue of those who cannot help themselves, who look to us for fair action in their behalf and assistance in their present desperate state.

I consider the tactics involved in bringing the substitute measure before the House deplorable and the entire procedure highly objectionable. During the debate on the substitute bill, a member of the House Committee on Education and Labor stated: "This substitute measure never saw daylight in our committee. The bill was not printed until the day after the Rules Committee acted. It was hurriedly drawn up to scuttle the committee bill." Members of the House had insufficient time to study it before being called upon to vote. It is apparent that the President and Vice President favored the substitute measure and that the administration did not object to the killing of the moderate Roosevelt bill as approved by the committee.

I voted against substitution of the Ayres-Kitchin measure for the Roosevelt bill. I regretted the necessity of finally having to vote for the substitute measure, which provides for a flat increase to only $1.15 per hour, and which greatly cuts down the coverage as proposed in the committee bill and contains other objectionable features. I voted for the substitute bill only because I had no other choice and because, in the light of the great hardships now suffered by our underpaid workers, a tenth of a loaf was better than none.

Those of us who have the welfare of our workers at heart, can only hope that the Senate will vote out a bill at least as fair as the House committee bill. I look forward, with confidence, to the day when the Congress of the United States will take the bull by the horns and pass a minimum wage bill providing for an increase in minimum wage to at least $1.25 per hour, and adequate coverage for the many millions of workers not now covered by the Fair Labor Standards Act, as amended.

What Elections Really Mean in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. WOLF. Mr. Speaker, the purveyors of the Communist doctrine have been trying to pass off to the free world the idea that really communism is just a little different form of democracy. They have been attempting to make the world believe that a people's democracy is just that. A few days ago the Washington Daily News carried a letter to the editor by Mr. Peter Zenkl, former mayor of Prague, and currently serving as chairman of the executive committee of the Council of Free Czechoslovakia. His letter attempts to outline what elections are really like in Czechoslovakia—truly a mockery of democracy. I commend it to the full consideration of the Members of Congress:

THESE WERE NOT "ELECTIONS"

In the so-called "elections" to the National Assembly, the Slovak National Council and the National Committees in Czechoslovakia, held on June 12, the "National Front candidates" reportedly obtained close to 100 percent of the "votes" and almost 100 percent of all registered voters reportedly took part in the "election act."

This was nothing but a gigantic crude hoax committed on the citizens of Czechoslovakia and the world at large. Many may not fully realize the great tragedy that lies behind that official report issued by the Communist regime in Prague.

On April 11, 1960, the Prague Government announced that the elections would be held on June 12. The Politburo of the Communist Party and the lower party organs in the regions, districts and communities then selected one candidate for each office to be filled, and "presented" these candidates to the "electorate" at public meetings which were attended only by a small fraction of the population. According to the reports published in the press and broadcast by the regime radio, all the candidates were enthusiastically endorsed and not one case of dissent occurred.

By the middle of May, the candidates were officially registered. Further public meetings were then held at which the candidates informed the voters that their election program was the fulfillment of the current and the future 5-year economic plan and invited them to work toward this goal.

The election act does not provide for obligatory participation in the elections. It stipulates, however, that the elections are secret. This did not prevent the Communist regime from exerting violent pressure on the citizens to take part in the election, march to the polls in whole groups according to blocks of houses, streets, villages or plants, carrying flags and banners and accompanied by musical bands and to cast their ballots without using the screened-off part of the polling booth. After the elections the regime boasted that only a tiny fraction of the voters had not complied with this invitation.

Czechoslovakia has a long democratic parliamentary tradition. Between the two World Wars, when the country was surrounded by a sea of totalitarian dictatorships, it stuck to its free democratic institutions. The Prague National Assembly functioned right up to the Munich dictate which delivered Czechoslovakia to the Nazi Reich. The Czechs and Slovaks have always been proud of this tradition and record.

Imagine, then, what it means to them that they—the people of the great T. G. Masaryk, of whose picture on the recent U.S. Champions of Freedom series of postal stamps the Prague regime is so afraid that mail stamped with them is not delivered but either destroyed or returned—have now to participate in the gruesome farce which has been described above and to pretend to do so readily and merrily.

The fact that they are compelled to do so is at the same time a measure of the degree of terror and fear which the Communists are able to exercise over the millions of their subdued fellow-citizens.

PETER ZENKL,
Chairman, Executive Committee,
Council of Free Czechoslovakia.

Sensible Recess

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. ROONEY. Mr. Speaker, pursuant to the permission heretofore granted me by unanimous consent of the House, I include the following interesting editorial published in the Washington Evening Star of Thursday, June 30, 1960:

SENSIBLE RECESS

The decision to recess Congress was dictated by a very practical consideration—namely, that there will not be enough time to wrap up a decent legislative job between this weekend and the opening of the Democratic Convention. And in this situation it makes sense, we think, for the legislators to come back in August, when they can devote 3 or 4 weeks instead of 3 or 4 days to their important unfinished business.

In this last category are 10 appropriation bills, medical aid to the aged, school construction, minimum wage legislation, housing, refugee assistance, small business, the sugar bill, and several others. Perhaps it would be just as well if some of these should not become law. But if the whole package is going to be enacted, some real consideration of the merits of these measures is vastly preferable to a last minute stampede in which many Members would not know what they were voting for or against.

There have been and will be attempts to embarrass the Democratic leadership because Congress has not succeeded in winding up its legislative business. But these are not justified. For one thing, a great deal of time in this session was devoted to pushing through a civil rights bill. And, this being an election year, things were bound to move slowly. Even so, however, Congress ought to be able to come back to Washington on August 8 and wind up its business prior to the date of last year's adjournment, which came on September 16.

Finally, we do not think that the decision to recess is fraught with any momentous political significance. Republican Chairman MORTON is saying that the decision is proof of a deal for a Kennedy-Johnson ticket. With all due respect to the GOP chairman's crystal ball, we think he is talking nonsense. Our guess is that Senator JOHNSON intends to fight for the top prize right down to the wire.

Who Lost Face?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. MICHEL. Mr. Speaker, I ask unanimous consent to have reprinted in the Appendix of the RECORD at this point the following editorial which appeared in the June 29, 1960, edition of the Peoria Journal Star entitled "Who Lost Face?"

WHO LOST FACE?

President Eisenhower's return and report have done a great deal to restore some sober perspective and more sensible understanding of recent events. The passage of a little time has helped, too.

We now find responsible observers, including the top newsmen who actually made the trip, reporting these events in saner terms than some of the early, emotional Monday-morning quarterbacking that went on.

It is now generally accepted and well established that the President had a tremendous impact in those very critical Asian areas of India and Pakistan as well as in Korea, the Philippines, and on Formosa. No world figure brought out such fantastic and enthusiastic crowds in all history—and this in Asia.

It is now clearly established that rioters in Japan seldom numbered more than 15,000 and that the whole maneuver was a matter of trained Communist agents fanning an issue into a white heat. There is every reason to believe that the vast majority of Japanese have the same remarkable affection and regard for Eisenhower as in other Asian lands.

We, in America, sometimes seem to have an almost neurotic, masochistic compulsion to beat our own backs whether it makes any sense or not.

Thus many of us cried loudly about "losing face" in the Japanese incident—which we did. But the great loss of face was not ours, but that of the Japanese Government that failed to curb such conduct. It will be changed, and the new government will be friendly to the United States and our bases will be maintained.

This is a repeat of the situation when, in fact, the Soviet Union "lost face" terribly with its admission that U.S. photo planes have been flying unmolested the length and breadth of Russia for years. They tried to regain "face" by a lot of loud and insulting talk.

This failed, and instead they earned the condemnation of the world for blowing up the summit, and called up to the consciousness of the world the massive Red spying in all free countries.

In this welter of condemnation of the Soviet Union, again only our own Monday morning quarterbacks insisted on being blind to what happened to the Soviet Union and harping on the whole thing as losing face for us. Only some of these nervous types and the Russians blamed Eisenhower. The world did not.

His return and one of the finest TV talks he has ever made combine to offer us a far more sensible, more confident, and more reasonable approach in sharp contrast with the jittery and erratic and irresponsible criticism raised by some during this time of trial.

The Future of Government Installations?

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of the House a deplorable situation existing today within our Defense Establishment. We, as the Congress of the United States, cannot shrug our shoulders and say that nothing can be done with the present administration. We have a responsibility not only to the thousands of Federal employees affected by the deliberate malicious drive by the present administration to replace Government installations by private industry regardless of cost. On April 21, 1960, I addressed the House in a 1-hour special order pointing out in great detail how this policy is affecting one of our finest installations, the naval weapons plant, here in Washington, D.C. In this special order, I raised a series of questions that to this day have not been answered by the administration and, unfortunately, Congress has not, in my opinion, done its duty by requiring a full investigation into the circumstances leading to the closeout of this fine plant.

Since my special order, I now find that no assistance whatsoever is being given to the hundreds of skilled engineers and fine craftsmen in their efforts to secure new employment within the Federal Government. The contrary seems to be the case. Although the Army Ballistics Laboratory in Huntsville, Ala., has a desperate need for several hundreds of engineers, weapons plant engineers have been unsuccessful in their efforts to secure information from the Department of the Navy necessary to make an intelligent decision. Officials in the Department of the Navy have been ordered to divert work from the weapons plant and place it anywhere it can be placed without regard of cost to the Government. I have seen first-hand very costly equipment at the naval weapons plant purchased within the past year that has never been utilized and I have no doubt that it will be soon given away.

The Naval Weapons Plant is located literally within the backyard of the Congress and it would take only 5 minutes for those of us who profess an interest in making economical savings in the operation of the Government to substantiate for themselves the allegations I have repeatedly made over the past 4 years.

I will continue to urge Congress to do its duty and in August will renew my attempts to bring this forcibly to the attention of each Member of this body. I would like to include, in its entirety, an advertisement prepared by the International Association of Machinists appearing in the Washington Post-Times Herald on June 29, 1960:

WHAT ABOUT DEFENSE "PAYOLA"?

During the 1956 presidential campaign, officials of the 100 largest military prime contractors contributed $1,133,882 to the Republican Party, and $40,975 to the Democratic Party according to the Gore report.

The worst payola scandal in America is the one the American public knows the least about. This payola centers in defense procurement. The Republican administration created this modern payola. The Democratic majority in Congress has taken no concrete steps to correct it.

WHAT ARE THE SYMPTOMS OF THIS PAYOLA POLICY?

Navy spent $21.10 each for lamp sockets similar to those offered by retail stores for 25 cents.

The Hughes Aircraft-developed infra-red guided missile, Falcon, cost 10 times as much in mass production as a Navy-developed missile engineered to meet the same functional requirements.

Ramo-Woolridge, to whom the Air Force gave full responsibility for missile research and development, parlayed an initial $248,000 investment into a $29 million operation inside 4 years; 97.1 percent of Ramo-Woolridge's sales were to the Air Force.

In the past 10 years, the Renegotiation Board (for defense contracts) has recovered over a billion and a half dollars in discovered and proved excess profits from defense contracts. This did not, of course, count the excess profits which were successfully concealed.

Ninety-five percent of the number, and 86 percent of the dollar amount of defense contracts are not competitively bid for.

The Davis report in mid-1959 said that cost-plus contracting to private industry actually tended to eliminate some of the basic elements of private enterprise, thus making it difficult to ascertain the specific difference between Government-operated installations and the cost-plus contractor.

The Vinson-Trammel Act of 1934, still in force, requires an equal division of work between private and Navy yards. This is to use the Government yards as a yardstick to measure the relative costs of ships built by private contractors.

The House Armed Services Committee has asked Navy to divide its work according to the Vinson-Trammell Act. In 1959, the actual distribution was 5 for the Navy Yards and 73 for private shipyards.

In 1955, the administration issued an order requiring all Government establishments to contract out everything possible to private sources, regardless of cost.

In 1959, the same administration issued another directive, reinforcing the 1955 order, which has the effect of making all Government-operated enterprise illegitimate, and of setting up standards by which existing Government facilities would be eliminated.

In 1959, the Navy, operating under these orders, closed out 19 major field activities, many of them engaged in the production of defense materiel. Among them were such important plants as the Corpus Christi (Tex.) Naval Air Station, the Pocatello (Idaho) Naval Ordnance Plant, and the South Boston Annex to the Boston (Mass.) Naval Shipyard.

This year, the Naval Weapons Plant, Washington, D.C., a prime source of modern naval weapons, announced it will shutdown.

If these shutdowns were really evidence of a true reduction of Defense spending, it could be justified somewhat. However, the work which all of these shutdown activities were, and could be, doing, is still being done, for a profit, in private plants.

The highest-paid Government administrator makes $17,500 a year. Such a man is responsible for managing more men, materiel and money than the heads of most large private corporations. Yet in the private aircraft-missile field, for example, executives of at least three of the major aircraft companies earn in excess of $150,000 a year. These aircraft-missile executives are almost wholly dependent on Defense contracts for their existence, and all, therefore, ultimately derive their pay from the Federal Treasury—the taxpayers' pocketbook.

Defense is a public enterprise. No one has a right to profiteer at the expense of the taxpayer. Under the Eisenhower administration, profiteering is officially approved. The Democratic majority has done nothing concrete to change the course of events.

The cost of defense research, development and production is in excess of what it would be if the Vinson-Trammel Act were fully carried out in principle.

The economy is becoming so deeply involved in defense subsidies that our maneuverability on international disarmament is increasingly handicapped.

The ability of the new-style industrial defense complex to respond immediately to a national emergency is becoming seriously comprised.

The know-how in the production of key defense materiel is falling into the hands of a relatively few large corporations, who owe no obligation to the Government to reveal their methods and techniques.

The management of Government functions vital to national survival is no longer in the hands of officials directly responsible to the public. Instead, it is in the hands of persons responsible only to the boards of directors of private corporations.

The Republican Party has made a serious error in its "payola" policy. It should be changed now.

The Democratic majority in Congress owes it to the American people to stop the administration's "payola" shenanigans, through effective law.

We feel that the Democratic leaders, Senator JOHNSON, Speaker RAYBURN, Congressman VINSON (chairman of the House Armed Services Committee), JOHN KENNEDY, STUART SYMINGTON, and others, can and should stop this raid on the taxpayer's pocketbook.

Mr. Louis Hardtla of Philo, Ohio, Honored by the Weather Bureau

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. HENDERSON. Mr. Speaker, today, Mr. Louis Hardtla, of Philo, which is in the 15th Congressional District of Ohio, will receive the Thomas Jefferson Award for 1960 from the Weather Bureau of the U.S. Department of Commerce. Mr. Hardtla is one of seven who have been selected from the United States for outstanding service in the field of weather observation and reporting.

The citation which he receives with his award reads as follows:

For an exceptionally long record of continuous climatological observations at Philo, Ohio, begun by Mr. Hardtla, because of his own scientific interest in 1892 and then continued as a cooperative observer for the U.S. Weather Bureau since 1901.

Mr. Hardtla, throughout these many years, has made a great contribution to the Weather Bureau and to the Nation. His observations and study have contributed in large measure to the overall study of weather conditions. I am proud that a constituent of mine has been chosen to receive this award and I extend to him my own congratulations and thanks.

Tribute to Garland Wheeler Powell, Co-originator of a National Flag Code

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. MATTHEWS. Mr. Speaker, on August 29, 1959, a devoted patriot and longtime resident of my congressional district died and was subsequently laid to rest in Arlington National Cemetery. I refer to the late Maj. Garland Wheeler Powell. It seems fitting to pay tribute to his memory, as a new Independence Day draws near, for a unique and patriotic service rendered, not generally known and never appropriately acknowledged.

Garland Wheeler Powell was born in Allegany County, Md., on August 8, 1892. He attended the public schools of his native State and graduated from the University of Maryland. He served a term in the Maryland Legislature.

Garland Powell enlisted in the armed services of the Nation on June 5, 1917, and witnessed battle action as commander of the 22d U.S. Aerial Squadron. He was promoted to the rank of 1st lieutenant on September 13, 1917, and to captain February 19, 1918, later attaining the rank of major in the Reserves.

After the armistice in November 1918, Powell became very active in the early work of the American Legion and was for a number of years a member of the Legion's Americanism committee In this capacity he was helpful if not wholly instrumental in bringing into existence a U.S. flag code.

Major Powell never laid claim to being the "father" of the flag code, but acknowledged the idea originated with him and the late Gridley Adams. The latter became founder and director-general of the U.S. Flag Foundation, Inc. Adams and Powell presented their idea before the First National Flag Conference held in Washington, June 14–15, 1923, which conference was addressed by the late President Warren G. Harding, who supported the idea of a national flag code enthusiastically.

These two gentlemen in effect laid the groundwork for the later enactment of Public Law 623, approved June 22, 1942, "to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America," and the eventual passage of Public Law 829 which firmly established the use of the flag of the United States of America by civilians, civilian groups, and organizations.

In the files of the late Mr. Adams may be found a letter from his colleague, Garland Powell, reading, in part, as follows:

> Of course, Gridley, you and I are ultra-patriots and we realize that over the years millions of lives have been sacrificed in the defense of that flag. In my estimation, if schoolchildren could be taught that, our whole Nation would be better off. After all, the school is the place to start the children of the Nation along the path of understanding. That is said even in view of the importance of the church and the home. If the schoolchildren of today are taught respect for their flag, as the parents of tomorrow they will see to it that the home will be taken care of as well as the church. So, my friend, you and I have contributed something that should go down in history as a contribution to this great Nation of ours.

This was an intimate letter from one friend to another and not meant for the public eye. However, it is so appropriate to the subject and to the need of a renewal of patriotic fervor such as Garland Powell exemplified in his life and actions that I think it bears reading. Maj. Garland Powell, indeed, had a reverence for his Nation and its flag which might well be emulated by all of us.

South Texas Delegates to the National Convention of the Future Homemakers of America

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. THOMPSON of Texas. Mr. Speaker, the Future Homemakers of America will have their National Convention here in Washington beginning July 11, 1960. Regretfully, for many of us, we will not be on hand to greet these fine youngsters from all parts of our country since the Democratic National Convention will begin on the same day in Los Angeles.

We are all aware of the outstanding record and achievements made by the Future Homemakers of America. In south Texas we have a particular pride for these youngsters, and it was with a great deal of pleasure when I learned of the group who will be in Washington to represent my section of Texas. The delegates are: Miss Carol Dennison, Liberty, Tex.; Miss Patti Jinks, Boling, Tex.; Miss Melva Jean Hand, Katy, Tex.; Miss Elsie Swendsen, El Campo, Tex.; and Miss Barbara Grayless, Richmond, Tex. The sponsors of this fine delegation are: Miss Margaret Koy, Bellville, Tex.; Miss Lenora Walters, Houston, Tex.; Mrs. Ruth Shurbet, Katy, Tex.; and Miss Marie Oatman, El Campo, Tex.

Communications Act Amendments, 1960

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1898) to amend the Communications Act of 1934 with respect to the procedure in obtaining a license and for rehearings under such act.

Mr. MACK. Mr. Chairman, I rise in support of S. 1898. This bill known as the Communications Act Amendment of 1960 is designed to carry out the recommendations of the Legislative Oversight Committee after one of the most extensive and constructive investigations ever conducted by a congressional committee, which is designed to correct many irregularities which have occurred in these agencies. Our subcommittee has worked long and hard on this investigation. It has been a most revealing and fruitful investigation. Thousands of pages of testimony clearly indicate great deficiencies and this bill is the first part of a legislative program recommended in reports by our committee to correct these deficiencies.

Mr. Chairman, I wish to commend our very able and distinguished chairman in the way he was revealed the irregularities in the regulatory agencies. This investigation was successful despite the many efforts by industry and others to sabotage our operation. No investigating committee of Congress has ever encountered such a determined effort on the part of those investigated to block the investigation. No investigating committee has been subjected to such tremendous pressures. Multimillion dollar industries were investigated by this committee with only a limited staff. This committee revealed gross irregularities within many of the regulatory agencies. It exposed payoffs, payola, deceptive practices and rigged television quiz shows on programs carried on the publicly owned air waves.

In my opinion, this committee has rendered a great service to America.

Mr. Chairman, this bill would reassert governmental authority to regulate the Nation's airwaves. It would give the Federal Communications Commission new tools to deal with the industry it regulates. This bill does not provide for censorship in any form but it does reassert the Federal authority over the use of publicly owned airwaves and would permit the FCC to evaluate the performance of radio and television stations. It would give them the opportunity to reward television and radio stations which live up to elementary standards of honesty and integrity. In this way the FCC would not necessarily have to reward stations which thrive on sadistic westerns, rock and roll, deceptive shows, and other trash which have been appearing over the publicly owned airwaves.

Mr. Chairman, under the provisions of this bill it would be impossible for anyone to participate in payola or deceptive television quiz shows without committing a Federal crime. Because of the unusual nature of these slick operations, it is necessary to amend the law so that even an unenthusiastic regulatory commission would have the power to stop these deceptive shows and proceedings could be brought against the participants.

Mr. Chairman, payola was a national disgrace but perhaps the most colossal fraud ever perpetrated on the American people was the controlled or rigged quiz shows. These shows affected over $100 million worth of business and by dishonesty and deception almost succeeded in driving some of the competing firms out of business. The "$64,000 Question," apparently controlled from its very inception, according to the testimony of the sponsor, ran for some 2 years undetected. Its success was so fabulous that the producers started another rigged program called the "$64,000 Challenge." These programs were so successful and attracted such a large audience that the competing network found it necessary to start its own rigged television quiz shows. Millions and millions of Americans watched these shows week after week and even refused to believe the truth when they were told that these shows were rigged. It was perhaps the greatest job of "brainwashing" this country has ever seen and it was all done over the publicly owned air waves.

Mr. Chairman, I am not primarily concerned about the ethics of the contestants who participated in these controlled shows although it is a reflection upon our standards of morality. Many of the contestants were innocent but it was shocking to know that the district attorney of New York estimated that some one hundred contestants probably committed perjury as witnesses before the New York grand jury investigating this matter. While I feel that the law should apply to the contestants, I believe that the real crime was committed by the limited number of individuals who assisted in planning and rigging the shows. Therefore, this bill is designed to cover all those who were responsible for the productions as well as all of those who assisted each week with the rigging of the shows. This bill would include those people who represented the window dressing which set the stage so that these frauds could be perpetrated. In the quiz shows great precautions were taken to convince the audience that the controlled shows were not rigged. The "$64,000 Question" used a nationally known college professor and the vice president of an internationally known these frauds could be perpetrated. In has been revealed that the college professor assisted in rigging the shows by designing questions that the producers knew the contestants could answer. It was revealed in testimony that the vice president did not have custody over the question.

Mr. Chairman, if this bill is enacted it will eliminate the slick Madison Avenue operations in the future years and the provisions of this bill would apply to all those who participated directly or indirectly in the rigging of shows.

Mr. Chairman, this has been a shocking incident for Americans. It is especially shocking for many people in our society to have been guilty of this deception. It has rewarded dishonesty in business as well as private life. It seems that our society hit an alltime low by the reprehensible practice of teaching young boys and girls to be dishonest while participating in these rigged shows.

Mr. Chairman, we wonder today why crime has been increasing especially among our young people and why we are having such a problem with juvenile delinquency. We wonder why many children today do not seem to know right from wrong and why many of our American homes do not provide the moral and ethical upbringing of youngsters which is necessary in a healthy and wholesome society. We wonder why business and politics appear to be more corrupt now than in years gone by. I have given considerable study to this problem and I am wondering if our Nation has failed to properly recognize and reward those individuals who do right and to penalize those who do wrong. It seems to me that in this day and age we have failed to recognize honest leadership, honest business and that we have had a tendency to accept dishonesty in all walks of life. We have even given some credence to the statement that money buys respectability.

We all recognize that television has had a tremendous impact on our way of life. It has had a substantial effect in formulating opinions in the minds of our young citizens. It can be used to formulate good or bad opinions. I hope that this bill will have a favorable effect.

Mr. Chairman, I hope very strongly that this bill is adopted so that millions of American viewers will be protected from these frauds in the future and that the FCC will have complete authority to act in these areas.

Captive Nations Week

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. FARBSTEIN. Mr. Speaker, it will be recalled that this Congress last year passed the Captive Nations Week resolution and that the President, consistent with the provisions of said resolution, issued a proclamation designating the third week in July 1959, as Captive Nations Week. The resolution further authorized and requested the President to issue a similar proclamation each year until such time as freedom and independence shall have been achieved for all the captive nations of the world.

This year the observance of Captive Nations Week is scheduled for July 17–23 and in connection therewith I am pleased to submit the following statement:

CAPTIVE NATIONS WEEK

We the people of this country are against all forms of dictatorships and regard them as the worst type of governmental machinery devised by men. At the end of the last war when we witnessed the spread rather than the limiting of Communist tyranny, we were rudely awakened from our wartime optimism. The Soviet Union's treacherous methods of capturing and enslaving the peoples of Eastern Europe was the most stunning shock to us. For more than 15 years the U.S. Government, working in cooperation with other governments of the West, has been trying to have these enslaved peoples, these captive nations, freed from the clutches of Communist tyranny. By establishing and proclaiming the third week of July in each year as Captive Nations Week, once more we affirm both our loyalty to the cause of freedom and our desire to see these freedom-loving peoples released from Communist totalitarian dictatorships. We shall continue to observe Captive Nations Week until the last of all enslaved nations is free in its homeland. I am glad to lend my wholehearted support for their freedom.

An Allen Special, Coming Up

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mrs. CHURCH. Mr. Speaker, under permission to extend my remarks, I happily include an editorial from the Chicago Sun-Times which goes far toward expressing the respect and extreme good will every Member of this House holds for Congressman LEO ALLEN. No words can express, however, the grief with which his friends regret his departure from the congressional scene nor the void which those of us who have been privileged to enjoy his personal friendship and his counsel will continue to feel. The article from the Sun-Times follows:

AN ALLEN SPECIAL, COMING UP

Only three Illinoisans served longer in Congress than LEO E. ALLEN, of Galena. "Uncle Joe" Cannon spent 46 years in the House. Adolph Sabath was in 45 years. Henry T. Rainey's time totaled 30. When he retires this year ALLEN will have been in Congress 28 years.

ALLEN is a product of Jo Daviess County where he was born October 5, 1898. He was an artillery sergeant in World War I. He became a lawyer and circuit court clerk. Then he went to Congress and immediately was recognized as an able, affable and shrewd man of politics. Fellow Republicans, and Democrats as well, who may never have heard of his town of Galena (home of Gen. U. S. Grant) became aware of Allen and he rose high in the councils of Congress and the GOP.

ALLEN has been a stanch supporter of President Eisenhower on both domestic and foreign issues (81 percent last year).

Why is he retiring? He says he's tired of the same "diet" of 35 years in politics—that it's like having ham and eggs for breakfast every day.

Congress will miss ALLEN, but after 28 years of political ham and eggs ALLEN is entitled to a new menu if he wants one. We hope he finds it tasty.

Let's Help Prevent Another Roseburg, Oreg., Disaster

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. PORTER. Mr. Speaker, there is on the Consent Calendar S. 1806, a bill which amends the Transportation of Explosives Act. Among other things this bill contains legislation which would place private and contract carriers under regulations now governing common carriers. Private and contract carriers carrying explosives and other dangerous articles could be fined up to $1,000 or imprisoned for 1 year or both for violating ICC regulations. If death or bodily injury of a person resulted the penalty would be a fine of up to $10,000 or 10 years imprisonment or both.

Why do I urge this action?

The city of Roseburg is in Oregon's Fourth Congressional District, which I represent. Shortly after 1 a.m., August 7, 1959, Roseburg was rocked by a blast which killed 13 persons, injured more than 100, and caused property damage of nearly $12 million. The city is rebuilding. Its citizens have done marvelous things. But what happened there when a private truck carrying explosives was left unattended in a downtown area could happen anywhere in this country.

The Interstate Commerce Commission approves S. 1806. The ICC held an on-the-scene inquiry in Roseburg in September to determine the cause of the explosion. The Commission found that it occurred as the direct result of the explosives laden truck being left locked but unattended while parked upon a public street in the congested part of a city.

The hardworking Judiciary Committee of this House has gone into S. 1806 and reported it.

This week the July 2, 1960, issue of the Saturday Evening Post carries a well-written and well-illustrated account of the Roseburg disaster. The magazine's lead article entitled "The Night Our Town Blew Up," is written by Mrs. Bonnie Wallace Riggs, of Roseburg. Photographs taken by Mr. Paul Jenkins of Roseburg illustrate the true account.

I recommend Mrs. Riggs' article. Under leave to extend my remarks in the RECORD I include the Saturday Evening Post account by Mrs. Riggs, a news release concerning my testimony before the House Judiciary Committee's subcommittee considering amendments to the Transportation of Explosives Act and a news story which appeared in the June 25, 1960, edition of the Roseburg News-Review:

[From the Saturday Evening Post, June 2, 1960]

THE NIGHT OUR TOWN BLEW UP

(By Bonnie Wallace Riggs)

(The people of this little Oregon town will never forget the night last summer that changed their lives. One of them tells about the holocaust.)

At about 9:30 p.m. a 2½-ton truck of the Pacific Powder Co. rolled into our town of Roseburg, Oreg. The driver, George B. Rutherford, jockeyed his rig into the driveway in front of the Gerretsen Building Supply Co. warehouse on Pine Street, three blocks from the main business district. He handled the rig gingerly, for his cargo was 2 tons of dynamite and 4½ tons of nitrocarbonitrate, part of which was to be delivered the next day to Gerretsen, at a powder magazine 5 miles out of town. The material was mainly for the use of work gangs constructing roads in nearby logging projects.

Rutherford turned off his switch, climbed down from his cab and walked three blocks to Roseburg's leading hotel, the Umpqua, to spend the night.

It was a typical Roseburg summer evening, August 6, 1959, warm and quiet. Most residents of this town of 12,000 located in a hunting and fishing area, had nothing more worrisome on their minds than the chances for Roseburg's American Legion junior baseball team to win the State championship playoffs during the weekend. Except for night shift workers in the lumber and plywood mills in the area and a few teenagers driving around in search of fun, most people were in bed well before midnight.

But at 1:05 Friday morning, a telephone call to the fire department reported a blaze at the Gerretsen Building. Nine minutes later the explosives truck blew up with a roar which many residents mistook for a nuclear blast. My family and I live 3 miles from Gerretsen's, and beyond a hill. Even so, the blast shook our house as if an earthquake had happened. But we were lucky and suffered no damage. Indeed, we concluded that a jet plane had shaken us with a sonic boom, and not until the next morning did we learn what had really happened.

The explosion killed outright, or fatally injured, 13 persons and wounded 125 others, many seriously. It overturned and twisted freight cars on a nearby siding, burning several. Seven city blocks were denuded and twenty-eight others—including the main business district—were reduced to a wreckage of broken glass, fallen cornices, and shattered roofs. Fire spurted from a half dozen major buildings. Windows were broken and plaster was cracked in almost every home within a 2-mile radius. Big stained-glass windows in churches clattered to the street, and chimneys jerked away from the houses they served, as fragments littered the floors of china and lamp stores and glass in automobiles popped in or out. Property loss approached $12 million. Where the truck and the Gerretsen Building had stood was a yawning crater more than 40 feet in diameter and 15 feet deep.

The explosion was a classic example of sudden and unexpected disaster. Now that almost a year has passed, the answers to many pertinent questions are available. How did those who died happen to be where they were at the critical moment? How did their fates intermesh? Was anyone there except those whose normal pattern of life called for them to be there? Was anyone absent, who, for one reason or another, likely would have been there, but was not? Were there outstanding feats of heroism?

To answer the last question first, consider the cases of two good Samaritans: dark, handsome, 17-year-old Dennis Tandy and Richard Knight, 20, who had learned many a lesson about fire control as an enlisted man in the U.S. Air Force before receiving a hardship discharge. He now lived with his mother and disabled father, and worked at a filling station.

Dennis Tandy worked at the Nordic Veneer Co. and had been learning to operate the big lathe which peels logs into veneer sheets for plywood. For a boy his age Dennis had special reason to work. Shortly after turning 17 he had quit his junior class at high school to marry Marilyn Hays, 18. The wedding was on December 31, 1958; and at the time of the disaster the Tandys were expecting a baby within 2 months.

Dennis' shift ended at midnight; but on this particular night he stayed a little longer to study his lathe and its operation. It was about 12:30 a.m. before he started his midget automobile, an ivory-colored Fiat 600, and picked up Marilyn at her parents' home, where he had left her on his way to work in the afternoon.

En route to their own home, they passed the Gerretsen Building. Dennis, thinking he had seen a little blaze in a row of trash cans, turned the car around and investigated. There was a blaze. Dennis jumped from his car and tried to keep it from spreading by rolling some of the trash cans into the street.

He shouted to his wife to drive somewhere and send in an alarm. She drove to a filling station a block or so away and told the attendant to telephone the fire department. The attendant did so. This was the 1:05 a.m. alarm previously mentioned. Marilyn Tandy then returned to the fire, now a good-sized blaze gaining headway inside the building. (Some authorities now believe the fire actually started inside the building, but nobody really knew then nor knows now.)

By 1:07 a.m. a firetruck manned by Assistant Chief Roy McFarland and fireman Lyle Wescott arrived, and soon the two men had a hose connected to fire hydrant and were playing water on the mushrooming blaze. Wescott was wearing black "turnouts"—protective clothing. But even though he was shielded by a parked truck—the truck bearing the 6½ tons of explosives—Wescott soon found the radiant heat unbearable and had to retreat. As he crossed the street, he realized that his chest was burned and flesh was sloughing from his hands. Police Officer Merle Jensen, arriving just then, immediately took him to a hospital. Wescott, in great pain, was relieved at his place operating the hose by Richard Knight, who had just arrived from his filling station. In his Air Force days Knight had received firefighting training and was heroically eager to contribute his skilled assistance. Another fire unit also arrived and began hooking up its hoses on the opposite side of the Gerretsen building.

On returning from giving the alarm, Marilyn Tandy parked the Fiat in a lot about 100 feet from the fire, and approached the Gerretsen Building on foot. Frightened by the size of the fire, she called out, "Dennis, let's go."

He answered, "No, but you get back to the car."

She stood rooted at first, but the heat became too much for her and she hurried toward the Fiat, looking back every few steps. Dennis Tandy had donned a protective jacket from the fire truck and was trying to chop open with an ax the locked cab of a Gerretsen truck which was in the way. He wanted to move it before it, too, caught fire. That was the last Marilyn saw of her husband.

Curiously, none of the little band of firefighters appeared to realize that the second

truck—the big 2½-ton rig which dominated the scene—was loaded with explosives. It was nearly 1:13 a.m. when a puff of breeze stirred the almost windless night, clearing the smoke and revealing the "Explosives" signs on all four sides of the truck. McFarland and Knight immediately turned their hose from the burning building and played water on the truck. Some 10 seconds later, someone—whose identity never was established—yelled, "Get the hell out of here; that dynamite's going to blow." But McFarland and Knight stuck with their hose, and Tandy kept on chopping at the cab of the second truck.

Meanwhile, Marilyn Tandy made it back to the Fiat and slammed the door. Then the explosives truck blew up. It was now 1:14 a.m.

The little car was blown, right side up, about 100 feet. Its back window popped out in one piece. Other windows shattered and blew inward, their fragments peppering Marilyn. But, oddly, she was not even cut, although her dress was torn from neck to waist and bobby pins were knocked out of her pin curls.

All about her fires were starting and fallen electric wires were crackling in showers of sparks. She got out, picked her way to the place of devastation and called out her husband's name; but he was beyond answering. So were, among others, Richard Knight and Roy McFarland. (Their bodies were found later under debris; Tandy's body was under the truck he had been trying to save.)

Great blasts usually produce freakish effects, and the Roseburg blast created its share. Union business agent Chuck Lynch, in the downtown area, heard the police and fire sirens and started in his car toward the center of commotion. When he was about 50 feet from the blazing building, someone flagged him down and yelled to him to turn around and get away. Lynch had just completed the fastest U-turn of his career when the explosives went off. Like a superpowerful hand, the blast belted Lynch's car up to 70 miles an hour within 200 feet. Then, as if to gratify a whim, the hand began to push from the front. In less than another 100 feet the car was slowed down to 35, although Lynch had the accelerator pedal on the floor board. Most of the car's exterior chromium trimming was ripped away, an unopened box of cigars on the seat beside him blew apart, and all the cigars were shredded into bits. Lynch was unhurt.

The ordeal of Carol Marical had its ludicrous moments, although they were overshadowed by tragedy. Miss Marical, a pretty redhead, was on her way home from the Umpqua Hotel, where she was taking instructions to be a restaurant hostess in the Indian Room, a popular eating place. She was accompanied by her friend, Bonnie Jean Berg. Miss Berg, by prearrangement, met her at the hotel shortly after 1 a.m., when the Indian Room closed. Together they began strolling toward Miss Marical's home, where Miss Berg was to spend the night as a guest. Dallying to watch the Garretsen fire, they stood in front of the Bill Stock Motors Co. building, across the street and a little more than 100 feet away. But after a few minutes, they stepped off the curb, intending to resume their homeward stroll.

Carol told her mother later, "I heard a sizzling sound and knew that something terrible was going to happen. I dropped to the pavement and curled myself into a ball, with my hands over my face, trying to make as small a target as possible. The big explosion seemed to come from down deep. An eruption like an ocean wave of flame rose high in the air, and I recall Bonnie Jean calling, 'Carol, Carol.'"

Carol Marical's dress was ripped and blown completely off her. Her glasses and shoes also were blown away. The shoes never were found, but later someone found her glasses—inside the Stock Motors building alongside the body of Bonnie Jean Berg. Bonnie had been only a couple of steps behind Carol, but they were blown in different directions. Blown 150 feet down the street, Carol never lost consciousness completely. When she stopped rolling, she got up and tried to run, but the paving felt hot to her shoeless feet. She fell and, unable to get up again, crawled on her hands and knees, seeking someone to help her.

Fred Siles, a millworker, lives half a mile from the Garretsen building and had driven over to watch the excitement. But no sooner had he parked his car than the explosion came. Siles was blown some 50 feet through the plate-glass window of another automobile agency, but was able to get up and step out through the glassless frame.

He then found Carol Marical, helped her into his car and drove her to a hospital, asking over and over, in a confused way, "Are you hurt, lady? Are you hurt?"

Miss Marical remembered that the question made her laugh in spite of her injuries. "There I was," she said, "with my dress blown away, covered with blood from head to foot and unable to walk—and someone keeps asking if I'm hurt."

She was hurt, quite badly, as she was to learn at the hospital. Her instinctive act of rolling herself into a ball had protected her face, but the rest of her body had been peppered with flying metal and glass. One metal bolt had driven through her arm and penetrated her chest cavity. The hospital already was jammed. No operating room was available until 2:30 a.m., but in the meantime attendants plucked out six bolts—possibly from the explosives truck—which were protruding from her skin. When she reached the operating room, teams of surgeons took turns working over her until noon, and 10 days were to pass before she was off the critical list.

While waiting at the hospital for the shock of his own experience to wear off, Fred Siles received a new shock when his 15-year-old son, Jimmy, was brought in on a stretcher. The elder Siles was shocked again when he learned that Jimmy had been lying unconscious about a block away when Siles was assisting Miss Marical to rise from the street.

Jimmy, an honor roll high school student, had nothing special to do on that fateful evening. His good friend, Larry Dysert, 17, dropped around after dinner in his 1948 automobile and suggested a ride. Their actions were typical of young boys with a car on a warm summer night in a small town. They stopped at the city swimming pool to chat for a while with other youngsters. They went to the Snappy Service, a restaurant, for something to eat, drove around some more, went to Larry's house and from there to a filling station where one of their pals was nightman.

It was well after midnight when the visit ended, and Larry Dysert and Jimmy Siles were homeward bound when they saw flames pouring out of the Gerretsen Building. They swung around and headed for the blaze. Larry parked alongside the Bill Stock Motors showroom, diagonally across from the Gerretsen Building, but this spot proved too warm, so they found another place a block away. As Larry pulled to the curb, Jimmy jumped out eagerly and called, "Come on, let's go" then sprinted toward the fire.

Then the explosives truck let go. Larry, who had taken just a few steps, was knocked down and his shoes were blown off, but his injuries were only bruises. Jimmy Siles lay unconscious, a 3-inch bolt driven into the base of his skull. The bolt was removed surgically and Jimmy lived, but he still is in a coma nearly a year after the accident.

Bill and Eleanor Unrath lived in a large, comfortable house next to their place of business, a Coca-Cola bottling plant. The bottling plant occuped a corner opposite the Gerretsen Building. An apartment on the second floor of the plant was occupied, and had been for some time, by Martin Lusk and his wife.

Fate, or coincidence, was about to play a grim joke on the Lusks. Lusk, who had worked for Unrath in the bottling plant, had quit the week before to return to his original home in La Grande, Oreg. The Lusks had their trailer packed with personal possessions and were ready to leave early in the morning.

Everyone in the two households was asleep when the sirens began to wail. Mrs. Lusk, awakening first, opened her bedroom window and shouted to the Unraths that the Gerretsen Building was afire. Bill Unrath ran for the bottling plant and, with Lusk's help, tried—without too much luck—to get the plant's protective hoseline through a skylight to the roof. From there they could have brought its stream to play on the Gerretsen fire.

While they were struggling, perhaps against a jammed skylight, Don Gerretsen, son of the owner of the building-supply firm, rushed into the bottling plant, looking for a telephone to call his father about the fire. Bill Unrath told him to use the one in the kitchen of the Lusk apartment. Young Gerretsen had just put in his call when the world around him rocked. He was knocked violently against a wall, and one foot was caught under some heavy object. To free it, he had to slip out of his shoe and leave the shoe behind. The stairway had been destroyed. Gerretsen climbed out a window and slid down an outside wall, escaping with minor injuries.

He was the last to see Unrath and Lusk alive. Trapped, they died either from the blast injuries or in the new fire which quickly destroyed the bottling plant, the Unrath home, the Lusk automobile and their neatly packed trailer.

Of the Unraths' two daughters, Sabra, 18, was to have returned that evening from a Camp Fire Girls' camp where she was a counselor. But by a stroke of good luck in reverse the camp's truck broke down, and Sabra didn't get home until noon the next day. The Unraths' other daughter, Mary Elise, 20, had as overnight guests two schoolgirls from Bremerton, Wash., Lauretta Rusher and Lorraine Ross. They were scheduled to leave the next day for a church youth conference in Los Angeles.

When the fire first got underway and Unrath and Lusk had gone into the bottling plant, their wives, thinking the blaze would be controlled quickly, stood on the sidewalk in front of the Unrath house. The dynamite explosion knocked the two women about 75 feet in different directions, as it had knocked Miss Marical and Miss Berg. But except for bruises and shock, they were spared. Mrs. Unrath stumbled back to the house, which now was on fire, to save the three girls. Because the blast had blocked the stairway with debris, she could only stand outside and shout to them to jump from a second-floor bedroom window.

All three girls were bleeding from glass-fragment wounds and were spattered with bits of black insulation materials from the walls, but they jumped as instructed, and only Mary Elise Unrath was seriously hurt. She fractured two vertebrae and was to spend 5 weeks in a hospital.

In discussing the heroes of the explosion, Roseburg citizens give a special place to Harry Carmichael, a 70-year-old veteran of two wars, who was driving home from the Monarch Card Room, a restaurant-tavern

rendezvous which he helped to operate. Hoping to be of service, he headed for the fire in his car. The explosion slammed the automobile and its driver mercilessly. Carmichael's left arm—which he may have had partially out the window—was severed by the blast or some flying piece of metal, and his chest was punctured. Nevertheless, this septuagenarian got out of the wrecked car, walked to a rescue squad, and helped them by directing them to spots where he knew people were trapped. Weakening at length, Carmichael gave in to the urging of others and allowed himself to be driven to the hospital. He died there while doctors were preparing to operate.

Wayne Townsend had the misfortune of living too near the spot of destiny. He and his wife Letta, occupied an apartment above the Stock Motors showroom. Townsend went down to move his car, which was parked too close to the Gerretsen building, but chose the wrong time. He never reached the car, and it was several days before his body was found in the rubble.

For the same period of time the bodies of two other victims lay concealed. They were those of Rufus Wiggins, Jr., a logger, and Mrs. Rollin J. McDonald, 62. Wiggins roomed near the center of town, and it was his custom to take "breakfast," shortly after midnight, in a restaurant not far from Gerretsen's. A truck usually picked him up at 2:30 a.m. and carried him to work.

After the fire, police surmised that Wiggins had left the restaurant to see the blaze—which is what Mrs. McDonald and her husband started to do from their home nearby. The blast caught them a block from the fire. McDonald, seriously injured, survived; but his wife's body was found under the rubbish which had been a farmers' cooperative building.

The Kuykendalls suffered the most of any family in town. Alvin Kuykendall, a steady, soft-spoken man, had spent his life building up a small business—a bicycle shop—and buying a house. Both were free of debt, and the business was showing a modest profit. But the location of their house and business, across the street from each other and half a block from Gerretsen's, was tragically unfortunate. The Kuykendall's were awakened by the sirens while young Dennis Tandy was attempting to put out the fire singlehanded. The whole family got out of bed and assembled at a big window which provided a grandstand box. With Kuykendall were his wife, Lela, and their two daughters, Janet, 22, and Virginia, a tyke of 4. A fire truck and a police car screamed to stops under their window. Out of the police car jumped Patrolman Don DeSues, who went to work immediately, trying to keep traffic lanes free of sightseers' cars so that the firefighters wouldn't be impeded. DeSues—who would be dead in 10 minutes—worked hard.

After a few minutes of watching the excitement, Kuykendall excused himself and went to the bathroom. He was still there when the monster blast hit the house with all its fire and fury. Mrs. Kuykendall and the girls were showered with thousands of bits of glass and knocked against the walls. In the bathroom Kuykendall was pinned against the bathtub by a 500-pound chest of solid oak. Burning lath was peeling off the ceiling in fiery gobs and falling all around him, and he was in great pain. But his family could not hear his cries for help. People outside the house responded, walking right through holes in the house, and helped the whole family into an ambulance. Ten minutes later both house and bicycle shop were in ruins.

Mrs. Kuykendall and little Virginia died of their injuries. For 5 days Janet could see nothing; but after doctors had removed 20 pieces of imbedded glass from her eyeballs, her normal sight began to return. She also had cuts and bruises over most of her body.

But Alvin Kuykendall was in more serious condition. His right arm and leg were fractured in several places and required months of pins, plates, and casts. Six weeks after the explosion the leg pins slipped and doctors had to operate all over again. Several weeks after that his arm was broken again in recuperative exercises, and this time it had to be reinforced with a bone graft and a metal plate.

Today he is in a wheel chair and faces many more months of sitting, waiting for his arm and leg to heal. His dream is to get another bicycle shop started. "It's all I know," he says. The only insurance he had was on the bicycle shop, and most of the yield of that has been spent on living expenses. Yet he looks forward hopefully to working again and getting out of debt once more. Ridding himself of debt is an admitted obsession with him.

Fortunately there was a happy ending for Janet—or, as she puts it, "a beginning." In June she was married to Einar Beck, Jr., a boy she knew in school.

Last October Marilyn Tandy's baby arrived on schedule, a healthy, plump boy. He promptly was named Dennis in honor of his heroic young father. Mother and son live with Marilyn's parents. Of her future and the baby's, she says, "When Dennis starts to school, maybe I'll go to a beauty school. I don't know what else to do."

Carol Marical was able to leave the hospital after 2 months, but did not feel well enough to return to her job at the Indian Room. For months she had nightmares in which, as in real life nearly a year ago, she heard the voice of her ill-fated friend, Bonnie Jean Berg, shouting, "Carol! Carol!" And she couldn't do a thing to help. But her story also took a happy turn with her marriage last spring to Frank Copeland.

George B. Rutherford, driver of the truck, ran from the Umpqua Hotel during the fire and himself was injured in the explosion, spending 2 days in a Roseburg hospital. He then went back to his home in Washington and later returned to work for the powder company, but as a workman in the production of explosives, not as a truckdriver. The company disposed of several remaining trucks, and early in 1960 was moving its explosives in rented vehicles.

Of course, the legal story of the Roseburg blast is only beginning. A Douglas County grand jury met in September 1959, hearing 22 witnesses in secret session. It indicted the Pacific Powder Co., owner of the explosives truck, for involuntary manslaughter. But in March 1960, Oregon Circuit Judge James Main sustained a defense demurrer, holding that the Oregon involuntary-manslaughter statute is not applicable to corporations. The grand jury returned no indictments against individuals. District Attorney Avery Thompson later gave notice of his intention to appeal the decision.

The Interstate Commerce Commission and the Oregon Public Utility Commissioner held a joint hearing at Roseburg, also in September 1959. Pacific Powder Co.'s plant superintendent and the driver of the truck both testified they understood the ICC requirement that vehicles transporting explosives were not to be left unattended during transit. They said an ICC safety inspector had warned the superintendent about the rule only a day before the truck left the company plant at Tenino, Wash. Both testified they discussed at considerable length the matter of making certain that the vehicle would be attended, just before Rutherford's departure on the trip to Roseburg. No decision was reached, however, as to a proper place for parking the truck, and the driver departed knowing that delivery could not be made until the next day.

The ICC, in its hearing report issued December 7, 1959, found that Pacific Powder and its driver violated motor carrier safety regulations in leaving the vehicle unattended, in failing to avoid congested places and in parking in congested places. The Commission concluded that if Pacific Powder and its driver had not violated these regulations, the explosion accident would not have occurred.

The Pacific Powder Co. of Washington, the Pacific Powder Sales Co. of Oregon, the Gerretsen Building Supply Co., W. H., G. H., and Donald Gerretsen, and Rutherford all have been named defendants in a long series of civil actions filed in the Douglas County courts. By early June nearly 30 cases were on file, each charging almost identically that the defendants had failed to move the explosives to their destination "without unnecessary delay," that they had failed to provide special care to guard the vehicle, and that they had violated ICC regulations in leaving the vehicle unattended and in parking it in a congested area.

The actions ranged from a $500,000 personal-injury suit on behalf of the comatose Jimmy Siles through a number of $20,000 suits by estates of persons killed—$20,000 is the maximum collectible for a wrongful death in Oregon—to property-damage suits in which insurance companies listed scores of claims already paid.

None of these cases had come to trial when this was written, and about 6 weeks ago Attorney David P. Templeton on behalf of the defendants asked changes of venue in several cases, claiming that his clients could not obtain a fair trial in Douglas County. His petition stated that insurance companies already had paid more than $4 million in property-damage claims because of the blast.

At about the same time an insurance underwriters' group in Portland, Oreg., filed an interpleader action in Federal district court, seeking consolidation of the various claims and court direction as to what they should do with the $500,000 for which the powder company was insured, in case judgments were entered against them. It seemed clear that the total assets of all defendants, including insurance, could not begin to equal the claims filed against them.

But in Roseburg all this is less important than living. Nearly a year after the explosion the flattened blocks still are mostly barren, the rubbish cleared, but very little building done. The main business district looks mostly new, with fresh paint and thousands of square feet of new windows. But around it are evidences of tragedy: A hotel boarded up except for the first floor; a church with a gaping hole where a huge stained-glass window had been; a row of small homes half occupied, half still as the blast left them, with roofs askew and chimneys tottering; charred wreckage where a feed mill once was.

Much of the rebuilding awaits a master plan, which an urban-renewal committee has been trying to formulate. Roseburg, which calls itself the timber capital of the Nation, would like to promote the use of wood in the rebuilding program, and planners want to utilize the natural beauty of the south Umpqua River, flowing past one edge of the blast area.

City Manager John Warburton is enthusiastic on the future of the community, with its plywood, lumber, and recreation industries backed up by agriculture and stock raising. "If people continue to work together as they did after the blast," he said recently, "we won't have any trouble in rebuilding right."

Although Warburton is only a rookie Roseburg resident, he almost qualifies as a native son. He had been city manager just a few months when the explosives truck

erupted—and knocked him out of bed. So he's a newcomer no longer.

In fact, many Roseburg people were blasted out of their beds that night last year, and many still are jumpy. Recently some military jets flew overhead, crashing through the sound barrier in thunderous booms that shook houses and rattled windows, giving everyone that same panicky, empty feeling we all had the night our town blew up.

NEWS RELEASE FROM THE OFFICE OF CONGRESSMAN CHARLES O. PORTER

Congressman CHARLES O. PORTER, Democrat of Oregon, today, May 25, testified before the House Judiciary Committee's subcommittee considering amendments to the Transportation of Explosives Act. PORTER told the committee he favored S. 1806 which contains legislation which would place private and contract carriers under regulations now governing common carriers. The Senate has approved S. 1806.

In his prepared testimony Representative PORTER discussed the August 7, 1959, explosion in Roseburg, Oreg., of a truck loaded with dynamite and nitrocarbonitrate. The vehicle, a private carrier, had been parked and locked and left unattended in downtown Roseburg. Its explosion at 1:15 a.m. brought death to at least 13 persons, injury to 125 others and property damage estimated at $12 million.

PORTER observed that the Interstate Commerce Commission following its on-the-scene investigation, September 1–3, had found that the explosion occurred as the direct result of the explosives laden truck being left locked but unattended while parked upon a public street in the congested part of a city. The ICC told PORTER it was done in disregard of regulations of the ICC designed to prevent such an accident.

The ICC has recommended that private and contract carriers be subject to regulations now governing common carriers. PORTER said he felt that equalizing the regulations would be a positive step. He said the Roseburg disaster could be repeated anywhere at any time, and he urged favorable subcommittee action. PORTER had written to the Judiciary Committee January 11, 1960, outlining in detail the need for legislation which has been approved by the Senate. At that time he supplied the committee with information on the Roseburg explosion.

Under the proposed legislation private and contract carriers carrying explosives and other dangerous articles could be fined up to $1,000 or imprisoned for 1 year or both for violating ICC regulations. If death or bodily injury of a person resulted the penalty would be a fine of up to $10,000 or 10 years imprisonment or both.

[From the Roseburg (Oreg.) News-Review June 25, 1960]

MAGAZINE STORY ON AUGUST 7 BLAST COMES NEXT WEEK

The coming issue of the Saturday Evening Post, which will reach mail subscribers over the weekend and go on sale on newsstands early next week, will contain a feature story on Roseburg's disastrous fire and explosion last August 7.

The story, indexed on the outside cover and appearing as the lead article in the magazine, is written by Bonnie Wallace Riggs. It is entitled "The Night Our Town Blew Up."

The author uses very interesting technique in which she relates the experiences of individuals connected with the tragedy. Little is told of property damage other than in a general way. Instead, the article deals with the personal side of the fire and explosion.

The article is profusely illustrated. Some of the photographs previously appeared in the News-Review. They were made by Paul Jenkins who recently retired from full-time photographic work with the News-Review.

The Case Against Paul Butler

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. DORN of South Carolina. Mr. Speaker, I charged last year that Paul Butler was out to wreck the Democratic Party. His recent shocking display of ingratitude to one of our greatest and most loyal Democrats, the Honorable HALE BOGGS, was most repulsive. Now he insults our beloved Doorkeeper, the Honorable William M. Miller. He is showing the same unbelievable ingratitude to our former President, Harry S. Truman. We must not forget that last year he tried to undermine our leaders in Congress, Senator JOHNSON and Speaker RAYBURN.

The following is from today's Washington Evening Star:

OTHER COMPLAINTS

Among the complaints against Mr. Butler voiced by supporters of one or more of the other candidates are:

1. Mr. Butler's supposedly not-for-attribution dinner with newsmen earlier this year in which he predicted Senator KENNEDY would probably be the nominee. Reporters who had not attended the small private dinner—which was initiated by Mr. Butler—named the party chairman as the source of the stories, and Mr. Butler subsequently acknowledged this.

2. Mr. Butler's reinjection of the religious issue into the campaign in an appearance at the National Press Club last week. Supporters of other candidates feel he issued a thinly veiled threat that Democrats would lose the Catholic vote unless they supported Senator KENNEDY. He said in his own defense that he was merely responding to a question.

3. The party chairman's refusal until yesterday to grant convention space to supporters of Adlai Stevenson. In refusing the request for space Mr. Butler had said that Mr. Stevenson was not a candidate. But he also refused a request that Mr. Stevenson be invited to address the convention, basing that refusal on the ground that Mr. Stevenson was a candidate.

4. A tightening of convention rules last year by the national committee, which placed almost all power of decision in the hands of Mr. Butler. His critics charge Mr. Butler used this power to appoint a rubber-stamp arrangements committee which approved allegedly pro-Kennedy choices for some key convention posts.

Appointment of Representative CHESTER BOWLES, Senator KENNEDY's foreign policy adviser for the campaign, as platform committee chairman is cited as one evidence of this. The freezing out of Representative HALE BOGGS, who had been believed to have the inside track for permanent chairman, was cited as another example. According to this theory, Mr. Butler, a Catholic, did not want Mr. BOGGS, also a Catholic, presiding over a convention that picked a Catholic presidential candidate.

5. Supporters of other candidates feel they have been discriminated against in the assigning of hotel space at the convention. "If you're not for KENNEDY you are parked miles away from everything, in a hotel nobody ever heard of," said one. Many Congressmen, who generally get favored treatment at conventions, also are reported to be complaining about their hotel accommodations.

6. Tight control by Mr. Butler of the Democratic National Committee staff people to go to the convention, with anyone who leaned toward a candidate other than Senator KENNEDY being left at home.

7. Yesterday's announcement that Mr. Butler had told veteran House Doorkeeper William L. (Fishbait) Miller, who has volunteered his services to every Democratic Convention since 1948, that his services would not be needed this time. Mr Miller works closely with House Speaker SAM RAYBURN, unofficial manager of the LYNDON JOHNSON campaign.

RESTRICTIONS EXPLAINED

Mr. Butler has explained his restrictions on the committee staff people going to the convention from Washington as dictated by limited party finances. Critics cite a memorandum sent out by the chairman yesterday, however, which forbids committee personnel to go to the convention on their vacations, at their own expense.

The memorandum, dated June 29, read:

"No member of the salaried staff of the national committee are (sic) to be granted vacation between now and November 8.

"No member will be allowed to take vacation in order to attend the convention at their (sic) own expense."

It is known that some staff members, unhappy at missing the convention, had been making arrangements to go on their own, sometimes getting their expenses paid by working for one or another candidate. This course is ruled out by the June 29 memo.

New Republic of Somalia

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. RODINO. Mr. Speaker, I should like to take a moment to pay tribute to Italian Somalia which today, July 1, becomes independent Somalia.

This nation was once an Italian colony, which the Italian Government voluntarily turned over to the United Nations in 1950. Somalia then became an Italian trusteeship.

During the past decade Italy has taken full responsibility for preparing the Somali people for free and independent status. Under Italy's guidance, Somalia has made considerable progress, both economically and in developing political maturity. Italy has taken her obligations under the U.N. mandate very seriously, and has vigorously applied herself to the task of leading Somalia toward full partnership in the community of nations.

The hopes and aspirations of the Somali people reach fulfillment today with the proclamation of the Somali Republic. We wish them well on this momentous occasion, and we hope they will achieve a full measure of prosperity and success.

Blunders of the Critics

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. DEROUNIAN. Mr. Speaker, I commend to the thoughtful attention of my colleagues the following, perceptive article by Gould Lincoln, as it appeared in the Washington Evening Star on June 30:

A FAR CRY FROM STEPHEN DECATUR
(By Gould Lincoln)

We have gone a "fur piece" down the road since the days of Stephen Decatur, a U.S. naval hero in the early 1800's. It was Decatur, responding to a toast, who said: "Our country: in her intercourse with foreign nations may she always be right; but our country, right or wrong." Today it has become popular in certain quarters to decry the President of the United States and the country's intercourse with foreign nations. The chairman of the Senate Foreign Relations Committee, no less—Senator WILLIAM FULBRIGHT, of Arkansas—at a time when this country and President Eisenhower are under bitter attacks by the Communists of Soviet Russia and China, has seen fit to charge that the prestige of the United States is at a new low due to the U–2 incident and Japan's withdrawal of her invitation to the President to visit Tokyo.

PLAY MR. K.'S GAME

Mr. FULBRIGHT's address to the Senate followed a few hours after President Eisenhower, reporting to the Nation on his recent trip to the Far East, laid the blame squarely on the Communists both for the blowup of the summit conference in Paris and for the riots in Japan which led to the withdrawal of his invitation to visit that country. And he said: "We in the United States must not fall into the error of blaming ourselves for what the Communists do; after all, Communists will act like Communists." He added: "Above all we must bear in mind that successful implementation of any policy against Communist imperialism requires that we never be bluffed, cajoled, blinded, or frightened. We cannot win out against the Communist purpose to dominate the world by being timid, passive, or apologetic when we are acting in our own and the free world's interests."

The chairman of the Foreign Relations Committee, in his bitter criticism of what he called the "bumbling and fumbling" of the administration, said the country could not "begin to regain our position in the world until we can disabuse ourselves of the habit of self-delusion, of viewing defeats as victories and of advertising blunders as strokes of genius." He went on to say that Adlai Stevenson, another Democrat, had been right in his May 19 statement that this Government had given Russian Premier Khrushchev the "crowbar and sledge hammer" to wreck the Paris conference. And Mr. FULBRIGHT added on his own: "We might even go further and say that we forced Khrushchev to wreck the conference by our own ineptness."

Apparently the Democrats have now elected to make political capital out of the U–2 incident and the withdrawal of the invitation to President Eisenhower to visit Japan. In their efforts to discredit Mr. Eisenhower and the Republican administration, they seem to overlook the fact they are helping to play Khrushchev's own game, which is not only to divide the American people, but to make us appear weak and inept in the minds of our allies. This is not a pretty picture. It may in the end prove mighty poor politics.

Part of the Democratic effort, too, is to belittle President Eisenhower because of his good-will trips to many nations of the world. All their criticism is based on the fact that the visit to Japan did not come off. They overlook the wonderful receptions accorded Mr. Eisenhower when he visited capitals of our European allies, and then later India and other nations of the East, and later still when he toured South America.

President Eisenhower, in his report to the Nation, strongly pointed out that the Communist leaders had come to regard these good-will visits of the President of the United States to the nations of the world as a blow to the Communist drive for world domination. So much had they become aware of this danger, the President said that they had used false reasons for withdrawing the Khrushchev invitation to the President to visit Russia, and later had gone to great lengths to stir up riots in Tokyo that, in the end, compelled the Japanese Government to withdraw its invitation, too. The President couldn't be righter. Yet his critics in this country insist that these actions on the part of Red Russians and the Red Chinese are to be overlooked because of our own "bumbling and fumbling." How do these Eisenhower critics expect the American people to react to the critics' own blunders?

ATTACKS NOT NEW

Such attacks by Democrats on the Eisenhower administration and its handling of foreign relations of this country are not, in reality, new at all. When the late John Foster Dulles was Secretary of State, the Democratic shout was that we had lost all our friends abroad; that Mr. Dulles was constantly bringing us to the brink of war, and that he was either too adamant or too yielding. Indeed, Mr. Dulles was criticized for constantly traveling about the world on many missions. In those days the same charge was made, that the prestige of the United States had fallen to a low degree. Mr. Dulles died. The expressions of regret coming from our friends abroad were sincere—and they expressed their feeling of loss because of the death of a strong, valiant leader against world communism. We rediscovered, if we did not know it already, that we—and Mr. Dulles—had plenty of friends abroad.

The Democrats will have a tough time, if they try it, making the American people or our allies believe that President Eisenhower has sold them short in defense measures against the Communists, or that he has failed to lead a courageous crusade for world peace.

A Tribute to Mr. Mitchell

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. OSMERS. Mr. Speaker, on Wednesday, June 29, a committee of the principal labor leaders of the United States, under the honorary chairmanship of George Meany, tendered a dinner to the Honorable James P. Mitchell, Secretary of Labor, at the Statler-Hilton Hotel here in Washington. Presiding over the dinner was George M. Harrison and the speakers were President Eisenhower, Jacob S. Potofsky, and William F. Schnitzler.

The dinner and the remarks of the speakers made one of the finest tributes ever given to a living American. The typically modest response by the guest of honor was heartwarming and full of the wisdom which so characterizes him.

An editorial in today's New York Times describes the occasion and the man so well that I ask unanimous consent to include the editorial in the Appendix of the RECORD:

A TRIBUTE TO MR. MITCHELL

The testimonial dinner given to Secretary of Labor James P. Mitchell, sponsored by 28 top leaders of the American labor movement, was a tribute to a man who has amply deserved it. The occasion was unique both because of the kind of people responsible for it and the character of the recipient himself. It would be almost unbelievable, if it hadn't happened, that so large and influential a group of unionists, whose politics are traditionally Democratic, should honor a Cabinet member in an administration whose policies labor has so bitterly attacked.

Remarkable, too, is the man who for almost 7 years has kept the confidence and respect of a Republican President and members of his Cabinet and of leaders of organized labor—with all of whom he often differed widely. This could only have been done by an unassuming person of stubborn integrity, dedicated to the welfare of the Nation's workers, intimately familiar with the conditions of their life and well aware both of the possibilities, and the limitations, of methods to improve their lot.

Mr. Mitchell, in short, is an idealist of rare sophistication. We, too, applaud his achievement.

Lassie Leaguers, Inc.

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me in regard to Lassie Leaguers, Inc.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LASSIE LEAGUERS, INC.
(By Senator HARRY F. BYRD, of Virginia)

I have noted that in the past few days, the Senator from Massachusetts, Senator SALTONSTALL, and the Senator from Pennsylvania, Senator CLARK, have been complimentary to the fine work of Lassie Leaguers, Inc.

This is an organization to help provide wholesome recreation for girls between the ages of 10 and 15 years. The organization was originated in Pennsylvania, and it now has its headquarters in Massachusetts.

I should like to join the Senators from those States in their support of this organization. It is franchised in Virginia, and I have been informed that the Lassie League activities mean much to the respective communities. I hope the league will grow.

The league is most widely known for its promotion of a new game called "lassieball," which I understand to be a game similar to baseball but modified for participation by girls 10 to 15 years of age.

Wholesome activities such as this for our young people is a project worthy of national support.

Daily Digest

HIGHLIGHTS

Both Houses cleared numerous bills for the President and when the Digest went to press the conferees on sugar extension were in session.

Senate

Chamber Action

Routine Proceedings, pages 14445–14487

Bills Introduced: Nine bills and two resolutions were introduced, as follows: S. 3808–3816; S. Con. Res. 113; and S. Res. 350. Pages 14450–14451

Bills Referred: Two House-passed bills were referred to appropriate committees. Page 14466

Bill Rereferred: Committee on Labor and Public Welfare was discharged from further consideration of S. 2973, to increase pay of food-service and laundry workers under the Veterans' Administration, and the bill was then referred to Committee on Post Office and Civil Service. Page 14446

Bill Placed on Calendar: One House-passed bill was placed on calendar.

Call of Calendar: On call of calendar 55 measures, of which 33 were private, were passed as follows:

Without amendment and cleared for President:

Italy: H. Con. Res. 225, expressing sense of Congress with respect to U.S. recognition of the centennial anniversary of the unity of Italy;

Pacific Festival: H.J. Res. 672, requesting issuance of Presidential proclamation with respect to the 1960 Pacific Festival;

Wartime loans—evaluation: H.R. 808, authorizing an evaluation in dollars of certain financial assistance loans expressed in foreign currencies arising from World War II;

Guam lands: H.R. 10997, granting to the government of Guam certain filled and submerged lands and tidelands;

Virgin Islands property: H.R. 11854, to clarify the ownership of certain church properties in the Virgin Islands;

Constitution anniversary: H.J. Res. 605, providing for the preparation of plans for the observance of the 175th anniversary of the Constitution of the U.S.;

D.C.—wills: H.R. 11931, relating to the time within which a caveat to a will must be filed in the D.C.;

FDIC: H.R. 12465, to provide a simpler method of determining assessments under the Federal Deposit Insurance Act;

Panama Relief Act: H.R. 10511, granting an additional benefit to persons receiving cash relief under the Panama Cash Relief Act; and

Private bills: 24 private bills, H.R. 10793, 1422, 1493, 1588, 1643, 2117, 2124, 2705, 2716, 2944, 3804, 4555, 4970, 5647, 6804, 7367, 7425, 7551, 8384, 9042, 9610, 9960, 10002, and H. Con. Res. 660.

With amendment, to be sent back to House:

Imports—marking: H.R. 5054, relating to the marking of imports to show the country of origin;

Migratory birds: H.R. 12533, to amend the Migratory Bird Treaty Act so as to increase penalties for violations of such act; and

Private bills: Three private bills, H.R. 10376, H.J. Res. 722, and H.R. 4546.

Without amendment and cleared for House:

Securities Act: S. 3769, to amend in several respects the Securities Act of 1933;

Securities Exchange Act: S. 3770, to amend in several respects the Securities Exchange Act of 1934;

Trust Indenture Act: S. 3771, to amend certain provisions of the Trust Indenture Act of 1939;

Investment Company Act: S. 3772, to amend the Investment Company Act of 1940;

Investment Advisers Act: S. 3773, to amend in several respects the Investment Advisers Act of 1940;

Acreage allotments: S. 3533, to protect farmers making certain land use changes under the Great Plains conservation program against loss of acreage allotments; and

Private bills: Three private bills, S. 882, 2427, and 3432.

With amendment and cleared for House:

Iowa lands: S. 3247, providing that payment for the (Iowa) lands covered by act of September 9, 1959, be made on a deferred basis;

Agricultural commodities: S. 3146, authorizing the CCC to donate agricultural commodities for use in home economics courses;

Appendix

Research and Development: A Vital Contribution to Security

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, I have just heard a most able, in fact, brilliant, address by one of America's greatest leaders in research and development, Lt. Gen. Arthur G. Trudeau. He never fails to make a most interesting, instructive, and profound address when he talks on the research and development program of the U.S. Army. It is, therefore, with pleasure that I present the address delivered by him before the U.S. Junior Chamber of Commerce awards banquet in Washington on the evening of Tuesday, June 28, 1960:

RESEARCH AND DEVELOPMENT: A VITAL CONTRIBUTION TO SECURITY

(Remarks by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army, awards banquet, sponsored by the U.S. Junior Chamber of Commerce, Washington, D.C., June 28, 1960)

Mr. Pafford, Mr. Palmer, distinguished guests, ladies and gentlemen, fellow Americans, it is a distinct privilege and pleasure to be here tonight and to have this opportunity of speaking to such an outstanding group of worthy young Americans.

First, I would like to congratulate your mothers and fathers—many of who are here with you—stanch Americans who have instilled in you the sound character, patriotic fervor, and high sense of a citizen's responsibility which have brought you to this proud achievement tonight.

Next, let me commend you—the award winners for 1960—for the fine essays you have written and for the many original approaches you have taken to this vitally important subject—national security. The honors that you have won are a clear indication that you, one and all, are on the thresholds of great careers—careers that will be rich in reward. I speak of reward with little reference to rank, station, or wealth, but rather of personal satisfaction—the supreme satisfaction that comes from carving out a good life and living it to the hilt.

Surely, we all agree that dedication to our Christian civilization and our country—its concepts and ideals—is the strong fabric of our national security. How well we serve determines the effectiveness of our Government, our foreign relations, our world trade, and our military preparedness—in effect, our entire way of life. It was Lincoln who said: "bear in mind that not with politicians, not with Presidents, not with officeseekers, but with you is the question: 'Shall the liberties of this country be preserved to the latest generation?'"

I deeply believe that what's ahead for America tomorrow and the day after will depend upon how well you—and students in every classroom across our land—serve America. There is a growing recognition of this fact as America stands today at a critical moment of history—at the crossroads of destiny—fighting to halt the advancing growth and spread of the vast and amoral international conspiracy—world communism—an alien ideology dedicated to seizing unlimited power and domination over the globe. The challenge of communism is steadily growing in all of its aspects—the economic, social, and political as well as the military—and today it is at the full crest of its drive. Throughout the world—in the slave lands and in the free nations—Communist embassies, trade missions and other headquarters work unceasingly, blazing with light in the dead of night.

Pacing this vicious worldwide conflict are two other fast-moving phenomena.

One is the rising tide of ethic nationalism which burst forth from the agonizing struggles of World War II and from the wonders of communication and transportation—and which is creating truly significant problems in those vital areas of Africa and Asia, known as the "uncommitted world." These people—diseased, undernourished, illiterate, impoverished—call for an improved standard of living. They look to see which system—the free world's or the Communist—can best help them secure the economic necessities of life—and which system can do it more rapidly. We must find solutions to their problems and show them that economic growth and technological progress are in better harmony with our type of freedom—than with Communist slavery.

The other phenomenon is the explosion in science and technology—which is drastically reshaping our world, bringing to our generation and yours more changes than were faced by our forebears in any past period of history.

In the last 100 years—2 percent of recorded time—mankind has achieved 90 percent of his technological progress. The future is even more promising. Of all the men who have ever been trained in science and technology, it is estimated that nine-tenths of them are alive today.

The implications of this exploding technology are truly fantastic.

Not only will national security profit from this amazing age of technology, but literally all mankind if we can survive the challenge of our times. The peaceful benefits give promise of a life more full and free for peoples everywhere if we have the wisdom to employ them.

Truly, this is an age demanding unprecedented exertion and imagination as we face the task of conquering our terrestrial environment, and of exploring the depths of the sea and the boundless regions of celestial space. The golden rain of exciting new applications of scientific discovery promise to raise the world's standard of living—to give the world's hungry masses more food, better shelter and other necessities of life. We are making tremendous strides in the control of disease and improving our biological environment. We are also beginning to learn how to control our physical environment.

New sources of energy are steadily feeding the growing appetite of industry for power and increasing man's productive ability and his comforts. New machines, soon to be in production, will provide several times more mechanical and electrical energy than present models with great reduction in size and weight. Think about some of the fantastic promises of technology glimpsed through electronics and automation. Through automation, technology promises more of the necessities, comforts, and luxuries of life if we can only learn to utilize and distribute them in a more acceptable manner.

New advances in transportation, communication, shelter, and utilities should make it possible for more people to break away even more from large, urbanized areas and live a richer community life.

The future is challenging in every respect.

The discoveries that we shall reap through satellites and manned space vehicles probing the universe are impossible to predict. We must not lose our sense of balance but the impact of space on our daily lives will be staggering as the end of our century approaches. Satellites with radio beacons operating on solar batteries will serve as navigation aids. They will also keep the world's weather under observation and greatly assist in improving worldwide communications.

The implications of all these research-sparked advances are staggering beyond imagination, but they give us hope and promise for a dynamic future.

At the taproot of this marvelous technological age is the disturbing fact that nations have at long last achieved the awesome power of mutual destruction. With the key of science and technology, mankind has freed forces which cannot be reimprisoned. Today a single nuclear-tipped missile can equal in destructive power all the devastation created during World War II. There is worldwide concern that this terrible power will, by design or miscalculation, break loose and wreck havoc upon nations and peoples. In this life there are few certainties, but one of them is that eternal vigilance is the price of liberty—and today, even of survival.

Speaking of vigilance, there is a growing need for Americans in this land to become more security conscious. In industry—in government—yes, in the Armed Forces, we should all remember the Russian success in concealing a microphone within the great seal of the United States in our Embassy in Moscow. Our own State Department has estimated that 300,000 persons are being employed by Communist forces in espionage against the free world.

All of us here tonight will agree that maintaining security is no childish game of cops and robbers. Nor is it only an intellectual exercise of matching wits with the enemy. Security unquestionably is one of the most important elements of our struggle for survival as a free nation in a free world. The acquisition of intelligence of the enemy by all available means is a vital security measure. When dealing with the amoral, ruthless forces massed against us, we would be stupid to leave any stone unturned in our own defense.

Never must we forget that the Communists consider themselves perpetually at war. In their ugly, tortured logic, peace is a condition that can exist only on their terms. They cry peaceful coexistence when they actually mean coaxful nonresistance.

I wish I had the time to speak longer on this subject because it's a subject on which I feel very strongly.

As a people we must more meaningfully define our national goals and objectives and

again find the fuel that brightens the uplifted torch of liberty. We must back our leaders in finding ways and means to pierce the Red fog. This is a major challenge to you young people, especially—and you must do you job well in alerting America, else yours may be the last generation to know a free America.

I hope you all have read—and given much thought to—the splendid series of articles in Life magazine concerning this Nation's need to reexamine its pillars of national purpose. And I hope you are aware of the work of the President's National Goals Commission under Dr. Henry Wriston. I urge you to study and to keep abreast of these developments—they are guided by men who understand the deep meaning of our great but befogged national purpose. There is no doubt in my mind that with such guidance our country can rise to the current challenge and advance the vital interests of freedom throughout the world. We must not forget that the real capstone of all strength is in firm advancement of the spiritual values that have made America the greatest Nation on this earth. Our infatuation with things mundane can destroy us. The true strength of free men and nations everywhere comes from faith in a Supreme Being and dedication to a just cause.

There is evidence that the material comforts of an exploding technology tend to obscure the only philosophy which gives real meaning to life—the spiritual. In at atmosphere where many avoid or scorn moral and spiritual values, it is no wonder that so many seem unable to differentiate between our standard of living and our way of life.

In my work as Chief of Army Research and Development I deal with a great number of scientists every day, and I have the highest regard for those talented men. You will understand me, therefore, when I say that, with due regard for Ph. D.'s, what we need very badly in this country are more Ch. D.'s. By coining this euphonious term I mean doctors of character. While not everyone can be a Ph. D., it is possible for everyone to be a Cr. D. And if there is one attribute that needs more thought and attention today it is the advancement of those sterling qualities of character and adherence to sound moral principles that were the trademark of our forefathers and here the home, the church, and the state have much to accomplish.

As to the application of science, in this dynamic age, it is the sound and solid key to economic growth, industrial progress, better health, and richer lives. I include the social as well as the physical sciences in such an appraisal.

If technology is to continue to accelerate, greater emphasis must be placed on basic research for new scientific knowledge and on applied research for new hardware items. Our national ability to provide adequate defense or to compete in world markets—in the late 1960's and the 1970's will be determined by the research and development effort our country is willing to support today.

The Army's efforts in basic research—to penetrate the ever-expanding horizons of science—are extensive. We devote about $50 million per year to this effort, expended through more than 550 laboratories, universities, and industries and 80 Army and other Government installations and—important to many of you—through two overseas research offices: one in Frankford and the other in Tokyo.

Basic research is crucial. It is the chief determinant of how the weapon art will progress in the coming decades. The Army will continue to stress and expand such efforts; they are the key to future development—to progress in peace and victory in war. Breakthroughs in research today will perhaps do more toward reshaping favorably the world's balance of power tomorrow than any other single achievement.

Now, here are some of the more promising aspects of basic research that we can expect to see incorporated into future equipment.

Metallurgy is one dramatic field that will surge beyond the boundaries of our imagination in the next few years. Here, new metals with amazing characteristics are being created to exploit extremes of temperatures and pressures which we are encountering or using in this space age. They promise to provide alloys that will be stronger, more heat resistant, and lighter than anything that we know today. Missiles, vehicles, and electronic devices will benefit from such advances.

Electronics is another field that has seen a quantum jump in the last 10 years. Here, basic research already has led to the technique of microminiaturization of electronic components. A cubic foot of space which only yesterday held 7,000 parts, now holds 350,000; and even this figure can be increased by a factor of 10 in certain fuze applications. Using solid circuit techniques, even this is only a beginning. Other marvels in the electronic field are the ruby maser, the tunnel diode, and the parametric amplifier, promising to increase tenfold the sensitivity and range of many Army electronic systems.

These advances illustrate, moreover, the kind of basic research effort which is necessary to feed the insatiable appetite of applied research and development, for without new knowledge—without new science—applied research and development is limited to product improvement. Product improvement, important as it is, will not put us out in front, where we belong, or keep us there.

Let us look now at the general areas of interest in our applied research and development effort in the classic fields of military endeavor—firepower, communications, and mobility.

As you know, nuclear weapons have revolutionized firepower—missiles have boosted our ranges of delivery and tremendously increased our impact power.

Among some of the other more promising items of new equipment are aerial vehicles which utilize ducted fans and other concepts for both horizontal and vertical flight, more versatile and lighter tracked vehicles, new power sources, miniaturized radios and data computers, and better protection for the soldier in the hostile environment of the nuclear battlefield.

Other startling additions to our arsenal of future weapons may occur in the chemical field. Here we know that the Soviets are putting a high priority on development of lethal and nonlethal weapons, and that their weapon stockpile consists now of about one-sixth chemical munitions. Russian leaders have boasted that they are fully prepared to use new chemical weapons of great significance. If the Communists ever use chemicals, with which they are well equipped, we must be prepared to meet such an attack.

Let me tell you briefly about the interest now being shown in certain chemicals that are only temporarily incapacitating—agents that allow personnel to recover completely with no permanent aftereffects. These chemicals are basically of two types. One is psychochemical that disturbs the normal behavior pattern of the individual, causing apathy, fear, or disorientation of the mind. The other type is physically incapacitating, causing for example, temporary blindness or paralysis. These two chemical agents could be used against an enemy without causing fatalities or large-scale destruction of buildings, bridges, and other man-made structures.

We view all our contributions to the defensive might of America with pride. I should like to show you a short film illustrating some our latest technological Army developments. This film includes a few ground and air vehicles and the latest advances in firepower—rockets and guided missiles.

(Film sequence—continuous—R. & D. projects.)

(Armored personnel carriers.)

Here is the new armored personnel carrier. It can be both air-transported and air-dropped. It is highly mobile, swims inland waters, and transports a driver and 12 men with aluminum armor protection from atomic blast and heat, as well as from small arms and shell fragments. In addition to many other improvements, it only weighs half as much as its predecessor.

(Goer vehicle.)

This vehicle gives promise of true off-road mobility for transport of heavy cargo in combat areas. Here is a demonstration showing one prototype—the 5,000-gallon tanker—maneuvering through a mud lane, 30 inches deep. This tanker model is able to crab-walk through this mud, partly because of its low ground pressure and high ground clearance, but primarily because of its wagon steer. This characteristic allows the two-wheel cab to turn up to 90 degrees in either direction, thus giving Goer's higher maneuverability.

This concept, which is a new approach to logistical carriers for use in highly mobile Army forces, is an outgrowth of recent developments in heavy earth-moving equipment. The Goer is rugged and reliable and exceeds any other wheeled vehicle I know of in real off-road mobility. In addition, it can carry its own weight and has good amphibious characteristics.

Here, is another prototype—the 15-ton cargo Goer. This vehicle has the lift capacity of six 2½-ton trucks. Notice how easily it is going over large obstacles—a series of sandy hogbacks—which as you can see stop conventional trucks.

The Goer's exoskeletal construction, in which the structural strength of the vehicle is in its outer frame, permits the vehicle to swim on water, as shown here. Waterproof parts or submersible engines are unnecessary. The treads of the large tires act like paddle wheels to propel the vehicle at a speed of about 3.5 knots in calm water.

(Doak.)

The Doak test bed is designed to take off and land like a helicopter but operates in the air like a conventional airplane. Doak uses rotatable ducted fans as its source of propulsion. Here you see it taking off with the fans at a vertical position. Notice now that the propeller ducts are rotated to the full forward position permitting normal flight characteristics of the aircraft. To land, the engines are returned to the vertical.

(Piasecki Flying Platform.)

This test bed is commonly called the Piasecki flying jeep. It is one of two models which we have under development. The flying jeep employs ducted fans for its source of propulsion and has conventional type helicopter controls. The operation at this stage of research is cumbersome, as you can see. Much work remains to be done before stability and control reach the level desired, but the feasibility of this type of air movement has been established.

(Caribou.)

In 1956, the Secretary of Defense approved a deviation from the 5,000-pound empty weight limitation imposed on Army aircraft. With the weight limitation raised, the Army took steps to procure a new airplane suitable for our use in close-support of the battlefield. The plane selected is shown here—DeHavilland of Canada's new rugged, workhorse—the Caribou.

The Caribou is a twin engine, passenger, or cargo plane with a 3½-ton payload. Its range is 1,200 miles with a cruising speed of 160 knots. It is powered by two Pratt and Whitney 1,450-horsepower engines. Empty

weight is 15,000 pounds. We envision this plane as a troop transport and an important delivery means of critical supplies that can be flown in and out of semi-prepared, short landing strips. Its wide opening door will permit rapid loading and unloading of troops, supplies, and equipment. It can carry two jeeps or 31 troops.

With a full payload, the Caribou can take off in about 1,000 feet. We officially accepted it last October and it is now in production.

(Surveillance drone.)

In the surveillance field, here is the SD–2, our newest drone system for gathering information of the enemy in the battle area. It is launched from a standard Army trailer. Jet boosted into flight, the SD–2 is radio controlled to survey enemy positions. Its sensory compartment accommodates photo transmissions systems, infrared radar, or other new electronic devices which transmit or bring back data. Here, it is being recovered by its own parachute. Development is underway on a family of drone systems for employment by the various command echelons of the field Army.

(Little John.)

The first project in the firepower area is the improved or tactical Little John. Notice the battlefield mobility of this weapon now being developed to provide an atomic punch for our Strategic Army Corps. This version of Little John has improved accuracy and will give us a firepower capability to meet our special requirements.

(Lacrosse.)

Now for Lacrosse, another close-support guided missile of extreme accuracy. In this sequence you'll see it fired at a stake several thousand yards away. Notice how it homes on the target. Lacrosse is highly mobile—it can be fired from a launcher mounted on a standard truck, and it can be carried by a helicopter.

(Sergeant.)

Now let us look at Sergeant. This is the weapon that will supersede Corporal, and like Corporal can carry an atomic warhead to about a 75-mile range. It is smaller, more efficient—a supersonic, medium range, solid-propellant ballistic guided missile. It provides a much easier, faster, and simpler handling in the field. As you can see, Sergeant is launched in a near vertical position from a specially designed erector-launcher. The missile is transportable by air and by standard Army vehicles. The system is under advanced testing and should soon go into production. When operational, Sergeant will carry a variety of warheads.

(Hawk.)

Now look at this air defense weapon—"the bullet with the brain." It is called Hawk. It provides a low-level air defense capability. It is the counterpart of the Nike-Hercules. Here you'll see it reach and destroy an F–80 drone at a low altitude. This missile carried a high explosive warhead. You will see how accurate it is when the missile comes up and destroys the drone that is just entering the screen. Recently Hawk has intercepted targets below 100 feet and up to 50,000 feet in altitude. Hawk battalions now in training are expected to be operational within months.

As you know, Hawk is the antiaircraft missile that recently intercepted and destroyed Honest John, another ballistic missile. Let's look at that amazing bullet-hits-bullet demonstration that took place at the White Sands Missile Range last January.

(Hawk-Honest John.)

Here you see an Honest John being launched as the target. Now you see a Hawk missile being launched and rising rapidly to seek and destroy the target. Notice how the Hawk missile dives to kill its prey. The speeds involved here are supersonic.

Early this month—on the 5th of June—the Army repeated this bullet-hits-bullet demonstration, using our new improved Nike-Hercules against a much faster target—our Corporal ballistic missile.

(Hercules-Corporal.)

Here, you see the launching sequence of these supersonic missiles—first, the Corporal; then the Hercules. Finally, you will see the explosion of the high explosive warhead of the Nike-Hercules as it hits its target. Certainly this missile-against-missile feat is another proof of the high-speed intercept principle which the Army is exploiting in development of Nike-Zeus.

(Nike-Zeus.)

Here, you see a test model of Nike-Zeus—we judge this revolutionary weapon to be the Army's most important contribution in the future for the defense of the United States against enemy ICBM's—the only weapon system under development in the free world designed to attack incoming ballistic missiles. Note the ground support equipment, particularly the large acquisition radars and the fire control facility.

This launching from above ground was to determine the performance of the missile configuration. The huge fins on this test model are for the purpose of gathering flight data in the atmosphere. The tactical models will be considerably trimmer. We have successfully fired both the Zeus booster and sustainer rocket motor and are now approaching the testing stage of the complete system. In the near future we plan to fire it against our own ballistic missiles to test its full potential.

Recently, we successfully fired the test model of Nike-Zeus from our underground launcher at White Sands Missile Range. These firings, shown here, were the first tests of a new-type launching facility proposed for use when Zeus becomes operational. The 450,000-pound thrust Zeus booster engine is the most powerful single-unit, solid-propellant motor successfully fired in the free world.

There is an urgent requirement for this weapon while we are faced with the growing ballistic missile threat of the Communists. We are confident the Nike-Zeus can do this job in the 1960's.

(Cat and mouse.) The last project in the firepower area deals with nonlethal gases. Here is a graphic demonstration of one of these—a psychochemical—which is being investigated as a possible alternative to nuclear weapons or toxic chemical agents. Nonlethal gases of this type disturb the normal behavior pattern of the individual, causing either apathy, fear, or disorientation of the mind.

Here you see this gas used on a cat. Before inhaling, the cat, as you see, reacts normally to the company of a mouse. Now the cat is subjected to the harmless gas. Now notice the reaction of the cat to the mouse. The cat seems to be afraid of its visitor. Humans, after receiving a dose of this gas, will not react to orders or instructions but merely wander around aimlessly. Consider what this gas would do to enemy troops defending a hill or intermingled with civilians in a city.

What we are currently achieving in Army Research and Development is merely a milestone in our continuing effort to provide the best weapons and equipment that modern technology can produce for U.S. troops.

Yet, the task for all of us today clearly goes beyond that of supporting the Armed Forces, as important as that task is. Again, I emphasize that we all have a crucial part to play in strengthening the moral fiber and spirit of this free nation in meeting the Communist multiple-threat stategy.

The world is nobody's plum. It's a wrinkled old prune and will only be a charred pit unless wise and able leadership prevails and unless our people stop measuring our way of life by the false gages of material wealth and luxuries. Our future depends upon ourselves—our character, our ideals, our abilities, and our determination to achieve greater things for ourselves and for free people everywhere.

The time was never more urgent for us to take stock of where we are today and where we are going tomorrow. Your generation faces more crucial problems than any generation of the past, as we struggle against false ideologies, ignorance, annihilation and seek to meet the yearning of most of the world's peoples to share our blessings.

It is not from government, but rather from all of us as individuals that the wisdom and determination must come to create dynamic national policies and to translate them into action. Within each of us should burn the spark—the flame ready to kindle other fires. Our history clearly reveals that when the goal is set high for our people, great things are accomplished and new heights are achieved. Today, in this urging era—tainted with seeming grayness and indecision—the power to assure the progress and security of our country—as well as the whole free world—is still within our capabilities if we but know and use our strength.

This is where a continuous catalytic action is required. We are faced with a vital, national task to lift our horizon and rekindle the spirit and dynamism of our forefathers. It depends upon industry, on labor, on Government, and on the Armed Forces—but basically it is an individual task—demanding the dedication of every loyal American. Mere outlay of money or physical resources alone will not bring a day, an hour, or a moment of real security. That objective can only be realized by greater vigilance, wisdom and determination on the part of all of us, but of great importance also is the refurbished image of an alert America purged by sacrifices and brightened by policies that give greater hope to free men everywhere.

We must again become inspired with the spiritual strength, determination, and fortitude of our forefathers. We must replace fear with faith; complacency with courage.

The great days of America need not lie shrouded in past glories. We have but touched the mezzanine of national achievement. Unlimited is our future if we have the courage to seek it. The days of the coming years burn bright with promise—for those who dare. We must stop wasting our heritage and move on to a greater destiny. Freemen everywhere pray that we will find the wisdom and the strength to do so.

I can think of no better way to assert what I believe our national spirit and goal should be today, than to echo the challenging words of Daniel Webster—inspiring words proudly inscribed on the wall above the Speaker's chair in our House of Representatives:

"Let us develop the resources of our land, call forth its power; build its institutions, promote all its great interests and see whether we also in our day and generation may not perform something worthy to be remembered."

The individual contribution of each of you toward this worthy goal will be a measure of the future success or failure that we, collectively, contribute to a greater America and a better world. This is the challenge of your lifetime. I hope your lifes will be stimulated and guided by the fires of the spirit and not immersed in the tepid waters of mundane comforts. What you give to America will be the best measure of your appreciation for what America has given to you. Let me congratulate you again on the accomplishment that brought you here.

I thank you very much.

Governor Rockefeller Points to Bright Future for Dairy Industry

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. KEATING. Mr. President, we in New York State are extremely proud of the important part played in our State's economy by the dairy industry. Indeed, judged by all standards on the national level, the Empire State is a leading dairy center.

In a recent address in Syracuse, N.Y., Gov. Nelson A. Rockefeller predicted a bright future for the Nation's dairy industry, and complimented the industry for the manner in which by research and promotion it has continually progressed and prospered. He pointed out that Government and industry must work hand in hand in the future in order to realize dairying's full growth potential.

Mr. President, I ask unanimous consent that excerpts from this excellent address by Governor Rockefeller be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY GOVERNOR ROCKEFELLER, OF NEW YORK, ON THE NATION'S DAIRY INDUSTRY

Speaking before the diamond jubilee convention of the Holstein-Friesian Association of America, held in Syracuse, N.Y., the Governor pointed to the population increase of the 1960's as opening up sizable new markets for dairy products.

Governor Rockefeller noted that the proportion of young people, who are bigger milk consumers than others, would increase substantially. He also noted that family incomes would rise in the 1960's, and that an increase in living standards was traditionally accompanied by greater consumption of dairy products.

The Governor added that both government and the dairy industry would have to make substantial efforts in research and promotion in order to take full advantage of the industry's growth potential. He cited the efforts of the New York State government in food research and in official promotion of farm products as evidence of what government could properly do to help the dairy industry and other branches of agriculture.

The Governor stressed the importance of overall economic growth to meet the Nation's urgent needs for better living standards, improved public services, and stronger defense and greater cooperation with other free nations.

Excerpts from Governor Rockefeller's remarks follow:

"I want to extend my most sincere congratulations to you all on the diamond jubilee of your association. In the 75 years of its existence, your association has not only brought great progress to you and great benefits to the consumers of dairy products; you have also demonstrated a principle that is relevant to every aspect of our American national effort today; namely, continuity of purpose. You know that true progress comes only through careful planning and consistent effort bent to a clearly conceived goal. This insight had guided you in the past, and it will stand you in very good stead in the future.

"The future of the dairy industry, it seems to me, looks promising indeed. I am very glad that this is the case, not only as the Governor of a great dairying State, but also as a citizen deeply concerned with the prosperity of our farmers throughout the Nation.

"The market for dairy products should grow faster in the 1960's than it has in the past because of the greater population growth that lies before us. Until now, our population has grown at the rate of about 1.4 percent a year. During the 1960's our population should grow about 1.8 percent a year—an almost 30 percent faster increase, an almost 30 percent greater possible growth rate for the dairy industry. The composition of the population will be favorably to dairymen, too. There will be a greater proportion of young people, who are bigger milk consumers than their seniors. Family incomes will rise too—and the evidence is that as people earn more, they consume more dairy products.

"However, you and I know that these potential opportunities will not be realized automatically. Other products compete for the dollars that can be spent on dairy products. The tastes and preferences of people change. Therefore, if the dairy industry is to stay strong and grow faster, both farmers and the Government agencies charged with assisting them must be alert and vigorous in research and promotion.

"I am happy to say that we have been mindful of these needs in New York State. Just last month, I dedicated a new food science and technology building at the New York State Agricultural Experiment Station in Geneva. This is the most advanced food research center in the United States—and the benefits of its work will be made available to anyone in the United States who wants them. Moreover, the State legislature at its last session appropriated additional funds for an expanded program of farm products promotion. Needless to say, I was delighted to sign the bill. And specifically for the benefit of the milk producing industry, we have abolished the outmoded milk dating requirement in New York City.

"The combination of Government-sponsored research, promotion and up-to-date regulation with the initiative and the enterprise of dairymen themselves is the key to the increased growth of your industry. This combination of Government service to the people—not Government dictation or imposition or duplication—and energetic effort by the people themselves is the key to the progress of all agriculture and to the accelerated growth of our economy.

"We ned economic growth in every front, and we need it to fulfill a mounting variety of legitimate private and public desires:

"The desire for a better life for all our people.

"The desire for better public services in education, health, recreation, highways and many other facilities.

"The desire—so urgent at this hour—for a stronger national defense.

"And the desire to build freedom throughout the world.

"All these goals are attainable if we provide the adequate material means to them through accelerated economic advancement.

"I know that you will do your part in the future as you have in the past for increased progress and prosperity. I pledge myself to do everything in my official power to assist the growth of the dairy industry and of the ecoonmy as a whole. Together, we shall lay more solid material foundations for the great and growing house of freedom."

Progress on Rayburn New House Office Building

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FULTON. Mr. Speaker, I have asked the Architect of the Capitol, George Stewart, to give me the current status of the new Rayburn House Office Building, which is under construction.

Architect Stewart has sent me a letter dated June 24, 1960, and a report which I am including under leave to extend my remarks.

ARCHITECT OF THE CAPITOL,
Washington, D.C., June 24, 1960.

Hon. JAMES G. FULTON,
House of Representatives, Washington, D.C.

MY DEAR CONGRESSMAN FULTON: In answer to your inquiry on the progress of the additional House Office Building (which has been referred to as the "Rayburn Office Building"), I am enclosing herewith three copies of a statement which I presented to the House Committee on Appropriations a few weeks ago. This statement contains practically all of the information you desire.

With reference to your question on occupancy of the garage, it is too early to indicate what portions of the garage might be occupied prior to completion of the total project; however, you may be sure if such occupancy proves feasible as the work progresses, I will be glad to make the necessary arrangements with the contractor.

Appreciating your interest in this project and with warm personal regards, I am

Sincerely yours,

J. GEORGE STEWART,
Architect of the Capitol.

ACQUISITION OF PROPERTY, CONSTRUCTION, AND EQUIPMENT, ADDITIONAL HOUSE OFFICE BUILDING

CONTRACT AUTHORIZATION

Public Law 24, 84th Congress, "Additional House Office Building Act of 1955."

Amount of contract authorization: To be determined by the House Office Building Commission.

Amount of contract authorization appropriated to date:	
Second Supplemental Appropriation Act, 1955	$5,000,000
Legislative Branch Appropriation Act, 1957	10,000,000
Legislative Branch Appropriation Act, 1958	7,500,000
Legislative Branch Appropriation Act, 1959	22,500,000
Legislative Branch Appropriation Act, 1960	16,500,000
Total appropriated	61,500,000
Appropriation requested in the Budget for the fiscal year 1961	13,000,000
Acquisition of property, construction, and equipment, additional house office building	13,000,000

This project is authorized by the "Additional House Office Building Act of 1955," Public Law 24, 84th Congress, approved April 22, 1955. Under the provisions of the Authorization Act, the planning of the additional office building and other authorized changes and improvements and the determi-

nation of contract authorization are vested in the House Office Building Commission, consisting of Speaker RAYBURN, Representative VINSON of Georgia, and Representative AUCHINCLOSS of New Jersey.

The project is broken down into seven parts, as follows:

Acquisition of property as a site for an additional office building and for additions to the Capitol Grounds.

Construction and equipment of an additional office building.

Changes, alterations, and remodeling of the Old House Office Building.

Changes, alterations, and remodeling of the New House Office Building.

Construction and equipment of security vaults and other underground structures.

Subways and underground transportation systems.

Landscape development of five squares acquired for additional House Office Building project.

Numerous meetings have been held by the House Office Building Commission and various directives have been issued by the Commission to the Architect of the Capitol.

The following is a report on accomplishments to date:

ACQUISITION OF PROPERTY

All properties directed by the House Office Building Commission to be acquired for the additional House Office Building project have been purchased. The properties consist of five squares, located immediately south and west of the present House Office Buildings, known as squares 635, south of 635, 637, 691, and 692. Title, in fee simple absolute, to these properties now vests in the United States of America.

Square 635 has been completely cleared of structures and is one of the two squares on which the additional House Office Building is being erected. The other square (square 636) was already owned by the Government and, prior to commencement of the project, was used as a parking area for Members' automobiles.

Square south of 635 has also been completely cleared of structures and is now used as a parking lot for automobiles.

Square 637 has been cleared of all structures except the General Outdoor Advertising Building, now used by the Architect of the Capitol as a field construction office.

Square 691 has been cleared of all structures except the George Washington Inn, which is now being used to provide temporary office and committee facilities for the House of Representatives. The remainder of the square is being used as a parking lot for automobiles.

Square 692 has been cleared of all structures except the Congressional Hotel, which is being operated under lease by the Knott Hotels Corp. The remainder of the square is being used as a parking lot for automobiles.

These five squares have been acquired, cleared of structures, and graded at a total cost of $7,993,254.

ASSOCIATE ARCHITECTS AND ENGINEERS FOR PROJECT

By direction of the House Office Building Commission, the following architects and engineers have been engaged, by personal service contracts, for the additional House Office Building project. Under the terms of their contracts, they are compensated on a fee basis, in accordance with rates established for such work by the American Institute of Architects.

Additional House Office Building: John Harbeson, William J. Hough, William H. Livingston, and Roy F. Larson, architects of Philadelphia, Pa.

Changes, alterations, and remodeling work, Old House Office Building: Roscoe DeWitt and Fred L. Hardison, architects of Dallas, Tex.

Changes, alterations, and remodeling work, New House Office Building: Alfred Easton Poor and Albert Homer Swanke, architects of New York City.

Security vaults and other underground structures: Jesse M. Shelton and Alan G. Stanford, of Robert & Co., Associates, Atlanta, Ga.

Subways and underground transportation systems: Jesse M. Shelton and Alan G. Stanford, of Robert & Co., Associates, Atlanta, Ga.

Landscape development of five squares acquired for additional House Office Building project: Robert Wheelwright, Markley Stevenson, and Joe W. Langrant, landscape architects of Philadelphia, Pa.

CONSTRUCTION AND EQUIPMENT OF ADDITIONAL OFFICE BUILDING

The estimated cost of the new building, as approved by the Commission, to date, including sewer relocation cost, is $68 million.

As approved, the new building provides accommodations for 8 major standing committees and 15 subcommittees, 170 three-room office suites, storage facilities for Members, and other appurtenant and necessary facilities; also, parking accommodations for approximately 1,600 automobiles. The new building is to be located on the two squares immediately west of the New House Office Building. There two squares have been combined into one square through the closing of Delaware Avenue.

Contracts were awarded in 1955 for engineering soils analyses and in 1956 for foundation test borings, necessary to determine the proper foundation for the new building. Work under these contracts has been completed.

Contract was awarded, December 21, 1956, to Gunnell Construction Co., for construction of a large sewer in square 635, on the site of the new building. This contract included part of the excavation and foundation work for the new building, as the new sewer is located beneath and constitutes a part of the new building structure. As the new sewer integrates with the city sewer system, it was necessary to install it in this location to provide proper drainage. Work under this contract has been completed at a cost of $1,392,805.

Contract was awarded, May 8, 1958, to McCloskey & Co., of Philadelphia, Pa., for excavation, excavation bracing, foundation piles and pile caps for the new building. Work under this contract is now about 76 percent complete and is expected to be completed by October 1960. The present amount of the contract is $8,269,767.

Contract was awarded, July 9, 1958, to the Bethlehem Steel Co. for furnishing, delivery and erection of the structural steel for the new building. This part of the job was awarded as a separate contract in order to expedite construction work. Work under this contract is now about 40 percent complete and is expected to be completed by December 1960. The present amount of the contract is $6,893,573.

Contract was awarded, March 10, 1960, in the amount of $50,793,000, for the superstructure for the new building. Work under this contract is scheduled for completion by June 1963. Occupancy of the new building is expected to commence prior to completion. The contract was awarded to McCloskey & Co.

Changes, alterations and remodeling of the old House Office Building:

The estimated cost of changes, alterations and remodeling of the Old House Office Building, as approved by the Commission, May 17, 1956, on the basis of preliminary plans and estimates of cost, is $9 million.

As approved, the Old Building is to be remodeled in such a manner as to provide 135 three-room office suites, 3 major standing committee rooms, 5 subcommittee rooms, and other miscellaneous appurtenant and necessary facilities, including an underground garage in the courtyard. To effect these improvements, major structural changes will be necessary; also, a general rearrangement of existing physical facilities and major changes to the plumbing and toilet systems; electrical and lighting systems; heating, ventilating and air-conditioning systems; and elevator and other transportation facilities.

Contract was awarded to Kirk Lindsey, Inc., January 24, 1958, for construction of a 3-level garage in the courtyard of the Old Building, providing parking accommodations for 291 automobiles. Work under this contract has been completed at a cost of $1,326,082. The garage was occupied and placed in operation in June 1959.

Further remodeling work in the Old Building is being deferred by order of the Commission.

Changes, alterations, and remodeling of the New House Office Building:

The estimated cost of changes, alterations, and remodeling of the New House Office Building, as approved by the Commission, May 17, 1956, on the basis of preliminary plans and estimates of cost, is $9,500,000.

As approved, the New House Office Building is to be remodeled in such a manner as to provide 142 three-room office suites, 6 major standing committee rooms, 4 subcommittee rooms, 14 two-room office suites, and 16 odd rooms, and other miscellaneous appurtenant and necessary facilities, including a cafeteria building in the courtyard. To effect these improvements, major structural changes will be necessary; also, a general rearrangement of existing physical facilities, and major changes to the plumbing and toilet systems; electrical and lighting systems; heating, ventilating and air-conditioning systems; and elevator and other transportation facilities.

Contract was awarded to Irons & Reynolds, Inc., September 3, 1957, for construction of a one-story building in the courtyard of the New House Office Building, covering the entire courtyard, to serve as a cafeteria for the House, containing seating accommodatons for approximately 575 persons. Work under this contract has been completed at a cost of $954,560. The new cafeteria was placed in service February 5, 1959.

With the exception of remodeling the space vacated by the old cafeteria for use by the House Post Office and certain other minor changes, further remodeling work in the New House Office Building is being deferred by order of the Commission.

Construction and equipment of security vaults and other underground structures: Action has been deferred with respect to these items.

Subways and underground transportation systems: This matter is still under study, and plans and specifications for this part of the project are expected to be completed during the fiscal year 1961. The estimated cost of a subway and subway transportation system from the third House Office Building to the House wing of the Capitol is $5 million.

Landscape development of five squares acquired for project: This matter is still under study.

Appropriations, obligations, and expenditures: A total of $61,500,000 has been appropriated for the additional House Office Building project, to date. In the fiscal years 1955, 1956, 1957, 1958, and 1959, obligations totaling $33,188,551 were incurred. In the fiscal year 1960, obligations totaling $51,362,894 have been incurred to March 25, 1960, and

additional obligations totaling $943,828 are expected to be incurred during the remainder of the fiscal year—or a total obligation of $52,306,722 for the fiscal year 1960. In the fiscal year 1961, the amount of obligations to be incurred is estimated at $5,420,000. This makes a grand total obligation—estimated and actual—of $90,915,273 for the fiscal years 1955, 1956, 1957, 1958, 1959, 1960, and 1961.

Of these obligations, $23,236,073 have been liquidated to March 1, 1960, and $51,263,927 are expected to be liquidated during the period March 1, 1960, to June 30, 1961—or a grand total liquidation of $74,500,000 for the fiscal years 1955, 1956, 1957, 1958, 1959, 1960, and 1961.

As the appropriations available to cover these liquidations total $61,500,000, an additional appropriation of $13 million is requested for the fiscal year 1961.

Estimated obligations and expenditures, fiscal years 1955 to 1961, additional House Office Building project

	Obligations				Expenditures			
	Fiscal years 1955–59	Fiscal year 1960	Fiscal year 1961	Total	Fiscal years 1955–59	Fiscal year 1960	Fiscal year 1961	Total

The World Situation

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. FULBRIGHT. Mr. President, recently a very fine speech was delivered to the Kiwanis Club of Coral Gables, Fla., by C. Ellis Vaughn, a young high school student. The speech is an excellent one, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE WORLD SITUATION

(By C. Ellis Vaughn, Kiwanis speech, Coral Gables, Fla., May 17, 1960

In our lifetime, it will be decided whether or not free life and virtually civilization as we know it will continue. Do you think this is quite a rational statement for an 18-year-old high school boy to make? Let us view the world situation for a moment and see how it looks. As we continuously progress through the 1960's, the most decisive years mankind has ever faced, here are some of the problems that confront us:

Never before in the history of mankind has there been such a rapid growth in population. Just 10 years from now, the population is expected to change as follows:

China: from 654 million to 800 million.
India: from 417 million to 504 million.
Europe: from 423 million to 452 million.
Russia: from 209 miloin to 254 million.
United States: from 179 million to 204 million.

In the entire scope, the world's population is expected to rise from 2.9 billion to nearly 3.5 billion, an increase equivalent to three times the present population of the United States.

Closely related to the population increase is the racial problem. We may compare the racial problem of the world to a premature volcano—it lies rumbling beneath us with an uncertain moment of eruption, if we are unprepared, it could be deadly. The world recognizes that colonialism is a thing of the past, but why is it willing to endure a system whereby countries are dominated satellites? This is our problem here, not the fact of whether the Asians and Africans shall have their rightful freedom, but whether or not they are prepared to accept the responsibilities of freedom, so that their countries will not turn into a chaotic voidness that will be filled with the wrath of communism.

Another phase of our world situation is one that we read about every day, we read about it so much that it is almost a regular item of news such as the funnies, and that is the destructive power that mankind, unfortunately, possess. It is appalling to think that within a matter of hours—not days, weeks, years, or decades, as in the past, but hours, a war could be started and finished—a war that would wipe out three-fourths of the population of the earth. Something that is also vitally important to mankind is: What are we doing to the health of the future generations by developing these destructive weapons?. Scientists all over the world continuously cry out that nuclear explosions are affecting the atmosphere and will cause future damage if continued. You have heard the statement: The Fourth World War will be fought with sticks and stones. Gentlemen, we must prevent a third.

For the past century the greatest percentage of the wealth of the world has been possessed by the United States. As time progresses, this situation is also changing. Other countries are eager to have their share of world riches. The production capacity of our competitors is rapidly increasing, causing us much damage. Also, nations are attempting to formulate trade pacts, which if accomplished would be very detrimental to our economy. Besides being a world of complexity, it is also one of rapid change.

Mark, that if mankind's recorded history of 50,000 years were compressed for the sake of analogy into 50 years, then history would read like this; 10 years ago man left his cave for some artifically constructed dwelling; 5 years ago, writing first appeared; 2 years ago Christianity appeared; 15 months ago Guttenberg developed western printing from movable type; 10 days ago electricity was discovered; yesterday morning the airplane was invented; last night radio was perfected; this morning television became a reality and a mere 6 minutes ago the jetplane was invented. The odyssey of man could be compared to the journey of a train—starting out slowly, gradually gaining speed, getting faster, faster, and faster, and upon going at a pace faster than it is able to endure, meets its end. But if it progresses in the correct stride, it will reach its immediate destination and then continue onward.

If we are to meet the world situation, there are problems that we as a nation must face. Are we physically and materially prepared to meet the world situation? I think so. Mentally? That is questionable. It appears that we are in a rather lackadaisical and complacent state of mind. "Eat, drink, and be merry" shouted the Romans, "for tomorrow you may die." And on the morrow, Rome died. "What are you trying to do, entertain yourselves to death?" a visiting European sociologist asked a colleague over here. "No, I'm afraid it is just our passion for escape," the colleague answered. "Escape. That is a good one," the European rejoined, "You have the richest, most bountiful civilization in all history, and you have the most satisfying way of life in the world, to hear you talk of it, and yet all you want to do is escape." That is a good one isn't it?—escape.

"One Nation, under God" is how a phrase of our pledge of allegiance reads. Yet, of all the people in the United States, only 56 percent belong to a church and only 30 percent of those who are members attend. This means about 15 percent of the people in the United States attend church.

Education is very vital to our existence. Permit me to use the words of the great

philosopher, Aristotle; "All who have meditated on the art of governing mankind have been convinced that the fate of an empire depends on the education of youth." History has proven this to be true. Surely, if we are to exist as a mighty nation we must improve and increase our educational system. Did you know that our Nation's birthrate leaves our schools short of 195,000 teachers and 140,000 classrooms? This past fall school began with 1,843,000 more students than there was room for—even with this lack of space, still only 33 million out of a possible 40 million attend school. Our schools are splitting at the seams, but we are not educating all that we should. This is a very serious problem that must be dealt with immediately.

Upon maintaining and after improving our strength internally, we have quite a job on the world scene.

The world's population increase is like a growing hungry monster, mainly because this increase is occurring in Asia and Africa—continents that can't feed their millions today. The rapid expansion of population threatens to block the efforts of many nations to improve their living standards. Nations must have food and homes for their people, and they will go to any means to obtain them, even submit to communism if necessary.

For the sake of humanity as well as for the sake of our economy, we must also work toward a disarmament plan. All told, the United States and Russia today are spending more on weapons (some $100 billion a year) than the combined national incomes of all the nations of Asia and Africa. We have smashed the atom and now it threatens to smash us. All of these problems will be difficult to solve—because of a lack of understanding and because they are deeply rooted—but, if they aren't solved soon, conditions will be much more difficult in the future.

As we continue to investigate, we see that we haven't been sitting on our hands all the time. There is much to be done, but we have accomplished something. We have made tremendous strides toward improving our educational system. The Nation is recognizing the need for more and better education. Recently, we have done such things as: Built new schools, hired more teachers, increased the salaries of teachers, and placed a greater emphasis on education. The Government has recently attempted to give students more of an opportunity to acquire higher education by creating the national defense student loan program—the mere title "National Defense" relates to you the realized urgency and need of this program. We are also giving the brighter student more of an opportunity to advance at a more rapid pace. For instance, on the local scene, next year in our school, students will have an opportunity to come to school early and take more subjects. Here in Dade County the outlook and progress is very encouraging, but we must remember that we have one of the finest school systems in the whole Nation and there is much to be desired on the national level.

Recognizing the racial conflict has led us to attempt to solve the problem, here in our own Nation and on the international level. We haven't been successful yet, but we must continue to try.

In reference to the population explosion, a few months ago there was the suggestion of such means of solution as birth control. You can see from the reaction that occurred after this suggestion, how difficult solving the problem will be. Successful or unsuccessful, it was an attempt, and there must be more. With 150,000 babies being born every day, this little world could get pretty crowded.

There have been many meetings held in an attempt to reach an agreement on disarmament. Although its chances have been dimmed, the summit conference still draws forth hope. Whether it fails or succeeds, there cannot be any ceasing of striving to create harmony among nations.

On this broad world picture, how does Key Club and Kiwanis fit in? Much of America's strength may be traced to the organizations which give people the opportunity to do unselfish service, thus preparing them for leadership in the Nation. These organizations also give people the opportunity to exchange ideas and collectively express a realization of our needs. Proof of this realization are some of the international themes of Key Club International: "Prove Brotherhood," "Wage Peace," "Forward Freedom," "Cultivate Creative Citizenship." The following actions of unselfish service, attempts to learn and experience, and the setting of examples that others might follow, blended with the study of themes and objectives, is the heart of Key Club International. Key Club does not involve the whole Nation I grant you, but it does involve 50,000 young men, giving them the opportunity to develop leadership through service. I think this is accomplishing a great deal. It is a wonderful thing when the adults of our Nation show an interest in the development of the youth. One day when the subject of youth was brought up to a man, he took out a small piece of string and laid it on his desk. "Look," he said, "if I try to push it, it won't do very much, but if I pull it, it can go anywhere." Gentlemen, this string can represent Key Club being led by Kiwanis.

Believing in the basic intelligence and desire of the American people, I think that we can meet the world situation. It will take our mightiest efforts, greatest amount of intelligence, and as our football coach likes to say, "that extra 10 percent," but we can do it.

Now as I close, I wish to leave you with these words:

"The life so short, the craft so long to learn.

"The future belongs to those who prepare for it."

Gentlemen, it has been my pleasure.

Thank you.

Carroll Reece Day

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. BROWN of Ohio. Mr. Speaker, Saturday, June 25, was Carroll Reece Day in Tennessee.

Our colleague was honored upon completion of 40 years of public service. The people of his district under the sponsorship of the Roan Mountain Citizens Club selected as a site for this occasion the Rhododendron Festival which has been held atop the 6,400-foot Roan Mountain as an annual event for 14 years.

The setting for this event was on one of the highest peaks in the East which presents one of the most beautiful panoramas and outlooks in America with 600 acres of purple rhododendron in the background and a clear vista in all directions as far as the eye can carry.

Thousands of east Tennesseans and many from out of the State converged on Roan Mountain to honor CARROLL REECE.

The program for Carroll Reece Day was on the format of "This is Your Life." He was 29 years of age when he was first elected to the 67th Congress in 1920. This was soon after CARROLL REECE returned from World War I where he received many awards for bravery, including the Distinguished Service Cross, Distinguished Service Metal, Purple Heart, and Croix de Guerre with Palm. He was cited for bravery by General Pershing, Marshal Pétain, General Edwards, Generals Hale and Lewis.

On this memorable occasion he was saluted by many editorials in the Tennessee newspapers and by more than 600 letters and telegrams from his colleagues in Congress, Government officials, including the President, Vice President, and members of the Cabinet as well as from many of his friends and admirers throughout the country.

Mr. Speaker, I believe it would be appropriate and of interest to bring to the attention of the House some of these well deserved tributes which were paid to CARROLL REECE on this occasion.

[From the Nashville Banner, June 25, 1960]

MR. REECE: AMERICAN

A vast majority of Tennesseans are able to put aside political partisanship and pay honor to a deserving native son, regardless of his political affiliations.

This refusal of Tennesseans to put party above the man has manifested itself twice in recent years. Though predominantly Democratic, the State gave President Eisenhower a majority in both 1952 and 1956.

And this independence is being exhibited today at Roan Mountain where B. CARROLL REECE, Tennessee's "Mr. Republican," will be the guest of honor as thousands gather for the colorful rhododendron festival.

The tribute will follow the format of the TV show, "This Is Your Life," and will trace the highlights of Mr. REECE's long and successful career which is marked by success not only in the political arena, but as a businessman and soldier.

Mr. REECE is a politician in the finest sense of the word. He is being recognized today upon the completion of 40 years' service as U.S. Representative from Tennessee's First Congressional District.

Congressman REECE is a party man and proud of it. Today he is serving as chairman of the Republican State Committee and he speaks with a strong voice in national party councils. During one of the few breaks in his long congressional career, the east Tennessee legislator was National GOP Committee chairman.

Today he serves as president of two banking institutions and as chairman of the board of a third. Mr. REECE also is a lawyer, having graduated from nearby Cumberland University.

And Tennessee has had few sons who have served in the Nation's Armed Forces with such distinction.

A battalion commander with the American Expeditionary Forces during World War I, he is a holder of the Distinguished Service Cross, Distinguished Service Medal, Purple Heart, and French Croix de Guerre. He was cited for bravery by both General Pershing and Marshal Petain, of France.

He is now 70 years old. His political career began at 30.

The Congressman is a candidate for an 18th term in the House of Representatives. He has never lost a Republican primary election and only once lost a congressional race, but at that Mr. REECE was only sidelined for one term. He won the next election.

During his lifetime, the veteran Congressman has received many honors, but this

recognition today by his fellow Tennesseans must rank with the best.

[From the Bristol Herald Courier, June 19, 1960]

REPRESENTATIVE CARROLL REECE: HIS DAY AND YEAR

Representative B. CARROLL REECE, when he's in a reminiscent mood, likes to recall how he came down out of the mountains of Johnson County to the flatter lands which form the upper part of the Tennessee Valley.

That he did come down from those mountains is a fact of considerable importance to east Tennessee, for the years which followed led him into a career of public service matched by few men in America.

Next Saturday, Representative REECE will, as he has done on countless occasions in the past, reclimb the mountains which stretch between the Volunteer State and North Carolina.

Though not in Johnson County, his journey will be, in a sense, symbolical. And it will not be without deserving cause.

For, on June 25, during the annual Rhododendron Festival atop Roan Mountain, Carroll Reece Day will be observed. It will be a day of special tribute to a man who, through long, long years, has served his part of the mountain empire in the halls of Government.

The citizens of the First District of Tennessee, the citizens of many other great districts in our region and in our Nation, know of this service. They know the personal touch which B. CARROLL REECE has with his constituents. They know of the quiet effective manner he employs to move mountain-like obstacles which might hinder the growth of his district, his State, and his Nation.

So B. Carroll Reece Day will, undoubtedly, be a great success. But we trust the tribute will not end there.

This is another election year, another year in which Representative REECE will again place his record of service before the voters of east Tennessee, another year in a career which he chose long ago and which he has followed in a dedicated manner.

Let us, then, make this a B. Carroll Reece Year. And, in November, let us give him a mountainous majority as we return him to Congress to continue serving the First District.

We extend to Representative REECE our heartiest congratulations on being honored during the festival on Roan Mountain. We extend to him, too, our full support in his campaign for reelection.

[From the Johnson City (Tenn.) Press-Chronicle, June 24, 1960]

AT ROAN MOUNTAIN—CARROLL REECE DAY—A FITTING OCCASION

Tomorrow will be Carroll Reece Day at the Roan Mountain Rhododendron Festival, and in our view nothing could be finer.

It is certainly fitting that concrete action be taken in the First District to honor Mr. REECE, for he has honored the district and its people by consistent support of their interests in Congress since he was first elected in 1920.

It is to Mr. REECE'S enduring glory that his popularity among the people has grown as his service has lengthened. And, remarkably, this popularity knows no party boundaries; it is almost as widespread in the Democratic Party as in the Republican, under whose banner he operates.

The reason for such bipartisan support is, of course, obvious. It lies in the fact that Mr. REECE'S service to his constituents is bipartisan. A man or a woman seeking his help does not have to take a party loyalty oath. Mr. REECE does not ask, "Did you vote for me?" If the person is from his district—or another district, for that matter—he is immediately interested and concerned.

It is to the Congressman's credit that, though he has attained national stature, he has not lost touch with the folks back home. He still speaks their language and shares their philosophy, and that is important.

There are few Congressmen, perhaps none, who are more widely influential than he. He is a troubleshooter extraordinary. He knows the intricacies of national politics so thoroughly that he can cut through the red tape which so often ties down the unknowing. It is said of him that if he can't do it, nobody can.

Considering all this—and it is only a general appraisal—it is no wonder he is so highly regarded, no wonder he has no serious opposition when he comes before the people for reelection. In past years the First District split sharply into Reece and anti-Reece factions. That time is gone. Any opposition he has in these days is of the most token sort.

And so we join the sponsors of the Roan Mountain festival in saluting this man. And we express the hope he will have many more fruitful years in Congress.

[From the Kingsport News, June 22, 1960]

CARROLL REECE DAY

Saturday is Carroll Reece Day at the Rhododendron Festival atop Roan Mountain.

Certainly, no one in the 14-county First Congressional District is more deserving of such an honor than the man who has represented that district in Congress for 16 terms.

CARROLL REECE, the "Mister Republican" of Tennessee, has given the people of his district the kind of conservative representation they want.

Elected as a Republican, REECE has served the GOP faithfully in district, State, and Nation as national chairman, and now State chairman.

He is a personal friend of the President and of the Vice President. He has known all of the party's leaders for the 40 years he has been in politics.

But CARROLL REECE represents all of the people of his district, regardless of politics. When a constituent comes to him with a problem, he never asks whether that person voted for him or not.

Indeed, it is this very characteristic—the willingness to drop everything to look after a constituent's interests—that has made CARROLL REECE such a perennial favorite among Democrats and Republicans alike in his district.

One of the reasons that CARROLL REECE gives the First District such good representation in the House is his ability to understand his constituents' problems. He speaks their language.

REECE has been a combat veteran, a college professor, a farmer, a successful businessman.

He has known poverty and hardships. He has known what it is to work with his hands and his back. He has known what it is like to advance under enemy fire to assault an objective.

He is a family man and a churchgoer.

Thus, CARROLL REECE can listen with sympathy and understanding to the problems of a veteran, a farmer, a small businessman, a laborer, a housewife.

But what of REECE, the nationally known political leader?

As chairman of his party, he masterminded the campaign that returned a Republican Congress to power in 1946.

As a member of the powerful House Rules Committee, he helps channel the many pieces of legislation onto the floor for debate.

As chairman of the Reece committee, he exposed the leftist tendencies of some of the Nation's most powerful foundations and thus brought down on his head the wrath of the so-called liberals.

He is a trained economist and as such, has helped check the trend toward wayward spending that has for too long been typical of big government.

CARROLL REECE is essentially a quiet, modest man. He does not make a big splash in Washington. He is not a headline-seeker.

But in his deliberate, efficient way—through his many contacts in all three branches of government and on both sides of the aisle—he gets things done.

The First District, the State and the Nation have good reason to be proud of Congressman CARROLL REECE. He deserves being returned to Congress.

[From the Knoxville Journal, June 25, 1960]

CONGRATULATIONS EXTENDED TO REECE AND TO FORTUNATE CONSTITUENTS, AS HE IS HONORED AT ROAN FETE

This weekend, upper east Tennessee is putting on the 14th annual Rhodendron Festival sponsored by the Roan Mountain Citizens Club, of which Byron F. Graybeal is president.

The celebration is given interest to the whole of the First Congressional District, however, by the fact that today is to be celebrated as Carroll Reece Day, in special tribute to the district's Representative who is in the process of being nominated for reelection without opposition in his own party.

The fact that Mr. REECE is being singled out for special honor in the 4-day celebration in Carter County, with the site Roan Mountain, will appeal to many east Tennesseans as especially fitting.

CARROLL REECE this year rounds out his 40th year in public life. In all of the years since 1920, with the exception of one 2-year period in which he served as chairman of the Republican National Committee, Mr. REECE has not only represented the First Congressional District, but as leader of the Republican organization in the State, has placed himself at the beck and call of citizens of both party affiliations as their go-between in relationship to their Washington Government.

Above and beyond his service to the district and to our home State, from these four decades of public service, Mr. REECE has emerged as one of the political powers in the Capital itself. We have frequently heard the opinion expressed in Washington that the First District Representative is one of the most effective men in the Capital so far as getting things done is concerned, no matter whether the administration is, at the moment, Republican or Democrat.

We congratulate Representative REECE upon the honor which is being done him today by his constituents, and no less congratulate them upon their good judgment in keeping a man of his character and unusual abilities in Congress during all these years.

[From the Elizabethton Star, June 24, 1960]

B. CARROLL REECE

The people tomorrow of Carter County and east Tennessee will have an opportunity to display their respect and affection for a great Tennessean and a great American—Representative CARROLL REECE—by turning out to do him honor at the Carroll Reece Day ceremonies on Roan Mountain.

To those of us who have known this man, and that includes practically every man and woman in this district, CARROLL REECE symbolizes the great American ideal. Born of meager circumstances, Mr. REECE has attained high stature not only in his Nation but throughout the world.

Yet, perhaps his highest praise and greatest virtue is that he has remained a man of his people. His thoughts and concern have been first of his people's welfare, and many residents of Carter County and all of East

Tennessee can cite examples of his compassion to them in their hour of need. This to us is the measure of this man's greatness.

In the Halls of Congress, among the great and influential men of national affairs, he is known for his good works * * * as the brilliant boy professor at New York University, as the most decorated for bravery in all of Congress, as the holder of the Distinguished Service Cross, the Croix de Guerre, the Distinguished Service Medal, the Purple Heart and other high awards, as the former National Chairman of the Republican Party, as a great legislator whose 36 years in Congress have spanned a period which history shall record as being the momentous in the proud history of our Republic, as a man of his word, a friend of Presidents and Diplomats throughout the world, and as a counsel to mighty men whose hands have shaped the course of history, he will long be remembered.

This is the man Carter County and East Tennessee will honor June 25. And we claim him for our own.

[From the Greeneville Sun]

REPRESENTATIVE CARROLL REECE DAY AT RHODODENDRON FESTIVAL

On Saturday, June 25, the Rhododendron Festival at Roan Mountain will honor Representative CARROLL REECE for his service to that area and to all of east Tennessee.

Mr. REECE was born in the mountains of east Tennessee, and is a genuine example of the "Horatio Alger" story of hard work and success. In 1920 he was elected to Congress, the youngest Member of the 67th Congress. Then in 1946 to 1948 he served as Republican national chairman. It is interesting to note that under his leadership the Republican Party elected the greatest majority in Congress that they have known in recent years.

All of east Tennessee will join with the Rhododendron Festival on Saturday in paying tribute to a citizen who has served his area and his country well.

This community has on many occasions called on him for help. The quiet effective manner in which he was able to move mountains which might have hindered the growth of this area have made a lasting impression on his fellow citizens.

We extend our heartiest congratulations to our distinguished Representative in Congress on Carroll Reece Day. We hope that many of our citizens will journey to Roan Mountain on Saturday, not only to see the magnificent scenery, but to pay honor to a man who has distinguished himself by public service not only to his district, his State; but to his Nation.

[From the Newport Plain Talk and Tribune, June 23, 1960]

HE DESERVES THE HONOR

Congressman B. CARROLL REECE will receive recognition Saturday of this week when he attends the annual Rhododendron Festival on Roan Mountain. The occasion will be known as Carroll Reece Day and the Republican Representative will be honored for his public service at which he has spent over 40 years.

Congressman REECE'S outstanding public record is known like a book to Cocke Countians where he is known by practically every adult person. Cocke Countians know him as the youngest man to be elected to the 67th Congress in 1920; they are familiar with his 2 years as Republican National Chairman when the Republicans elected the greatest majority of their members in recent years; they know him as a public-spirited Representative and have followed his public life with interest down through the 40 years he has served them.

Yet, Cocke Countians know this man because of other reasons. They have learned to love and respect him due to his personal interest locally. They like to feel that he is a personal friend. They say with pride that they can write Mr. REECE and receive an immediate reply. They tell of instances where he has helped men in service, veterans of the wars and their families. They tell the story of the young man who has made good.

In short, Cocke Countians like Congressman REECE.

We are glad to see our neighbors do him honor and our congratulations are extended to Mr. REECE and those in charge of the big festival.

[From the Nashville Banner, June 27, 1960]

REPRESENTATIVE REECE TO CONTINUE LIFE OF PUBLIC SERVICE

ROAN MOUNTAIN.—Representative B. CARROLL REECE, who has spent nearly half of his 70 years representing the first district in Congress, has pledged the remainder of his life to the service of his people.

"Forty years is not such a long time," the nationally acclaimed Republican leader joked before a crowd of several hundred persons who had gathered to honor him Saturday on Roan Mountain in REECE'S native upper east Tennessee.

REECE'S address was the highlight of CARROLL REECE Day ceremonies held in connection with the 14th annual Rhododendron Festival. The special tribute was arranged in honor of the Johnson City Congressman's 40 years of service to his district.

Unopposed for reelection to an 18th term in the U.S. House of Representatives, the veteran Congressman told the audience that the United States will maintain "its position of military strength" which he described as sufficient to destroy the Soviet Union.

"As long as I am in Congress," REECE said, "I will devote all of my efforts and all of my energies, not only to doing things for the people of my district, but toward maintaining the Nation's strong military and economic position."

REECE'S famous broad smile appeared when Knoxville attorney, Ray Jenkins, master of ceremonies for the occasion, referred to the Congressman as "Mr. Republican." Cheers from the audience filled the air atop the mountain when Jenkins suggested that REECE would make a good running mate for Vice President RICHARD NIXON in the 1960 presidential elections.

Accompanied by his wife and his daughter, Mrs. George W. Marthens, III, and several other relatives, REECE appeared the happiest when messages of best wishes from President Eisenhower and Vice President NIXON were read to the applauding audience. These messages, along with more than 600 others from every Member of Congress, every Governor, and several members of President Eisenhower's Cabinet, were presented, to the Congressman.

A plaque presented by the Roan Mountain Citizens Club, sponsors of the festival, praised REECE for his outstanding service during war and peace.

Jenkins introduced REECE, describing him as a meteor born to burn, and traced the Congressman's life from his early days in his native Johnson County.

* * * * *

REECE, who has maintained a reputation for speaking the language of the folks back home throughout the years, has never lost a Republican primary race.

Mr. Speaker, among the many messages of tribute which CARROLL REECE received, I feel that I should include in my remarks those from the President and Vice President:

THE WHITE HOUSE,
Washington, D.C., June 24, 1960.

RAY JENKINS,
In Care of K. Wayne Graybeal,
Roan Mountain, Tenn.:

It is a pleasure to join in the observance of Carroll Reece Day. This day should be celebrated in Tennessee and across the land. As an outstanding Member of Congress for many years, Congressman REECE has not only served his neighbors at home but also his countrymen throughout the Nation. An able and courageous leader in war and peace, he is a credit to America. Please give CARROLL my heartiest congratulations and best wishes.

DWIGHT D. EISENHOWER.

OFFICE OF THE VICE PRESIDENT,
Washington, D.C., June 17, 1960.

Mr. BYRON GRAYBEAL,
Chairman, Citizens Committee of Roan Mountain, Roan Mountain, Tenn.

DEAR MR. GRAYBEAL: This is just a note to extend my earnest best wishes for a splendid success for the Carroll Reece Day which your committee is staging in connection with the annual Rhododendron Festival.

I have known and counted upon CARROLL REECE as a loyal friend and valued adviser since I first became a Member of the House of Representatives and I know of no one in public life more deserving of the grand tribute you plan. By his diligence, his keen analyses of developing situations and his intimate knowledge of national affairs as well as of affairs in his home area, he has won the widest respect and admiration of his colleagues in the Congress. It is indeed an honor to join the innumerable friends of CARROLL REECE in wishing him well on the occasion of this recognition of his 40 years of public service. In my opinion, your area is indeed fortunate to have the leadership of CARROLL REECE.

With kind regards.

Sincerely,

RICHARD NIXON.

Baseball Under Antitrust Laws

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. CHAVEZ. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter written by the Senator from Wyoming [Mr. O'MAHONEY] together with a letter from former Senator Edwin C. Johnson, pertaining to the Kefauver baseball bill.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JUNE 25, 1960.

The Honorable DENNIS CHAVEZ,
U.S. Senate,
Washington, D.C.

DEAR DENNIS: Like you, last week I received a telegram from Mr. Ford Frick, commissioner of the two major baseball leagues, and a few days later received from him a letter accompanied by a brief in which he urges the Senate to support the present major league baseball monopoly by defeating the Kefauver bill, which would place baseball under the antitrust laws.

May I take the liberty of writing you this letter to indicate the reasons why I deeply

feel that Mr. Frick is terribly mistaken and that the Congress should now seize the opportunity of turning baseball back to the Nation.

When a motion was made in the Judiciary Committee to strike out title II of the bill and put "baseball" in title I it was defeated by a substantial vote because a large majority of the committee realized that if such a policy were followed it would be a recognition by the Senate of the monopolistic conditions which the owners of the 16 major league teams now maintain in this country. It seems strange to me that Mr. Frick should urge this policy, because two of the National League teams under his jurisdiction, namely the Brooklyn Dodgers and the New York Giants, moved 2 years ago to Los Angeles and San Francisco, where they found extraordinary support from the baseball fans of the West and from the people of Los Angeles and San Francisco. By making this move the Brooklyn and New York teams demonstrated that the people of the Nation, who have never had major league teams within their areas, were eagerly awaiting the opportunity to support one. This is the situation that exists in the United States now outside of the comparatively narrow area in which the present major leagues had been operating.

By voting for the Kefauver bill the Senate can extend the opportunity to the people of the United States to establish major league baseball from coast to coast and from north to south.

The concept of Mr. Frick and his associates in the 16 major league teams that they can restrict major league baseball to the States and cities that they choose is in my judgment utterly wrong. The right to establish major league teams belongs to free independent owners who have money to invest and cities whose fans will support new major league teams with modern stadiums like those at Los Angeles and San Francisco.

Minor baseball leagues are not, as Mr. Frick would have us believe, beneficiaries of the major league monopoly. They are its victims, and so, also, are the baseball players who are held on farm teams or on major league benches until the present baseball monopolists are willing to release them.

I remember well the time when the old National League, like the present two major leagues, tried to prevent the organization of the American League because of their false concept that the whole Nation was not baseball minded. Ban Johnson had to fight with skill and courage to bring the American League into existence. We have a larger nation now than we had then. Our population has expanded; there are more baseball fans that there were then. Let us give them the opportunity to attend major-league games personally.

To repeat, let us give major league baseball back to the Nation by supporting the Kefauver bill.

Sincerely,

JOSEPH C. O'MAHONEY.

EDWIN C. JOHNSON,
Washington, D.C., June 27, 1960.

HON. DENNIS CHAVEZ,
U.S. Senate,
Washington, D.C.

DEAR DENNY: I am sorry to bother you again about the team-sports bill but there is so much confusion regarding what this bill will and will not do that I feel obligated to do so. Title I of the bill deals with football, basketball and hockey and title II with baseball. Under Supreme Court decisions baseball has a different status from the others and its vast empire of minor leagues requires a different approach from other team sports.

In football a new league has no difficulty getting underway. That is positively not true of baseball. In football enough talented players to man a new league graduate from the Nation's colleges each year. In baseball practically all the professional baseball players are under contract to the two major leagues, directly or indirectly.

The purpose of title II is to make it possible for additional American communities to have major league baseball if they want it. But it is practically impossible for another baseball league to materialize without legislation unless it goes "outlaw." Many American cities are no longer satisfied with minor league ball. They want top flight baseball and they could have it if it were not for the present monopoly in baseball talent.

The Judiciary Committees of the House and Senate have held numerous hearings on this situation. Previously the House acted, but the Senate has not. The latest hearing was held in the Senate Judiciary Antitrust Subcommittee on S. 3483, the Kefauver bill, on May 19–20, 1960.

President Cronin of the American League and President Giles of the National League with their staffs of attorneys were present and their commisioner testified against the Kefauver bill. It was an excellent hearing and many points were clarified In an effort to compose differences, the subcommittee rewrote title II. This revised bill is before you and it is a good, sound bill.

To clarify various provisions of the first and second versions of the Kefauver bill, it would be well to review the Frick testimony, point by point:

"Mr. FRICK. Under this bill (the first version of the Kefauver bill) limiting us to 60 players * * * we could support only 9 minor leagues. Yet gentlemen, in order to operate three major leagues, experience has shown us and figures prove that you need 36 minor leagues to accomplish that end" (p. 94, hearings, May 19–20, 1960).

The Judiciary Subcommittee followed Mr. Frick's prudent advice and struck from the bill the limitation of 60 players. Please note what Mr. Frick says about needing 36 minor leagues when the Continental Major League gets underway. At present the existing majors have 21 leagues and the Continental has the West Carolina league, but they will need 14 more minor leagues. That evidence makes the argument that the Continental League will destroy the minor leagues ridiculous.

"Mr. FRICK. I cite section 203(2). This section provides—'In the event a player is drafted by more than one major league club, the election as to which club the drafted player's contract shall be assigned shall remain and be vested in the drafted player' " (p. 98, hearings, May 19–20, 1960).

This provision was inserted in the bill by Senator KEFAUVER to protect a player drafted from one of the existing major leagues by the Continental League if he didn't want to play in the Continental League. But Mr. Frick said this would defeat the basic purpose of the draft rule and the Judiciary Subcommittee struck it from the bill.

"Mr. FRICK. I agree more with what Mr. Rickey said about the unrestricted draft than I do with Senator JOHNSON on the player limitation. The player limitation, I think, is harmful. But I go back again that I want to emphasize and reemphasize that the worst part of that bill is not that. It is 204" (p. 126, hearings, May 19–20, 1960).

The Judiciary Subcommittee thereupon very wisely struck both the player limitation and section 204 from the bill as urged by Mr. Frick.

"Mr. FRICK. I have never fought the unrestricted draft on my record before this Congress. I have recommended it. I am not fighting that. I didn't say we had it now. I said I would favor an unrestricted draft. That is not the part of the bill I am objecting to" (p. 125, hearings, May 19–20, 1960).

"Mr. DIXON. Would you be content with this bill if the limitation were limited solely to 40 ballplayers and an unrestricted draft of all other ballplayers every year?"

"Mr. FRICK. Yes" (p. 126, hearings, May 19–20, 1960).

"Mr. DIXON. "Wouldn't this be beneficial to a team like Washington if we had something like you suggested, and I assume that is the reason you have recommended it, that there be an absolute unrestricted draft every year?"

"Mr. FRICK. Yes, I think it would help a lot of clubs. I think it would help all clubs.

"Mr. DIXON. I can readily see why it would make the game more competitive" (p. 130, hearings, May 19–20, 1960).

The Judiciary Subcommittee accepted Mr. Frick's views and inserted in the bill the unrestricted draft of all players controlled directly or indirectly by the major leagues except the 40 players on the roster of each major league club.

The presidents of the National and American Leagues and their counsel were in the hearing room and heard the Frick testimony and did not take exception to any of it. This was a complete victory for Mr. Frick and the bill was greatly improved by the suggestions he voiced. Nevertheless, Mr. Frick is still fighting title II of S. 3483.

The bill revised by the Judiciary Subcommittee also includes the Senator Hart amendment reading:

"That the unrestricted draft shall not apply to any player directly or indirectly owned or controlled by any major league baseball club at the time of passage of this Act until such player has completed 4 years in organized professional baseball."

That provision makes it doubly certain that no violence be done to the present major league clubs' property rights in player contracts. The Judiciary Committee has done everything possible to make S. 3483 absolutely fair to the two existing major leagues and the minor leagues.

"Mr. DIXON. I assume you would welcome exemption, as to the reserve clause, which is granted in section 203?

"Mr. FRICK. That is right.

"Mr. DIXON. You think that would be highly desirable?

"Mr. FRICK. That is right" (p. 114, hearings, May 19–20, 1960).

It seems to me that the Frick testimony and the action by the Senate Judiciary Subcommittee in response to it should be specifically called to the attention of every Senator. America wants and should have more major league baseball. If there is more major league baseball, there must be more minor league baseball, as Mr. Frick has stated I am authorized to pledge to you that when the Continental League gets into operation as a major league, it will sponsor one-third of the burden of providing minor league baseball.

Most sincerely,

ED C. JOHNSON.

The Tariff Commission's Cotton Report

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ALEXANDER. Mr. Speaker, the decision of the Tariff Commission this week refusing to invoke the safeguards of section 22 of the Agricultural Adjustment Act is further evidence of the policy of this administration and the Department of State to sacrifice the American textile workers and cotton

farmers to foreign textile mills which continue to flood this country with cheap textiles which are swamping the American markets.

The failure of this administration to properly safeguard the American textile industry is reflected in the fact that in the past 10 years over 700 mills have been liquidated in this country and some 325,000 workers have lost their jobs because of the competition of foreign manufactured products entering the United States.

The imports of cotton goods are so large in volume that in 1959 they were equivalent to some 350,000 bales of raw cotton.

It appears to me, Mr. Speaker, in view of the recent rebuff of our President at the hands of the Japanese, and the failure of the Tariff Commission and the administration to protect American industry, the time is fast approaching when the Congress must take the initiative and enact legislation which will assure protection of our American industry.

When the Congress reconvenes I shall join with other of my colleagues who are interested in this problem in the hope that effective legislation may be enacted which will put a stop-gap to the sacrifice of the textile and other American industries.

THE TARIFF COMMISSION'S COTTON REPORT

The cotton growers of the United States and the American textile industry which serves them were shocked and dismayed by the report of the Tariff Commission released on the afternoon of June 27 with a majority finding—by a vote of 4 to 2—that the rapidly increasing imports of cotton products were having no adverse effect on the cotton export subsidy program. The majority opinion concluded that there was no basis for favorable recommendation of relief under section 22 against these imports.

It seems incredible that there could be any possible theory upon which the record of these accelerating and damaging imports could be reviewed without arriving at an immediate conviction that the Department of Agriculture programs for the protection of cotton and cotton growers were being completely frustrated and destroyed.

However, the most shocking and dismaying feature of the report is the disclosure by the majority opinion that such majority considered the Commission was prevented, by Presidential directive, from considering the whole cotton program. The majority concluded that they were limited to a consideration of the cotton export subsidy program and could not even treat it as a part of the total program to which it is so intimately and closely related.

This limitation was the basis for the conclusion that imports of cotton articles could adversely affect the cotton export program only if such imports reduced the exports of American raw cotton. Examining that question, in the light of the limitation, the Commission concluded that the more foreign made cotton goods imported into the United States, the greater would be the consumption of cotton in the foreign mills, and the greater the potential market for American cotton exported to those foreign mills. In other words the Commission in effect said that if all cotton goods consumed in the United States were to be imported and the domestic cotton textile industry would close all its mills and dismantle all its machinery, the cotton export subsidy program would be helped and not rendered ineffective or interfered with.

Clearly this conclusion is in utter disregard of the effect of imports upon the cotton program as a whole or upon the cotton export program as an integral part of the whole.

The Commission said:

> We are limited by Presidential directive (p. 10 of the report).

This limitation by Presidential directive is something new in section 22 proceedings. It is one more step in administrative circumvention of the intent of Congress as expressed in the law of the land.

In 1939 when section 22 was first invoked for the protection of the cotton programs against increasing imports of both cotton and cotton products, the then President found no necessity for limiting the scope of the investigation or attempting to predetermine the maximum remedy that might be recommended.

In 1939 an almost identical situation was presented. There was a cotton export subsidy program in effect then, as now. Its purpose then, as now, was to reduce the accumulated surpluses of cotton in the hands of the Government. Imports of cotton, as well as cotton products, were showing substantial increases, although less then than now. Two investigations were instituted by the Commission pursuant to the Presidential directives of 1939. Investigation No. 1 related to cotton; investigation No. 2 related to cotton products. Priority was given to the first investigation. The President's letter went to the Commission on July 26, 1939. The investigation was instituted by the Tariff Commission, a hearing was held and a proclamation establishing import quotas on raw cotton was issued effective September 20, a total elapsed time of less than 2 months.

The corresponding investigation on cotton products was instituted simultaneously. However, by the time the first investigation had been completed, World War I had begun and the need for limitation of imports disappeared. Had it not been for the intervention of the war, quotas on imports of cotton products would have been established at that time for the protection of the cotton program just as quotas on flour were later established for the protection of the wheat programs.

Never before in any of the 21 investigations previously instituted under section 22 has there ever been any such studied and deliberate attempt on the part of the President to limit the scope of the investigation. The limitation in the present proceeding, as construed by the majority of the Commission, is such that it is now clear that there was no opportunity whatever, from the beginning of the investigation, no matter what the facts might be, to obtain a favorable recommendation for section 22 relief against imports of these products. The intent and objective of Congress with respect to the protection of agricultural programs against imports have been frustrated. The section 22 procedure set up by Congress has been rendered impotent.

The majority opinion concludes with the recommendation to cotton products manufacturers that they should seek relief through section 7, the escape clause procedure. That road has already been traveled to its dead end. Several such investigations instituted in 1956 ended without one iota of relief against imports. The section 22 proceeding was instituted on recommendation of the Department of Agriculture and the industry held high hopes that it would at least be the beginning of effective action to stem the rising tide of imports. Now the cycle of the familiar runaround has been completed.

And all this has happened against the background of continually increasing and rapidly accelerating imports.

Public Housing, a Great City Resource

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. DOUGLAS. Mr. President, what public housing, with wise and far-seeing management, can contribute to its resident families and to the whole community was ably set forth last week at the forum luncheon of the City Club of Chicago by Mr. Alvin E. Rose, executive director of the Chicago Housing Authority.

For the information of Members of Congress and others who still have some doubts about the great value of these public housing projects in our crowded cities, and as a helpful guide to those seeking to improve the operation of such housing developments, I ask unanimous consent to have printed in the Appendix of the RECORD the report of Mr. Rose's speech which appeared in the City Club Bulletin for June 20, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEES PUBLIC HOUSING AS GREAT CITY RESOURCE

It was an eye-opening and heart-warming story that Alvin E. Rose, executive director of the Chicago Housing Authority, told at the club's forum luncheon last Monday, when he discussed "A New Concept in Public Housing for Chicago."

Whatever the beginnings of public housing in this country, he said the tragedy of their original concept is still being compounded today "by many so-called business-

men who apparently can't see any farther than the distance to their own hip pockets and their personal prejudices—who can't realize that good public housing is good business, for everybody."

By good public housing, he said he meant "not just bricks and mortar but a new, meaningful, purposeful program of working with 20,000 low-income families and helping 50,000 kids to become good citizens." Because it is something no private landlord can afford to do or is interested in doing, Chicago has the unique opportunity to convert its public housing into a powerful tool for building a better community, he said.

Today less than 3 percent of Chicago's population occupies public housing. In New York a week earlier, Mr. Rose said he had closed a deal for the sale of $29 million worth of 40-year housing bonds, to cover 10,000 new units. This means that the CHA has now paid off all its borrowings of the past 20 years.

Those loans, he made it clear, were not from the Federal Government, as many mistakenly suppose, but from private Chicago and New York bankers. He said that few seem to understand, or want to understand, that the Federal Government is involved only to the extent that it guarantees the repayment of the bonds. Because it insists that CHA charge rents 20 percent below the going rate, the Federal Government advances annually up to 4½ percent of the bonds. This is not a gift, but is repaid, as are the bonds, out of CHA income from rentals.

According to the newspapers, said Mr. Rose, the Federal Government had predicted that the CHA would wind up a million dollars in the red last June. The record shows that after paying a million dollars to the county in lieu of taxes, the CHA came out over a million dollars in the black. For many years the county has realized from 2½ to 3 times as much from the CHA as from the slum properties it bought and reclaimed.

PRIVATE BUILDERS CANNOT MEET NEED

It is true, he said, that had private real estate operators cleared and rebuilt the areas, resulting tax revenues would have been much greater, but no private builder has been able to supply decent housing desperately needed for low-income families. It is a stark fact, he said, that there will always be thousands of low-income families in our city, and unless they have decent shelter they can well become a bigger problem to the whole city.

"What hundreds of families who desperately need public housing today really need most," he said, "is for the people who don't need it to understand what it's all about." To those who need to be convinced of what public housing in Chicago is like today and what the tenants are like, Mr. Rose extended an invitation to visit the projects. He said also, "Take a look at our books. They are wide open to any member of the City Club."

He stated that the 4 percent of tenants whose standards and behavior were so low as to discredit public housing generally, have been evicted and the CHA is now being "quite selective" in the admission of new eligible tenants.

He described the transformation that occurred when the CHA decided to reach beyond its legal responsibility for providing shelter for low-income families and instituted what is called its "good neighbor program."

"We enlarged our community and tenant relations staff," he said. "We began working with these families. We appealed to one of the most basic desires of man, to be considered worthy by one's peers."

A number of techniques were evolved. First, a prize of a year's free rent was awarded to the family chosen as the Good Neighbor of the Year, based on such factors as good housekeeping, parental responsibility, and contributions to improved living conditions. This award, as well as others involving financial outlays, was not approved or paid for by the Federal Government since it was beyond its concept of the function of public housing. The free rent was paid for by Bishop Bernard Sheil through the Sheil Foundation.

YOUTH RESPONDS

Next, CHA sponsored a competition among its teenagers to select the Top Teen in public housing each year, again based on accomplishments and qualities of character. Prizes for this competition were made available by Mayor Daley's Youth Foundation.

Then CHA encouraged each of its 34 projects to compete for a pennant presented every 60 days to the project judged best in "all-around appearance," inside and out.

"Frankly we were amazed at the response, at the results achieved, at the change," said Mr. Rose.

Just recently over 300 boys under 12 were organized as lawn patrols to help keep project grounds tidy and clear of litter. They were rewarded with T-shirts with a CHA insignia. Funds for these, and for such incentives as cokes and doughnuts, came out of $5,000 contributed by the Chicago Community Trust. This fund pays for floor-by-floor good neighbor activities in each building.

This year $300 in cash prizes, contributed by the Janitors Union, has been offered to the janitorial staff for the best kept grounds and floral displays in the 34 projects.

The results of the good neighbor program have been so obvious, Mr. Rose said, that a week ago the CHA board allocated up to $20,000 annually to promote and expand the program. This money is part of the interest accruing on corporate funds invested by CHA over which the Federal Government has no control.

"So long as public housing is considered only in terms of the cost of bricks and mortar, it can never reach its full potential as a citywide asset," said Mr. Rose. "People need more than clean, cold bricks and mortar. They need an opportunity to grow. We cannot do for people. We cannot impose a way of life on them. We must work toward community and city improvement through them."

One of many questions put to Mr. Rose at the end of his talk was, "How can the CHA good neighbor program be expanded to take in other neighborhoods in the city where it is needed?"

Such an undertaking is, of course, outside the CHA's province, but the question itself was eloquent.

Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein copy of letter addressed to the assistant executive editor of the Reader's Digest by Kenneth O. Gilmore, who wrote the article, "The Scandal of Unemployment Insurance," together with copy of communication sent to the Assistant Secretary of Labor by the executive director of the Reader's Digest:

THE READER'S DIGEST,
Pleasantville, N.Y., June 27, 1960.

Mr. NEWELL BROWN,
Assistant Secretary of Labor,
U.S. Department of Labor,
Washington, D.C.

DEAR MR. BROWN: I am forwarding herewith a letter we have received from Kenneth O. Gilmore, replying to your charges that his article, "The Scandal of Unemployment Insurance," in the April 1960 Reader's Digest, presented a "wholly inaccurate picture of the program."

Over the years that he has been associated with the Reader's Digest, Mr. Gilmore has proved himself to be an outstandingly reliable and conscientious reporter. His defense of his statements in connection with the unemployment insurance program indicates to us that his allegations have ample support in fact and that his investigation of the situation has indeed been in the public interest.

Far from being "baseless attack," his article and his vigorous, factual defense of it seem to us to contribute the very sort of "just criticism" which you assert is always welcome, and without which any needed improvements in the program are most unlikely to be effected.

Sincerely,

KENNETH W. PAYNE.

THE READER'S DIGEST,
Pleasantville, N.Y., June 17, 1960.

Mr. HARRY H. HARPER, Jr.,
Assistant Executive Editor, The Reader's Digest, Pleasantville, N.Y.

DEAR MR. HARPER: I have before me a copy of a communication from the Labor Department over the signature of Assistant Secretary Newell Brown to Mr. DeWitt Wallace, editor of the Reader's Digest. The letter characterizes the magazine's April story about "The Scandal of Unemployment Compensation" and the role of the U.S. Bureau of Employment Security as a "wholly inaccurate picture of the program."

As author of the article it is of the utmost concern to me that you be appraised of the facts surrounding the Department's allegations. For this communication was not just a private reply to Mr. Wallace. It is a rebuttal from the Labor Department mainly in defense of one of its subdivisions, the BES. And the BES has in turn sent this 16-page document to all the State agencies. It has also been furnished to members of Congress and on April 28 was put into the CONGRESSIONAL RECORD by Representative CLEMENT J. ZABLOCKI, of Wisconsin.[1]

The article and its veracity will undoubtedly be discussed in a number of State legislatures meeting next year to consider changes in their unemployment compensation laws. It is therefore significant that the Labor Department and the BES have gone to such great effort to produce and distribute this elaborate reply. It is also ironic that this detailed response came forth with such speed. For it is a matter of record

[1] The BES will not tell us how many copies of the rebuttal it has distributed nor will it identify those Congressmen who were sent the document. In refusing to disclose this information, the BES informs me that we must officially write in our request to the Department's Solicitor in order for him to make a ruling.

that as far back as December 1958, while researching the subject, I wrote a letter to the Secretary of Labor requesting that the BES release information about the program—a letter that has never been answered except for a routine acknowledgment despite continual promises to the contrary.

Seeking to undermine the article's documented evidence of laxity in the giving out of unemployment benefits to retired pensioners, the Labor Department communication supplies assurances (pages 1 and 8) that pensioned retirees collecting unemployment compensation are carefully investigated. Yet the General Accounting Office has been conducting an extensive investigation that has uncovered indisputable evidence right in the Labor Department's own backyard of jobless aid giveaways to pensioned retirees. This congressional watchdog agency disclosed in a recent report [2] that voluntarily retired Federal workers have been handed out unemployment compensation while they also draw generous Federal civil service retirement annuities. According to the GAO, this has notably taken place in the District of Columbia whose U.S. Employment Service significantly is directly operated by the Labor Department. In one case cited by the GAO a 56-year-old woman quit her Government job to retire on a $283 a month annuity or 72 percent of her former salary. Yet for 54 weeks she was given unemployment benefits totaling $1,629 although the GAO could find nothing to show that Federal officials had referred her to any employer.

And in summary Comptroller General Joseph Campbell stated: "The report expresses our opinion that unemployment compensation payments to voluntarily retired Federal employees are not in accordance with the basic objective of the program, which is to provide partial compensation for wage loss during periods of involuntary unemployment due to lack of work." You'll note these words not only closely parallel the theme of the Digest story but indicate that the attention given in the article to the payment of jobless aid to retirees was highly deserved.

One underlying theme in the Digest story was its documented evidence that unemployment compensation has long been dominated by Federal officials who attempt to cut down the authority of the States. The Labor Department declares this is false while totally ignoring undenied evidence right in the story of Federal interference, such as BES criticism of Ohio's disqualification provisions. Worse yet, the Department's naive denial of BES domination (pt. 8, p. 7) was received the very day that the BES launched a sledgehammer attack against the State of Indiana. On the exact date that the Department's communication arrived at the Reader's Digest editorial headquarters in Pleasantville, N.Y., the BES sent a letter to Indiana threatening to cut off the State's administrative funds and compel employers to pay additional taxes as penalty unless Indiana took steps to have a review board decision reconsidered. The case involved a claimant whose administrative appeal for benefits had been denied but who did not make a further appeal to the Indiana courts. The situation parallels action taken by the Labor Department in 1949 when it threatened California with loss of funds and tax credits due to an administrative benefit decision that the BES did not like. This Federal interference was judged so flagrant by Congress that it immediately enacted a law (the Knowland amendment) forbidding the Department to intervene in the handling of a benefit claim until the claimant had exhausted all the appeals procedures provided in the law. Yet now in complete disregard of that congressional provision to protect State authority, the BES is intervening in Indiana. And it is holding over Indiana's head the extreme penalty of withholding administrative funds and collecting an extra $80 million from employers.

The Department's apologia goes to astounding lengths to create an impression of Digest falsehood. It continually resorts to the old routine of setting up a straw man—something the Digest never actually said—and then knocking it down. For example, the Department's letter in one instance (point 15, p. 11) claims a Digest statement was "false." Yet it is able to level this charge only by badly misquoting the article. The Department claims that the Digest said: "For 6 months (in Pennsylvania) every person who had run through all his compensation hauled in an additional 15 weeks." It then replied that there were those who found work and dropped out before the 15-week period ended. However, the original article explicitly said "* * * every person on the rolls who had run through his compensation hauled in an additional 15 weeks of benefits." As the Bureau's defender, the Labor Department curiously omits the underlined words which make it clear that those who were still unemployed—"on the rolls"—collected for 15 more weeks.

Another instance of the straw man trick: Trying to destroy the story's documented evidence that the pressures of our welfare bureaucracy cause money to be wasted on loafers, the Department says: "Loafers, etc. have never been legally entitled to benefits" (point 2, p. 2). The article never said that the law intended that loafers should collect benefits. Mr. Brown completely misses the basic point of the story: that these abuses beat the system and thus go on within the law. In fact, on page 42, column 2, of the article this point was specifically underlined in regard to the question of fraud. The story stated: "While all the rackets mentioned thus far have beaten the system within the law, unemployment assistance is also plagued by illegal abuses."

A further method which the Department's defense has used to foster an impression of inaccuracy is the recitation of deserts of detail under the label of "The Facts." This was done in an effort to undermine the specific cases in the article, but not once do these details alter the validity of RD's summarizations. They only emphasize the senseless rationale that the Bureau relies upon to justify benefit payments. For example, a reading of the Hollywood case (point 6, p. 5) is just proof that our welfare apparatus has reached the point where authoritics can seriously talk themselves into letting a 12-year-old boy collect unemployment compensation rather than earn up to $28 a day.

The Labor Department's letter defends the BES refusal to release results of the 30,000 claimant investigations it financed with the explanation that these studies were not aimed at measuring the extent of fraud, and therefore the BES promised the States it would not give out the data. (Point 21, p. 16). This is an astonishing statement when, for example, during Congressional appropriations hearings for fiscal 1957 Mr. Robert Goodwin, BES Director, cited general figures from these same investigations in order to indicate the amount of fraud in the system.[3] Because Mr. Goodwin himself chose to use this material publicly as a yardstick for fraud, I contended that the Digest was entitled to an open State-by-State breakdown of the studies—the only way to check their validity and significance. Not only was this point made clear to Mr. Goodwin when I was assembling material for the article, but I personally went to Under Secretary of Labor James T. O'Connell and explained the reasons for wanting the full facts. He assured me that the request would be given consideration. Despite this and further promises last summer that a definite decision would be reached, the Department never gave us an official answer and by such stalling prevented us from obtaining the information.

The Department gives as a further reason for keeping the material secret the fact that the BES wanted "to avoid misuse of the data." The presumption that the fraud studies would be misused is not a valid reason for keeping them under cover. Rather it is an admission that the BES simply invested itself with the authority to prejudge how the information would be handled by the press and then for that reason suppressed the data. This is a dangerous form of government censorship.

One final point in this regard. The BES has consistently blocked my efforts to get hard facts about fraud. Last year it refused to let me look at any answers to a questionnaire on fraud sent in to the BES by the States. When an interview with Walter T. Niziol, BES "consultant" on the project, was sought, barriers were flung up. "All his answers will have to be in writing and approved by me and perhaps others above me," declared BES Assistant Director R. G. Wagenet. He added: "You've been busying yourself around here for months; you ought to know what the routine is by now."

But I am not the only one who has encountered difficulties in connection with fraud. Mr. Newell Brown, who signed the Department's communication protesting our article, also has had problems with the BES. Not too long ago when he was Director of New Hampshire's Division of Employment Security, he came to Washington and told a Senate Committee that "over the years" the BES had given him funds "for less than two people on fraud detection." He added: "I think I need more people for fraud. I have been unable to get the money." [4]

While I would be more than glad to provide a full rundown of every point raised by the Department, suffice it to say here that, as in the above instances, not one of them holds water when compared to the facts and the original story in its full context. Rather than being a solid finding of inaccuracy, the Labor Department's defense consists of mere countercharges, opinions and interpretations.

The article charged and proved that unemployment "compensation" was going extravagantly to freeloaders, with official sanction. And this charge still stands.

Sincerely,

KENNETH O. GILMORE.

A Tribute to Mr. Mitchell

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. CASE of New Jersey. Mr. President, yesterday there appeared in the

New York Times an excellent tribute to Secretary of Labor James P. Mitchell.

I, too, was pleased to join with 28 top leaders of the American labor movement in paying tribute to a man whose forward-looking programs have always kept at heart the best interests of the working men and women of the country. As a fellow New Jerseyite, I am happy to see such ability, such dedication receive recognition.

I ask unanimous consent to have this editorial from the Times printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 1, 1960]

A TRIBUTE TO MR. MITCHELL

The testimonial dinner given to Secretary of Labor James P. Mitchell, sponsored by 28 top leaders of the American labor movement, was a tribute to a man who has amply deserved it. The occasion was unique both because of the kind of people responsible for it, and the character of the recipient himself. It would be almost unbelievable, if it hadn't happened, that so large and influential a group of unionists, whose politics are traditionally Democratic, should honor a Cabinet member in an administration whose policies labor has so bitterly attacked.

Remarkable, too, is the man who for almost 7 years has kept the confidence and respect of a Republican President and members of his Cabinet and of leaders of organized labor—with all of whom he often differed widely. This could only have been done by an unassuming person of stubborn integrity, dedicated to the welfare of the Nation's workers, intimately familiar with the conditions of their life and well aware both of the possibilities, and the limitations, of methods to improve their lot.

Mr. Mitchell, in short, is an idealist of rare sophistication. We, too, applaud his achievement.

Thirteenth Anniversary of the U.S. National Student Association

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. CLARK. Mr. President, the U.S. National Student Association, an organization with headquarters in Philadelphia, will hold its 13th anniversary meeting from August 21 to September 1 at the University of Minnesota in Minneapolis. I know that many of my colleagues in Congress will want to join me in sending anniversary greetings to the association.

USNSA is a confederation of the student governments in nearly 400 colleges throughout the Nation, dedicated to increasing students' recognition of their responsibilities in regard to local, national and international affairs. It has succeeded in increasing student awareness of current issues to a remarkable degree.

Successful student exchange programs with Latin American nations have been forged by the National Student Association at times when diplomats from those countries and ours have found it difficult to sit down at the same table. The association has sponsored valuable study projects in fields of human relations and educational resources. Letters from association members in favor of the repeal of the National Defense Education Act disclaimer affidavit provided valuable expressions of student opinion.

I ask unanimous consent that a statement of the aims, achievements and makeup of the U.S. National Student Association be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THIRTEENTH ANNIVERSARY OF THE U.S. NATIONAL STUDENT ASSOCIATION

The U.S. National Student Association (USNSA) is a confederation of student governments in colleges and universities throughout the Nation. Its national leadership—this year as in previous years—has been elected by the National Student Congress, the largest single meeting of college students in the Nation, comprised of delegates elected by the member schools of the USNSA. This year the National Student Congress will be held August 21 through September 1 at the University of Minnesota in Minneapolis, making the 13th anniversary of this nationwide organization of American students.

USNSA's National Student Congress is a legislature for the expression of student opinion while at the same time affording students an opportunity to experience democracy and develop leadership skills. USNSA's work is both domestic and international jn scope.

The work of the USNSA in the international student community was recognized in a statement of evaluation adopted by the three major deans' organizations in the United States—the National Association of Women's Deans and Counselors, the American College Personnel Association, and the National Association of Student Personnel Administrators—declaring that the USNSA has "spearheaded and led the mobilization of the unions of students of the free world in combating the partisan propaganda and distortion of truth fostered by the Communist-led International Union of Students."

USNSA's 1959–60 program in the international student community included:

USNSA's foreign student leadership project entered its fifth year of operation, with special scholarship provided for 14 foreign students from underdeveloped areas. The student leaders spent a full academic year on selected American campuses with reduced study loads, in order to study the structures and operation of American campus organizations. Seventeen students arriving in this country next month will bring the total number of foreign student leaders participating in this project to 75.

The Eighth International Student Relations Seminar now in progress at USNSA's office in Philadelphia, Pa. Fifteen outstanding student leaders have been awarded full scholarships for an intensive 9-week seminar in international relations and the international student community.

Continuation of a program in which regional international student relations seminars are conducted throughout the Nation during the acedamic year.

Twenty-one academic scholarships have been made available for Algerian refugee student leaders. The program is now in operation with 16 Algerian refugees studying in American colleges and universities.

USNSA will send five representatives to the International Student Conference in Geneva, Switzerland, this August. As a member of tthe International Student Conference, USNSA will be one of 66 national unions of students represented.

An emergency appeal for funds to aid students in Chile following the devastating earthquakes and tidal waves.

Establishment of a program of special technical assistance to all national unions of students which is being administered by the coordinating secretariat of the International Student Conference.

A program of travel in Latin America to ascertain the needs of student communities there so as to develop programs through which some of these needs may be alleviated.

Representation at the Latin American Student Conference in Caracas, Venezuela, in September 1959 and at the European Student Welfare Conference and the International Student Travel Conference in the Benelux countries in October 1959.

Completion of a long-term academic exchange agreement negotiated by representatives of USNSA and the Polish National Union of Students, under which two American students studied in Polish universities and two Polish students spent an academic year in the United States. The program will be continued next year and both national unions of students are in the process of selecting qualified participants.

USNSA representatives are now negotiating with representatives of the Soviet Union for a long- and short-term academic exchange. Under the terms of the agreement, two American students will study for one full academic year in the Soviet Union and two Russian students will come to the United States. A special section of the agreement guarantees to participants of the exchange complete access to all necessary records in both countries. The terms of the short-term exchange are not yet complete. The program is expected to begin in September of 1960.

USNSA raised funds for the development of a work camp project in Sakiet-Sidi-Yousef to rebuild an educational institution destroyed during a bombing of that city.

In the 12 months since the last National Student Congress, the USNSA has completed an impressive series of successful programs domestically, including:

Campus consultations: USNSA staff members have traveled to over 150 member and nonmember campuses, providing local student leaders with help in evaluating their own performances and in improving their liaison with their counterparts in other areas of the country.

Publication of a series of four books upon completion of the student responsibility project, a major innovation in educational programing financed by a $25,000 grant from the Ford Foundation, and involving experimental programs on 15 pilot campuses and in 2 pilot regions. The student responsibility project stressed three areas: Student reponsibility in college teacher recruitment, student responsibility in counseling and tutoring, and better utilization of existing educational resources.

Completion of the first year of the southern student project, a program involving work with southern student leaders toward increasing understanding in human relations, financed by a $60,000 Field Foundation grant. This program includes a southwide student seminar on human relations to be held this August at the University of Minnesota, bringing together 15 student leaders, 5 each from all white, integrated, and all Negro colleges, for a 5-week period.

The Second Annual Student Editors' Conference on International News Coverage, cosponsored with the Overseas Press Club of America and financed by Time magazine, Seventeen magazine and the Foundation for Youth and Student Affairs. Approximately 125 student editors and 60 club members spent 4 days in February in the club headquarters in New York City.

Completion of the first year of operation of the University Press Service, a simulated wire serivce for college newspapers resulting from the desire of student editors to receive news from other campuses in order to strengthen the ties of the student community.

The National Student Conference on the sit-in movement, held April 22 and 23 in Washington, D.C., brought together student body presidents from colleges and universities throughout the Nation to learn about and discuss the southern student protest movement.

Supplying information to students at member campuses on the status of legislation pertaining to students and education in the U.S. Congress, so that students may take informed and responsible action on issues affecting them.

The USNSA also provides low-cost student tours of Europe through its travel subsidiary, Education Travel, Inc., located in New York City. This year also marked the opening of a west coast office in Berkeley, Calif.

Recognition of the work of the USNSA was expressed in messages of encouragement to the participants of the 12th National Student Congress held in August 1959, at the University of Illinois.

* * * * *

The programs and policies of the USNSA have been carried out this year by young leaders elected at the 12th National Student Congress.

Donald A. Hoffman, 24, president. A second-year law student on leave from the University of Wisconsin where he served as student body president in 1957–58. He was selected as 1 of 15 student leaders to participate in the Seventh International Student Relations Seminar in 1958.

Curtis B. Gans, 23, national affairs vice president. A graduate of the University of North Carolina where he served as editor of the Daily Tar Heel in 1958–59. He was a participant in the 1958 International Student Relations Seminar.

Isabel S. Marcus, 22, international affairs vice president. A senior on leave from Barnard College where she was elected student body president in the spring of 1959. She was selected for the 1958 International Student Relations Seminar.

B. James Kweder, 22, program vice president, is a graduate of Allegheny College when he was a student body president in 1958–59. He also participated in the 1958 International Student Relations Seminar.

Richard Rettig, 24, program vice president. A graduate of the University of Washington and former chairman of the great northwest region of USNSA.

The 382 colleges and universities, with a total enrollment exceeding 1,200,000 students, constitute the U.S. National Student Association.

Review of a Congressional Internship Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. WILEY. Mr. President, our Nation—if it is to meet the great challenges of our times—requires a citizenry closely attuned to, understanding of, and cooperating with the Government of the Nation.

Despite the constructive efforts of our school system to implant such knowledge, however, I find evidence, time after time, that folks—well-meaning, honest, civic-minded Americans—have not, in many cases—had a real opportunity to see, observe, and understand the practical workings of government.

In recent years, the Wisconsin Citizenship Clearing House, headquartered on the campus of the University of Wisconsin, has been participating in a congressional internship program. The purpose has been to enable outstanding students to come to Washington, for a week or a month, to acquire a better knowledge of the practical workings of the Federal Government, of political life itself and of the broad scope of duties and responsibilities of Members of Congress.

From experience, I believe the program is a highly useful, enlightening and educational effort to provide more of our outstanding young people with a real knowledge of operations of the Federal Government and the work of public servants, like ourselves.

This year, I was privileged to have a fine outstanding student, Miss Barbara Chryst, of Madison, Wis., as an interne in my office. Miss Chryst, selected by the Wisconsin Citizenship Clearing House, attends Edgewood College of the Sacred Heart of Madison.

Prior to the completion of her internship—which terminated yesterday—Barbara reviewed briefly the significance of her participation in this fine program. Reflecting the deep impressions of her experience—in a keen, sensitive, understanding way—I ask unanimous consent to have the brief review printed in the Appendix of the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

STATEMENT BY BARBARA CHRYST, CONGRESSIONAL INTERNE

When I first heard of this opportunity to spend a month in the office of a Senator, I must admit it sounded appealing but very remote with regard to myself. When I found out I was to spend a month with Senator WILEY, I could not imagine what I would do in this capacity.

Now that the month is over I can say that it has proven to be one of the most thrilling experiences of my life. It has been an education and a vacation at the same time. My only hope is that I have made the most of this tremendous opportunity.

I have come to realize that the life of a Senator is one that consists of a good deal more time and effort than most of us are willing to spend with probably less compensation in the long run than most of us would be satisfied with. In the case of Senator WILEY, I was particularly impressed with his conscientious interest in everyone who stopped in to see him or who wrote to him. This interest was manifest also in his staff who saw that everything possible was done to satisfy the Senator's constituents.

In my case in particular, the staff took time to explain to me their individual function in the procedures of the office and to answer any questions I might have. They saw to it that I became familiar with the kinds of work that are handled in the office of a Senator. In addition, they provided me with opportunities to see the various phases of the Government process, such as observing sessions of the Senate, the House of Representatives, the Supreme Court and attending committee hearings. They also made arrangements for tours for me of various points of interest including the Children's Bureau of the Department of Health, Education, and Welfare, the White House, the Federal Bureau of Investigation, and the Bureau of Printing and Engraving.

Probably the greatest impression I will take from this month's internship is the conviction that our Government is not the nebulous institution that is portrayed in textbooks. Congressmen are real individuals and our Government is really "of the people, by the people, and for the people."

I am certain my life has been enriched by this experience and that I will be a better citizen because of it and only wish that I could adequately express my appreciation for it.

Prejudice in Industry

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Honorable Boyd Leedom, Chairman of the National Labor Relations Board, before the National Paperboard Association at White Sulphur Springs, W. Va., on May 24, 1960.

Entitled, "Haunting Problems in Labor Relations," it contains much sound thinking on the problems of prejudice and discrimination.

There being no objection, the address was ordered to be printed in the Appendix of the RECORD.

HAUNTING PROBLEMS IN LABOR RELATIONS

I have been under a compulsion to make a speech entitled "The Anatomy of Prejudice." I presume this is because prejudice relating to politics and racial disturbances has been so much in the news. Doubtless, the word anatomy has been greatly overworked in titles lately, and some of you may well wonder whether such a subject falls within the area of expertise of the Chairman of the National Labor Relations Board.

Instead, I have chosen as my title for today's talk, "Haunting Problems in Labor Relations." Before discussing these haunting problems, which involve prejudice in the field of industrial relations, I must allude to prejudice in other aspects of our lives, for the purpose of revealing the character of bias.

A definition of prejudice is: preconceived judgment or opinion; unreasonable predilection or objection; especially an opinion or leaning adverse to anything without just grounds, or before sufficient knowledge.

This definition is relevant to my subject because certain problems in labor relations, some that legislation cannot cure, relate to attitudes having no justifiable basis. A couple are basic—one, a prejudice that many people have against labor unions just because a union is a union; and two, the assumption by some labor leaders that management is blind to the viewpoint of its employees and always seeks to serve itself and to exploit them.

This is not to say that problems growing out of prejudice are the most distressing at the Board, or that there is not at times good reason and some grounds for distrust and opposition between management and unions. But, such grounds would not relate to the

union or to management, as such, but rather to corrupt or selfish leadership, or unreasonable or arrogant or undemocratic or backward officers, within these institutions.

BASED ON EMOTION

Since prejudice is unjustified opposition based on emotion, it goes far beyond, in fact often engulfs and obliterates, a reasonable opposition. For emotional conduct is stronger and more persistent than reasonable conduct, and this is especially so when it is improperly motivated or sparked by prejudice.

A colleague and I attended the opening day of baseball this season. Some of the Washington Senators, both varieties, have not been doing too well these days, as you know. There was a big crowd, people were milling around on their way into the stands, and the police officers were having a hard time in keeping them separated from the automobiles and in controlling traffic.

One eager motorist sought to sneak over a cross walk ahead of an oncoming horde of pedestrians, contrary to a colored traffic officer's direction. The officer yelled at him loudly—gave him a typical "cop's" bawling out, but good.

At that moment, an immature, insecure foot soldier hurried by us and bravely said to his companion, "If that black s.o.b. yelled at me that way, I'd run over him."

Washington, as you may know, is now pretty well integrated. My colleague commented wryly and very realistically, "He had better not run over that cop in this crowd. He'd be lynched."

Pure prejudice prompted the pedestrian's appraisal of the conduct of the officer. Assuming that there was reason to complain, the reason clearly had nothing to do with the dark skin of the policeman. The officer had had his training at the hands of light-skinned officers and had observed their performances. He was like them. And he may have added to his performance on this particular day a little of his own perverse nature, which, in turn, had little or nothing to do with his complexion.

My colleague's statement about the lynching indicates the dangers that lie in prejudice, for, given somewhat more aggravated circumstances, real trouble approaching a riot, wholly unwarranted of course, could have followed.

MAKINGS OF PREJUDICE

Modern American prejudice is acutely sensitive to color. But the color factor must be only a symptom and not really a cause of this dangerous infection of our society. Prejudice seems to be the weapon of majorities their conflicts with minorities. Unfortunately, it is quite certain that those who now suffer from prejudice will utilize it whenever the tables are turned.

Just why prejudice develops in some conflicting situations and not in others is hard to understand. Prejudice is very devious. It seems that in certain situations it grows out of reasoned opposition. Thus, for example, an ever so intelligent expounder of the protestant viewpoint, expressing reasonable concern over such a problem as the American political principle of separation of church and State, is very apt to depart from reason and reveal real prejudice through a display of obvious rancor. Where hateful expression occurs, there prejudice is most likely lurking.

The factor that imparts prejudice to a conflict is elusive, as I have indicated. Often however, when reason clearly fails, expediency opens the door, and prejudice comes in.

Thus it is, I am quite sure, with many businessmen and union leaders in their attitudes toward each other. Because people love their own prejudices, it is not unusual to find businessmen who instinctively bristle at a suggestion that their opposition to unions is based on emotion rather than reason, or to find union leaders who bridle when criticized for outrageous attitudes toward business.

UNION-MANAGEMENT PREJUDICE

My purpose here is not to suggest the removal of all opposition between union and management but to urge only the elimination of prejudice as a cause of opposition. A brief look at the historical conflict between labor and management is in order.

The conflict began with man's effort to work out his existence. The acquisition of the essentials of food, clothing, and shelter, puts each man in competition with all other men. This most basic conflict revealed in history assumes larger proportions when man's selfish nature compels him to seek and acquire much more than he could possibly need; and man has done this aggressively and with avarice, even though his effort in some parts of the world still impede his fellowmen in eking out their bare existence.

Out of this struggle have come various forms of domination of one group by another, along with various forms of restraint on the dominating group in an effort to hold the conflict within reasonable bounds. History has witnessed such economic systems as ancient slavery, the feudal system, craftsmen's guilds, modern slavery, trade unionism, American democracy, and the Soviet's scheme of subjugation of man to the state. Judged by all the gross imbalance between those who worked and those who hired or enslaved under all other systems, the present national labor concept of America under the much denounced Taft-Hartley Act and its more recent and equally maligned offspring, the Landrum-Griffin legislation, is nearly perfect. In appraising our present regulation we will do well to keep in mind the experiences of other peoples and other times.

CHANGING CONCEPTS

Scarcely anything is as hard to accept as change. There has been ingrained in the human being for numberless centuries the notion that he who hires should dictate terms. It is, therefore, very difficult for some to accept wholeheartedly the American concept that the worker has the right to join with his fellow workers to bargain concerning his working conditions. It is a tribute to our democracy that, in the main, there is good acceptance of this concept, for American industry does have enlightened management that not only accepts willingly the provisions of the Labor-Management Relations Act but relies heavily on its employees' union representatives and counts them indispensable in our present highly productive industrial system. I have been told by some big business operators that they could not possibly operate successfully if their industrial plants were not organized.

It is, however, also true that this resistance to change still manifests itself among some in their unwillingness to conduct their labor relations within the true spirit of the act. Analysis of such resistance both among unions and management discloses that some of it grows out of prejudice.

In some parts of the country the notion still prevails that one local union cannot represent employees of mixed races. A device that has been worked out to serve this particular prejudice is something like the separate but equal theory applied to schools before the Supreme Court held such theory unconstitutional.

Two locals are formed to represent the same unit of workers, with white employees in one and colored in the other. Whether or not such an arrangement impinges on the National Labor-Management Relations Act has not been directly before the Board in recent years; indeed, not during my time under the Eisenhower-Nixon administration. But when it was last before the Board, the system of two locals—with separate but equal representation being given the workers—was approved because it did not raise a question of racial discrimination in contravention of the act.[1]

RELATED QUESTION

About that time, a related question arose as to whether, after a Board certification of a local union for a unit of both colored and white employees, it was proper to establish a separate local for the colored employees, with the certified local (1) remaining, as it had always been, the local for the white employees, (2) executing a contract with the employer, and (3) applying such contract terms as the checkoff and inferentially the maintenance of membership provision to members of the colored local, as well.

Again, the Board said that the establishment of a separate local for the Negro employees did not constitute per se a subversion of its unit finding. The Board, however, felt that the union had abused the standards of conduct required under section 9(a), in that it had used its statutory power as exclusive representative to compel dues payments and continuance of membership with respect to the colored local, an organization which was not the certified union and which, under the certification and the contract, had no legal standing.[2]

Sometimes, unions will refuse membership or apprenticeship to Negroes with the result that where an employer seeks workers from such a union, Negroes are not referred. This problem has been much in the news as the AFL–CIO and the Committee of which Vice President DICK NIXON is Chairman, that is, the President's Committee on Government Contracts, have moved with vigor against this practice.

NIXON'S SUMMARY

Perhaps one of the best summations of the basic problem of inequities among races on the job was given by Vice President NIXON when he made this simple, eloquent statement:

"America cannot afford the moral, economic and the international cost of prejudice and discrimination * * * the American Revolution will not be complete until the ideals of independence, equality, and freedom * * * are a reality not only for Americans but for people throughout the world."

Aside from the fundamental issue of a man's right to his fair place in the labor market, on sheer moral grounds, there is also the matter of the tremendous manpower loss we sustain when we do not make full use of all our people's talents. The Vice President has spoken of this often. He has enthusiastically upheld the President's civil rights proposal of last February and declared, "This problem of racial relations is not just a southern problem; it is a northern problem too * * *." He recognizes it as a global problem as well.

NONDISCRIMINATION CLAUSES

Because Government contracts carry nondiscrimination clauses it can be presumed that the employer involved in such a contract intends to adhere to his contractual obligation. Of course, it would be a violation of Taft-Hartley by both the union and the employer if the union caused the employer, who was subject to the act, to refuse to hire an employee, no matter what his color, for want of union membership.

It also follows that any employer confronted with this situation and recognizing that racial prejudice is the obstacle, could employ Negroes and once hired could retain them, notwithstanding a union security contract, if the Negroes tendered union dues.

---

[1] *Atlanta Oak Flooring*, 62 NLRB 973.

[2] *Larus & Brother Company, Inc.*, 62 NLRB 1074.

The practice of denial of union membership to colored employees cannot be justified on the ground that mixed locals do not function well, when so many unions throughout the land have demonstrated to the contrary. Rather, it seems to stem from one of those attitudes which has no justifiable basis.

ISSUE IN NLRB ELECTIONS

Similar problems have found their way into Board-conducted elections because one of the parties injects the racial issue. In such cases, the union has a policy with respect to race in the allocation of jobs which is at odds with that of the employer, or with that of a competing union. The one injecting the racial issue endeavors by speeches or otherwise to tie in job retention or job loss for one of the races with the outcome of the election.

While some might seek to justify such statements as mere predictions which fall within the free speech provisions of the act because they are neither threats nor promises and only forecast what will happen as a result of union selection or rejection, I do not so view them.

As I said in just such a case,[3] "The consequence of injecting the racial issue where racial prejudices are likely to exist is to pit race against race and thereby distort a clear choice on the issue of unionism. Clearly, to draw the issue along these lines does not effectuate the policies of the act. The implications are far greater, in my opinion, than the reaches of the act, for they bespeak an assault upon the spirit of our Constitution."

THE BIG PREJUDICE

Then, in addition to the foregoing problems growing out of bias of one kind or another, there is the big prejudice to which I have already made reference.

On the one side, we find the emotionally charged determination on the part of some employers that no union, however good for his employees or his business, is going to work its way into his business affairs. On the other side is the fractious type of union leader who spends much of his time in villifying his own organizations' sources of being, that is, the business enterprises which pay wages to his own union's members.

This latter attitude puzzles me greatly, for I can imagine no more useless member of society than a trade union leader whose tactics, if followed to a logical conclusion, could lead only to the extermination of business enterprise and the elimination from the ranks of labor of his own dues-paying union members.

ALTERNATIVE IS PLAIN

The alternative to this is plain. The segment of management about which I am speaking should yield its stubborn antiunion position in favor of our national enlightened concept of labor's right to bargain collectively. It should accept this concept as part of the mores of our American society with a degree of enthusiasm no less at least than that with which it surrenders so much of its profits to the Internal Revenue Department. The higher living standards, increased national prosperity and human happiness which flow from the implementation of this national labor concept are benefits comparable to those which flow directly from government through the income taxes we pay.

As for the type of leadership in unions of which I have spoken, it is plain that their constituents would do well to replace them with men of broader vision and with attitudes more compatible with a well-functioning society. Their shortsightedness, if allowed to continue, is but a guarantee of industrial strife.

How can we assure this much needed harmonious teamwork between American business on one hand and union leadership on the other? Although at times within our grasp, it seems to have eluded us.

I have witnessed during my 5 years as Chairman of the National Labor Relations Board several years of real labor peace and an alltime low in time lost through strikes.

But this was not to last; as recently as 8 months to a year ago the picture again looked dark. There seemed to be a hardening of attitudes, and the huge steel strike was a point of climax. Then, out of the blue, came the settlement of that strike. The industrial picture has brightened ever since.

IMPROVED OUTLOOK

Welcome signs of spring have followed this big freeze in labor-management relations. Old molds of prejudice seem to have been broken.

Labor leaders have been photographed in apparent moods of cooperation with Government leaders of a political party in which labor leaders ordinarily have not sought to wield their influence; Vice President DICK NIXON, sometimes maligned by some labor leaders, garnered an amazing write-in vote for President in a section of Pensylvania where the electorate is made up largely of union members; the first quarter of 1960 showed that the number of work stoppages has been less than in any other similar period since the end of World War II, with the exception of the first 3 months of 1958; and, best of all, among these signs of lessening of prejudices is this: Through the untiring efforts of Mr. George Meany of the AFL–CIO, of distinguished leaders of business, and of Secretary of Labor James P. Mitchell, President Eisenhower managed to arrange a labor-management conference at the summit. While no great and immediate achievement may now be recognized, this first meeting was surely a progressive step.

SAD MOMENT IN HISTORY

Recent international events establish this as a sad moment in history. An honest man, our President, was confronted at a most unfortunate time with an ugly and embarrassing fact made necessary because of the imperfect state of the world society. He acted with great dignity, as an honest man should act, that is with simple candor, and a reasonable effort to amerliorate. It seemed a novel and high point in diplomacy.

Thank God for the bipartisan support he got at home when the powerful forces of evil turned on him with unrelenting ferocity; and for the grand backing that came to him from America's friends in all parts of the world.

Now here at home all of America must eliminate prejudices that divide us and exemplify, in all that we do and say the great principle that sets up apart from our detractors, that is, the brotherhood of man under the fatherhood of God. Now more than ever we must hold fast to charity and justice.

In this critical time, the least that labor and management can do is to stand firmly together, to wipe out all differences not based on reason, and with new determination provide for America, in an hour of great peril, what she and the world need most—a thriving, sound industrial system that will sustain free men everywhere, whatever may befall.

Price of Sugar Versus National Security

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. DENT. Mr. Speaker, although this discussion taking place here today is limited and restricted, there can be no doubt as to its grave importance on the world scene.

Forgetting for the moment the overall picture of sugar quotas, their desirability and even if needs be—their necessity—one cannot help but comment on the impact of our action today upon the world leaders, both pro- and anti-United States.

Insofar as I can ascertain from the report of the committee and from the history of this legislation, there appears to be a fixation in this Nation as to what is required from us as members of the world society to be allowed to stay free and secure in our rights.

It seems that we may have become the world's chief scapegoat under the all-embracing, high-sounding title of "World Savior" aided and abetted by our own national desires for physical security in our homeland.

You wonder what the price of sugar has to do with national security and anyone sometimes wonders the same thing. Nevertheless, it is true that we pay about twice as much for sugar as any other nation on earth. We do so, some say for the simple reason of safeguarding our breadbasket by assuring our people's supplies for domestic consumption from year to year.

This means that we allocate to each sugar producing country a quota of sugar purchases at a price about double the world market price. Of course, this does guarantee us the first claim of the sugar crop and also as our planners have it figured, it buys us friendship and helps our neighbors economically.

All of this may be true, but the time is coming when we must face the realities of life.

Our barrel is finally getting near bottom in both gold and friendship.

Too many of our friends are so used to being paid for being our friends that like some personal friends, they are beginning to take unwarranted privileges with both our national security and our international reputation. This, in turn, causes our true friends to wonder whether it is better to kiss us or to kick us.

This is not the time to discuss the right or the wrong of our policy of world sugar subsidy since the whole question of subsidies is one of our gravest national problems and our economic sickness and will compel us to either change prescriptions or get a new doctor in the foreseeable future.

Until that day comes, it is useless to beat your head against a stonewall of old ideas, old customs, new slogans and half-explained formulas.

Sufficient to say that this Congress will pass the sugar bill, it will play politics with the Cuban issue and in a few days about 90 percent of the American people will be fed a line of logic through the press, radio and television and the Congress will go back to arguing about other things.

In the meantime, the "little King of Cuba, Castro" will make hay in the propaganda market screaming about American imperialism, economic aggression while at the same time confiscating billions of dollars worth of American enterprise which has contributed more

to Cuban economic well-being than any other single factor since its emergence as a nation. Of course, he can do this with impregnability so long as the American taxpayer pays him 6 cents a pound for sugar and buys most of his crop while he demoralizes the world market by selling to all comers at 3 cents a pound.

In plain words, the Congress is giving Castro millions of extra dollars to create in our hemisphere a festering sore that may grow into a Latin bloc of cancer and the victim can well be the very good neighbor—one United States of America.

It would be foolish to try to cut off our sugar quotas without a reasonable adjustment but to say that we can never get away from our policy of dependency upon Cuba's sugar supply is to admit that we are failures.

We have thousands of sugar acres lying idle; we can bring in the world market as much sugar as Cuba supplies us with from friendly Latin American countries who have surplus and need our business and appreciate our friendship.

Our aim is not to strangle Cuba's economy—it is to make it healthy again by cutting out the venomous poison that is being fed into its bloodstream by a self-centered, misguided leader. I tried to get action on a 3-point program but lacking both seniority and prestige, and the one is dependent entirely upon the other, my suggestions were almost completely ignored.

For the benefit of those who are critical of the Congress of the United States, I at least want to place on the RECORD the suggestions that I believe are reasonable and logical in this crazy, mixed-up sugar festival.

One June 27 I called upon the House of Representatives to give serious consideration to the three-point program in the sugar allotment quota as it affects Castro's Cuba.

I suggested a three-amendment approach:

First, cut out all sugar quota as of the end of this year, or sooner; if the House deems it advisable, give to the President of the United States the right and the power to restore all or part of the quota as he finds it to be in the best interest of the people.

Second, reduce the sugar quota by the amount of sugar sold to Russia or Communist satellites at any price less than the subsidized price paid by the United States on the sugar program.

Third, put the difference between the U.S. price and the world market price into certain escrowed funds to be paid to any American enterprise injured by the Castro policies of expropriation or confiscation. I pointed out that there would not be a deficiency in sugar because every sugar producing area in the world practically has a surplus, notably our friends in Mexico with over a million tons and our friendly Latin American countries and the Philippines.

The Castro Cuban Government recently sold Russia sugar under a 5-year program at a price which is about one-half charged to the United States. This is an outright subsidy to Russia out of the kitchen money of American housewives.

This is a program based upon commonsense and sound logic without any feelings of reprisal or economic straitjacketing, but rather a measure to bring back some similarity of sanity and economic soundness.

I still believe the approach to be one consistent with American needs for both sugar and prestige.

The Cuban Revolution

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cuba and the Revolution of Our Time," written by Theodore Draper and published in the New Leader for July 4, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CUBA AND THE REVOLUTION OF OUR TIME

(By Theodore Draper)

Under the banner of nationalism, Castro's regime is heading for "socialism in one island."

It is a long way from the rioting students of Japan and Turkey to the ruling ex-students of Cuba, but the distance is not so great politically and socially. Both the rioters and the rulers belong to a revolutionary type that is little understood in the United States, where the equivalent in social background is anything but revolutionary. On a recent visit to Cuba, I went to some trouble to find out what the social background of the leaders of the Castro regime was. It was not an easy task because they prefer to be known as majors and captains of the former rebel army. Finally I prevailed on one of the young ministers to make a list of the professions and ages of every member of the Government. The result was not far from what I had expected.

Every member of Castro's government attended a university, came from middle- or upper-class homes and became or intended to become a professional or intellectual. Of the 18 members of the Cuban Government in April 1960, there were eight lawyers, one professor, one architect, one engineer, one naval captain, one doctor, three ex-university students, and two unspecified. Castro's father was a well-to-do farmer who sent his son to Jesuit schools and the University of Havana for a career in law. Castro's most influential lieutenant, Ernesto Guevara, is a doctor whose father was an Argentine architect and builder. Castro will be 34 in August, almost exactly the average age of the entire group.

The Cuban revolution was not a rebellion of the workers and peasants; it was a rebellion by the sons and daughters of the middle class in the name of the workers and peasants. In its present stage, the peasants are benefiting from it the most, the workers very little or not at all, and the middle class as a whole has been marked for destruction.

I have tried elsewhere to define the nature of Castro's revolution and its place in the Communist family of revolutions. In brief, despite important differences in background between Castro's circle and the official Cuban Communists, the former seem to be heading toward a Cuban variety of "socialism in one island" which the latter can unconditionally support as the best available means for fulfilling their own long-range objectives. Yet the two groups have fallen out in the past and it cannot be ruled out that they may fall out again in the future.

In poor, backward countires like Cuba, revolutions still issue out of the middle class but not in behalf of the middle class. The sons and daughters of the bourgeoisie dedicate themselves to the destruction of their own class in the name of nationalism and socialism. In this respect, Cuba was particularly vulnerable because its middle class was relatively too big as well as too weak. The island's five universities enrolled about 25,000 students, with the University of Havanna alone accounting for about two-thirds of the total, all turning out too many lawyers and too few engineers. Only a growing, dynamic economy could have assimilated so many would-be intellectuals and professionals. Middle-class fathers provided their sons with educations which their society was too constricted and stagnant to utilize.

The social conditions which led to Castro's victory were painfully familiar to every student of Cuban life. Ten years ago, the still unrivaled report on Cuba of the International Bank for Reconstruction and Development devastatingly exposed what was wrong with Cuba—dependence on a single crop, sugar; chronic unemployment of the mass of sugarworkers for about three-fourths of every year; the appallingly high rate of illiteracy; the habit of rich Cubans of investing their capital abroad, hoarding it or sinking it into non-productive real estate; the "unstable and static nature" of the whole economy. It was no accident that Castro's rebellion owed its success to its original base in Oriente Province at the eastern end of the island. This largest and most populous of Cuba's provinces ranked first in the production of sugar, lowest in the proportion of white population, highest in the illiteracy rate, lowest in school attendance and highest in the percentage of rural population. Yet the peasant-like guajiros of Oriente Province could not make their own revolution; they provided the friendly environment and some of the recruits necessary for the victory of the predominantly middleclass boys from the cities.

Thus, the Cuban revolution is partly a struggle of classes and partly a struggle of generations in a form which makes the younger generation of the bourgeoisie the revolutionary cadre of the more or less passive workers and peasants. This is not a wholly new situation: Lenin also came out of a middle-class landowning family and, like Castro, first adopted the law as his profession. But the Cuban case is even more extreme than the Russian. Whereas the Bolshevik intellectuals and professionals were most closely linked politically and psychologically to the Russian working class, the revolutionary intellectuals and professionals behind Castro identify themselves emotionally with the guajiros and Cuban collectivism has taken an agrarian far more than an industrial form.

It does not help understanding much to dismiss these students and ex-students as Communist inspired. Why is Communist propaganda so much more effective in one place rather than another? Why should the younger generation of the middle class be so susceptible to Communist propaganda?

This situation conforms to no Marxist schema; it more nearly corresponds to the ideas of the Polish anarchist, Waclaw Machajski, made familiar to us by the writings of Max Nomad, that a new middle class of intellectual workers would install itself in power by exploiting the ideals of socialism; but Machajski hardly worked out the mechanics of his central thought and could not foresee that it would be more applicable

to backward than to highly developed capitalist countries.

Classical Marxism conceived of socialism as the culmination of capitalist development without which the prerequisites of socialism—an advanced industrial economy and a preponderant, impoverished proletariat—could not be fulfilled. But Marx expected capitalism to develop too successfully in some places and not successfully enough in others. Where capitalism has not been successful, the prerequisites of socialism could not be fulfilled, and where capitalism has been successful, the prerequisites of socialism also could not be fulfilled—but for different reasons. In the former case, the middle class was not strong enough, and in the latter case, the middle class was too strong. Where capitalism has been stunted and the middle class is stagnant, a different development from the one that Marx envisioned takes place, urged on by a segment of the middle class but anti-middle class in nature, and in the name of socialism but ultimately antisocialistic in character.

The enraged, uprooted, superfluous children of the bourgeoisie in underdeveloped countries gravitate irresistibly toward the ideology of socialism, but they can make use only of those aspects of socialism which conditions permit them to realize. They cannot pay heed to the idea that the proletariat should liberate itself. They cannot recognize the existence of prerequisites of socialism, above all an advanced industrial economy. They cannot conceive of socialism as the fulfillment and complement of political democracy. But there is one aspect of socialism on which they can seize without delay and without restraint—the full use of the state to change the social order. In classical Marxism, this aspect was only one of several, conditioned by the stage of development at which it was put into effect and the social relationships which would govern its realization. According to this caricature of socialism, however, there is only one prerequisite—the seizure of power, wherever and whenever possible.

In the end, the attempt to force socialism on a predominantly agrarian society generates the pressures that produce a Communist form of totalitarianism. With the best will in the world, the order of development cannot be inverted—first the revolution, then the prerequisites of socialism—without resulting in something other than the classical prospectus of socialism had contemplated. Despite vast differences between Cuba and Russia, Castro's "socialism in one island" assumes some of the essential features of Stalin's "socialism in one country."

This is the revolution of our time. It is a genuine revolution, bursting out in so many places so far apart that it must respond to a common set of circumstances and answer a similar range of needs. It cannot be dismissed as merely a diabolical aberration because it does not live up to our expectations or its own advertisements. It demands understanding on its own terms, less in terms of its theory than of its practice. It ushers in a new type of system that is neither capitalist nor socialist, but contains elements of both, and emerges where capitalism has not succeeded and socialism cannot succeed.

Sparks From the Forge

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. MEYER. Mr. Speaker, the following article appeared in the Rutland (Vt.) Daily Herald on June 29, 1960. The writer, Sam Ogden, columnist for the Rutland Herald, is widely known in Vermont as an independent thinker and for his efforts to promote wise natural resource policies. He is also known as an outspoken advocate of the way of life of Vermont small towns. Sam Ogden frequently makes a fresh analysis of current affairs, and I believe the Members of Congress will be interested to read this commentary:

SPARKS FROM THE FORGE
(By Sam Ogden)

I am not a Communist sypmathizer, nor is my firm conviction that we are on the wrong track in our handling of atomic weapons based on fear of death and destruction. I think that one or the other of these two motivations is usually ascribed to those who come out against further atomic testing. Many intelligent people have assumed that such positions have been taken out of fear of personal harm. The truth of the matter is that the very reverse of this may actually be the case; the truly moral person may prefer to lose all, his life, his family and his liberty rather than to participate in any such immoral bestiality as is implicit in the use of atomic weapons.

I would like to have the leaders of the Republican Party admit to the possibility that there can be disagreement with our current foreign policy, which is not Communist inspired; and I insist that as far as political aspirants are concerned, whatever their party, explicit statements must make it clear where each one stands. It is improper to insist that disagreement with the policies which have forced the United States into the position of being the most hated Nation in the world, shows a lack of patriotism. To make clear what I am talking about here is an excerpt from an editorial in a London newspaper: "The State Department (of the United States) has become too accustomed to blame anything that goes wrong on the Communists and to believe that any objection to American policy must be automatically Communist led and inspired." I think one would have to go no further than the "Letters to the Editor" column in this paper to find evidence of the same attitude.

I have become involved in this essay on communism and atomic warfare because of a conversation I had recently with one of our Republican candidates for Congress, and also because of James Reston's article in the Boston Sunday Herald of June 19. This latter will speak for itself, and I hope that many will read it. Reston says, in part, "We are establishing military bases on the fringe of the Communist empire, and establishing bombers and rockets on those bases * * *. We are justified in doing so, but we should not be surprised if the Communists use every possible device to frustrate our efforts, particularly if we reflect on what we would do if they established rocket bases in Cuba."

As for my conversation with Bob Gannett at Mrs. Ripley Swan's "meet Bob Gannett Party," it was never carried through to its proper conclusion. The setting was perfect, such as only a rare day in June in Vermont can supply; the Swan's garden was lovely, the hospitality impeccable, and the assembled guests as distinguished and intelligent a group as might possibly be imagined, and so it was neither the time nor the place for a long and serious political discussion. In spite of this I did sound off by saying what I thought about the necessity of candidates for Congress stating their position on such matters as atomic testing and the use of atomic weapons.

I had the feeling that had we been permitted to discuss the thing through, I might have come away with a feeling of mutual understanding. But the interruptions were continuous, and I took leave after suggesting that he read a book called "Fallout—A Study of Superbombs, Strontium 90, and Survival." This book is edited by John M. Fowler, and published by Basic Books. It is a collection of 12 essays on the various aspects of atomic warfare and testing, each one written by an acknowledged expert on the subject, and each as objective and unbiased as anyone could hope for. It is an important book, and I expect that Bob will read it. More than this, I hope that all candidates for office, no matter what the scope of their ambitions, will read it.

I will conclude this with a quotation from the third essay in the book. "A decade after the bombing, scores of Hiroshima citizens were dying each year of leukemia and other diseases attributed by Japanese doctors to the bomb's radiation. On August 6, 1957, the 12th anniversary of the bombing, 20,000 citizens assembled in the rebuilt city's Peace Memorial Park, heard their mayor, Tahao Wantanabo declare:

"It is only a foolish illusion to try to maintain peace by the might of possessing atom and hydrogen bombs, and experimenting with them. Present tests of nuclear weapons are undermining the existence of mankind. Radioactive elements, once taken inside the body, not only corrode from within but continue wreaking generic havoc with the offspring."

A National Fuels Policy Is One of America's Most Urgent Items of Unfinished Business

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. RANDOLPH. Mr. President, yesterday the National Coal Policy Conference issued a statement noting that recent developments in the international competition between America and the Soviet Union are warnings that the Congress of the United States should immediately undertake a study of the overall fuels situation in this country.

I agree with this conference representing coal producers, the United Mine Workers of America, coal-carrying railroads, coal-burning electric utilities, and mine-equipment manufacturers, that a national fuels policy is one of America's most urgent items of unfinished business. It is a matter of real concern that legislation pending in this Congress which would cause a joint committee to be formed to inquire into the question of whether or not such a fuels policy is indicated has been subjected to most unfortunate exaggeration and a propaganda barrage of abuse.

A few days ago, the National Coal Policy Conference noted in a memorandum that I was joined by 42 Senators in sponsoring Senate Congressional Resolution 73, while 30 Members of the House introduced similar resolutions—all of which would authorize Congress to inquire into the need for a national fuels policy.

Recently, the American Legion called for such a policy as being vital to national security. More recently, Labor's Economic Review, an oracle of the 13½-million member AFL–CIO, declared for

"a progressive, integrated, national fuel policy." This publication noted a prerequisite to such a policy would be a far-reaching national energy survey which should provide the foundations for an integrated national policy comprising first, abundant supplies at lowest possible cost; second, protection of consumer and public against monopolistic practices; third, Federal leadership, and cooperation by States, localities and the private sector of the economy; fourth, employment of research and technology to solve major energy problems; and fifth, integration of a national energy policy with a national resources policy.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two significant paragraphs from the article in the latest issue of Labor's Economic Review.

There being no objection, the excerpts were ordered printed in the RECORD, as follows:

Labor's stakes in such a policy are immediate and vital. Increased productivity, maximum employment, and rising living standards of workers, all are dependent upon future supplies of energy in abundance and at the lowest possible cost.

Less than a quarter of a century ahead looms the problem of how to provide a steady and expanding stimulus for economic growth to secure job opportunities for millions more Americans who will be entering the labor market.

Mr. RANDOLPH. Mr. President, Joseph E. Moody, president of the National Coal Policy Conference, pointed out in the conference statement yesterday that the anti-American demonstrations in Japan, the imminent invasion of Soviet oil into American-owned Cuban refineries, and other symptoms of international disorder and trade pressures as evidence that the United States urgently needs a fuels policy as an essential ingredient of national security.

In connection with the NCPC statement there was released a booklet by that group entitled "A National Fuels Policy: One of America's Most Urgent Needs." This publication examines the serious problems plaguing all three basic domestic fuels industries—oil, coal, and natural gas.

Mr. President, I ask unanimous consent to have printed further in the Appendix of the RECORD, extracts from the booklet to which I have referred.

There being no objection, the extracts were ordered printed in the RECORD, as follows:

The world glut of oil is causing serious concern among domestic American petroleum producers as prices are slashed and high costs make new exploration and drilling in the continental United States unprofitable. The natural gas industry, hampered by rigid controls, rising pipeline construction costs, and the swelling importation of gas from Canada is facing an uncertain future. And coal, America's most abundant fuel and her main dependence for the tremendous growth expected in electric power and industrial capacity, is existing today at little more than a standby production level—a level that is dangerous to national security and threatens our future industrial growth.

All of these facts point to the very critical need for development of a sound national fuels policy, a need that must be met at once if America's essential domestic fuels industries are to prosper and continue to serve the Nation in the critical months ahead as well as the years of the future. * * *

The present unhappy situation of domestic fuels can be traced to the lack of a single, integrated policy to guide the energy industries. It should also be pointed out that many agencies of government—Federal, State, and even local, have developed literally hundreds of separate policies dealing with separate energy industries in separate, limited ways. * * *

Sometimes these policies overlap, sometimes they conflict, sometimes they leave large and important areas completely uncovered. As long as this situation goes unchanged, our Nation's energy industries will be in trouble—perenially faced with the problem of basing their operations on the ever-shifting foundations of bureaucratic whim. * * *

If the United States is to protect itself, if it is to insure its continued strength, if it is to be able to meet any demands placed on it in peace or war, it is absolutely essential that a single, integrated, overall policy be adopted to guide the future of our vital energy resources.

If this basic segment of our economy is allowed to languish unattended the United States will be placing itself in very real jeopardy—an action which the Congress cannot and must not countenance.

Address by Ambassador H. Freeman Matthews on the 10th Anniversary of the Signing of the Fulbright Agreement Between Austria and the United States, Given in the Great Festsaal of the University of Vienna, June 1960

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. FULBRIGHT. Mr. President, 10 years ago, on June 6, 1950, an agreement was signed by the representatives of the governments of Austria and the United States which provided for the exchange of professors, scientists, teachers, and students. I ask unanimous consent that there be printed in the Appendix of the RECORD an address by Ambassador H. Freeman Matthews on the 10th anniversary of the signing of that agreement.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF AMBASSADOR H. FREEMAN MATTHEWS ON THE 10TH ANNIVERSARY OF THE SIGNING OF THE FULBRIGHT AGREEMENT BETWEEN AUSTRIA AND THE UNITED STATES, GIVEN IN THE GREAT FESTSAAL OF THE UNIVERSITY OF VIENNA, JUNE 1960

Ten years ago, on June 6, 1950, an agreement was signed by the representatives of our two Governments. It was an unusual agreement. Unlike most treaties between government, it did not provide for peace, or war, or alliance, or reduction of tariffs. It did not settle any dispute between our countries. It simply provided a basis for the exchange of professors, scientists, teachers, and students, in a variety of fields. This agreement ran for 5 years, and was then renewed for 5 more years by a simple exchange of diplomatic notes.

In that 10-year period, over 1,200 Austrians and Americans have participated in this program, crossing the ocean both ways to teach, do research, or study.

But before this unprecedented exchange between the intellectual leaders of our two countries took place, the financial and legal basis for the program had to be established.

The first step was taken by the United States well before the end of the Second World War. As early as 1944, it was found that American military equipment and supplies worth millions of dollars were left in country after country following the liberation by the allied forces. It was obvious that much of this material—such as transport trucks and cars, fuel, medical supplies, and food—would be of inestimable help to the countries most ravaged by war. It was however also obvious that such countries had no dollars to buy these materials. The Congress of the United States therefore passed a law authorizing these military surplus materials to be sold at nominal cost to the countries concerned in exchange for payment in their own currency. This was done, and many of you may remember how useful this material was here in Austria in the first difficult years following the end of the war. The resulting sales surpassed all expectations, and the American Government soon found itself in possession of huge sums in foreign currency and credits, not only in Austria but in some 20 other countries as well.

The question was: How to dispose of these funds most wisely? It did not seem right simply to give them away; there was already serious inflation in many countries which would only have been made more dangerous by such a gift. Also, the American people were the true owners of these funds; they had paid with their taxes for all the military material which had been sold. It seemed only fair that these funds should be used in a way that would bring at least some benefit to the American people.

It was at this point that an American Senator proposed an amendment to the 1944 law, which has probably made his name better known throughout the world than those of 99 out of 100 of the Generals and Admirals of the Second World War.

This amendment is officially known as Public Law 584, 79th Congress, but it is better known as the Fulbright Act; the program it provided for is known throughout the world as the Fulbright program, and the scholars and professors who have participated are known to one another wherever they may be simply as Fulbrighters.

I wonder what other statesman in the world's history has during his own lifetime been able to see such a noble monument in honor to his achievements.

It was the hope of your Government as well as of his magnificence and myself, that Senator FULBRIGHT might be able to join us here in Vienna on this occasion. I informed him of this hope, knowing that it would be extremely difficult for him to leave his duties in the Senate during the busiest month of the year. I should like to read to you the letter which he wrote to me in reply.

"MY DEAR MR. CHAIRMAN: It is with profound regret that I find I am unable to be present at the celebration of the 10th anniversary of the exchange program with Austria. Please convey my respect to the President, the Chancellor, and to Education Minister Drimmel.

"The exchange program with Austria and the other countries with which we have such programs contributes materially, I believe, to better relations between these countries and seeks to maintain a free and enlightened society. All of us can learn much from others, and I know of no way that is more effective than the exchange of students and professors.

"Those who have charge of the administration of this program in Austria have done an outstanding job in every respect. There have been no instances of inefficient administration of the program. I believe that in the years to come these exchanges will contribute even more to the improvement of international relations which is essential to the preservation of peace. If the United Nations and other international organizations designed to promote peace are to succeed, the confidence and good will necessary for the success of these organizations will be created, I believe, by the knowledge and understanding which result from the exchange programs. I am hopeful that these programs can be expanded and that perhaps they may elicit a greater participation and support in many other countries.

"Again, may I thank you and the Chancellor for having extended the invitation to me.

"With all best wishes, I am,

"Sincerely yours,

"J. W. FULBRIGHT."

It would not be fitting for me to try to tell you how much good the Fulbright program has done for Austria. That can best be done by his magnificence, Prof. Dr. Antoine, by his colleagues in the other Austrian universities and colleges, and above all by your Federal Minister of Education Dr. Drimmel, for whose wholehearted support we are deeply grateful. I can tell you something of what has been done for America through the participation of Austria in this program. Some 500 Americans have come to Austria as Fulbrighters since 1950. Of these, 340 were students, not ordinary students, but the best we could select from the entire United States. Almost one-third of them came to study that field which the whole world associates with Austria, the art of music. Many came to study your literature and your language; others came to study your history and to work in your archives, your libraries, and your museums. Some have come for geology, chemistry, and other natural sciences.

In addition to the students, American scientists and scholars, many already world-famous in their fields, have come to Austria to do research, and others have come as exchange teachers for a year in Austrian schools.

Over 700 Austrians have participated in the Fulbright program in America. I hope they have brought back with them knowledge and experience which will prove of long lasting benefit to Austria. But I know that they have given much to America during their stay in my country. Many of them taught German language and literature at our schools and universities. I have heard that it is possible to recognize those American universities which have had Austrians helping in their German departments; the students say karfiol instead of blumenkohl.[1] But seriously, there is hardly any field of study in America where we have not been helped to some extent by the presence of Austrian professors and researchers who have come to us under the Fulbright program.

Lest anyone suppose that our real aim is to steal away the best brains of Austria for our own permanent benefit, let me interject that we ask all Austrian candidates for Fulbright grants to give written assurance that they will return to Austria after completion of their study in America. I must admit that the power of Cupid sometimes thwarts our sincere efforts to prevent the export of Austrian intelligence to America. Several of your most promising, most industrious, and most beautiful young lady students have married Americans and have found ways to stay in America permanently. However, I am glad to assure you that an equal number of our American girl Fulbright students in Austria have been overcome by Austrian charm and have married and settled in Austria. One of our girls was even successful in marrying her Austrian professor. I mention this only as a slight warning to any unmarried members of the senate of this university.

I have tried to give you some idea of the wonderful benefits America has gained through the better knowledge of Austria and the Austrians which we have acquired as a result of the Fulbright program. Perhaps even more important than the exchange of academic and scholarly knowledge and know-how has been the dispelling of countless ancient prejudices and misconceptions which are so frequently characteristic of the attitude of one people toward another. Many of us have learned not to generalize about one another so much.

Some of us now realize that not all Austrians yodel, and some of you now know that quite a few Americans never chew gum. We are beginning to realize that in spite of your famed Gemütlichkeit, most Austrians work very hard indeed to achieve a better life, and those of you who have been in the United States have seen that many Americans are more concerned with spiritual and cultural values than with the eternal chase for dollars which is so frequently (and I believe mistakenly) ascribed to us by Europeans.

In fact, the Fulbright program has helped us to see that we are more alike than unlike; in the great ideas of Western civilization, we as Austrians and Americans share a common heritage which if we will only realize it, should make us friends and brothers for all the centuries to come.

[1] Austrian and German words for cauliflower.

Veto-Leaping Pay Bill

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. ERVIN. Mr. President, the Washington Post and Times Herald of July 2 carries an editorial entitled "Veto-Leaping Pay Bill" expressing views somewhat similar to those expressed by me in the statement published on pages 14278 and 19429 of the CONGRESSIONAL RECORD. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VETO-LEAPING PAY BILL

Almost everyone in Washington is pleased to see Government employees get a raise, but the circumstances in which the present salary increases have been voted over the President's veto certainly reflect no credit on the Congress. Both the House and Senate responded to pressure on the eve of the national campaigns, despite the glaring inequities in the bill before them. It seems highly improbable that this measure would have become law if Congress had had the restraint to wait until January, when political pressures will be less acute and when the grade-by-grade salary study which Congress itself had ordered at a cost of half a million dollars will have been completed.

President Eisenhower's complaints against the bill were neither trifling nor partisan. In view of the fact that the cost of living has increased only 2.1 percent since the last salary adjustment of 10 percent in June, 1958, the new adjustments ranging from 7½ to nearly 9 percent are clearly excessive. The Government should, of course, be fair to its employees, but these pay boosts at a cost of three quarters of a billion dollars have to be weighed against the many other demands on the Treasury. It cannot be reasonably said that Federal pay adjustments should have preference over all the other public needs that Congress has thus far failed to approve.

Congress refusal to act on the recommended increases in postal rates, while adding $248 million in salary costs to the immense deficit of the Post Office Department, is certainly an irresponsible performance. Though Congress has set up a balanced budget for the postal system as an objective, it recklessly boosts expenses without concern as to where the revenue is coming from.

The complaint of inequities in the bill also seems to be well founded. Why were postal employees given more generous raises in general than employees under the Classification Act? The bill also magnifies the inequities in the present Federal wage structure by giving the largest raises to employees whose salaries are already high relative to those paid for comparable work in private industry. The extension of Federal retirement and insurance benefits to groups of county employees who are not responsible to the Federal Government seems to be utterly inexcusable. This precedent is certain to arise to the embarrassment of future Congresses.

There are indications that some legislators originally voted for this unfortunate pay bill on the assumption that it would be vetoed and would not become law. If that is the case, their reliance on a veto proved to be a costly mistake. Having committed themselves, the vast majority of legislators in both Houses could not turn back without serious political embarrassment. More than anything else, the performance on this bill proves the unwisdom of allowing Federal pay legislation to come to a head at a time when Congress is not really in a position to deliberate upon it.

U.S. Foreign Policy: Statesmanship Can Often Be Regional

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. HARTKE. Mr. Presiednt, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Statesmanship Can Often Be Regional," written by Holmes Alexander and published in the Indianapolis (Ind.) Star of June 30, 1960. The article deals with U.S. foreign policy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATESMANSHIP CAN OFTEN BE REGIONAL

(By Holmes Alexander)

WASHINGTON, D.C.—Statesmanship in America is often regional, as well as personal. Peculiarism of this sort is apt to enhance the quality of the statesmanship, rather than otherwise. Lincoln, the prairie lawyer; Calhoun, the southern planter; La Follette, the agitator of the middle border, were better

Americans because of their intense and enlightened indigenousness.

STRONG AMERICANISM

In modern times, the Southern and the Western States have a strong affinity in Americanism. It has seemed to me during the last decade in Washington that the United States of America is well served whenever southern and western sentiments are spoken in concert.

Something like this happened recently, when, on consecutive days in the Senate, a pair of southerners, LONG, of Louisiana, and RUSSELL, of Georgia, withheld their approval of the Japanese Treaty and a westerner, MANSFIELD, of Montana, gave a review-in-depth of American misfortunes through the loss of the U–2 plane over Russia, cancellation of the summit meeting and withdrawal of Mr. Eisenhower's invitations to visit Russia and Japan.

TWO AGAINST TREATY

Senators LONG and RUSSELL cast the only two votes against the Japanese Treaty, and for almost identical reasons. LONG is tired of ratifying the military treaties which bind the United States of America to do the spending and bleeding, but which obligate the allies to do little except wring their hands.

Senator RICHARD RUSSELL, chairman of the Armed Services Committee, and a major statesman by any standard, saw the treaty as far less favorable to the United States of America than the one we imposed by conquest after World War II. He seemed aghast at the provisions which surrendered another phase of American sovereignty to a foreign land. Without Japanese approval, we could not, under this treaty, go to war from American bases in Japan.

Senator MANSFIELD characteristically took several weeks to reach the conclusions he offered. His considered judgment is that the administration's excuse for U–2 spying—"Do we want another Pearl Harbor?"—is typical of the leadership we're getting. The Senator judges from the public record that our country is being run on "bureaucratic inertia" rather than executive decisions.

BREAK UP BUREAUS

MANSFIELD's solution is brisk and logical. Break up the bureaus. Put the human brain back to work.

Specifically, he recommends the butcher's ax for a whole herd of sacred bureaucratic cows: the National Security Council staff, the Vice President's extracurricular setup as a policy mastermind, the independent status of the International Cooperation (foreign aid) Administration, and the U.S. Information (propaganda) Services, the international policymaking functions of the Atomic Energy Commission, as well as of the Agriculture, Commerce, and Defense Departments and—biggest bump of all—reduction to the ranks of the Central Intelligence Agency which has been swelling in size and significance to super-Cabinet status.

In place of these decapitated bureaucracies, MANSFIELD wants the responsibility back where it belongs—to the President and two or three of his Cabinet members.

Defense Cut Represents Peril

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. BARTLETT. Mr. President, my colleagues from Alaska, Senator GRUENING and Representative RIVERS, have repeatedly called the country's attention to the serious weakening of our air defense structure by the Air Force decision to withdraw entirely from Ladd Air Force Base near Fairbanks, Alaska. That is to say, the withdrawal will be complete excepting that about 30 persons connected with the aeromedical laboratory will be left.

What this means is that at the critical juncture in our history one of the three operating airbases in this highly strategic area will be put in mothballs. If our relations with Soviet Russia had improved, if coexistence with the Communist world had been proved practical, then the decision to close the base would be one thing; now it is quite another. Likewise, it might—but not surely—be logical if we had truly moved into the missile age. But we have not.

Over the last several years the defense strength of Alaska has been sapped, element by element. No previous cut, however, has been so devastating, so alarming, so completely without merit.

The situation is set forth in strong but understandable terms in an editorial which appeared in the Fairbanks (Alaska) News-Miner, June 30. I ask unanimous consent to include that editorial with my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REDTAPE—BLACK CREPE

Those who are old enough should remember the gravel-voiced American radio commentator who oftener than not started his broadcasts with a booming: "There's good news tonight."

If he were around yesterday he could have put the phrase to good use by adding that the good news was for the Russians.

We are sure that the decision to rub out air defenses in the heart of Alaska is being viewed with satisfaction in Moscow today. Yesterday's announcement restating the Air Force intention of pulling out of Ladd Air Force Base—and doing so virtually lock, stock and barrel—certainly is a blow to Alaskan defense.

We have stated many times before and we state again, we do not believe this is a wise decision; we still contend it is foolhardy and dangerous to weaken the air defenses of Alaska when there is obviously a great need for strengthening them. We are still baffled by the fact that within 8 weeks, the Air Force shifted from a policy of improving the capabilities of the 449th Fighter Squadron to a policy of disbanding it entirely.

It is now obvious that high level military men in Washington have swept aside logic, the protestations of military experts, including those within the military, the views of the Alaskan commander and the Alaskan congressional delegation and are going full speed ahead with their move to strip this area of its fighter defenses.

A valuable airbase is going to be largely written off as expendable. The 449th will go out of existence; some planes will go to Elmendorf, a few to Eielson.

Heretofore, all our objections to the move have been based on a conviction that it is ill advised from the standpoint of U.S. defense. At no time have we interjected any arguments involving the economic impact such a move might have on the community of Fairbanks. This is not only because we feel American defense comes first and the economy of one area or another second. A close examination of the overall picture convinces us that while an Air Force cutback will have economic repercussions here, the present economic outlook for Fairbanks is not all black.

Though the Air Force is transferring its personnel and planes, it has no way of transferring runways, buildings and other properties worth more than $220 million.

We do not think cobwebs are going to appear in the magnificent Ladd Air Force Base hospital or that grass is going to grow on the modern runways.

The aeromedical laboratory is firmly entrenched here and undoubtedly will continue its studies, keeping its personnel here.

Once the Army is in control of Ladd, the facilities will act as a vacuum to bring in units now located at various points in Alaska and the other States—including some who are now conducting cold weather studies in Canada.

The personnel complement at Eielson is being increased.

Housing at Ladd will still be in demand; the base will remain in operation. For a time there may be a smaller on-base population but this will undoubtedly move back up in the near future.

The economic gap left by the Air Force move will be compensated in large part by the gradual transfer here of RCA personnel and other technicians associated with the big Clear project.

It must be remembered that each civilian newcomer to the community—and shortly there will be hundreds—contributes more to theh economy than several military men. This is because the average serviceman does most of his purchasing from the commissary and PX. He usually goes to a base theater, drinks at a military bar and has his meals in a military cafeteria. In most cases, he lives in base housing.

RCA and other civilian newcomers, on the other hand, will be full-fledged consumers, requiring all the trades and services available in the city. It does not take many of these full-scale consumers to equal the "trickle-down" benefits gained by this community from another self-contained community located on the base.

Militarily the Air Force move is detrimental—not only to Alaska but to the security of the entire Nation. We are deeply concerned regarding this military decision and its effect on national safety. As businessmen dependent on Fairbanks' economy, we're not about to "write off" the economic future of Interior Alaska.

The end of the telescope we're looking through shows continued expansion of this area's economy. Those who insist on looking through the opposite end cannot help but see a darker, smaller view which is only the reflection of their own lack of faith in Fairbanks.

We'll place our chips on a great future for Fairbanks, redtape and black crepe notwithstanding.

Cameron County Commissioners Court Favors Establishment of Padre Island National Seashore Park

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. YARBOROUGH. Mr. President, of all those who have been working to assure the creation of a National Seashore Park on Padre Island, none have worked harder or more effectively than

the Honorable Oscar C. Dancy, judge of Cameron County. He has done an outstanding job of presenting this project not only to the residents of his own county, but to many other residents of the gulf coast area of Texas.

I ask unanimous consent to have printed in the Appendix of the RECORD the resolution favoring this project which was passed by Judge Dancy and the members of the Cameron County Commissioners Court, together with the names of all the commissioners.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Be it remembered, That on this, the 1st day of December A.D. 1959, there was held a special or called meeting of the commissioners' court held in the regular meeting place in the commissioners' courtroom, in the courthouse at Brownsville, Tex., at which the following members were present, to wit: Oscar C. Dancy, county judge; Ted R. Hunt, commissioner, precinct 1; Tony Tamayo, Jr., commissioner, precinct 2; Jack Ehlers, commissioner, precinct 3; Guy Leggett, commissioner, precinct 4; H. D. Seago, county clerk; J. R. Snoeberger, county auditor; which said meeting was duly called to order by proclamation of the sheriff,

Whereupon, the following proceedings were had:

Commissioner Ted R. Hunt, of precinct No. 1, presented resolution as follows:

"On this day, there was presented to the court copy of resolution of the Cameron County Park Board in words and figures as follows:

"'Resolved that the Board of Park Commissioners of Cameron County support the various bills in Congress to establish a national seashore area on Padre Island subject to agreement between the State of Texas, and the U.S. Government.'

"And the same being duly considered by the court, the court is unanimously of the opinion that said resolution should be unanimously adopted and approved as the position of the said commissioners' court of said county.

"Premises considered, it is decreed, adjudged and ordered by the court that the above and foregoing resolution is in all respects approved and adopted as the position of the commissioners' court of Cameron County in the matter referred to.

"Said Commissioner Ted R. Hunt moved the passage of the foregoing resolution, which was duly seconded by Commissioner Tony Tamayo, Jr., and the same being considered and the question being called, all members of the court including the county judge voted in the affirmative and none voted in the negative and said resolution was declared to have unanimously carried."

Government Policies on the Disposition of Patent Rights

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. LONG of Louisiana. Mr. President, it may be recalled that the Junior Senator from Louisiana has, on two different occasions this year, delivered rather lengthy speeches in the Senate on the prevailing Government policies concerning the disposition of patent rights to inventions and discoveries obtained from Government-financed research and development contracts.

On the second occasion, I introduced a bill which would make the patent policies of all the departments of the Federal Government uniform in retaining for the Government the rights to these taxpayer-financed inventions and discoveries.

I am happy to report that at least one newspaper has taken up this cause. I ask unanimous consent that an article entitled "Rewards of Patriotism: Taxpayers Pay Twice Over for Defense Research Patents," which appeared in the June 25, 1960, issue of the AFL–CIO News, the official weekly publication of the American Federation of Labor and Congress of Industrial Organizations, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REWARDS OF PATRIOTISM—TAXPAYERS PAY TWICE OVER FOR DEFENSE RESEARCH PATENTS

It has been said that the question of Government-financed research and the private patents that result from it is such a technical matter that it is almost impossible to get the public interested.

Yet there is a side to the question that is far from technical and should be within the grasp of everyone who has the interests of the United States at heart.

That is the immense cost to our people involved in spending billions of dollars of the taxpayers' money annually on research only to permit private corporations to obtain private commercial patents on the discoveries that they make through the use of these same public funds.

Those costs have been estimated as high as $30 billion over the next quarter of a century in higher prices.

Even more importantly they involve the strengthening and even perpetuation of monopolies that it has long been public policy to destroy.

The question of Government-financed research and resulting private patents is more than a technical matter.

Congress is debating whether it should insist that patents obtained through Defense Department research should revert to the Government or should be permitted to revert to private interests as has been taking place ever since World War II.

In the House an amendment was introduced to the Defense Department appropriations bill providing that all patents resulting from Government-financed research become the property of the United States.

The amendment was defeated 37 in favor to 104 against. So as far as the House is concerned, powerful American corporations can go on patenting discoveries made with Government money even though in their own private contracts with scientists they have strict clauses under which patents are automatically assigned to the corporation and not to the employee making the discovery.

Senator RUSSELL LONG, Democrat, of Louisiana, has made several major speeches in the Senate on the subject and has introduced a bill making patents resulting from Government-financed research Government property.

His speeches and his bill have brought strong opposition from the American Patent Law Association, made up of patent lawyers, many of whom represent leading corporations. These corporations do research for the Government at the cost of billions of dollars annually, but are far more interested in the additional billions to be gained through commercial exploitation of the discoveries made through the use of public research funds.

Their concern over the possible cutting off of an immensely lucrative operation is understandable from the viewpoint of private profits. And, as debate in the Senate made clear, the same concern is understandable from the viewpoint of the public interest.

The history of private corporations with relation to defense research and private patent profits and monopolies is not too edifying. LONG told the Senate that many defense contractors in World War II "took the position that they did not want to do the research and development unless they could get the private patent rights. The Government reluctantly yielded on that point."

Having "taken" the Government so patriotically on the patent point, they have been "taking" the Government and the public ever since.

Here are some of the comments made in Congress during discussion of this issue:

Senator ERNEST GRUENING, Democrat, of Alaska: "What is the use of talking about the enforcement of antitrust laws when the present administration is at the same time creating patent monopolies that cost the American public billions of dollars?"

Representative HARRIS B. MCDOWELL, Democrat, of Delaware: "I have been astounded to discover that in the absence of any legislative enactment by Congress establishing a patent policy for the Federal Government, officials of the Department of Defense have themselves undertaken to develop a patent policy of their own, which is in direct conflict with the repeated enactments of Congress as expressed in the Atomic Energy Act, the National Aeronautics and Space Act, and other legislation where Congress has spelled out a national patent policy which protects the interests of our country."

All of which should not be too technical for the public to understand if it is to avoid paying through the nose twice—once for the research and again for the commercial products of the research because of monopolistic prices protected by 17-, 34-, or even 51-year patents.

Jennings Randolph Lauded as Leader for World Understanding; W. H. M. Stover Urges President Eisenhower To Pursue New Peace Programs

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. YARBOROUGH. Mr. President, Last evening the able and distinguished senior Senator from West Virginia [Mr. RANDOLPH] made an eloquent, informative, and thought provoking speech on our strivings for world peace, under the caption "Personal Diplomacy." It appears at page 14443 of the CONGRESSIONAL RECORD.

Senator RANDOLPH has been an able advocate for better American diplomacy for years, and has spoken in the Senate and out of it for his aims and ideals for America.

Recognition of his achievements and ideas have come from many quarters, one of the most recent being contained in a letter from "Bill" W. H. M. Stoner, president, Leadership Training Institute of the District of Columbia, addressed to the White House, and dealing with recent events abroad. Mr. Stoner's recognition of Senator JENNINGS RANDOLPH'S contribution to the cause of world peace in our time is so well stated that I ask unanimous consent to insert in the Appendix of the RECORD pertinent extracts from his letter of June 30.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

JUNE 30, 1960.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Welcome home.

* * * * *

"On February 2, at the International Christian Leadership prayer breakfast, in the most eloquent speech of his career, and in what probably was his most significant speech on world peace, President Eisenhower said: 'There has been too much of the world that believes the United States is completely materialistic, boastful, proud, and arrogant.

" 'America still is a nation that is founded on religious faith, with great concern for the sentiments of mercy and compassion—we want others to know this.

" 'The conviction that the United States is trying to follow in the footsteps of the Prince of Peace is a tremendous gain in this day of fears, hysteria, and great—sometimes too great—a reliance on force.

" 'We intend to remain strong, but let us always do it with the certainty that anyone who will come in integrity, observing the moral values that we know are embedded in this great religious faith, that he will be received as a friend, and taken with us down the road to the future in peace.' "

You, Mr. President, from your high office, can do much even now to help set up the structure and plan for world peace. * * *

It is respectfully suggested, Mr. President, that the time has arrived when a U.S. Department of Public Relations is sorely needed. A separate department, in the hands of our greatest statesmen, appointed with permanent status to avoid political moorings, with funds automatically appropriated at the rate of 1 percent of all defense and foreign aid appropriations, could, if officially created and properly and promptly functioning, do much to create better understanding among men and nations, whether friendly or unfriendly.

We use this public relations device quite effectively in business. In fact, in any large corporation today, a public relations department is almost as essential as the sales, advertising, or operating department. Why wouldn't the same idea work for our Government? Could it not find ways and means to help build good will for America, to sell freedom and the dignity of man, at home and abroad, and generally to create an atmosphere conducive to peace around the world? Would not the exchange of ideas and ideals for peace be a project worthy of our serious, sincere consideration?

* * * * *

May I respectfully suggest, Mr. President, that you throw the full weight of your high office and your own high personal integrity behind pending legislation S. 2332 to create a U.S. Department of Peace?

It is significant to note that S. 2332 was introduced into the Senate on July 2, 1959, by the same man who first introduced H.R. 3628 into the House in 1945. Senator JENNINGS RANDOLPH, from West Virginia, repeatedly introduced similar legislation each session while a Congressman, and traveled over America for 6 years lending his voice eloquently for this idea, from 1948 to 1958.

One can only surmise how much different the recent summit conference might have been, if indeed necessary at all, had a public relations Department been functioning efficiently for the past 15 years as Mr. RANDOLPH'S constituent, Mr. R. M. Davis, of Morgantown, W. Va., initially conceived it, in the interest of peace.

We're living in an age when it seems as if at any moment "man's inhumanity to man may destroy mankind." For today, as never before, we are conscious that, with one overt act or mistake, the world could be plunged into a fiery furnace of hell, destruction and death. May God grant that this may never come.

* * * * *

I would like to see a dedicated man like JENNINGS RANDOLPH set up as Secretary of a Department of Peace. Starting with a man of high integrity who has tenaciously clung to this idea for 15 years in and out of Government, with all need for political considerations stowed away, such a man could be most effective. I suggest a Deputy Under Secretary, or Cochairman.

Give to such men an advisory board consisting of all living ex-Presidents of the United States for a life term and at a similar salary. What a wealth of wisdom and experience Mr. Herbert Hoover, Mr. Harry Truman, and Mr. Dwight Eisenhower together could make available in their final contribution to the good of mankind and the peace of the world.

Add to this a working board of directors, by whatever name, equip the department or agency with an intelligent, well-selected, effective staff, with ample authority to act and with perpetual appropriations automatically fixed by a small percentage of the amount appropriated for defense in all its aspects, and it still may be possible to help build a world in which men might work out their differences in harmony and peace.

Such a public-relations department could go a long way toward humanizing the world. Each day the tempo of tensions and unrest increase and with it the hazards increase by leaps and bounds. It's later than many think—much later. God grant that it may not now be too late.

Would it not expedite possible legislation and allay all partisan considerations on this vital issue if both political parties at the coming conventions were to advocate such legislation as a plank in their respective platforms? Wouldn't this very action tell the world in unmistakable terms that America is above all else united in its desire for peace?

Who else but you, Mr. President, could dare make such an appeal? Yet I suggest that the boldness of the suggestion, backed up by your absolute integrity, recognized and acknowledged by friend and foe alike, would be all that would be necessary. Certainly your own party would follow your lead, and almost as certainly the opposition party would, after due deliberation, accept and adopt such a plank.

* * * * *

Pardon this long epistle. I set out last week, while you were absent from the country, to write you a brief note to welcome you back home. Instead, I arose one morning with the strong compulsion to write you more fully concerning this matter of peace. I feel that this is a God-inspired message which ought to be brought to your attention for the good of mankind.

* * * * *

You have the fervent prayers of many whose destiny you guide. "May you prosper and be in health even as your soul prospereth."

"BILL" W. H. W. STOVER,
President, Leadership Training Institute of the District of Columbia.

The Great Need of Our Time

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. WILEY. Mr. President, the people of American—of the world—will, I believe, require of their public servants, as leaders, an ever-higher sense of responsibility.

In the space age—in which a push-button, nuclear-missile war could kill off millions of people—this is a necessity.

Yesterday, I was privileged to comment on the need for realistic, objective leadership as well as to attempt to put the facts of life—as I see them—in proper perspective on foreign policy. In my talk—and it was a straight-from-the-shoulder talk—I took serious issue with the chairman of the Foreign Relations Committee on evaluating the significance of the U–2 flight and the Paris debacle.

However, I want to make it clear—and I am sure the chairman understands this—that our differences are a matter of issues, not of personalities. By no stretch of the imagination would I want my commentary to be considered to reflect upon the chairman himself.

On the years, I have developed a great respect for the keen, scholarly mind of the distinguished Senator; for the constructive contributions—of which there are many—which he has made in the field of foreign affairs; and for his long, faithful service to the people of Arkansas and the country.

However, I strongly felt—and I make no apology for doing so—that the distinguished chairman's "slashing attack"—as the newspapers called it—on the administration's handling of foreign policy was absolutely unjustified. Frankly, I felt it "out of keeping" with the calm, cool, objective perspective with which the Senator normally approaches problems in this field in which he has long experience.

The target of my own commentary was to refute the adverse impact which the distinguished Senator's comments—however justified he may have thought them—would have upon the public and the world mind and, yes, upon U.S. foreign policy.

This, then, brings me to my point today. The people of America—particularly in political life—have fallen into a bad habit. What is that bad habit? Just this: All too often there is the false idea that in creating the new tools and ideas upon which to meet the challenge of and build a better future, there is a need to damn and deprecate the achievements of the past or present. This is pure nonsense. All of us—Republicans, Democrats, and independents—building upon the great heritage handed down from our forefathers, have helped, in our time, to create the policies and programs that have made the United States the greatest nation in the history of the world.

It pains me to see the great minds of America, the great leaders, the great

thinkers, dissipate so much time and energy deprecating the past, deprecating the opposition, deprecating policies, or deprecating leaders with which they may be in disagreement. What a great tragic waste. Why, in heaven's name, is it necessary to spend so much time, thought, and energy tearing down the other fellow? To the contrary, the great crying need of our time, as in all time, is to utilize the resources, manpower, and, above all, good ideas for building a better future. If the Democrats have some good ideas, let us have them; if the Republicans have good ideas, let us have them. The country needs them all.

Frankly, I believe it is high time that, as a world leader, we adopted a new, mature attitude toward our responsibilities.

Let us stop tearing ourselves down.

Across the seas the Communist—controlling nearly a billion people and vast resources—are trying to accomplish that objective.

Instead, let us try to "grow up a little," discard the outmoded and useless tactic of damning the opposition, of deprecating past policies and programs.

In this battle, all of us have a responsibility—in political life, in private life, and, yes, in the press and information media of the country. Too often—and perhaps this is a fine shade of meaning but all too often, efforts to put forward new ideas for the world of tomorrow are by interpretation, if not outrightly presented as such—displayed as bad or critical reflections on past programs or perhaps on present administrations.

This is not necessarily true.

If President Eisenhower were a candidate for reelection, I am sure that, as in the past, he'd have a good, sound, constructive program to present to the people for the next year and the following 3 years.

As Democrats and Republicans alike present their ideas on how to cope with the complex problems of the future, I believe it is important that these not be put forward as deprecating present or past programs and that they not be so interpreted.

Following the committee report on the U–2 and summit incidents, many editorials have appeared in newspapers across the country. Today I would like to present two of these which I think reflect the real factors of the significance of these events in world affairs:

First. An editorial from the Burlington (Vt.) Free Press, entitled "Fourteen Senators Take Strange View of U–2."

Second. From the Youngstown (Ohio) Indicator, an editorial entitled "Mountain and Mouse."

I ask unanimous consent to have these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Burlington (Vt.) Free Press, June 27, 1960]

FOURTEEN SENATORS TAKE STRANGE VIEW OF U–2

Fourteen members of the Senate Foreign Relations Committee, including Senator AIKEN, conclude that had the U–2 incident not occurred there would have been a summit conference.

They are not sure that the summit conference would have been a success, but, at least, Khrushchev would not have had a pretext for breaking it off.

Therefore, the Senators contend there is good reason to conclude the May 1 flight should not have been permitted.

We, too, regret the U–2 incident, but only as an unfortunate accident in the entirely necessary pursuit of gaging Russian strength and estimating Russian intentions.

If any good was derived from the capture of an American pilot and the loss of a plane, it lies in the fact that the incident brought Khrushchev's summit intentions to the surface for all to see and sooner, rather than later.

Judging from past performances at the top, the summit meeting presented much greater risks to the free world's position than did the possibility of losing a plane during 4 years of flights over Russia.

Two members of the Senate Foreign Relations Committee reasoned straight to the mark in a minority report—Senator FRANK J. LAUSCHE, Democrat, of Ohio, and Senator ALEXANDER WILEY, Republican, of Wisconsin.

Members of Congress responsible for reviewing details of intelligence-gathering activities knew of these flights and approved them. Congress has appropriated money for development and operation of high-flying spy planes for years.

The U–2's operated successfully for 4 years, obtaining information indispensable to an adequate defense.

Khrushchev had decided the allies could not be divided at the summit and that he could not accomplish his objectives. While the U–2 gave him an excuse, it was not the actual reason he wrecked the summit conference.

The Soviet Union has the largest espionage organization of any nation in the world and possibly the largest in history. Communist activities were not suspended May 1 or during any period preceding the summit meeting.

Those who launched the May 1 flight had 4 years of unbroken success behind them and had no reason to believe that this particular flight would be any different from those in the past. If they could have foreseen the failure, they would not have launched the flight. This would hold true, of course, for any flight. Bad luck, not bad judgment, brought on the incident.

Had diplomatic reasons for not sending planes over Russia been overriding, it would have been difficult to find any time at which flights could have been sent.

The May 1 flight having failed, the Federal agencies involved failed to coordinate their public reactions. Both the committee majority and minority agree on this.

It developed that President Eisenhower had to make a statement regarding the incident. Since he had to make a statement, he had to tell the truth.

The concluding point of Senator LAUSCHE and Senator WILEY is a masterpiece of summation:

"The gathering of intelligence has been practiced by nations from time immemorial and though it is an unsavory and hateful occupation its omission would come fairly close to constituting criminal negligence in the responsibility of a nation to provide for its common defense."

[From the Youngstown (Ohio) Vindicator June 27, 1960]

MOUNTAIN AND MOUSE

On the basis of the Senate Foreign Relations Committee's published report, the investigation of the U–2 spy plane failure prior to the ill-fated summit conference produced nothing of any great value to anyone.

Once the public familiarizes itself with the report of the 17-man committee (11 Democrats and 6 Republicans) it may not even become a good campaign issue although the Fulbright group seemed desperately intent on trying to make it one. Evidently the committee found out little that was not already public knowledge. The American people, the best informed in the world, have had ample time to make their own deductions and, having done so, refuse to fashion a crisis out of the event.

The committee had a perfect right to inquire into the incident * * * President Eisenhower could have lied about the whole thing, disclaiming any knowledge of the project, but this does not fit in with either the President's code or that of his countrymen. If he had lied, it is to be presumed that Khrushchev would have gone on with the summit meeting.

At least this is the way the committee second-guesses the affair. However, it seems to be well established that Khrushchev had no intention of going through with the meeting because he knew in advance that he couldn't dominate the West.

Ten Democrats and four Republicans signed the report. Apparently the Democratic majority's stiffest task was to come up with a report which would not be an all-Democratic product, and more than a dozen meetings were required to tone down the findings to a point where the GOP representatives would consent to signing. Even then Senator CAPEHART voted against it because, he said, it did not promote the best interests of the United States. He will find considerable public agreement with his stand.

Two other members of the committee abstained from approval and returned a minority report of their own. They were Senator WILEY of Wisconsin, ranking Republican member, and Senator LAUSCHE of Ohio, both of whom agreed coordination was lacking after the failure of the flight but defended it on the basis that past experience justified expectation of success.

On the whole the report reminds one of the old fable: "A mountain was in labor sending forth dreadful groans, and there was the highest expectation throughout the region. But it brought forth only a mouse."

Are We Too Lax in Carrying Forward a Positive Program in World Affairs? William Randolph Hearst, Jr., Says We Must Do More

---

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. RANDOLPH. Mr. President, many of our colleagues have spoken in recent days on the continuing problems of the so-called cold war. Citizens in our country are asking the question, "Are we too lax?" in our purpose to do a more effective job in dealing with Russia and other countries, including Cuba.

I have read and reread the editorial in the Hearst newspapers of June 26, written by the editor in chief of these daily journals, William Randolph Hearst, Jr.

Mr. President, the penetrating and persuasive comments of Mr. Hearst are

challenging. I wish his beliefs could be carefully considered by all Americans—especially by those persons who are too complacent in these perilous times.

I ask unanimous consent, Mr. President, that the editorial referred to in my remarks be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A pretentious phrase you read and hear too much of nowadays is "National Purpose." Heavy thinkers (accent on heavy) are asking in thousands of words: Do we have one? What is it?

This evidently got a little too much for my friend, columnist Arthur Krock of the New York Times, which by the way, ran a series of deep-think pieces on the "National Purpose." On the basis of a fascinating news report that porpoises appear to have brains larger than ours, Arthur suggested that "what this country really needs is a good 5-cent national porpoise."

Without in the least disagreeing with A. K., the answer to the pundits is of course we have a purpose. It is to beat communism in the cold war and to prevent the Communists, by our deterrent strength, from turning it into a hot one.

Everyone but the experts knows that.

But the biggest question all of us face today is:

Are we carrying out our purpose to win over communism in the most effective way?

I think the answer is: We're trying hard but we're not doing all we could or nearly as well as we might.

One of the reasons for the two Hearst task force visits to Moscow in 1955 and 1957 was to assess how effectively we were conducting the cold war, or competitive coexistence, vis-a-vis Russia. After the second trip, our reports, and conclusions were issued in a booklet titled "How Russia Is Winning the Peace." We fixed on this title after spirited discussion. It represented a realistic appraisal and was intended as a challenge. Just a few quotes will give you the idea.

"The Communists will avoid a hot war and move adroitly when the opportunities arrive to score further gains.

"They will search for disruptive factors * * * and aggravate them whenever possible" (i.e. Japan).

"We are convinced the Communist leaders believe they can achieve world domination by peace offensives in the political and economic fields.

"A totalitarian government always can channel its resources in a matter that periodically will produce spectacular achievements.

"But America and its allies in the free world possess essential resources in depth unmatched by the Communists, not to mention the spiritual strength that should flow from our religious and cultural heritage."

We had said very must the same after our journey to Moscow in 1955.

And that brings up a recommendation we made some 5 years ago, first presented in a speech I made to the National Press Club in Washington, January 28, 1955. The proposal has been urged on various occasions since by our newspapers and has received support from some distinguished individuals.

It is for "establishment of a permanent planning board commissioned to formulate an all-fields, all-fronts strategy for winning the battle of competitive coexistence * * * the board should be scrupulously nonpartisan. It should be culled from the finest minds and talents available. It should coolly survey the whole global scheme and develop plans for getting the people of the world on our side."

Quite independently, a strikingly similar idea was advanced a few months later by Brig. Gen. David Sarnoff, chairman of the board of the Radio Corp. of America.

Although the idea has received approving pats on the head from time to time, it has never, as far as I know, been thoroughly studied by the administration. But just last month, Senator HENRY JACKSON, the Democrat from Washington and chairman of the Subcommittee on National Policy Machinery, mentioned the Hearst plan in saying that one of his principal concerns was how to get and keep the best brainpower to cope with the complex problems of the cold war.

It matters not a whit to me whether it is known as the Hearst plan, the Sarnoff plan or the Jackson plan.

What does matter a great deal to every American is that our purpose to beat Russia in the cold war needs the best intelligence we can enlist to do the job.

In this connection, Premier Khrushchev made a very significant speech a few days ago in Bucharest that created a sensation in the Communist world and appeared to indicate a widening ideological split between Moscow and Peiping.

By reiterating his belief that the Communist and capitalist worlds can get along by "peaceful coexistence" (I prefer competitive coexistence), Khrushchev committed what almost amounts to Communist heresy. He declared that some aspects of Marxist-Lenin theory, including the teaching that the existence of capitalism makes war inevitable, are outdated.

"We live in a time," he said, "when we have neither Marx nor Engels nor Lenin with us. If we act like children who, studying the alphabet, compile words from letters, we shall not go very far. We cannot repeat today mechanically what Lenin said many decades ago that imperialist wars are inevitable as long as socialism has not triumphed over all the world."

Mao Tse-tung—who, like Castro, uses Uncle Sam as the whipping boy to cover up the shortcomings and failures of enforced communism and who daily warns his poor, duped people of the imminence of U.S. war-like intentions—disagrees violently and openly. Peiping issued a blast saying capitalist governments are "vicious and unchangeable" and that the Communists have no choice but "to organize strength to fight them."

It reminded me of a remark Sir Winston Churchill made to the Task Force after our first trip to Russia. He said the time might come when Moscow would turn to the West for help against the Chinese comrades.

That time may be far away, but the evidence of ideological differences between Moscow and Peiping is strong.

There are two related courses of action we ought to take right now.

The first is to exploit the differences by every means possible.

The second is to meet the challenge of competitive coexistence the Khrushchev has flung at us with everything we have.

With our techniques of salesmanship, advertising and persuasion to back up the moral validity of democracy and freedom, we ought to be able to win.

The fact seems to be, I am sorry to say, that we haven't been working hard enough at it. We have lacked the continuous, day-by-day concentration of thinking and planning needed to win.

It's as if Casey Stengel managed the Yankees only 3 days a week. What we need is a competitive coexistence council of Caseys on the job all the time.

One area where Congress seems to be facing up to hard reality and getting ready to do something about it, is Castro's Cuba.

Secretary Herter made an impressive appearance Wednesday before the House Agricultural Committee and appeared to have won over opposition to the administration's request for Presidential authority to cut the favored Cuban sugar quota at the President's discretion.

We have been buying approximately half the Cuban crop at premium prices 2 to 3 cents above the world market rate. There is no good reason to continue to do so in view of the increasing Communist domination of the Castro government, of Castro's increasing hostility toward the United States, and of the benefits our true Latin American friends would gain by reapportioning part of our quota to them.

Castro has reacted violently with charges of economic aggression and threats to seize all American-owned property. He has seized one-third already. In other words, he insists on the right to bite the hand that feeds him while demanding it continue to feed him as before.

Why, even Khrushchev, at the height of one of his bombastic tirades, sounds like a logical professor of philosophy compared to the fuzzy-faced Cuban psycho. The way Castro's been ranting he's nearer Mao than K. in his anti-Americanism and war talk. We should work on widening their ideological schism, separate K. from his belligerent Commie cronies and beat him at the coexistence game.

WILLIAM RANDOLPH HEARST, Jr.

A "Perfect" Administration

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mrs. ST. GEORGE. Mr. Speaker, as we leave these Halls for home, and for our respective conventions, the following article by the great editor and columnist David Lawrence, on the "Perfect" Administration is one to read and reflect on during the coming months.

Mr. Speaker, we will hear promises as absurd, yea even more so, than any in the following article. As we go about our work to choose and elect the next President of these United States let us never forget that: "Those whom the gods would destroy, they first make mad."

The article follows:

A "PERFECT" ADMINISTRATION?

(By David Lawrence)

Judging by some speeches, inside and outside Congress, that are getting headlines nowadays, there is a perfect way to run the foreign policy of the United States.

The critics have encouraged us to believe that the way to win the cold war is to elect a President next time who will know in advance what the Communist regime in Moscow is planning and will promptly take just the right action to defeat its purposes.

This, to be sure, is a very large order. It asumes that the President will always be in perfect health, that he will never need any time off for recreation—especially, that he will never play golf—and that, with a telephone at his bedside, he will be able at any hour of the night to issue orders to his thousands of subordinates. Indeed, it is asserted that the President should know

what military pilots are taking off for any destination throughout the world every minute of the day and night. He should, it is said, be able to suspend any airborne alert which our bombers occasionally fly in an attempt to get warning of the enemy's preparations for a surprise attack.

The President should also be turned in—legitimately, of course, and not through any espionage device—on the deliberations at the Kremlin. He should be able to regulate his overseas trips so that he will not run into such a dilemma as he did in Paris or Tokyo. In fact, the President is to know in advance the temper of the mobs that are gathering in any foreign country to demonstrate against our prestige. Above all, he is to be an expert in diagnosing the psychopathic aberrations of a Khrushchev.

More than this, the President must never fail to spend enough money to keep us "ahead of the Russians" in everything—from missiles to professors of science and all other categories of education. One ingenious way to accomplish all this supposedly is to use Federal funds to increase the number of classrooms in the country and, of course, raise teachers' salaries.

If anyone so much as mentions the budget as a possible barrier to big spending programs, the President is to rise up to denounce "budget considerations" as old fashioned or as thwarting our "national purpose."

Money, we will be told, grows on trees. Anyone who thinks that a perennially unbalanced budget will produce inflation and a 10-cent dollar is to be given a simple and pious lecture about the need for a 5-percent increase annually in our "national growth." This presumably will at once dispel all fears of fiscal chaos.

Under the perfect administration, to be sure, the chairman of the Senate Foreign Relations Committee will conduct our foreign policy, and the Secretary of State will take his instructions from Capitol Hill, despite the fact that the Constitution says this is solely an executive responsibility.

As for domestic problems, by waving a magic wand, we will have just the right wages, the right prices and adequate receipts from higher taxes. The Government would regulate all business.

The "perfect" administration will regard as outmoded any protest decrying all this as destructive of private initiative. Instead, the slogan is to be "more spending for more growth, and more government in more business." Anyone who objects will be called a misguided disciple of "big business" or an old fogey who is far behind the times. The demand is for "bold and imaginative ideas" no matter what they cost. Taxpayers are to be dubbed "illiberal" if they object to paying more taxes while their dollars shrink in purchasing power.

As for money spent abroad, the foreign countries receiving it are to be given constant aid and yet do nothing for the United States in return. Our military bases there are to be regarded as superfluous and as annoying to the Communists—hence they would be withdrawn, as recommended by Moscow. If this brings us to a posture of "isolation," then it will be urged that we quickly get more missiles and intercontinental bombers, even if it costs many times what our allied bases cost us now. As for our allies, they are expected to enjoy these "disengagement" policies, comforted by the thought that all this is "peaceful coexistence."

What candidate can assure the "perfect" administration? If any would-be nominee cannot do it, his campaign promises, whatever they are—even before the conventions take place—must be held up to scorn. Only someone with the ability to awe Communists into immediate acquiescence in, if not submission to, our demands should theoretically be given serious consideration by the delegates of the two national conventions.

Will the American people be misled into believing that Utopia is just around the corner and that, if only we will give up all our armament, including nuclear weapons, the lion and the lamb will lie down together? Fortunately, the average voter has plenty of common sense, and he will recognize that the "perfectionists" are really partisans who are overplaying their hand.

Walter Lippmann To Be Guest on "CBS Reports" Thursday, July 7, 1960

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. MONRONEY. Mr. President, as a critic of the television networks for their failure to use that great medium of communication to serve all elements of our society, I was very happy to read in John Crosby's TV column in the Washington Post the good news that Walter Lippmann, would be a guest on "CBS Reports" next Thursday. Not only is this good news for the millions who enjoy the solid commentary of this distinguished columnist in the daily press; it is a good indication, as well, of the recognition of the network officials that a better balanced diet of TV programing is necessary to fulfill its ultimate destiny to inform and elevate the American people about the serious problems of our time.

I hope the forthcoming Lippmann program will be followed by other programs of equal appeal to those who wish to know more about the problems the world today must face.

Mr. President, I ask unanimous consent that the article entitled "Lippmann's TV Debut Promises a Major Event," written by John Crosby, and published in the Washington Post and Times Herald be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUBJECT: LEADERSHIP—LIPPMANN'S TV DEBUT PROMISES A MAJOR EVENT

(By John Crosby)

I would like to invite your attention to "CBS Reports" next Thursday (7:30 p.m., e.d.t.) which is entirely devoted to a talk with Walter Lippmann, one of the Nation's great senior citizens. Lippmann is one of the few people alive who speaks what he considers the truth without caring a hoot about whether or not what he is saying is popular.

I am very happy that Lippman has consented to make his television debut (it took months of persuading by Howard K. Smith and Fred Friendly), and I hope that he will make this a regular occurrence. Not too regular. About once a year, I think, would be refreshing and stimulating and, in the best sense, inspiring.

I have not seen the film, but I have Friendly's word for it that the Lippmann personality comes through with great clarity and force. I'm not surprised. People who have towering integrity and great intellectual power—of whom there are very few—make a tremendous impact on television, which is an entirely different kind of communications medium than anything we have known. A man like Bertrand Russell or Robert Oppenheimer—or Lippmann—comes to you on the screen as the sum of all the things that he has thought or that he has done in this life. All of it is imprinted, as it were, on his brow, so that he cannot even say "it's a nice day," without imposing authority.

I have felt most urgently that television should more often use its unique powers to bring us the great leaders and thinkers of our time, to inspire and to lift and to shape our thinking and our personalities. Instead of seeking—as it so incessantly does—to be popular, it should strive, at least some of the time, to tell the truth—and damn the torpedoes. Instead of everlastingly feeling the public pulse, TV should have a few independent thinkers of its own who might say: "The whole country is going to such-and-such a movie, but it's a terrible movie. Stop it." Or: "This is a book that has caused no stir at all, but it ought to. Read it." Or: "So-and-so is a very popular Senator, but we think he's a bum. Don't vote for him."

Some of the clear, bracing, cold-water quality of truth is contained in the hour-long talk with Lippmann, which ranges over a dozen subjects. Nowhere is he so eloquent as on the subject of leadership. Lippmann feels strongly that what he calls the old gentlemen who have run the world during and after the war are about to retire from participation.

He talks at length about the great leaders he has admired in the past—Theodore Roosevelt and Woodrow Wilson and Winston Churchill and—his current enthusiasm—De Gaulle. A great leader, Lippman says, must have the "ability to see what is. He must be able to see through the excitement of daily events. He must be able to see through the latest headlines to what is permanent and enduring. This ability—this second sight—is, to my mind, the quality of great leaders."

One person who has not got this quality of second sight at all in the Lippmann view is President Eisenhower, of whom Lippmann speaks with crushing candor that the Ike fans are not going to like. Of the Presidency, Lippmann says the ideal man should be—as all leaders should be—articulate, but this articulateness must not be aimed at the lowest common denominator. Rather, it should be aimed at the best minds in the country, and they would carry it on down to the lowest level. (That is a thought that the broadcasting industry might think about a bit.)

Here are the Lippmann thoughts about another leader that might intrigue you: "One of the most handsome, attractive young men—quite superficial, rather uneducated, but so charming that everybody likes him, but nobody ever conceived of him as President of the United States." That sounds like a thumbnail portrait of Senator KENNEDY, but actually it is Lippmann's view of the prepolio Franklin D. Roosevelt, about whom Lippmann says he has "long and mixed and confused feelings."

In his interview Howard K. Smith asked Lippmann what he thinks is the biggest single job the President of the United States has to face. His answer to this is not quite what you might think, but you had best listen to him yourself next Thursday. I think you will be heartened especially by what Lippmann says about the Soviet Union's desire to avoid war. You will be depressed by what he says about the U–2 incident—his appraisal being the only honest one I have seen.

Story of Hiroshima Bares Secrets Hidden Until Now

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following review by Carter Brooke Jones, of the Washington Evening Star, of the new book by Fletcher Knebel and Charles W. Bailey II, "No High Ground." Their book is about the dropping of the first atomic bomb and the problems and decisions of the people concerned. It is a book for the general reader and does a good job of presenting this huge undertaking simply and interestingly.

The review follows:

THE FIRST ATOM BOMBING: STORY OF HIROSHIMA BARES SECRETS HIDDEN UNTIL NOW

(By Carter Brooke Jones)

Two Washington correspondents have told fully for the first time the story of how we developed the atomic bomb, what led up to its devastating use at Hiroshima and what happened on that fateful mission.

Much hitherto secret material is woven into their narrative, which not only is an authoritative general account of pertinent events, but a tightly written documentary that holds breathless interest.

WELL SORTED FACTS

Naturally volumes could be and have been written about technical phases of the unleashing of atomic power and the military historian could write endlessly about the exchanges of orders, the conferences and controversies that led up to the bomb. But Mr. Knebel and Mr. Bailey, addressing their story to a general audience, sorted their mass of material expertly, keeping the most interesting and significant. And, like good journalists, they've written simply and clearly.

The authors, in expressing their gratitude to the Air Force and the Navy for making available all the secret papers sought, thank the Army for turning over a few specific papers. They add: "But we cannot accept without protest the Army's refusal, in the name of 'national security,' to open the rest of these papers to responsible historical research. It is perfectly clear to the authors that personal and policy considerations, not security, dictated the withholding of these 15-year-old papers."

DEBATE CONTINUES

In telling the story of the bomb and of its first use on Hiroshima and Nagasaki, the writers have not neglected the ethical debate which preceded the decision to drop the weapon that changed history—a debate that still goes on and undoubtedly will continue. It was when the moment came, President Truman's terrible responsibility to make the decision. And yet, as the authors point out, President Roosevelt and Prime Minister Churchill had agreed tentatively that the atomic weapon, which seemed near completion, would be used against Japan.

The administration, however, and the military commands, were split. While Secretary of War Stimson felt it should be used to end the war, Assistant Secretary John J. McCloy and Navy Under Secretary Ralph A. Bard held strong reservations. Adm. William D. Leahy, then the President's Chief of Staff, was most unhappy over the decision, feeling that Japan was beaten as it was and would soon surrender. Gen. Henry A. (Hap) Arnold, commanding the Air Force, was opposed to using the bomb.

General Eisenhower expressed hope that we wouldn't have to drop it, because he hated to see the United States the first to use a weapon with such an incredible destructive potential.

It is interesting to learn that neither General Eisenhower, then supreme commander of the European theater, nor General MacArthur, Pacific commander, was let in on the closely guarded secret that the bomb had been made until days before it was dropped.

Those who felt the bomb should be used argued that it was no worse to wipe out a city with one bomb than to lay waste much of Tokyo with a mass of incendiary bombs, as we had done, at a cost of 78,000 lives. More than 70,000 were killed at Hiroshima or died within hours.

THE FLIGHT ITSELF

The historical flight of the bomber *Enola Gay*, commanded by Col. Paul W. Tibbets, which dropped the first atomic bomb, is described vividly. Each member of the crew comes to life in these pages.

Security measures guarding the Manhattan District (designation for the farflung operations involved in making the bomb) were unprecedented. And yet two spies leaked its design to Russia—an ally we did not trust.

"No High Ground" is a remarkable achievement. Fletcher Knebel, who writes the "Potomac Fever" column which appears in the Star and many other newspapers, and Mr. Bailey are in the Washington bureau of the Cowles publications. They have written objectively, leaving it to the reader to form judgments.

Press Conference by Gov. G. Mennen Williams, of Michigan, at Governors' Conference, Glacier National Park

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. McNAMARA. Mr. President, during the past few days, a considerable amount of discussion has taken place concerning a press conference conducted by Gov. G. Mennen Williams, of Michigan, while he was attending the Governors' conference at Glacier National Park.

Some of the statements and published reports appear to be based on a misconception and a misinterpretation of what actually took place.

According to those who were present, and who are familar with the matter, an article published in the New York Times of June 27, 1960, represents an accurate and comprehensive account of the event.

So that the RECORD will contain a fair and unbiased report, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 27, 1930]

JOHNSON ALLEGED TO HAVE USED POST TO STOP KENNEDY—WILLIAMS SAYS HE WAS TOLD ENDORSEMENT OF BOSTONIAN MIGHT BLOCK AGED BILL—STORY CALLED UNTRUE—DANIEL SAYS SENATE LEADER WOULD NEVER EMPLOY POWER TO FURTHER CANDIDACY

(By W. H. Lawrence)

GLACIER NATIONAL PARK, June 26.—Two Democratic Governors clashed head-on today over alleged use of congressional influence by Senator LYNDON B. JOHNSON, of Texas to advance his own presidential aspirations.

Gov. G. Mennen Williams of Michigan reported that an unsuccessful attempt to delay his endorsement of the candidacy of Senator JOHN F. KENNEDY, of Massachusetts had been made in the name of Senator JOHNSON.

The Governor said he had been warned that such an endorsement might imperil congressional enactment of legislation providing Federal medical care for aged persons.

Senator JOHNSON'S effort, Mr. Williams said, was made through Walter P. Reuther, politically powerful leader of the United Automobile Workers of America with whom the Governor is closely allied.

Mr. Williams did not volunteer the story. It developed entirely as a result of questioning in his news conference.

CALLED A FABRICATION

Gov. Price Daniel of Texas branded the Williams account as pure political fabrication.

Mr. Daniel said he was certain that Mr. JOHNSON, the Senate majority leader, would not use his office to promote his own candidacy and would not determine his position on legislation on the basis of whether persons were for or against him for the Presidency.

Governor Daniel said he had not asked Senator JOHNSON directly about the incident, because he knew it could not have happened and "it would be an insult even to ask him."

From other pro-Johnson sources, however, it was established that, through a New York intermediary, Senator JOHNSON had approached Mr. Reuther in the hope that he could at least persuade Governor Williams to delay an announcement for Senator KENNEDY.

The New Yorker said that on instructions from Senator JOHNSON he had told Mr. Reuthers that an early Kennedy endorsement might make it more difficult to pass any medical care bill for the aged.

At the same time, the New Yorker made it clear for Senator JOHNSON that the auto union would have to compromise for something less than the Forand bill because Senator JOHNSON had said he "would not take on the doctors." Medical groups oppose the Forand bill as strongly as organized labor supports it.

BILL HELD IN COMMITTEE

At that time, the medical-care bill was locked up in the House Ways and Means Committee. Senator JOHNSON was reported to have said he might not be able to count on southern Democratic votes needed to report the measure to the House if Michigan started a bandwagon rolling for Senator KENNEDY.

The Daniel-Williams clash highlighted preliminary festivities for the 52d Governors' Conference, which will start formally tomorrow morning and continue through Wednesday.

Not surprisingly, Governors Williams and Daniels differed widely on the prospects of their presidential favorites.

Mr. Williams forecast that Senator KENNEDY would reach the required 761-vote majority for nomination before the end of the first ballot at the Los Angeles convention.

Governor Daniels, asserting that Senator JOHNSON could win on the third or fourth ballot, predicted that Senator KENNEDY's first-ballot strength would be his peak, and that he would lose votes on succeeding roll-calls.

The Texas Governor predicted that Senator JOHNSON would have 502 votes on the first ballot and climb to 664 votes. He also said he assumed that Senator STUART SYMINGTON of Missouri would withdraw after the first ballot, and that most of his strength would flow to Mr. JOHNSON.

SAYS DATE WAS JUNE 2

In answering questions at his news conference, Governor Williams reported that the indirect effort by Senator JOHNSON to delay his pro-Kennedy endorsement was made on June 2. That was the day the Governor met with Senator KENNEDY at Mackinac Island and issued his announcement.

Mr. Williams said the Johnson warning had been given to Mr. Reuther but had been relayed to him by Mrs. Mildred Jeffrey, a U.A.W. staff member and a Democratic party official.

Asked if he had checked Senator JOHNSON to establish the facts of the incident, Governor Williams said he had not done so, but that he had complete confidence in the veracity of Mrs. Jeffrey and of Mr. Reuther.

As Governor Williams told it, the Johnson message said that he would support the Forand bill if the Michigan announcement were delayed, but oppose the bill if Michigan came out for KENNEDY.

VIEWED AS "BLACKMAIL"

When a reporter suggested that this represented an accusation of political "blackmail" against Senator JOHNSON, Mr. Williams repeated that he had not brought up the issue, that he simply was answering press inquiries, and that he had not characterized the nature of Senator JOHNSON's effort.

He said he assumed that the Texan, in seeking the presidential nomination, was employing all the means of persuasion at his command.

Governor Daniel's suggestion that Senator JOHNSON would gain on the second ballot because Senator SYMINGTON would withdraw after the first ballot, was the first time that such a statement had been made.

Conceivably, Mr. Daniel's suggestion could cause trouble between the Johnson and Symington forces because the Missourian's friends, including former President Harry S. Truman, may be angered at this attempt to write him off so early.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution adopted by the City Council of the city of Peabody, Mass., on June 23, 1960, on minimum wage legislation:

RESOLUTION INTRODUCED BY COUNCILLOR JOHN MICALCHUK CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure, and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Peabody, Mass.; and

Whereas there is now before Congress a bill (S. 1046 and H.R. 4488) which would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and include nearly eight million additional workers under the protection of the Fair Labor Standards Act; and

Whereas 165,000 citizens in Massachusetts will be protected by this needed legislation and have available $50 million to spend locally: Now, therefore, be it

Resolved by the City Council of Peabody, That we call upon the Congress of the United States to give prompt and favorable consideration to S. 1046 and H.R. 4488, so that the conditions above described can be

Resolved, That copies of this resolution be sent to the U.S. Senators from Massachusetts and to the Congressman from the Peabody area (Seventh Congressional District), namely, Congressman THOMAS J. LANE.

Salute to ACLU

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. DOUGLAS. Mr. Preisdent, this year has marked the 40th anniversary of the American Civil Liberties Union, and many who cherish freedom have paid just tribute to its unflagging efforts to defend the liberties of all, however unpopular their views may be.

I am glad to join in these tributes because of the central importance to American life of freedom of speech, thought, assembly, religion, communication and dissent, freedom from racial and religious discriminations and the right to equal justice and due process of law.

In the world struggle in which we are now engaged, it is these freedoms that most clearly distinguish us from the Communist tyranny which strives to dominate all.

In its upholding of these freedoms, the ACLU has had an honorable, courageous and often distinguished record, even though some of us have disagreed at times with positions it has taken.

As an indication of the widespread praise that has come to it for its work, I ask unanimous consent to have printed in the Appendix of the RECORD editorials from recent issues of the Chicago Daily News, the Chicago Sun-Times and the Chicago American.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News, Apr. 18, 1960]

SALUTE TO ACLU

The American Civil Liberties Union and its Illinois division are observing the 40th anniversary of the ACLU at a dinner here Thursday. The choice of Chicago for the accompanying conference is a salute to the leaders in this area of the work of the organization.

Civil liberties are something like pets; your own are the dearest things in the world, but the other fellow's often appear to be either a nuisance or a downright menace. This fact not infrequently gets the ACLU in dutch with those who forget that everybody's pets must be protected before any individuals may be safe.

When the ACLU has gone to the defense of Reds whose legal rights seemed in jeopardy it has been denounced as a Communist front. When it supported the constitutional privileges of Nazis, others have called it Fascist. It has come to the aid of anti-Semites and Ku-Kluxers, as well as members of minority groups, whenever the rights that should be available to all were denied.

Inevitably, many of the causes it has championed have been unpopular. The fighter for free and untrammeled speech must defend some unsavory characters who abuse their liberty. It follows that many sincere lovers of freedom have at times found themselves at odds with ACLU policy.

The alternative, however, is infinitely worse, and the ACLU has earned a welcome from all who cherish the ideal of a government of laws under which all men enjoy equal privileges.

[From the Chicago Sun-Times, Apr. 21, 1960]

FORTY YEARS OF FREEDOM FIGHTING

Back in 1954, during the darkest days of McCarthyism, the American Civil Liberties Union reaffirmed its stand against "guilt by association, judgment by accusation, the invasion of the privacy of personal opinions and beliefs, and the confusion of dissent with disloyalty."

That 1954 stand on McCarthyism was one of hundreds of such defenses of the Bill of Rights that have marked the ACLU's 40 years. Today, as it observes its 40th birthday with a dinner and the opening of a national conference here, the ACLU also can look back on such important battles as the Scopes trial, the Sacco-Vanzetti case, and the Scottsboro trial. In these and other well-remembered cases, the ACLU fought for preservation of the basic American rights—freedom of thought, religion, communication, assembly, dissent, freedom from discrimination, and the right to due process of law.

However, there will be little looking back as 1,000 ACLU delegates gather here today. They will be busy with problems of 1960—the rights of racial minorities, separation of Church and state, censorship and sex morality, and the threat of police authority to civil liberties.

These are among the continuing problems to the ACLU. But in 1960, as it has for the past 40 years, one thing remains constant—the ACLU's pledge to "defend the civil liberties of any person however unpopular that person or his views may be and regardless of any political party organization, denomination, race, or nationality to which that person may belong."

[From Chicago's American, Apr. 20, 1960]

THE ACLU ALARM CLOCK

The American Civil Liberties Union, which celebrates its 40th anniversary tomorrow at a dinner in the La Salle Hotel, works something like an alarm clock, in that it is doing its job best when being a pain in the neck for somebody. The ACLU realizes this and is resigned to it; in fact, we suspect it enjoys the situation.

The ACLU is a permanent nonpartisan organization, devoted solely to defending anyone whose civil liberties appear to be threatened. It is supported wholly by mem-

bership dues and contributions; there are 40,000 members, 4,000 of them in Illinois, and one purpose of the week-long observance is to attract new members.

By the nature of its job, the ACLU is constantly on the side of unpopular causes—the kind of cause that inclines people to say, "Sure, free speech is fine but this case is different." The ACLU is there to remind us that if we keep making exceptions to the constitutional guarantees of free speech eventually speech will be free only for statements that nobody quarrels with.

Since its founding in 1920, the ACLU has defended Communists and has been attacked as a pro-Communist organization; it has also defended pro-Nazis and Ku Kluxers, and has been assailed just as bitterly from the other side.

We have differed strongly with the ACLU in the past, and have every expectation of doing so again. But we wholeheartedly salute it for keeping the American people alert to basic freedoms that are sometimes very easy to forget.

We wish the ACLU a happy birthday and a lot of interesting fights.

Start Them Young

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PUCINSKI. Mr. Speaker, I should like to call attention to an editorial which recently appeared in the Washington Daily News regarding the great need that exists in America today for our youngsters to become proficient in foreign languages. This editorial quite properly points out that the foreign language gap is one of America's failings.

Throughout the world it is now common practice for youngsters to learn not only the native language of their respective country, but to learn at least one additional language so that they are better prepared to face the challenge of a world that is ever becoming smaller and smaller.

I think one of the great shortcomings in our Foreign Service is the fact that so many of our State Department employees do not speak the language of the country in which they are stationed. I think that this language gap creates many serious problems and to a great extent weakens the effectiveness of our diplomatic representatives.

We are today stressing a tremendous growth in international commerce and in this field also we will need bilingual Americans.

I do not think we can emphasize strongly enough how important it is to encourage the study of foreign languages in our country. This in no way suggests that we should lessen the emphasis on the English language and grammar, but I sincerely believe that we must create an atmosphere in this country where youngsters now attending school will firmly believe that "it is smart to be bilingual."

The editorial follows:

START THEM YOUNG

The foreign-language gap is one of America's failings. A proposal just submitted by three national organizations interested in education points the way to close it.

These are the Carnegie Corp. of New York, the Modern Language Association of America, and the National Education Association. They urge that foreign languages be taught as early as the third grade, at an age when children learn, and remember, most readily. They suggest, furthermore, that studies be continued for 4, 6, or even 10 years to give apt students thorough understanding, rather than the relatively worthless knowledge of languages they get in short courses.

Through our neglect of foreign language studies Americans severely limit their ability to communicate with and to understand the aspirations of other lands. In this respect we are far behind Europe where most with any pretention to education speak at least one language besides their own.

The organizations making this report have considerable influence on educational techniques. They should be able to get their findings to school officials across the land, with a consequent strong improvement in this much-neglected field.

National Football Foundation To Build Hall of Fame at New Brunswick, N.J.

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a statement regarding the National Football Foundation, and its plans to build a Football Hall of Fame at New Brunswick, N.J., Edward Durell Stone, one of the great American architects, has been engaged to design the hall of fame and grounds.

Mr. Chester J. La Roch is president of the National Football Foundation, and it numbers among its membership many of the distinguished leaders of our country. As the very excellent statement points out, one of the purposes of the foundation is to foster and promote football, as a sport whose emphasis on discipline, competitive spirit, physical fitness, teamwork and courage contributes to the vigor, and moral and physical fiber of our country.

I am glad that the executive secretary of the foundation, Mr. Gould B. Martin, who prepared this informative statement, is my old friend and classmate at Yale University. He has given his services freely to Yale, and has served with distinction in business and in many positions devoted to the public interest. I am sure the statement will be read with interest by my colleagues in the Senate, and in the House of Representatives, and by many throughout the country.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL FOOTBALL FOUNDATION TO BUILD HALL OF FAME AT NEW BRUNSWICK, N.J.

It has recently been announced that the National Football Foundation has commenced the raising of a national fund of $2 million to build the Football Hall of Fame at New Brunswick, N.J., on the site where Rutgers played Princeton in the first intercollegiate fotball game in the United States in 1869.

The foundation is an organization of dedicated men who believe that the establishment and maintenance of high aims and purposes in the world of amateur football serve not only American youth, but the Nation as well. In an age when there has been considerable tendency to softness and the relaxing of our standards of fortitude and physical preparedness, the foundation believes that football will continue to be a significant and vital factor in helping to strengthen and prepare the physical and moral fiber of the Nation for our defense in the years to come.

Football is one of the great builders of men in our country, in our time. Properly played, properly administered, it does more for the boy of school and college age than any other sport or comparable activity. It is not only, as indicated by President A. Whitney Griswold of Yale, a vital part of education as physical recreation and exercise, but more, it is, like other organized sports, a challenge to the spirit, a test of mettle, a way to educate our youth to go far beyond their surface resources.

In the words of General of the Army Douglas MacArthur, who in 1959 received the foundation's gold medal award in recognition of a "lifetime of devotion to American intercollegiate football": "The game has become the symbol of our country's best qualities—courage, stamina, coordinated efficiency. Many believe in these days of doubt and indecision that through this sport we can best keep alive the reality and enterprise which has made us great. Upon the fields of friendly strife are sown the seeds that upon other fields, on other days, will bear the fruits of victory."

President of the United States Dwight D. Eisenhower, who received the foundation's first gold medal a year previously, phrased it this way: "In football, in business, in the trades and the professions, the normal urge to excel provides one of the most hopeful assurances that our kind of society will continue to advance and prosper. Morale, the will to win, the fighting heart, are the honored hallmarks of the football coach and player. This morale, this will, this heart, we need not only in athletic teams as individuals, but collectively."

Col. Earl H. (Red) Blaik, great West Point coach, is even stronger in his analysis of the game: "Football represents one of the few last vestiges of real discipline for American youth and personifies the development of physical fitness."

Chester J. LaRoche, president of the foundation, has stated that "football trains a boy in stamina, courage, competition, teamwork, sportsmanship, self-reliance, and imbues him with the many qualities which help to build our manhood and maintain our competitive spirit vibrant."

It is because of these beliefs that the foundation has dedicated itself to these purposes: To promote football as an integral and wholesome part of our educational processes; to encourage the beneficial direction and playing of the game at schools and colleges; to establish the true concept of football as an amateur sport throughout the country; to gain recognition for the important role football plays in the preservation and advancement of our way of life; to provide the proper incentives and ideals for American youth and set standards of sportsmanship for the individual player.

That it may accomplish these aims and purposes, the foundation has an extensive program of operations. Among them are: Honoring through the Hall of Fame those former players and coaches whose deeds and

lives during and after their playing days have been exemplary and inspiring; honoring through its chapters the outstanding scholar-athletes in schools; rendering many practical and valuable services to colleges, schools, institutions, organizations, and individuals connected with football; combating through the various channels of public relations the unwarranted attacks sometimes made on football by those who are ill informed or prejudiced; actively aiding and encouraging the playing of football at schools and colleges, particularly in those cases where it has been dropped because of improper or insufficient reasons; answering the questions or doubts of those who do not have sufficient knowledge or means of obtaining information about the background and place of football.

The National Football Foundation is organized in New York State as a non-profit corporation, and in the past 5 years it has grown until it encompasses some 200 college and institutional members and thousands of individual members. It serves all the official groups connected with playing, conducting and reporting the game.

It has a national board of directors of 100, including the representatives of the National Collegiate Athletic Association, the American Football Coaches Association, the Football Writers of America, the College Sports Information Directors of America, and various unofficial groups, including many thousands of ex-football players and enthusiasts.

The affairs of the foundation are guided by an executive committee who meet once a month in New York. The members of this committee are all prominent business and professional men who spend a large amount of time and effort to handle the affairs of the foundation. They represent the major facets of professional, industrial and commercial activity and many colleges from the traditional Ivy League through the conference groups, the service academies, the religious institutions, the State universities and smaller colleges.

In additon to the executive committee the foundation has a strong national advisory committee, headed by General of the Army Douglas MacArthur. This committee numbers many of the country's top business executives, as well as college presidents, U.S. Senators and Representatives, and professional men of distinction.

At the local level, where the foundation penetrates the grassroots of football throughout the United States, the operations are through the chartered chapters and their membership. There are chapters organized in each of eight districts of the country, as far north as Minneapolis, as far east as Portland, as far south as Miami and as far west as San Francisco. There are at present more than 30 such chapters and the number will be much greater at the end of 1960. Some of them have as many as 100 members and the membership is constantly growing.

One of the most important of the activities of the foundation is the Football Hall of Fame which will play a large part in its overall work, and which will be a challenge to all those interested in the great American game. It will be the living symbol of the foundation and the focal point of its many interests.

With the example of the men enshrined in the Hall of Fame to inspire them, the youth of America can have few better guides. Familiarity with the names and deeds of such men as Pudge Heffelfinger, Frank Hinkey, Willie Heston, Red Grange, Ernie Nevers, Jim Thorpe and other outstanding players cannot but fill a youngster's heart with desire to emulate the deeds of those great athletes. And what young boy wouldn't thrill to the stories of teams coached by Knute Rockne, Alonzo Stagg, Bob Zuppke, Walter Camp, Percy Haughton, Pop Warner and the other coaching immortals?

As America's greatest sport, the one that sets the standard for all amateur athletics, football deserves ta place in the history of our country, and the Football Hall of Fame will fill this need. The evolution of the game from its earliest days to the present will be unfolded and the game's greatest moments relived. The Football Hall of Fame will become a national shrine devoted to fair play, courageous action and the will to win. It is with these aspects of the game—its influence on national character, its hardening and tempering of the will—that the hall of fame is most concerned.

Those enshrined in the hall of fame are the truly great All-America players. They have been selected on the basis of performances and elected by judges who can justly qualify as experts.

The names, exhibits, and memorabilia in the Football Hall of Fame will recreate the spine-tingling excitement of hundreds of thrilling moments in America's sports history and will pay a well earned tribute to the men who made this history.

There are now 127 players and 45 coaches in the Football Hall of Fame, elected from the more than 1,500,000 who have played the game. A player becomes eligible for consideration by the foundation's honors court only after 10 years from graduation; a coach 3 years after retirement.

Edward Durell Stone, one of the great American architects, has been engaged to design the hall of fame building and grounds. As creator of the U.S. Pavilion for the recent international exhibit in Brussels, our Embassy in New Delhi, the Museum of Modern Art, the Huntington Hartford Museum, and many other structures of outstanding significance, Mr. Stone brings to the hall of fame a talent insuring artistic design of the highest order.

The building itself will be on spacious grounds ideally located and accessible to automobiles, buses, and trains. It will comprise a complete shrine for amateur football as well as national headquarters for the foundation. There will be a central hall to honor those who have been elected by the honors court, the most complete sports library in the world, a large and extensive museum for every feature of the game, a gallery, exhibition rooms and auditorium, projection and music rooms, a theater, workrooms, and offices for the foundation. The Football Hall of Fame, when constructed by the voluntary contributions of all citizens and institutions interested in perpetuating and furthering the incentives, ideals, and accomplishments of the game of football, will stand as one of the great American centers of a culture and way of life important to our whole national concept of competitive strength and courage.

GOULD B. MARTIN,
Executive Secretary.

No High Ground

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following book review by John K. Hutchens in the New York Herald Tribune for June 6, 1960. It discusses thoroughly and with understanding a new book by Fletcher Knebel and Charles W. Bailey 2d covering the events and people concerned in the dropping of the first atomic bomb. This is a highly readable account of this point in history:

BOOK REVIEW BY JOHN K. HUTCHENS—"NO HIGH GROUND"

("No High Ground" by Fletcher Knebel and Charles W. Bailey II, Harper, 272 pages.)

Shortly after a 5-ton weapon dropped out of the belly of a B–29 over Hiroshima at 8:15 a.m. plus 17 seconds on August 6, 1945, and launched a new era in warmaking, a Japanese official broadcast declared: "The effectiveness of this bomb * * * should not be regarded as slight." Truth and the Japanese Imperial Government's wartime admissions were not often on chummy terms, but here at least they met in a momentous understatement at one of the turning points in all history.

To a couple of able, hard-digging journalists it rightly appears a tale worth still another telling.

REPORTERS AT WORK

They are Fletcher Knebel and Charles W. Bailey II, of the Washington bureau of the Cowles Publications, and what they have done is to round up and present, in layman's language, as many significant aspects as are available of a story that shook the world and changed it forever.

A glance at the bibliography of "No High Ground" tells you that much of what they report is well known. Any reader of, say, William L. Laurence's "Dawn Over Zero" and "Men and Atoms," John Hershey's "Hiroshima," Arthur H. Compton's "Atomic Quest," must feel himself on generally familiar ground here. It could hardly be otherwise if this book were to have any value at all.

But if there are no major revelations in "No High Ground," its authors have made their own specific, valuable contribution. They quote from hitherto guarded documents in the archives of the Manhattan Project and the armed services. Like good reporters not averse to legwork, they have searched out and interviewed surviving participants in the great saga and followed through on the later careers of some of them. They have considered, without passing judgment on, the first atomic bomb's political and moral implications.

MANY PEOPLE, MANY PLACES

All save some Rip Van Winkle, implausibly asleep these 15 years, must know by now the story's main outlines, the prelude and the event itself—Albert Einstein's historic, urgent letter to President Roosevelt in 1939, the long delay in Washington, the all-out drive of the Manhattan Project under Maj. Gen. Leslie R. Groves, the fears (scientists wondering if the bomb would crack the planet's crust, ignite the nitrogen in the air and the hydrogen in the seas), the cynicism (a Michigan Congressman describing the bomb's cost as New Deal boondoggling), the drama at Los Alamos, the takeoff of the *Enola Gay* from Tinian at 2:45 o'clock one morning a month later.

From one front to another go the Messrs. Knebel and Bailey as the cataclysmic point approaches—from Hiroshima, hungry and vaguely apprehensive, to the sealed-off testing ground in the desert, to Washington and a new President with a fearful decision to make, to Potsdam where Stalin, told of the bomb by Mr. Truman, smiled what seemed to be indifference but could have been secret amusement at hearing what he already knew.

WHO KNOWS?

All along the way are points about which historians will be arguing through the years. If the Potsdam Declaration had assured the

Japanese that their Emperor would be retained, might they have surrendered in time to prevent the use of the bomb? Joseph C. Grew and Henry L. Stimson had so advised, and Mr. Stimson, for one, thought it possible that history would find we had prolonged the war, though he urged the use of the bomb after the allied ultimatum was rejected.

Here are both sides of the debate among scientists and Government officials about whether we should have made a demonstration drop. And here—for the first time, as far as one reader knows—is a cross section of the reactions of the men who flew the *Enola Gay* and the two weather planes accompanying her. They, like the public at large, differed, some holding that the dropping of the bomb was justified by the shortening of the war and the lives saved on both sides, others uneasy in their consciences.

"This is for history, so watch your language," said Col. Paul Tibbets, pilot, informing his crew that the intercom conversation on the *Enola Gay* was being recorded. The Knebel-Bailey chronicle puts into focus more of that history than any one book that comes to mind, and is the more welcome for that.

Comparative Merits of the American and Russian Systems of Education

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. ABBITT. Mr. Speaker, ever since the advent of sputnik, there has been a good deal of discussion in this country as to the comparative merits of the American and Russian systems of education. Criticisms of our own system have been widespread—even though the United States has the finest overall program anywhere in the world.

It has been asserted by many so-called experts that our system lacks much of what the Russian system possesses—namely, a heavy accent on mathematics and the sciences. Russia has been pictured as constantly accenting this phase of their program and reports have circulated that this concentration is increasing.

In light of this, I would like to call to the attention of the Members of the House a very fine article which appeared in the Wednesday, June 29, issue of the Wall Street Journal, in which much evidence is presented to show that Russia is turning to a greater accent on vocational education. This article is significant because it points up a new challenge to America. The United States has become the most powerful and most productive nation in the history of mankind due in large measure to the productivity of our people. Much of this has been a direct result of the fine vocational education program carried on in the country over the past 40 years.

This article points out that Russia is now in the process of putting more and more emphasis on vocational education and this could prove serious to the security and economic well-being of the United States. The fact that our people have stressed vocational education over so long a time has contributed immeasurably to the strength of our Nation. Russia undoubtedly has learned a lesson by our example and is now attempting to copy us in this respect.

The vocational education program in this country is a joint Federal-State-local effort and is one of the finest educational programs we have. The contribution made by this program over the years has been tremendous and the fruits of this endeavor are visible all around us.

On June 16, 1916, 44 years ago, the late Congressman Dudley M. Hughes in a speech on the floor of the U.S. House of Representatives, while the Smith-Hughes vocational education measure was under consideration, said, and I quote:

> National efficiency is the sum total of efficiency of all individual citizens, and the national wealth is the sum of their wealth-producing capacity. In the markets of the world we compete, not as individuals but as a unit against other nations as units. This * * * unquestionably introduces a national element into vocational education.

Not long ago Russia's Khrushchev said to an American newspaper publisher, and I quote:

> We declare war upon you—in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States is not the intercontinental ballistic missile, but in the field of peaceful production. We are relentless in this, and it will prove the superiority of our system.

I include the Wall Street Journal article herein and commend it to the reading of the Members of this body:

RUSSIA'S SCHOOLS—MR. K STARTS MIXING FACTORY, CLASS WORK—PROTESTS IMPEDE PLAN—PROGRAM'S AIMS ARE TO CUT SKILLED WORKER SHORTAGE, EASE UNIVERSITY CROWDING—BRIBES, "PULL" AID PUPILS

(By Edmund K. Faltermayer)

Moscow.—The much acclaimed Soviet education system, which helped inspire the spirited postsputnik reappraisal of U.S. schools, is undergoing a massive upheaval of its own these days—one that has brought a host of readjustment troubles and exposed some of the deeper rooted problems of a Communist society.

Curiously, while American educators are shifting emphasis from vocational learning to old-fashioned book learning, their Soviet counterparts are rushing headlong in very nearly the opposite direction. Their goal: To transform Russia's 200,000 primary and secondary schools into "polytechnical" schools that will equip all graduates to go directly to work in factories and farms. The science-heavy academic load, which has awed so many U.S. educators, won't actually be reduced. But high school pupils will have to spend a third of their schooltime learning a manual trade, even if they plan to go on to a university. To help make up for the time given to manual training, a year is being added to the Soviet curriculum.

The purpose of this most drastic school shakeup in three decades, according to its instigator, Soviet Premier Nikita Khrushchev, is to bring the schools "closer to life" and combat the "lordly contempt for labor" that has developed among the intelligentsia—a grave development in a society supposedly moving toward a completely classless Communist state. The study-and-work scheme, unlike so many recent changes in the Soviet system, harks back directly to the writings of Marx and Lenin.

PRACTICAL AIMS

But Mr. K. also had some practical aims in mind: To discourage youth from seeking admission to jam-packed universities and technical institutes, and to remedy the serious shortage of skilled labor in Russia's increasingly mechanized factories.

What distinguishes Mr. Khrushchev's school reform from some of his other sweeping changes in the Soviet system is the nondogmatic way in which it's being implemented. Says enthusiastic Mikhail Kashin, deputy minister of education for the Russian Federation, biggest of the U.S.S.R.'s 15 republics: "We're taking an experimental rather than a rigid approach."

Even more intriguing, for the light it throws on the present-day workings of the Soviet system, is the way in which powerful vested interest groups appear to have watered down some of the plan's more drastic features. This process unquestionably has its limits. But it demonstrates the strength of the opposition to Mr. Khrushchev's plan, at least in the form first suggested. Opposition to the plan came from three groups affected by it. These include the professional educators who don't like sharing dominion over their charges with factory directors, the harassed factory directors who don't like the idea of youngsters cluttering up their plants anyway, and the big new middle class which is determined that its children shall not have to spend their lives in factories.

EDUCATIONAL ADVANCE

When Mr. Khrushchev first agitated for a revamping of the schools in April 1958, he said, in effect, that all students, except for a few gifted ones, should go to work after 7 or 8 years of schooling and complete their eduction in evening institutions. At least, that's the impression he gave to many Russians, though others dispute this. But by the time the Supreme Soviet passed the school reform law in December 1958, a lot of influential people had gotten Mr. K.'s ear. It now appears, partly in the light of later developments, that just as many children—about a third of the total—will go on to a full-time high school education as at present, except that they'll also have to do the part-time factory or farm stint. And the children of the prosperous middle class will still have a chance at a higher education.

Thus, some Western authorities say, the school reform may never achieve one of its stated purposes, which is to wipe out inherited privilege. In practice, they say, those who continue on to high school will continue to be those who have the best grades—and aren't forced to go to work for economic reasons. One observer here sees a propaganda problem, too. "The school reform," he says, "points up a basic contradiction in the Soviet system: The idea of equalitarianism versus the party's pressure on people for self-improvement."

Despite these difficulties, the plan is getting into high gear and is scheduled to become universal in the U.S.S.R. in the fall of 1963. During the academic year just ended, some 80,000 high school pupils in 2,000 schools spent a third of their time on manual labor. In Moscow alone 161 factories participated in the plan. Next fall, half the country's 31,000 high schools will be on the new curriculum. Even in the lower grades, manual work has been stepped up, although it's limited to labor in the schools themselves.

BOARDING SCHOOLS

Boarding schools, the feature of the school reform which aroused perhaps the greatest interest in the West, are also proliferating rapidly, though not as fast as the regime

would like. This year 400,000 youngsters were enrolled in these full-time institutions, which are designed to provide a Communist upbringing under ideal conditions and ease the lot of poorer class families from which most of the pupils come. Under present plans, the number of pupils in such schools is to grow by 2.5 million by 1965 and to several times that figure by 1980. Ultimately, Mr. Khrushchev would like to see boarding schools become universal. But even the shorter range goal may not be reached on schedule. One reason is lagging construction. During 1959 building of boarding schools in the Russian federation ran 50 percent behind schedule.

An even more crucial limiting factor is the cost of maintaining a pupil in these institutions. According to Mr. Kashin, this cost—nearly all of which is borne by the state—runs between $600 and $700 a year (figured at the tourist exchange rate of 10 rubles to a dollar), compared with only $70 to $80 in an ordinary school. The same fiscal factor will probably limit the spread of prolonged-day schools set up to achieve some of the aims of the boarding school. Thus, for the next decade at least, the place where most Soviet youngsters will feel the impact of Mr. Khrushchev's school reform will be in the new polytechnical primary and secondary schools.

To see this new system in action, visit Moscow's school No. 465, a five-story gray concrete building on Big Torchlight Lane, about a mile east of Red Square. Last fall, according to Director Mikhail Lebedev, the school's 134 ninth grade pupils became the first class to operate under the new system. In 2 more years, they'll be the first to graduate under the new scheme, which takes on an extra year to the former 10-year curriculum in order to compensate for the extra factory work. Under the new law, the school is technically referred to by the mouth-filling title of "secondary general labor polytechnical school."

CLASSROOM QUIZZING

Four days a week the nine graders of school 465 study the usual academic subjects. On the third and fourth floors you can see bright-eyed boys and girls in uniforms and red ties performing chemistry experiments and being quizzed in a history class about the short-lived Paris commune of 1871. In the latter class brown-eyed Gennady Trostnikov, wearing the standard blue-gray boy's uniform with brass belt buckle, is getting a grade of "four"—out of a possible five—for saying, among other things that "although it lasted only 72 days, the Paris commune was important not only for France but for the fact it was the first proletarian state."

On two other days of the six-day school week these same youngsters will turn up at four different factories in the neighborhood, depending on the trade each child has chosen to learn. Students can choose among the first watch factory, the factory of universal assembly fittings, and garment factories Nos. 4 and 18. There they can learn everything from dressmaking (girls only) to watch assembly and lathe operation (mostly boys). According to Mr. Lebedev, each day at the factory consists of 2 hours of instruction and 4 hours of actually turning out goods under the factory's regular production plan. The total weekly work load is a grueling one by American standards; 24 hours of classroom instruction, a roughly equal amount of homework, plus 12 hours at the plant.

Nevertheless, says Mr. Lebedev, a bespectacled blue-eyed man in his fifties, the ninth graders think the new setup is just dandy. Only two pupils, girls who wanted to switch from dressmaking to watch assembly, have complained, he says, and they later changed their minds. "The rest of the students are quite happy in the factory work and doing well at it." He scoffs at the idea that factory work on top of study overloads his pupils. "It's not difficult to study academic subjects under this system," he says. "The pupils spend only 4 hours working on the days they go to the factories. That's not overloading. Besides, the academic course has been spread out over 3 years." Before the factory work was inserted into the curriculum, he says, the same academic program was squeezed into only 2 years.

COMPLAINTS PLENTIFUL

Mr. Lebedev's optimism notwithstanding, there have been plenty of complaints in the Soviet press about the way the new system is being organized. The director of Moscow's school No. 330, a certain A. Mostovoi, complains in a letter to Pravda about "serious shortcomings." The problem of deciding which pupils shall go to which factory, he charges, is being solved in a "disorganized fashion." The 104 regional economic councils which now boss Soviet industry, he complains, haven't come up with a "long-range plan" to tie the part-time instruction in with factories' projected needs for skilled workers.

Moreover, Mr. Mostovoi frets, students approaching the ninth grade are being "poorly" counseled in choosing which factory trade they want to take up next year. The choice of vocations, he says, is artificially limited by the types of factories in a school's neighborhood. In cautious language he also hints that combining manual and brain work is disruptive. Taking up a factory task and then leaving it for 2 or 3 days, he says, gives students only an "intermittent" acquaintance with production. The official says he's "inclined" toward a different plan under which all factory work would be concentrated in a 2- or 3-month period, leaving the rest of the school year for academic subjects.

In any event, the idea of combining a healthy dose of manual work with academic study seems here to stay in the U.S.S.R. The old school system, Mr. Khrushchev says, was "divorced from life." Modeled on the old czarist "gymnasiums" and dating in their present form from 1931, the old schools with their identical academic curriculums (the only "elective" is a student's foreign language) were almost exclusively designed to prepare pupils for college. This, plus the fact that a college education in the U.S.S.R. means the difference between grim subsistence and a halfway tolerable living standard, had led most pupils to expect a college education.

DEMAND FOR ADMISSION

By 1958 the situation had become serious. The expanding high school network was annually turning out 1.5 million graduates, nearly all of whom wanted to get into universities and engineering schools. But these can admit only 225,000 full-time students (plus a roughly equal number of evening and correspondence students) and the daytime figure is being frozen because of the country's "surplus" of college graduates. Simultaneously, a shortage of skilled labor was making itself felt. Moreover, the number of persons reaching working age was declining because of the low birth rate during the war years—a serious development in view of the formidable tasks of the current 7-year plan.

To cope with the backlog of university applicants, which may have gotten as high as 4 million, the regime at first took stopgap measures. A rule was introduced under which institutions of higher learning only had to take 20 percent of their applicants directly from high school. The rest were to be people with the papers to prove they had done 2 years of full-time work after high school. But this regulation has not stemmed the tide. Many institutions are admitting up to 50 percent without the 2-year "production stage." Bigwigs are using "pull" to get their children into universities without this and other new requirements. Bribery has reared its head, with payments running as high as $2,000.

While it might seem so at first glance, the Soviet school reform is not really a step backward. To be sure, the new law junks the goal of a free 10-year education for all, proclaimed ever since 1918 and as recently as 1956. Under the new scheme the amount of compulsory schooling has been boosted from seven years to eight, effective in 1962. But upon completing this requirement most pupils will go directly to work at age 15 and complete their formal schooling in evening schools, which are to be greatly expanded. Some will go to technical institutes where they acquire a semi-professional status, or to vocational schools, as at present. But only a minority will go on to the ninth grade and beyond in daytime schools.

EVEN QUALITY

Despite this appearance of "turning the clock back," it appears that the quality of Soviet schooling won't decline below its present level. To understand why, it's necessary to know what that level is. It's not as high as many Americans think, despite phenomenal gains since the revolution. It's still true that a Russian high school graduate gets more science and mathematics than most U.S. college graduates, and that the U.S.S.R. spends between 10 percent and 15 percent of its national income on education compared with about 5 percent in the United States. But as late as 1958 Mr. Khrushchev himself admitted that only about 80 percent of Soviet children finished the seventh grade. By the end of the 10th grade, it's been figured by Western experts, only between 30 percent and 35 percent have survived.

The reason for this is not a teacher shortage. There are four or five applicants for each opening in Soviet teachers' colleges. Nor is it due to a shortage of plant, even thought new construction lags and about half the schools still operate on a two-shift system. The real reason is the low living standard of the average Russian family. Most children have to go to work at 15 to help support their families.

From this standpoint, the Soviet school reform can only be considered progress. Pupils will be getting a year more of compulsory schooling than they would have gotten before. Moreover, there are signs that the number admitted to full-time high schools will be about the same as at present.

Address of Congressman Victor L. Anfuso

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. JOHNSON of Texas. Mr. President, 30 years of dedicated work in behalf of human welfare, world peace and human justice by my old and dear friend, VICTOR L. ANFUSO, the distinguished Representative from the Eighth District in New York, was recently recognized by the Order Brith Abraham at that great fraternity's 73d annual convention.

Presentation of Brith Abraham's Humanity Award was not the first honor to come to this able and outstanding public servant. In 1946 Congressman ANFUSO was appointed by Pope Pius XII as Knight Commander of the Knights of

the Holy Sepulchre for his humanitarian work on behalf of youth.

So that we might set down in his own words the thinking of this great American, I ask unanimous consent that Congressman ANFUSO's speech, delivered at the time of the presentation of the Brith Abraham award, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO, GRAND MASTER'S DINNER, ORDER BRITH ABRAHAM, CONCORD HOTEL, KIAMESHA LAKE, N.Y., JUNE 28, 1960

Grand Master Maurice Goldstein, Past Grand Master Irving Hodes, Judge George Radar, members of the national executive board, my good friends of the Order Brith Abraham, ladies and gentlemen, I feel highly honored by the decision of your national executive board to present the annual Brith Abraham Humanity Award this year to me. I am very flattered to join the illustrious men who have been the recipients of this award in the past. I had hoped that my very good friend and great majority leader of the U.S. Senate, the Honorable LYNDON B. JOHNSON, could have been here too, but as someone aptly put it here tonight—somebody has to mind the store in Washington.

This is indeed a signal honor, especially cherished by me since it comes from Brith Abraham, the oldest national fraternal order. In accepting this award, I am thinking of the old but wise observation in chapter 28 of Proverbs in the Bible, which says:

"He that tilleth his ground shall be filled with bread; but he that followeth idleness shall be filled with poverty."

I'd like to think that your award to me today, although I assure you that I feel as though I do not deserve it, is the bread for tilling the soil of humanity all these years—the recognition for my labors in the vineyard of mankind. I did not follow the course of idleness, and so today I am not a poor man; I have many friends—all of you—and you have been very kind to me.

We live in a very exciting age, but also a very dangerous age. Two opposing ideologies are waging a life-and-death struggle for survival, and we are not merely witnesses to this struggle—we are participants in it. Consequently, we cannot afford to come out second-best, for that would mean the destruction of our way of life and our civilization.

Speaking of being second best, reminds me of the topsy-turvy way of looking at events as they are practiced in the Communist countries. When they speak of democracy, they mean their brand of "peoples' democracy" which is actually dictatorship. When they refer to political freedom, they mean freedom to preach only communism. They think in different terms and act in different ways, and we will have to learn to understand their ways because the first requisite in this ideological conflict is to understand your enemy.

By way of illustration, let me tell you a little story. A very important international sweepstakes took place one day. The only entries in that sweepstakes were one American horse named "Reluctant Capitalist," and one Russian horse named "Glorious Revolution." The winner of the sweepstakes was the American horse. But here is how the outcome was reported by the Soviet press and radio:

"Our great Soviet horse 'Glorious Revolution' came in second. The American entry 'Reluctant Capitalist' came in next to last."

An enemy of that kind of mentality is never wrong, he will not tolerate any kind of criticism. In a democracy such as ours we have learned to appreciate criticism and to live in tolerance with our neighbors of different racial or national origin, or different religious faiths.

To be sure, we have our problems here. We have problems of discrimination and prejudice against people who have a different color of skin, or worship a different God. We have problems of the perverted minds who find a thrill in smearing a swastika on a synagogue, or burning a cross near the home of a Negro or a Jew or a Catholic. They do not understand that their deeds are merely testimony that their minds are perverted and their hearts are full of hatred for their fellow men. We have the fanatics who are using the U.S. mails to distribute "hate literature," in an effort to divide the American people and to undermine the fabric of our national existence.

And while I am on this subject, allow me to digress for a brief moment to pay a well-deserved tribute to Brith Abraham and to grand master Maurice Goldstein for waging a campaign to stop the distribution of this trash through the U.S. mails. I remember well your grand master's excellent editorial "Crime Against Humanity" and his letter to President Eisenhower a few months ago urging him to take action against the spread of racial hatred, because it was "destructive to our national peace and unity." I had both, the letter and the editorial, inserted into the CONGRESSIONAL RECORD. I wish you success, Maurice Goldstein, in your new campaign against discrimination and to better our youth.

I should also like to pay tribute to the oldest living grand master of Brith Abraham, but—I assure you—young at heart, Judge Adolph Stern. Also to the second in seniority of the past grand masters, my very dear friend and president of my club, if you please, the honorable Samuel Goldstein.

Finally, and certainly not last in my esteem, the unsung hero of Brith Abraham, a man who doesn't know how to say no to any good cause of any faith, the man who—believe me, my friends—is more deserving of your great award than I am—everybody's friend, Sam Rubenstein.

My friends, we have reached a stage where it is no longer possible or desirable to justify racial and religious discrimination—and yet maintain that we are a moral nation. If we deny to certain groups the opportunities to develop their skills and talents—be it Jews, Negroes, Italians, or others—then it is a contradiction of our own democratic principles and we are actually causing irretrievable harm to the interests of the Nation.

I believe the time is long overdue to eliminate all manifestations of hatred and intolerance in this country, and thus keep clean the good name of the United States throughout the world. It was not so very long ago that we fought a savage war against the Nazis and their theories of racial supremacy. In that struggle our country stood forth as the world leader of democracy and human dignity. Freedom-loving people everywhere have not forgotten that struggle, they still look to the United States as the leader in the cause of democracy and human rights against those who are trampling on these rights now.

Today we find great nations, who in the past have made wonderful contributions to civilization—such as the Russians and the Chinese—now spreading hatred against their fellowmen. I cannot recall a period in history when the world was so full of hatred of man against man, of the Communist world against America and the free world, of black against white, of Arab against Jew, etc. Instead of love, instead of neighborliness and understanding, instead of cooperation and the desire to establish peaceful relations among the nations for the benefit of all mankind—we see a world torn by hatred, divided by suspicion, and tottering on the brink of a new holocaust which threatens to destroy both victor and vanquished.

I do not know whether we shall ever succeed in convincing the Communist world that we are anxious for peace, and that it must be a peace based on honor, freedom, and dignity. Perhaps our best answer to communism and those who preach the Communist ideology is to maintain and preserve human rights throughout the free world, to assure freedom to all peoples, and to guarantee them a life of dignity and honor for all, regardless of race, color, or creed.

Here, in the United States, we fought a revolution to attain our own independence. Yet, we cannot understand the surge for freedom in other nations. We call it Communist-inspired. We are wrong. It may be encouraged by the Communists, but the inspiration and surge for freedom and independence exists in all peoples—whether black, yellow, or white. When we understand this we will have these peoples as our friends and prevent the influence of communism—and only then.

Let us have one thing clear in our minds: America is today the only major power that is able to thwart the efforts of the Communist leaders to gain world domination. That means, unless we decide to guarantee the freedom and the human rights for all people, we are in danger of losing them for all people, including ourselves. And that is what I had in mind earlier when I said that we live in an exciting age, but a dangerous one.

I should like now, with your kind indulgence, to devote the concluding part of my remarks to a subject which is undoubtedly of utmost interest to all of you, namely, the controversy over the so-called Eichmann case. Before I discuss this case, however, might I say that it is my firm conviction that the people of Israel are not capable of an injustice and I am sure they will give Eichmann a fair trial.

I wish to, first of all, commend the United Nations for its mild censure resolution and Argentina for its restraint. I interpret the resolution as not denying to Israel the right to try this barbarian.

I regret that this matter has become involved by all sorts of legalisms which only detract from the main purpose, namely, to try the greatest and most despicable Nazi war criminal who directed the extermination of 6 million Jews in Hitler's gas chambers. This is a case involving a crime which has no parallel in human history; hence it requires unusual action.

I have nothing but respect for a people which for many long years pursued and finally tracked down the murderer of 6 million of its kinsmen. Any other people suffering a similar tragedy would do the same, and having apprehended the killer probably would have taken his life. But in the tradition of the "People of the Book" Israel has seen fit to permit this mass killer to survive, to be brought before the bar of justice so that a complete story of the abominable history of annihilation might be placed on the record.

I am certain that the United Nations recognized the international agreement which applies to this situation. That is the declaration signed on October 30, 1943, at the height of World War II between the United States, Great Britain, and the Soviet Union in which they agreed that the principle of "territoriality of jurisdiction" does not apply because the Nazi crimes were not limited to a "specific geographic location." Furthermore, the declaration states that "Nazi war criminals may be tried and punished by the people whom they have outraged." Since the Jews were the primary victims, there can be no question as to their right to try Eichmann.

It is fitting that an Israeli courtroom be the forum where a detailed history of Nazi genocide should be recorded. There the full tale will unfold with the identify of all who aided, abetted or condoned the dastardly acts fearlessly exposed. No person, no nation, should escape exposure. In this bastion of democracy the world will be assured of complete disclosure of all the facts without fear or favor.

Let Israel invite the nations of the world to send their finest legal talent to assure that justice prevails. Thus the forum of this trial will be given an international atmosphere, appropriate for the trial against one accused of a crime against all humanity.

Israel's trial of Eichmann is not motivated by the concept of revenge. It will be guided by the supreme judaic concept of justice. Since Eichmann was brought to Israel, the people there have not made any outraged demands to destroy him without trial. They have not threatened lynching—they are calm and collected—only awaiting the final day of judgment before the bar of justice.

I know that justice will prevail. A democratic Israel in the tradition of the prophets and judges shall record for posterity a verbatim account of the Nazi atrocities, and will mete out justice in accordance with the wisdom of a Solomon.

It may interest you to know that there is no capital punishment in Israel for an ordinary crime of murder. But the law of the land does provide execution for genocide. However, it is very possible that after Israel has exposed this heinous crime against all humanity, Israel may propose to turn this arch-war-criminal to an international genocide committee for punishment. It will be a great tribute to Israel to make such a move as an international warning that the free world will not tolerate the whim of a despot, dictator or any government responsible for mass destruction of a race without regard to human rights.

I want to commend to you a little prayer which, I think, best expresses our feelings on this occasion:

"God give us the patience to accept that which cannot be changed.
Give us the courage to change that which can and should be changed.
And, above all, give us the wisdom to know which is which."

It is with a great deal of humility and deep appreciation my friends that I accept the "Humanity Award" of the order of this great family of brothers and sisters—Brith Abraham. I want to thank the officers and leaders of this great organization for bestowing this honor upon me. I want to assure you that I shall continue to exert all possible effort towards the fulfillment of the noble principles of your organization—unity, liberty and justice.

A Reminder to All Americans

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. DINGELL. Mr. Speaker, in a recent address delivered before his fellow alumni of Columbia University in New York City, Gen. Carlos P. Romulo, Philippine Ambassador to the United States and former President of the United Nations General Assembly, spoke of Philippine-American relations emphasizing the new trends in Filipino thinking as a result of recent global happenings.

In the course of his speech, he mentioned some of the problems now facing our two Governments: The Zablocki bill which makes good a commitment we made to pay the Filipinos' war damage claims; the recognition of the Filipino veterans' rights and the Teague bill, H.R. 261; increase in the Philippine sugar quota; pending negotiations regarding civil jurisdiction in our military bases in the Philippines, and others.

After discussing each of these questions at length, General Romulo mentioned the welcome accorded by the people of the Philippines to President Eisenhower as another evidence of the friendship and good will of the Filipino people for the United States and in a subtle but effective manner contrasted it with what happened in other countries where American prestige suffered a severe blow.

The Philippine Ambassador concluded his thought-provoking analysis of Philippine-American relations by quoting the following column of Ralph McGill, printed in the Washington Evening Star, which General Romulo referred to "as a timely reminder to all Americans, a moving and soul-stirring reminder of Filipino loyalty that should find a responsive chord in every American heart":

BROWN HANDS THROUGH THE WIRE—MEMORIES OF CORREGIDOR POINT UP FILIPINOS' INTENSE LOYALTY TO UNITED STATES

(By Ralph McGill)

The President's welcome in Manila stirred two memories:

A few weeks after the second great war I talked one evening with an Army officer who had been one of those in the desperate surrender at Corregidor and the infamous death march which followed.

"When I think back on all that happened," he said, "on the death of companions, the suffering, the brutalities, the one thing most vivid in my mind is not of those things. I remember first the many small-brown hands which so often reached through the wire of the prison camp, slipping me, and others, a bit of food or a cigarette. Time will help me store the harsher memories on the back shelf. But nothing will erase my image of the great loyalty of the Filipino people. Their soldiers fought with us. They hid our escaped prisoners and formed guerrilla forces with them. We will never know how many American men, women and children survived because of the kindness of the Filipino people. * * *"

One thought of that when the people of Manila roared their welcome to President Eisenhower.

This is a story which somehow has never been put into perspective. The Filipino people are Asian. But they are distant from the peoples and the lands which knew colonial government under the Dutch, the French, the British and the Portuguese. Nowhere in all of the vast area of colonial Asia was there any loyalty to colonial power which compares even remotely with that of the Philippines.

The British have accumulated a magnificent record of assisting units of their once farflung empire to orderly independence Wherever the British governed there was at least some public education, a trained bureaucracy of indigenous people, and, most important of all, a system of courts and an understanding of the process of law.

But the one Asian experience of the United States is unique. From the beginning there was not merely the promise of independence. There was a planned progress toward it. At the end of the war the tremendous power of revolutionary forces loosed in the world were in evidence in the Philippines. But the leaders had faith in the United States and the transition to independence was a happy one.

The image of the brown hands reaching through the wire is not in any degree lessened.

The second memory is a later one. It is of several conversations with an earnest, intelligent young lady school teacher from the Philippines at a graduate school seminar in this country.

The few signs of questioning opposition to the President's visit were placards asking why Japan has received more economic assistance than the Philippines. There were others from the distressed producers of copra (dried meat of coconuts used in manufacturing oil and soap). These recalled talks with her.

The young teacher could bring herself close to indignation on the subject of U.S. assistance to Japan. It is difficult for a Filipino to understand * * * recalling the presence of the Japanese and all the suffering and sorrow thereby produced. The need for bases and of economic sufficiency for Japan to save her from turning, of necessity, to the Communists for trade, was not clear to the Filipinos who were themselves in want of so many things.

This little reminder, from the tiny opposition in Manila, makes us see again that world trade likely will be the hottest feature of the cold war. We must particpate. And we aren't doing much planning. The Government soon will reduce some tariffs, but there will be howls from the Congress—echoing hometown business forces. The adjustment will be the more painful if we wait until it is forced. And that is what we seem intent on doing.

House Resolution 366

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FULTON. Mr. Speaker, for the benefit of the House I am calling to the attention of my colleagues House Resolution 366 which I introduced August 27, 1959:

Resolved, That it is the sense of the House of Representatives of the United States that:

(1) The House Office Building, commonly known as the Old House Office Building, be renamed for and dedicated to the Honorable Joseph Gurney Cannon of Illinois, who served as Speaker of the House of Representatives when the building was constructed under authority of the Act of March 3, 1903 (32 Stat. 1083, 1113);

(2) The new House of Representatives Office Building, commonly known as the New House Office Building, be renamed for and dedicated to the Honorable Nicholas Longworth of Ohio, who served as Speaker of the House of Representatives when the building was constructed under authority of the Act of January 10, 1929 (45 Stat. 1071); and

(3) The Additional House Office Building, commonly known as the Third House Office Building, be named for and dedicated to the Honorable SAM RAYBURN of Texas, who is serving as Speaker of the House of Representatives while its construction is in progress under authority of the Additional House Office Building Act of 1955 (69 Stat. 41).

Captive Nations Week

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ADDONIZIO. Mr. Speaker, at the end of the last war calamities and tragedies on a scale unprecedented followed each other in quick succession. Even before the victory of democracries over Axis totalitarianism was assured, Communist totalitarianism had already shown its grasping and greedy hands by occupying and annexing a number of hitherto independent countries in Europe and thus enslaving their inhabitants.

As the result of the Soviet Union's treacherously aggressive policy there are today nine nations which are captives of the Soviet Union, and a part of another nation shares the same fate. These countries, between the Bay of Finland and the Black Sea, include Estonia, Latvia, Lithuania, Poland, East Germany, Czechoslovakia and Hungary, Bulgaria, Albania and Rumania. Peoples in some of these countries have been suffering under Communist totalitarian dictatorships, imposed by the Kremlin and maintained with the aid of the Red Army, for 2 decades. Thus Estonians, Latvians, and Lithuanians have endured the oppressive Communist rule longer than peoples in other countries in eastern Europe. Their countries have been annexed to the Soviet Union, and as far as the Soviet Union is concerned there are no such independent and sovereign entities as Estonia, Latvia and Lithuania.

The other countries, including East Germany, are called—mistakenly—independent and sovereign. In the West these countries are denominated as Soviet Satellite, but actually they may be best described as captive countries, and their inhabitants captive nations. In their foreign and domestic policies, also in their political, economic, educational, and social structure, the governments of these countries and their helpless subjects are compelled to follow the Kremlin line. No deviation from that Communist line is tolerated or permitted, and any infraction on the part of any government is severely punished. Thus, the peoples and governments in the Baltic countries, in East Germany, Poland, Czechoslovakia, Hungary, Albania, Bulgaria, and Rumania are captives of the Kremlin in the real sense of the word. They have been sealed off from the free West by the Iron Curtain deliberately and most effectively imposed by the Kremlin between East and West. The peoples of these countries, the Germans in 1953, the Hungarians and the Poles in 1956, tried to free themselves from the clutches of Communist tyranny, or at least to loosen its grip, but unfortunately by themselves their valiant efforts did not succeed and could not have succeeded against the almost unequalled might of the ruthless Red army.

The people of this country and their Government have always shown utmost sympathy with the lot of these unhappy and unfortunate peoples, the captive nations. Their fate has been, and continues to be, a serious concern of our Government. Then too, these captive nations feel that they have a claim upon us, upon our sympathy and humanitarian feelings. We are fully aware of our sacred moral responsibilities towards these peoples. As proof of that awareness, last year a joint resolution was enacted in Congress for the establishment of a Captive Nations Week, as an annual observance. The Presidential proclamation issued on July 17 designated that the third week of July of each year should be set aside as the Captive Nations Week. In making this sincere move the Congress and the President were not only carrying out the wishes, and the mandate, of the people of this country, but they were also following the firm and fortright policy of this country in championing the cause of freedom and justice. We have always felt and still feel that the cause of the captive nations is a righteous cause and a just cause, one of freedom and humanity. I am indeed glad that the Captive Nations Week was made a national observance week and of course am delighted to join hands with all friends in observing it.

Countering the Communistic Threat

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FASCELL. Mr. Speaker, I would like to take this opportunity to insert into the RECORD an address made by Adm. Arleigh Burke, Chief of Naval Operations, at commencement exercises, North Oklahoma Junior College, Tonkawa, Okla., on May 19, 1960.

Admiral Burke's speech is particularly significant due to recent international developments. He has emphasized the importance of the individual American's role in order for our country to continue to provide world leadership and to effectively counter the threat of communism.

Admiral Burke's speech follows:

ADDRESS BY ADM. ARLEIGH BURKE, U.S. NAVY, CHIEF OF NAVAL OPERATIONS, AT COMMENCEMENT EXERCISES—NORTHERN OKLAHOMA JUNIOR COLLEGE—TONKAWA, OKLA., MAY 19, 1960

Dr. Easterling, distinguished guests, members of the graduating class, it is a particular privilege for me to address these wonderful young men and women and their justly proud parents, relatives, and friends.

We in the Navy have a special kinship with Northern Oklahoma Junior College. Dr. Easterling is an outstanding educator whom we have learned to respect—and admire during his long and close association with the Navy.

This is a memorable occasion for all of us—an unforgettable day for the members of the graduating class. Those who are departing face a far different world than the one which greeted the first graduates of this college, almost 40 years ago.

The whole tempo of the world has been changed by rapid, dynamic technological progress. The pace is faster. The community of nations is now drawn close, by the speed of modern transportation, by tremendously improved communications. This is accented by nearly every development in science and research, by the new and challenging dimensions of the space age.

But even more important than the challenge of this changing environment is an aspect which your predecessors of 40 years ago did not have to face. For today, you enter a world threatened by the ruthless, aggressive expansion of communism, of Communist imperialism.

Regardless of your chosen career, you will be called upon to participate in the struggle between the forces of freedom, and the forces of slavery, and of godlessness. To do that effectively, to fulfill your obligations as citizens, you must fully understand the nature, and the totality of the conflict.

We face this threat not just in the military area, but in every area of endeavor, economic, political, cultural, and social. The free world looks to the United States for leadership in every phase of this struggle.

Leadership, however, is not possible without respect. Such respect for us, as a nation, must be more than admiration for our military power, or our wealth. It must be a respect based on what we do, on how we live up to our national principles, how we adhere to the precepts contained in our Constitution, and the Bill of Rights.

Our task is to show, by example, that we do uphold them. The old adage, "Actions speak louder than words" still holds true, on the international—as well as on the national scene.

We have clearly shown that our economy most efficiently serves the material needs of the individual, that we are a progressive society. But, throughout the fabric of progress, there must also be the strong thread of moral principle.

No country or society ever flourished long without principles, or without the courage to live up to them.

The Communists know this. They know they can be successful, only if they get us to lower our standards, get us to abandon our moral principles. This is one of communism's methods—in its move toward world domination.

They try to distort beliefs and convictions, to eliminate religious faith, to confuse concepts of right and wrong, all to weaken the individual. They do this to make the individual distrustful of others, doubtful of his own abilities, and consumed with fear.

Do this to individuals, and ultimately, you can do it to an entire nation. The nation itself becomes weak and fearful and the weak and fearful are the natural prey of the Communists. The record shows that Communists are contemptuous of the weak, and merciless in dealing with them.

This is the danger we must guard against, in order to maintain our strength, our leadership, our very freedom.

Yet today, prominent men in education and business, in politics and religion, have commented pointedly and intelligently, that our ethical values, our standards, are being endangered. They point to the evidence around us, to scandals, to corruption and

dishonestly, and worse than that, to the acceptance of these evils as a normality, by too many Americans. The picture they paint is not a pretty one, even when we realize that such a picture is neither a complete, nor a true image of American society.

Unprincipled acts are magnified by our interest in the sensational, they make the headlines. But the headlines seldom emphasize the wonderful deeds, the daily acts of devoted teachers and workers, of hard-working civil servants and nurses, and of the millions of other fine solid citizens, who make up our great Nation.

The fact remains, however, that no irresponsible minority of American society can play its part in conveying a bad image to the world, at a time when it is so important for our Nation to convey a good image. Fortunately all of us, you and I, can, and must do something about it.

In their search for the best way to progress, to improvement, the underdeveloped countries of the free world need clear-cut proof that social justice and a high code of ethics, are part and parcel of our way of life. They need this proof, even more than they need practical help, in advancing their technical and scientific skills, more than they need help in developing armed forces for their security.

To these young countries, vigorously searching for direction, we must offer a positive philosophy by individual, and national example. Should we fail to do this, communism will give them its own destructive ideology, one which denies the basic spiritual values we cherish and believe.

We must show that these values are the basis of our free society, the society which has fostered our unparalleled growth. We must maintain and constantly improve our standards of conduct.

It is a demanding task, and an important one. The fate of the free world may well be decided by the ethical leadership we provide.

Fortunately, we have the noble American ideal to guide our way, an ideal founded on trust in God, and motivated by a strong sense of responsibility. This ideal determined our direction in the past. It is this ideal that will draw us into the future. The American ideal is our most powerful weapon.

We hold fast to the principles of our forefathers, freedom, justice, honesty, belief in the dignity of man. They are principles which have grown with our Nation. They must remain the driving force behind our actions, the standard against which those actions are measured.

Such a standard provides the ethical code of American society, the basis for our national conscience. It demands more than mere lip service. It is our job to apply these principles to our actions, continually, and consciously, or run the grave risk of losing both standard, and conscience. Such a loss would spell disaster.

The task of maintaining our standards of ethics, however, is not our only challenge. We face another, on a broad front. It is the challenge of communism's so-called peaceful competitive coexistence.

Remember the word "competitive." It is the key that sets the stage for the contest, a contest between a free society and a slave society. We must outperform the Communists, or pay the price. That price is only too obvious. It is the desperate plight of the enslaved, living almost without hope on the edges of the free world.

The concept of competition is certainly not foreign to us. It is as American as the hot dog. We have been challenged at our own game. They have taken on the Yankees and in their own ballpark.

The courageous men who cleared our wilderness, who developed our industries, and founded our institutions, were all motivated by competition. They asked for no aid in the form of paternalism. They were not seeking security, but they found it through hard work, and unceasing effort, through free competition under law.

We have grown great, cherishing free competitive enterprise. By its strength, we have become a model of economic growth, and our prosperity has been an eloquent argument for our way of life.

Communism, having met determined opposition to its aggressions, is now employing other means, to attain world domination. The Communists have adopted one of the free world's strongest drives, competition.

Every success communism gains in the field of competition, has a tremendous impact on newly independent countries. These countries are desperately seeking rapid growth and propserity. The Communists wish to delude them, to delude them into following the Soviet pattern, without assessing the costs to their own freedom, and to human dignity.

The basic issue is, how well will we respond to this Communist challenge? The answer rests with all of us, particularly with you of the younger generation.

We should welcome this competition. The major advantages are on our side. We base our plans upon the ability, the courage, and the effectiveness, of the freeman. Our high standards of health and living prove the success of this concept.

The Communists boast of their system being progressive. Perhaps it is, but the American system is far more progressive. It is more progressive both in principle, and in practice.

We have 200 years of successful experience in competition. The Communists are just beginning, and beginning in an environment hardly conducive to lasting success.

Our competitive spirit remains vigorous, bursting with fresh ideas, challenging the talents and aspirations of America's youth.

But now to answer the threat of world communism, we must exploit our advantages to the utmost. Traditional American alertness must prevail over complacency, a spirit of adventure over the desire for security, service over selfishness.

To win this contest, we need far better than average performances. Contests are not won by average scientists, average managers, or average workers. The need for excellence, and the highest standards of performance is greater than ever before.

The pursuit of excellence, however, is never easy. The very fruits of our labor, our progress, often make it more difficult. The wonderful material benefits that spring from these advancements, often reduce, the very incentives that inspire us to excel.

Emphasis on group achievement, so helpful to the growth of our great industries, has reduced the recognition for superior individual performance. In some areas the respect for high standards of workmanship is obscured, there is less distinction between the mediocre and the excellent. However desirable, high wages, when awarded equally to the skilled and unskilled, hide the value of the superior over the inferior, the direct connection between effort and reward.

But the connection is there. It must be recognized. It is there in material benefits, it is there in the satisfaction of a job well done. Superior performance always provides significant incentives, if we retain significant goals.

American manufacturers now face increased competition from the growing industrial strength of the free world, as well as from communism. It is a competition that some firms are facing with vigor, and with success. To the management and labor of these firms, ingenuity, invention, and innovation are watchwords. They are not complacent, the cannot afford to be. They are too busy to indulge in self-pity. Theirs is an example which others must follow.

Our forefathers stressed the virtue, and the importance of hard work. It is still a virtue. It is needed now more than ever. So is increased efficiency. So are imagination and initiative.

Comfortable prosperity is fine, as a Nation we have worked for it, and achieved it. But our efforts will have been in vain should we permit the individual initiative which was responsible for that prosperity to be dulled by self-satisfaction or by complacency.

Nations, too, can squander their inheritance. Should we become complacent now, we can lose the very prosperity for which our forefathers worked so long, and hard, and courageously.

We have come a long way. American workers now turn out three times as much in a 40-hour week as their grandfathers did in 70 hours.

But we still have a long way to go. For management and labor, greater rewards stimulate growth, even the Communists recognize this. But, to deserve these rewards, each must contribute more. We must all perform to the limit.

As we move into the future, our emphasize must be on quality, as well as quantity. It is the old story. We must "build better mousetraps" and we can. But it takes work and sacrifice and craftsmanship. It takes this and more, it takes skills.

To compete successfully, we must have those skills. The need is growing. Your fine college has already recognized this requirement. It has developed an active program of vocational training, as well as the normal college courses.

Developing skills, and enlarging human knowledge, are basic sources of growth as a man and as a Nation. Many of you will continue your formal educations. Some of you will move out into the world. Whether you leave college life now, or later, you cannot allow your educations to stop when you depart. Education is a vital process that must continue all your lives.

Education and the willingness to be educated will be vital to our Nation's future. America needs the wisdom of educated men, and the depth of understanding that comes from continued study. They are needed to defeat the tactics employed by the Communists. Our progress will demand judgment, and critical evaluation, to keep us on course, to avoid the reefs.

But we must exercise caution lest we become hypercritical. If we speak only of failures, others will soon be convinced that failure is all we achieve, and will lose confidence in our ability.

Our accomplishments have been tremendous. Working in freedom, guided by a sense of moral responsibility and social justice, we have developed the strongest, most prosperous Nation in the history of the world.

We have good reason to be proud and optimistic. Our optimism is warranted, but complacency, complacency in any form is not.

Today we are being challenged to our utmost, by the gnawing threat of imperialistic communism. It is a life and death struggle for survival. We must anticipate a protracted struggle, anticipate it and work hard.

This task cannot be left to others. It cannot be left solely to the Government, to any superior authority. This may appear to be the easy way, it does avoid personal responsibility and duty, at least temporarily, but it will never provide the solution.

Insistence on the highest moral standards and on the highest standards of performance must be supplied by each of us as citizens.

Experts in various areas can advance specific courses of action. But it will be up to the young and eneregtic men and women of America, you in this graduating class, to

develop them, to make them work, to carry them out.

Your responsibilities are great ones, because of your higher education, and because of your role as the leaders of the future. Seize these responsibilities eagerly, carry them out with enthusiasm, with true patriotism and with integrity. Do this and our cause, the cause of freedom, the cause of all mankind, will be won.

Milada Horakova

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. DOUGLAS. Mr. President, those who fight for freedom and against tyranny are not to be found solely among the soldiers and statesmen whose courage and sacrifice receive the greatest attention.

The contribution of women to the cause of liberty is no less important for being so often overlooked.

An outstanding example of the noble women who have given their lives for freedom's sake is Dr. Milada Horakova of Czechoslovakia, the 10th anniversary of whose execution on July 27, 1950, by the Communists was memorialized earlier this week at the All Souls Unitarian Church here in Washington.

I am very glad that the Czechoslovak National Council, the Council of Free Czechoslovakia and related groups have thus acted to keep alive the memory of one whose valiant and determined resistance both to nazism and communism is a continuing inspiration to free men and free women everywhere.

In further recognition of that anniversary, I ask unanimous consent to have printed in the Appendix of the RECORD a brief biographical sketch outlining the principal events in Dr. Horakova's life, together with a testimonial chapter on "Milada Horakova" by Betka Papanek, taken from the memorial booklet recently published by the Council of Free Czechoslovakia.

There being no objection, the biographical sketch and article were ordered to be printed in the RECORD, as follows:

WHO IS DR. MILADA HORAKOVA?

(A biographical sketch)

Who is Dr. Milada Horakova? A noble and courageous Czechoslovak woman, wife and mother, parliamentary deputy and chairman of the Czechoslovak Women's Council, whom the Red regime of Czechoslovakia executed 10 years ago and to whom Czechoslovak exiles in the free world now pay tribute.

Dr. Milada Horakova was born on December 25, 1901, in Prague, Czechoslovakia. She studied law at the Charles University in Prague, and took her doctor of laws in 1926. Before graduating she started to work with Senator Frantiska Plaminkova, the leader of the equal rights movement and president of the Czechoslovak National Women's Council (who was executed by Nazi gestapo on June 27, 1942). She married in 1927. Soon thereafter she started work in the social welfare department at Prague City Hall, where for years her chief was Dr. Peter Zenkl, then mayor of Prague, later Vice Prime Minister of Czechoslovakia and now chairman of the executive committee of Council of Free Czechoslovakia and Mrs. Ruzena Pelantova, director of the welfare department, for whom she headed the legal section. She took a direct and indirect part in the statutory regulations of matters appertaining to education, the training of young people, the betterment of family life and the improvement of the position of women.

In August 1940, during the Nazi occupation, she and her husband were arrested. She was subjected to torture during gestapo interrogrations, and the Nazi Superior Court in Dresden in October 1944 sentenced her to 8 years imprisonment (the prosecutor having demanded that she be sentenced to death). She was in prison at Aichach in Bavaria in May 1945 when the American Army liberated the region.

After her return from Nazi gaols to her reunited family in Prague, she once more took up the pursuit of social welfare questions and held a leading position in the national and international women's movement. She was chairman of the Czechoslovak Women's Council and a member of the International Federation of Democratic Women, vice president of the Union of Former Political Prisoners, where she valiantly fought against the Communist infiltration and terror. She enter also national politics as a member of the Czechoslovak National Socialist Party, founded on the principles of President Thomas Garrigue Masaryk and led by Eduard Benes, was elected to the Provisional National Assembly and then to the Constitutional Assembly.

In the frenzied days of February overthrow 1948, she fearlessly maintained contact between democratic political leaders then already under Communist guard in their homes, but still struggling to avert the Red avalanche led by delegates from Moscow, among them Valerian Zorin, and backed by the Red Army maneuvering across Czechoslovak borders. She refused every approach of Communists in the attempt to win her over their side before "the inevitable victory of the revolution," resigned all public offices, and went underground again in the struggle to regain national liberty.

Then she was arrested on September 27, 1949, and after 9 months in prison without contact with counsel or the outside world she was brought, with 12 others, before a People's Court of one judge and two Communist Party henchmen, was sentenced to death on June 8, 1950; she was executed on the gallows in Pancrac prison on June 27, 1950, along with three others of the group, Dr. Oldrich Pecl (an advocate and national economist), Jan Buchal (former member of the Corps of National Security), and Zavis Kalandra (former lecturer at Charles University and member of the Communist Party until 1936).

Throughout the trial Dr. Horakova's character shone through that gloomy courtroom as a beacon of courage and indestructible patriotism. Her last words before the sentence rang across the nation like a challenge to dauntless resistance.

MILADA HORAKOVA

(By Betka Papanek)

I had known of Dr. Milada Horakova's long association with Senator Frantiska Plaminkova in the National Council of Women of Czechoslovakia. As a lawyer and as executive secretary she was extremely useful to the Council's president, Senator Plaminkova, when legislation under consideration in Parliament concerned women or the family in any way—education, family relationship under law, women in the labor fields, working conditions, hours, minimum wages, child labor, etc. They were both concerned that the laws were enforced.

I had known that she and her husband had been arrested in August 1940 by the Nazis for helping persons wanted by the Gestapo, aiding families of Nazi victims—for helping her fellowman. I had heard of the long and numerous interrogations, the mental and physical tortures she endured in jails, solitary confinement, and concentration camp. Her trial in Dresden in which the prosecutor advocated the death sentence and the people's judges sentence of 8 years in Aichach near Munich was described to me in a way that aroused my admiration and respect to a degree reserved for someone truly great.

It was difficult to imagine what scars 5 years of uncertainty, anxiety, mistreatment, physical deprivation and hard labor would leave on a body and soul. When I first met Milada Horakova in September 1945, I saw a lovely woman who greeted me smilingly with a warmth and friendliness that charmed me. Her dedication to her work was revealed as she spoke of her efforts on behalf of the political prisoners who had survived the years in Nazi concentration camps and the families of those who had died there. Her all-absorbing concern and sense of duty to serve these victims of injustice, cruelty and oppression left no room for bitterness or hate. She knew of the work of my husband for the cause of Czechoslovakia and the Red Cross and spoke admiringly of our teamwork.

We talked of reestablishing ties with women in the international organizations, particularly the International Council of Women. She had rallied the surviving leaders of the National Council of Women of Czechoslovakia to reactivate the organization dissolved by Nazi decree, as she had promised to do when Senator Plaminkova was executed. She was elected its president. I gladly acceded to her request to speak at the next meeting of the Council's Executive Committee on the work of the women of the United States during the war. It was evident that Dr. Horakova had Communist influence to contend with even then, but was doing everything possible to strengthen the democratic forces. She was instrumental in arranging to have me address the university students on the role of the United States in the war, perhaps to make up for the lack of enthusiasm I met with in the Council. The university students packed the hall until there was no more room for standees and I have rarely had a more interested and enthusiastic audience.

I promised Dr. Horakova that on my return to New York in December, I would contact Dr. Lena Madesin Phillips of the International Federation of Business and Professional Women to discuss the possibility of arranging for a sale of Czechoslovak women's handicrafts—embroideries, laces, toys, etc., similar to that arranged for the Council in 1938 after Munich. In April 1946, Dr. Horakova wrote to tell me that Dr. Phillips had initiated a project in Federation clubs to collect and send packages of clothing for the needy victims of persecution. She was happy to announce that the Czechoslovak Federation was organized again and that international contacts were growing and being renewed very rapidly. She mentioned attending the World Congress in Paris and becoming members of the Women's International Democratic Federation and at the same time fostering equally cordial contacts with our former international coworkers. Mme. Maeaterre-Sellier, the vice president of the International Alliance for Women's Suffrage had just been to Prague to discuss the possibility of holding its first postwar congress there. Close cooperation had already been reestablished with the International Council of Women. She requested any and all information about American women, especially about their political influence and positions. She ended the letter

saying, "We here are completely occupied with our election campaign and we believe that the election will assure democracy and freedom," with a personal message.

Much as she wanted to come to Philadelphia to the Conference of the International Council of Women in August 1947, she wrote to me: "Unfortunately the Women's International Democratic Federation is meeting in Sweden at the same time and it is not very possible that I be absent there." Her role in the WIDF was to try to rally the women who believed in democracy and freedom to resist the Communist control of it. The struggle was unequal in this international organization, since its leaders were Communist directed. In Czechoslovakia, too, the Communist infiltrators were becoming bolder, even though there were clear indications that the Communist Party would lose strength in the elections scheduled for May 1948.

The Communist coup d'etat in February 1948 dashed hopes for democratic elections to deal with subversive Communist efforts. Milada Horakova resigned her seat in Parliament the day after the coup. She was prevented from calling a meeting of the National Council of Women of Czechoslovakia to protest the Communist seizure of the government. She was locked out of council headquarters and ousted from all organizations to which she belonged. She lost her means of livelihood. She knew she was watched and marked for persecution. She was arrested in September 1949, accused only of being unfriendly to the U.S.S.R. and friendly to the western democracies. On June 8, 1950, Milada Horakova was sentenced to death with 3 men, while 9 other men and women received life or long-term prison sentences.

On June 9, 1950, Mrs. Ruzena Pelantova, Dr. Jan Papanek, and I began to campaign to try to save her life. More than a hundred letters were sent over the signature of Dr. Papanek, the former Ambassador and Permanent Delegate of Czechoslovakia to the United Nations, the presidents and past presidents of international organizations, asking that they and their organizations intervene to try to save the life of Milada Horakova, whose only guilt lay in unfailing loyalty to the democratic ideals, freedom and justice. These letters were sent to the International Council of Women, International Federation of Business and Professional Women, International Federation of University Women, International Federation of Friends of Young Women, International League for the Rights of Man, International Union of Catholic Women's Leagues, Liaison Committee of Women's International Organizations, World Y.W.C.A. Letters went to members of the United Nations Commission on the Status of Women, women members of delegations to the U.N. and many others. Personal appeals were also made to the Secretary General of the U.N. Trygve Lie, Mrs. F. D. Roosevelt, then chairman of the Human Rights Commission and others. The letters suggested that protests be addressed to U. N. officials, delegations, Commissions on Human Rights and Status of Women, Klement Gottwald, Premier Joseph Stalin, and the International Society of Red Crosses. These efforts were in vain. She was executed on June 27, 1950, firm in her belief that she had lived and worked for what was right and was content to die for it.

One of many memorial meetings was held at the Julia Richman High School in New York on October 20, 1950. The huge crowd of individuals and representatives of international, American and Czechoslovak organizations was a testimonial to the admiration and regard for Milada Horakova and the sorrowful protest of her execution. The speeches of those participating in the program of this unforgettable event also reflected these sentiments, Malcolm Davis, Mrs. Franklin D. Roosevelt, De Witt Poole, Dr. Petr Zenkl, Andrew Valusek, David Martin and I. Thelma Votipka of the Metropolitan Opera sang.

There were many other meetings in memoriam. There were resolutions passed by international women's organization deploring the fact "that our 20th century civilization permits such acts," renewing "allegiance to the causes she espoussd with energy and deep conviction," calling upon their entire membership to increase its strength and influence to become a living force to prevent repetitions in the future.

The inspiration of Milada Horakova's life after her death continues, year after year.

On the occasion of the 10th anniversary of her tragic loss the members of the National Council of Women of Free Czechoslovakia gratefully remember her long sustained and courageous service to women and the victims of oppression in Czechoslovakia and solemnly pledge our faithfulness to the ideals she held high as she lived and died.

Time Has Come for United States To Take Positive Action To Put Halter on Castro

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ROGERS of Florida. Mr. Speaker, Editor Jack Gore, in the Fort Lauderdale News of Fort Lauderdale, Fla., asks "How long is the United States going to sit calmly by while Prime Minister Fidel Castro continues to convert the nearby island of Cuba into a communistic state and a bastion for the Reds to stir up anti-American sentiment throughout the length and breadth of this hemisphere?" This is a question many of us here in Congress have been asking, and one we expect the State Department to answer soon, by action.

Because Mr. Gore's editorial will be of interest to all Members, I have asked that it be printed at this point in the RECORD.

[From the Fort Lauderdale News, June 30, 1960]

TIME HAS COME FOR UNITED STATES TO TAKE POSITIVE ACTION TO PUT HALTER ON CASTRO

(By Jack W. Gore)

How long is the United States going to sit calmly by while Prime Minister Fidel Castro continues to convert the nearby island of Cuba into a communistic state and a bastion for the Reds to stir up anti-American sentiment throughout the length and breadth of this hemisphere?

As has been noted quite frequently here of late there is no longer much doubt about Castro's motives in Cuba. He has clearly and conclusively demonstrated his close ties with the Communists, and his hatred for this country and all that it stands for has now become so intense that the man becomes virtually a raving maniac every time he makes a public address.

In recent weeks Cuba has become increasingly unsafe for American visitors and American businessmen who have financial investments on the island. Many American-owned properties have already been confiscated in Cuba, and yesterday Castro threatened to seize them all "penny by penny until nothing is left" if the United States cuts its purchases of Cuban sugar.

Up to now our official policy in regard to what is happening in Cuba has been one of extreme patience combined with a somewhat forlorn hope that Castro will be taken care of by him own countrymen.

But, as Congressman PAUL ROGERS pointed out on the floor of the House the other day, the situation in regard to Cuba has now reached the point where more positive action by this Nation is called for to meet the threat posed by Castro and his Communist pals.

The Florida Congressman said that the Communist pattern of takeover in Cuba is marked and unmistakable. The promised free elections have not materialized; schools have become vehicles for the dissemination of Communist propaganda; the press and radio have ceased to exist as free entities, and anyone who dares to criticize or oppose the activities of the government is promptly branded as a "counterrevolutionary" and imprisoned or executed after a "circus" atmosphere trial which makes a mockery of justice.

"It is all too apparent," Representative ROGERS declared, "that the so-called political revolution is, in truth, an anti-Democratic revolution aimed at establishing a Communist stronghold in the Western Hemisphere a scant 90 miles from our coast.

"The rapid spread of Communist activity in Cuba, Representative ROGERS continued, "has grown to such proportions that it has transcended the realm of Cuban-American relations and now threatens the collective security of the entire hemisphere."

Representative ROGERS then proposed that Secretary of State Christian Herter take immediate cognizance of this threat to our hemisphere by requesting a meeting or consultation of the Ministers of Foreign Affairs of American States in accordance with the charter of the Organization of American States for the avowed purpose of considering collective action necessary for defense against the aggressive activities of international communism.

Representative ROGERS declared there was ample precedence for such a meeting and that any further delay in bringing the Cuban situation before the OAS would strongly jeopardize our position as the leader of the free world. The smaller nations throughout the hemisphere have been patiently waiting for us to initiate positive action to thwart the Communist conspiracy in Cuba and to maintain our position as a leader we must take the lead, ROGERS said, rather than continuing to sit back and wait for another nation to take the initiative.

We heartily concur with Representative ROGERS' viewpoint. It is ridiculous for us to continue spending billions of dollars a year fighting the spread of communism in nations thousands of miles removed from our shores while we blind our eyes to the emergence of an even more serious Communist conspiracy right in our own backyard.

Granting the point that the United States has no grounds, as yet, for intervening in the domestic affairs of another nation, we do have a multitude of grounds to justify the convening of a meeting of the OAS to consider collective action by the members of this hemispheric organization to combat Communist objectives in Cuba.

It is foolish and it is dangerous for our State Department to go on doing nothing about Fidel Castro under the expectation that he will be taken care of in due time by his own people. That could happen, but it isn't likely under the iron-fisted Communist-directed dictatorship that Castro has inflicted on his countrymen today, and every additional day that Castro goes unchallenged gives him that much more time to consolidate his position.

The time for laughing about Castro's antics is over. He is the ready and willing

tool through which the international Communist conspiracy hopes to make vast inroads into the Western Hemisphere and the sooner our State Department recognizes the man for what he is and initiates positive action to meet the threat he poses to our own security, the sooner will all the freedom-loving people of this hemisphere breathe a little easier.

A Declaration of Principles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. MULTER. Mr. Speaker, it was my privilege, on June 4, 1960, to address the 51st annual convention of Bnai Zion, held at Kutschers Country Club, Monticello, N.Y.

Bnai Zion is a national fraternal organization which has grown in stature through the years until today it is recognized as the outstanding organization of its kind in this country, with a membership that reaches from one end of the country to the other.

During the course of its deliberations the convention adopted the following declaration of principles which I believe deserve the widest publicity. The text of the declaration follows:

DECLARATION OF PRINCIPLES OF B'NAI ZION

Dedicated to the ideals of Americanism, zionism, and fraternalism, B'nai Zion in the more than five decades of its existence has adhered steadfastly to the principles laid down by its founders.

We take pride in our loyalty to the United States of America and our dedication to the belief that its ideals of social justice and equality of opportunity for all are the basic and abiding principles essential to a free and democratic world.

In the firm conviction that zionism is consistent with these American ideals and that the Zionist belief in a Jewish homeland as the unifying force of the Jewish people is indispensable to the continued survival of our people, we reaffirm our support of and affiliation with the World Zionist movement and pledge ourselves to continued activity in:

1. Furtherance of mutual understanding and ties of friendship between the United States and Israel.
2. Strengthening of the bonds of fellowship between the Jews of our own country and our brethren in Israel and other lands.
3. Economic aid to the people of Israel.
4. Aid to immigration and absorption of refugees into the State of Israel.
5. Furtherance of Hebrew culture, education, and language, and Jewish traditions in the United States.

We proclaim our position as a nonpolitical body, neither affiliated nor identified with any political grouping in our own country, Israel, or elsewhere. We welcome into our ranks members of all shades of opinion united under the banner of Americanism and zionism.

We strongly believe in the importance of fraternalism in American Jewish life and will continue our efforts toward the advancement of the physical and social welfare of the individuals and families that constitute our membership.

New York Port Authority

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. LINDSAY. Mr. Speaker, when the officials of the New York Port Authority did not produce all the internal memoranda, worksheets and day-to-day correspondence of the Authority as requested by the subpena of Subcommittee No. 5 of the Judiciary Committee, they were acting under instructions from the Governors of New York and New Jersey.

Governors Rockefeller of New York and Meyner of New Jersey, who had previously requested an adjournment of the return date of the subpena in order to present to the committee their views on some questions of Constitutional propriety, directed the officials to refuse to produce the materials if the initial request was denied.

Under unanimous consent I include in the RECORD a copy of Gov. Nelson A. Rockefeller's letter of instructions to the Honorable S. Sloan Colt, chairman, Port of New York Authority. Gov. Robert B. Meyner sent an identical letter to the Honorable James C. Kellogg, III, vice chairman, Port of New York Authority:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, June 25, 1960.

Hon. S. SLOAN COLT,
Chairman, Port of New York Authority,
New York, N.Y.

DEAR MR. COLT: On June 23, 1960, as you know, Governor Meyner and I sent telegrams to the members of the House Judiciary Committee requesting the opportunity to meet with the Judiciary Committee at a mutually convenient date to present for the committee's consideration our position on the grave questions of constitutional propriety arising from the subpena served upon you, as chairman, Austin J. Tobin, the executive director, and Joseph G. Carty, the secretary of the Port of New York Authority. We requested an adjournment of the subpena to permit such a presentation to the committee. We took this action because of our deep concern for the basic principles of our American form of government which reserves to the States all powers not delegated to the Federal Government.

We have sought by these means to resolve the important constitutional issues involved in a cooperative manner. The subpena at issue appeared to us and our legal advisers to constitute a novel intrusion by the Federal Government into areas reserved by the Constitution to our respective States and to constitute a precedent which could subject various agencies of State government throughout the Nation to be similarly answerable to Federal authority. As the responsible chief executives of our States, we could not allow such action involving a State agency to proceed without our having an opportunity to present our objections.

The chairman of the Judiciary Committee has refused our request for a meeting and has refused to adjourn the date for the return of the subpena to permit us to present our objections. Accordingly, in order to insure that these basic issues may be presented and decided in an orderly way and with full opportunity for the States to present their views on these crucial questions, I am instructing the New York members of the Port of New York Authority to direct you, Mr. Tobin and Mr. Carty, when you appear before the subcommittee on June 29, to renew our request for an adjournment of the return date of the subpena to permit the Governors of the respective States to present their States' views to the committee. Failing the grant of this request, due regard for the important questions of constitutional propriety and legality presented and the necessity to have these questions determined by the appropriate tribunal, constrains me to instruct the New York members of the Port of New York Authority to direct you, Mr. Tobin and Mr. Carty not to produce the internal memoranda, worksheets, day-to-day correspondence and other materials now requested by the subpena.

As we understand it, you have already produced the minutes of the board and committees, the reports of the agency to the Governors and legislatures, and a great volume of other documents delineating the scope of the agency's activities. Of course, similar board and committee minutes and agency reports may be supplied for any period now requested.

The furnishing of the internal records now requested, in the opinion of my legal advisers, would represent a serious infringement on the rights of the State under the Constitution and could constitute a dangerous precedent as recognition of Federal authority in an area of State responsibility.

My only purpose is to insure that these basic questions of constitutional propriety and legality will be fully considered and determined by the appropriate tribunal.

I regret any inconvenience this may cause you personally, but I know you share with me the desire to have these basic issues decided with due regard for the substantial matters of State concern which are involved.

Sincerely,

N. A. ROCKEFELLER.

House Joint Resolution 649

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. MACK. Mr. Speaker, I certainly could not take issue with the purpose of this bill. It undoubtedly would have some effect in advancing health sciences here and abroad through cooperative endeavors with other countries.

As in the past I still strongly favor health research and research training.

I have introduced amendments on this subject and plan to introduce another bill next year. I did, however, have some reservations about $50 million or even $5 million to establish a new International Health Agency.

I want to give all the aid and assistance to our scientists that is possible. I want to find the answer to the deadly killers, such as cancer, but I am not thoroughly convinced that this can be accomplished by appropriating $50 million for this International Agency.

During the consideration of this bill I suggested the use of counterpart funds to carry out this program and I am pleased that the sponsors of the bill have conducted an investigation and found that these funds can be utilized.

Mr. Speaker, under these circumstances I strongly support this bill and hope that it receives the support of the majority of the Members of the House.

Why in the World Is It That There Are No [Labeling] Standards on Shoes?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, on June 23 a subcommittee of the other body held a hearing to consider a bill proposing the establishment of a Department of Consumers. During the course of the hearing before the Subcommittee on Reorganization and International Organization Senator HUBERT HUMPHREY and Federal Trade Commision Chairman Earl W. Kintner discussed the labeling of shoes.

In the course of the colloquy Chairman Kintner was asked by Senator HUMPHREY, "Why in the world is it that there are no standards on shoes?"

The ensuing discussion, made at this public hearing, points up, I believe, the need for full hearings, as promised for next year by the subcommittee chairman, on the shoe labeling legislation I have introduced—H.R. 1320.

Under leave to extend my remarks in the RECORD, I include a portion of the colloquy between Senator HUMPHREY and Chairman Kintner:

FROM THE COLLOQUY OF EARL W. KINTNER, CHAIRMAN, FEDERAL TRADE COMMISSION, WITH SENATOR HUBERT HUMPHREY, FOLLOWING THE STATEMENT OF CHAIRMAN KINTNER

Senator HUMPHREY. I surely feel that there has been a decided step-up in activity along the lines that you have indicated.

My response to you is one of appreciation for what you do. It is a lot of hard work. It is a tremendous economy to attempt to have an overall surveillance, and we surely do not want Government in every aspect of our economic life.

We have to work with the private, the voluntary, the citizen groups seeking law observance, as well as applying law enforcement. I know that has been your philosophy.

I have been interested in one other matter. This is way off on the side.

I was talking to my shoe repair man the other day. Why in the world is it that there are no standards on shoes?

Mr. KINTNER. You mean labeling standards?

Senator HUMPHREY. Labeling standards. Isn't there some way that you can prevent people selling shoes for $15 made out of cardboard?

Mr. KINTNER. We have an investigation underway to determine what abuses, if any, exist there.

Senator HUMPHREY. I can send you to a shoe repair man that showed me six pairs of shoes, gave me the prices of these shoes, the closest he could identify them, and pointed out to me just exactly what kind of material was being used, and nothing but paper in some of the most high-priced shoes.

He said, "This is just outright unbelievable misuse of the word 'leather.'"

For example, they would have a leather piece in the shoe, and on that piece they would have the word "leather," and the rest of the shoe would be made out of paper or plastic.

Of course, the plastic is quite observable, you can see what you have. But you can take paper and make it look very much like leather. You would have a little piece in the instep, for example, of the shoe which wouldn't be any bigger than, let's say, an inch long, or an inch wide, and that would be the total amount of leather. The rest of it would be cardboard.

Mr. KINTNER. We have an inquiry going on in that area, and I understand there is pending legislation for shoe labeling.

Senator HUMPHREY. Yes.

Mr. KINTNER. I would imagine that eventually these facts will be brought out in connection with that legislation.

Senator HUMPHREY. I wish they had done it before my wife and daughter bought so many of those cardboard shoes.

Mr. KINTNER. I think they would rather have something that looks a little better, with plastic and other froufrous on it, than solid leather.

Senator HUMPHREY. The thing that gets me is:

You go to a good, plain responsible, hard-working man like the man out on McKinley Street who repairs my shoes, and he tells me all about this. I can't understand why it is such a secret from Government. He is a very honest man who works long hours, knows what is going on, repairs these shoes, open them up and shows me nothing but paper.

I remember when I was a kid we used to get a hole in our shoes once in a while and we would wad up some paper, but I never thought they would make a business out of it.

Mr. KINTNER. It raises a very difficult problem.

Senator HUMPHREY. Is there any authority that you have over that?

Mr. KINTNER. We have authorities where deception of consumers of the public can be indicated by the practice.

Senator HUMPHREY. Maybe you ought to look into it.

Mr. KINTNER. We are. We have an investigation.

Senator HUMPHREY. A good shoemaker who really puts out a leather product gets a raw deal if you can have a substitute product where the word "leather" appears on a very small item on the shoe and indicates to the unsuspecting consumer that this may be a leather product.

Mr. KINTNER. You have just made a very important point there, because the thrust of our law not only is a protection of the public generally, but the protection of the honest businessman.

Senator HUMPHREY. Exactly.

Well, I got my shoestore fixed up. You see, I have to have these occasions to remind myself that there are some of these things that I haven't taken care of. I promised my shoemaker that I would do something about this, and I hadn't gotten around to it.

Mr. KINTNER. You take care of these points very effectively, if I may say so.

Our Hazardous Maritime Gap

EXTENSION OF REMARKS
OF
HON. THOMAS N. DOWNING
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. DOWNING. Mr. Speaker, recently the Department of Defense issued a regulation which will become effective on September 1 of this year, in which it states that no military personnel will be transferred by ship. If this regulation is put into effect, not only will it deprive our merchant marine of these needed revenues, but it would tend to indicate that the U.S. Government is again neglecting to protect the well being of our American merchant marine.

Our merchant marine has always been considered the fourth arm of our national defense and every effort should be made to keep it strong and ready. Recently, Mr. W. F. Carey, president of the National Defense Transportation Association, in a statement published in the May issue of the Merchant Marine Bulletin, warned that preoccupation with missiles to the exclusion of merchant ships, is a maginot line delusion in a new form. I believe my colleagues would be interested in this timely statement and under unanimous consent I include it in the Appendix of the RECORD, as follows:

OUR HAZARDOUS MARITIME GAP

(Statement by Walter F. Carey, president, National Defense Transportation Association and president, Dealers Transit, Inc.)

Our ocean sealanes are essential links in America's national defense transportation picture.

Ships, like automobiles, trains, trucks, buses, and planes, are vital to our national security. Today, as never before, the story of this linking chain of service must be told to the great American public. We want no Maginot Line thinking here; yet, in my mind, the Nation is on the verge of accepting such a philosophy. Missiles are extremely important, but that aspect of public attitude known as "missile thinking" is fraught with danger.

Without an active, privately owned American merchant marine, a future war would have to be fought out largely on our own shores. I am not speaking of the first phase, the missile phase (if there is to be one). I am thinking of the followup or the limited war. Without ships, any such operation cannot successfully be conducted overseas. This is the crucial fact that is too often forgotten these days. We hear talk of our missile gap. An equally real problem in our maritime gap.

Today's American merchant marine is carrying about 10 percent of our export and import trade. This means that 9 out of 10 ships serving our commerce are foreign vessels. If we learned anything in the last two great wars and in the Korean war, we learned that America cannot rely upon foreign merchant ships to transport our supplies and materiel of war. This is the lesson that must be brought back into focus.

The National Defense Transportation Association is dedicated to the proposition

that all links in our transport chain must be strong and the chain complete. The finest roads or railroads in the world end at our shoreline. The finest automotive industry in the world is useless unless the tanks and war vehicles it can produce in an emergency can be transported to a possible overseas war front. Let's not have our missing link. Let's not have a maritime gap.

"Yankee, Go Home," From Cuba

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Donald I. Rogers as it appeared in the New York Herald Tribune of June 12, 1960:

"YANKEE, GO HOME," FROM CUBA
(By Donald I. Rogers)

Some measure of the gravity of the world situation may be adjudged from the fact that not one columnist, editorial writer, or humorist found anything amusing in the fact that unshaven Fidel Castro made one of his major political speeches the other day before the assembled members of the Barbers' Union and this, it seems certain, indicates that the American temper has changed somewhat toward this man who dislikes us so bitterly.

Perhaps the time has come, then, when the American people can view forthrightly the problem presented by this man who now hides behind our hemispheric agreements and the Monroe Doctrine itself to welcome into his bosom Nikita Khrushchev, who less than a month ago berated our President in such schoolboyish terms as to set world diplomacy back a thousand years.

There is only one way to deal with Castro, and that is through straightforward economic pressure.

It is not nice to say "I told you so," but this correspondent, after lengthy research in Cuba, wrote a column warning of Castro's intentions long before the revolution, when the bewhiskered bolshevik was burning sugarcane fields back in Oriente Province. While most newspaper reporters were hailing the potential liberator (including one who acquired a coveted prize for his work), only one other paper, to my knowledge, found anything alarming in Castro's conduct. That was the New Bedford (Mass.) Standard-Times, whose executive editor, Charles Lewin, wrote some pointed editorials warning of Castro's philosophies.

HOW TO HIT BACK

If Americans are now alarmed enough about Castro, perhaps they will be willing to consider some voluntary retributions against the Cubans.

First, and most important, let's discourage tourism. If the Yankee dollar is as repugnant to Cubans as Castro says it is, let's spend it in friendly Puerto Rico or the neighborly Virgin Islands, or Nassau, or Bimini, or a dozen other Carribbean islands, if we must go to islands—or simply in easily accessible Florida, if we need tropical inspiration.

If Cubans think their independence can come only at the expense of ours, we should be able to control our urge to pour money into their cause through tourism. There are other places to visit.

Second, let's serve notice, through our State Department, that any nonsense about seizure of American-owned properties in Cuba will bring instantaneous retaliation. We can expect the same treatment in the United Nations that Russia received after the Hungarian incident, a vote of censure.

Third, let's tell Castro that, if there's any repetition of the childish little gesture of firing at an American submarine—or at any American vessel—the U.S. Marines will arrive next day.

SUGAR CUTS URGED

Fourth, since President Eisenhower possesses standby authority to change the sugar quotas affecting Cuba, let him invoke immediate economic reprisals against the Cuban Government. Let's, for example, cut the Cuban quota right in half; then let's remove the premium price we pay Cuba for its sugar and inform the Cubans we will buy it in the open market, at current market prices.

In doing so we would be complying with Castro's wishes. Not long ago the dictator denounced the United States for paying Cubans as a gift about $150 million a year in the form of a subsidy overpayment on their sugar. Looking the gift horse right in its sugar-decayed molars, Castro said the subsidy was enslaving.

The United States buys more than 3 million tons of sugar annually from Cuba at a premium price of 5 cents a pound, which is just about double the price Cuba gets for sugar in other free world markets.

Castro writhed in ecstasy when he announced that his great friend Khrushchev had agreed to buy Cuban sugar at the going world price. Why can't we be just as friendly? Our sugar bill would be cut in half. Moreover, some of our own sugar farmers could put back into production some of their own land which is now being subsidized or remaining dormant.

FOR VACATION AID

Castro announced last week that it is his intention to create more jobs in Cuba by giving everyone longer vacations, an idea that even Huey Long never conceived. If Cubans are naive enough to subscribe to this distorted economic reasoning, then let's help them in their search for idleness.

Let's pay them less for their sugar; let's give them no more than other nations do. Let's not patronize their wining and dining and gambling casinos. Let's not even go there at all. Then they can really vacation, and in some idle moment perhaps enough of them will grasp the verities of life and economics to a point where Castro will find less support.

Delayed Medical Aid

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an editorial appearing in the Washington Post on Thursday June 30, 1960, entitled "Delayed Medical Aid":

DELAYED MEDICAL AID

The decision of the Senate Finance Committee to hold hearings at this 11th hour of the congressional session on medical insurance for the aged can hardly be construed as other than a delaying tactic. It will serve in all probability to prevent Senate action on the bill passed by the House and the amendment to it offered by Senator McNAMARA and 23 other Senators—at least before the recess. And this may suit the political meneuvering of those who want to trade support of the measure for convention votes next month. But it will hardly promote the interest of the aged.

The provision of medical insurance for retired Americans, either as a new feature of the Social Security system or, as the administration prefers, by direct appropriations in the annual budget, will be an important innovation in American life which deserves careful consideration by Congress. It has had such consideration. The proposals before the Finance Committee have not been hastily drafted on the spur of the moment. For more than a year the Senate Subcommittee on Problems of the Aged and Aging has taken testimony from experts in hearings all over the country and has thoughtfully reflected on the problem. The Finance Committee is unlikely to be able to add much to the subcommittee's painstaking recommendations.

We think that Congress knows quite enough about the problem to act on it now. It can do so by using the McNamara amendment to transform the pitifully inadequate health measure passed by the House into a comprehensive program providing for hospitalization, nursing home care, home health and diagnostic services, and assistance in paying for expensive drugs. This would give real aid to the aged. Whether in this Congress or the next, a program of this kind is bound to be enacted in response to an inescapable national need.

Address of Maj. Gen. Armistead D. Mead

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent that an excellent address of Maj. Gen. Armistead D. Mead to the Military Government Association Conference in San Francisco on May 14, 1960, be printed in the Appendix of the RECORD. General Mead is Chief of the Office of Civil Affairs in the Department of the Army, and his able remarks should be of interest to the Members of Congress and persons interested in an effective national defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF MAJ. GEN. ARMISTEAD D. MEAD, TO MILITARY GOVERNMENT ASSOCIATION CONFERENCE, SAN FRANCISCO, CALIF., MAY 14, 1960

Mr. President, members of the Military Government Association, ladies and gentleman, I have looked forward with a great deal of anticipation to the privilege of addressing the members of this distinguished patriotic association. I'm very happy to have the opportunity to speak to you because of my deep personal interest in and responsibility for the civil affairs function within the Department of the Army.

Aside from my official interest in your activities, I would in any case look forward to being with you because of the great pleasure I have derived from my personal contacts with many of you. These contacts have given me a good insight into your goals, ideals, and inspirations and a great admira-

tion for your accomplishments. I know that you are competent in your respective professional fields and that you share an enthusiastic dedication to civil affairs/military government.

My purpose today shall be first to highlight recent civil affairs developments and then to touch on the role of civil affairs in civil defense.

Current developments indicate a growing understanding and appreciation for the vital and indispensable role of civil affairs. Our activities are receiving more recognition in planning, development of doctrine, training and operations. This improvement is not limited to our forces but is noticeable in the forces of many of our allies. I had the opportunity to observe this during an orientation trip to Southeast Asia as well as in Europe while observing a large NATO exercise which stressed the refugee problem.

Recognition of the commander's responsibility for civilian-military relations has been obscured in the past by a tendency to consider the military government phase as the beginning and the end of civil affairs. This hampers the development of a comprehensive civil affairs concept since it tends to confine the civil affairs function to occupation of enemy territory during and immediately after combat. Military students in the main are most familiar with this aspect of civil affairs. I think we must consider that the civil affairs function involves a spectrum of operations extending from the most complete control of a civil population by military government to the simplest type of military-civilian liaison, such as the relationship between a commander and the civilian communities that surround his command. In limited war and in operations short of war, civil affairs activities will likely be conducted under civil affairs agreements as was the case in Lebanon year before last. These are agreements between friendly countries which define the nature and extent of the civilian-military relationship in the host country. Whether our forces are involved in operations, or are by their presence alone lending stability in a friendly country, there must be—clearly defined, mutually understood, civilian-military relationships. This broader approach to the civil affairs function identifies each individual commander's responsibility for civilian-military relations in every location except where there are no civilians as in the polar regions.

What are the new developments of importance to civil affairs with which we should be familiar? The first one which I should like to mention is the issuance of a Joint Chiefs of Staff publication, on November 25, 1959, entitled "Unified Action Armed Forces." The purpose of this publication is to set forth principles, doctrine and functions governing the activities and performance of the Armed Forces of the United States. The section devoted to civil affairs operations covers definition, purpose, policies, general principles, mission, authority and responsibilities. Previously much of this material existed. However, it was scattered in various JCS documents, some of which were classified. Now, all the fundamental aspects of civil affairs operations are combined in one simple, clear, available document. The publication defines civil affairs as those phases of the activties of a commander which embrace the relationship between the military forces and civil authorities and people in a friendly country or area, or occupied country or area when military forces are present. A narrow interpretation of this definition would exclude the United States and would thus make it applicable only abroad. To remove any ambiguity or doubt on this point, we hope expressly to include the United States in a pending revision of the definition. Thus, civil affairs would then be defined as the relationship between military forces and the civil authority and people wherever.

"Unified Action Armed Forces" outlines the responsibilities within the U.S. Government for civil affairs operations in the various agencies including the National Security Council, the Department of State, the Office of the Secretary of Defense, the Joint Chiefs of Staff, the Chiefs of Staff of the three services, joint commanders and unit commanders. As executive agent for the Joint Chiefs of Staff for civil affairs planning, the Chief of Staff of the Army initiates actions for appropriate consideration by the Joint Chiefs of Staff, required to discharge their responsibilities in this field. The Army is responsible for establishing and operating training facilities for the basic branch material training of all U.S. civil affairs personnel and units. The Army also mobilizes, trains and provides all civil affairs units and personnel required in the joint commands except to the extent that this responsibility may be assigned to the Chief of Naval Operations or the Commandant of the Marine Corps.

The manual directs each commander of a unit of the U.S. Armed Forces, regardless of its size or subordination, except as otherwise directed, to look to appropriate civil affairs units and personnel to secure for him necessary assistance, supplies, and facilities from indigenous sources, and to deal with local civilians and Government on his behalf.

The second development I should like to mention has to do with a comprehensive reexamination of civil affairs doctrine. My office is constantly reviewing doctrine and searching for ways to improve it and the techniques involved in civil affairs operations. Doctrine and techniques of operation must fit the new concepts of hot war and, equally important, the current concept of cold war which seems to be bound by neither Robert's Rules of Order nor the Hague Convention. I should like to invite your attention to two studies in progress which perhaps will improve doctrine and techniques of operation. The first concerns the Agadir disaster—the sudden, drastic, and completely devastating nature of the Agadir disaster produced problems similar to those which could be encountered anywhere by civilian and military authorities in the event of nuclear or other types of major catastrophies. The U.S. Army Civil Affairs School in conjunction with my office is analyzing all the available written and pictorial material pertaining to the Agadir disaster. The purpose of this is to develop the lessons to be learned therefrom in the various civil affairs functional fields.

The second is a classified study initiated in September 1957 by the Operations Research Office, ORO, of Johns Hopkins University. Currently forecast for completion next month it is entitled "Optimum Civil Affairs/Military Government Operation and Functioning After 1960." This study considers the civil affairs aspects of cold as well as hot wars.

The third development has to do with the role of civil affairs in meeting the threats of Communist subversion in underdeveloped friendly countries. The cold war is presenting civil affairs with new challenges, particularly in Southeast Asia. The Communists believe that these underdeveloped countries represent the Achilles heel of the Western World.

Adequate deterrence of Communist aggression requires alert, dynamic adaptation to the changing circumstances upon which Communist aggressive options rest. The most prominent form of Communist aggression in the cold war rests primarily on a single means: A fifth column constituted internally as a local Communist Party or externally by nationals who make up the nucleus of the party to be formed and used when the occasion arises. This is the enemy.

The target of this enemy is the people.

They are the real stakes in the cold war. Although Southeast Asia has only 6 percent of the world's total area it has 660 million people, about one-fourth of the world's population.

A cold-war operational doctrine has evolved among these weaker nations which offers considerable prospects of success. This doctrine is based upon the use of the nations' armed force as a civil support agency. The military forms the principal dynamic and cohesive force in many underdeveloped countries. Usually the army is the largest governmental organization. It is commonly the most stable element of the government. Its units are stationed throughout the country with uniforms that clearly identify its people as government personnel. The military communication net may be the only really efficient communications system in the country. The armed forces may be the only agency upon which the government can place full reliance. Thus, the national leaders turn to the armed forces for national duties far beyond the traditional role of the military.

Their main purpose deals with the Army-people relationship for winning the full support of the people for the Armed Forces and thus for the Government. Civil affairs activities become a primary weapon in this war to convince the villager that his ultimate good lies with the non-Communist world.

One very effective method employed in southeast Asia for improving the civilian-military relations is what we call "civic action." Civic action is a project of a self-help nature undertaken by armed forces in conjunction with the local population for the benefit and well-being of civilian communities—in the fields of public welfare, public works, transportation, communications, public health, public safety, education, and other such areas of community concern. A number of countries where we have military assistance advisory groups are conducting such civil affairs activities or civic action programs. A new Department of Defense directive contains a statement referring to the civic action role. This follows closely suggestions made by the Draper Committee which recently undertook an exhaustive survey of our military aid program.

The new Department of Defense directive prescribes that "Military assistance programs should, where feasible, encourage the use of indigenous military and paramilitary forces in underdeveloped countries in the construction of public works and other activities helpful to economic development, provided that such participation does not significantly detract from the capability of the forces to perform essential military missions."

In order for a country to integrate an effective civil affairs operation into its total military effort an indigenous civil affairs capability is required. The development of this capability is facilitated by providing civil affairs advisers in the U.S. military assistance advisory groups: by furnishing U.S. Army mobile civil affairs training teams and by offering training for foreign officers at our civil affairs school. We are urging greater utilization of the civil affairs training and experience.

The development of civil affairs techniques in the cold war is a two-way street.

We are learning much from the southeast Asian officers. Their ideas on the role civil affairs plays in their national security is realistcally based upon necessity. If half of the United States were occupied by the enemy and the people in the remaining half were not fully confident in the ability of our Government, we would be just as realistic. The U.S. Army Civil Affairs School teaches the development of a good basic civil affairs capability which is most useful in hot war. This was the mission of the school when originally established. Within this limit some recognition is given to the cold war aspects of civil affairs. However, this is not sufficient to meet the increasing requirements to train foreign officers and our MAAG

advisers required for the areas where the war is being pressed by our Communist enemy. The demand is not limited to southeast Asia. South America is an area of some concern. We are confident that our civil affairs school will adjust adequately to meet the new demands placed upon it.

My second purpose, you will recall, concerns the roll of civil affairs in civil defense.

Recently, General Lemnitzer, Chief of Staff, indicated that "fast-moving events of current history are bringing into clear focus the interrelationship between civil defense and military strength—both of which are essential elements of our national security posture." He further indicated that the Army is ready and able, not only to assist in civil defense should that become necessary, but to plan now concerning the form such assistance should take. He believes that the saving would be out of all proportion to the amount of time, effort, and expense involved in the planning. It must be remembered, only the absence of a military mission, together with the presence of an important and pressing civil defense mission, justifies diverting military units from their combat role. Therefore, it is impossible to earmark military units for a primary civil defense role. Major elements of the military will be required for purely military operations. While civil defense and military defense are inseparably linked, civil defense must, nevertheless, remain primarily a civil responsibility.

The Army is charged with coordinating both the planning for and the rendering of military support by all of the services in civil defense emergencies. The Army effects close coordination with civil defense authorities at national, regional, State, and local levels in planning for support of civil defense emergency operations. Thus, the military can minimize post-attack diversion of military resources for emergency assistance to civl authorities by helping these authorities to increase civil defense readiness. This will maximize the capability of the military for purely military missions. The Army will assist in efforts to improve civil defense preparedness during the preattack period to the extent permitted by budgetary and other resource limitations and the requirement to maintain its combat readiness.

In brief, Army assistance in civil defense emergencies shall be rendered when such assistance is requested or directed in accordance with appropriate public laws and Executive orders. The active and Reserve components of the Army will be prepared to support the maintenance of and/or the reestablishment of law and order in areas critical to national survival. Such military assistance will be withdrawn when the civil authority no longer requires it.

How may civil affairs units assist the Army in this civil defense role? These units are most suitable to support the Army effort. They are fashioned to function amid civilians in the crisis, confusion, and danger of combat. They are organized to offer assistance and advice in the conduct of the essential governmental functions at all levels of government. They are trained to cope with civilian-military relationships under the most extreme circumstances. In fact, in the combat zone part of their support entails the supervision of local civil defense.

What is the task of civil affairs and particularly the civil affairs reserve units in the military role in civil defense? I believe you already have the answer. It is the same sort of support to the combat troops as we envisage for combat. The reserve civil affairs units can provide valuable assistance to commanders now—particularly in the preparation of plans now for military assistance which may be required later and on short notice. This type of assistance is being rendered already in some Army areas. Civil affairs units in the 2d Army area have been assigned planning missions concerned with certain major target complexes. The 1st Army is employing a similar procedure. Future plans should make full use of the talents of civil affairs units in all Continental Army areas. This would provide excellent training for the units and valuable assistance to the ZI Army commanders and civil authorities.

It is not necessary to dwell on the assistance civil affairs units can render if called upon in the wake of a thermonuclear attack on the United States. It is clear that, in the initial phases, our national recovery effort would be decentralized. Any local commander employed to assist in the recovery of a community would require civil affairs personnel to assist him effectively to handle this vital civil defense support responsibility. His need for trained civil affairs personnel would be even greater should he be faced with the necessity for assumption of civilian control in the temporary absence of local authority. Thus, reserve civil affairs units perform a twofold mission in a civil defense operation: Preplanning for an atomic attack, and, if required, post-attack operations. Your careful preattack planning and realistic postattack training will contribute directly to national security. It will contribute indirectly by improving national confidence. Confidence derived from the knowledge that the situation is not hopeless. Confidence in our ability to survive and prevail even if a thermonuclear disaster should engulf us.

Civil affairs is moving ahead on many fronts. Because trends depart from traditional concepts of military government, we must have an open mind and the vision to make the necessary adjustments to provide the best response to the challenge.

The Congressional Cemetery of Washington, D.C.

EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MAHON. Mr. Speaker, H.R. 12326, the public works appropriation bill for fiscal year 1961, recently approved by the House, permits a modest increase in the sum allowed for maintenance of Federal gravesites in the Congressional Cemetery and, since many of the present Members may not be informed as to the Federal interest in this cemetery which prompts this annual appropriation, I would like to take this occasion to furnish a brief statement of the pertinent facts.

EARLY BEGINNINGS OF THE CEMETERY

In 1795, before the Federal City came into being, the Maryland Legislature authorized the establishment of Washington Parish whereupon the Christ Church Washington Parish was incorporaaed, vestrymen elected and a rector appointed. In those early days, the transportation of the remains of deceased persons more than a short distance was not feasible and the need for a place of burial in the new Capital for Senators and Representatives who might pass away while attending sessions of the Congress was early recognized. Certain influential members of the new church undertook to acquire an appropriate tract of ground subject to an agreement that when the graveyard, with its improvements, shall be unencumbered of debt, they would assign over all the right and title of said ground not subscribed for to the vestry of Washington Parish. By March 24, 1812, the cemetery was free of debt and at a meeting held by the vestry Easter Monday, March 30, 1812, the vestry accepted the said burial ground, with the deed, plan, list of subscribers, proceedings, accounts, and transfer of ground.

GRAVES RESERVED FOR MEMBERS OF CONGRESS

Shortly thereafter, the vestry reserved for the interment of Members of Congress 100 sites. In 1820, this reservation was extended to include heads of Departments of the General Government or their famliics, or the families of Members of the Congress.

Thereafter, until the establishment of the Arlington National Cemetery, additional sites in Congressional Cemetery were, from time to time, reserved for Government use and, in return, the Government appropriated moneys, labor and material toward the upkeep and improvement of the cemetery property. For instance, the act of May 31, 1832, (4 Stat. L., 520) appropriated $1,500 toward the erection of a keeper's house, for planting trees, boundary stones, and otherwise improving the burial ground allotted to the interment of Members of Congress and other officers of the General Government; the act of August 10, 1846 (9 Stat. L., 93) appropriated $500 for repairs to congressional burying ground, rendered necessary by the late freshet, and so forth.

FURTHER LEGISLATIVE ACTION

The act of July 25, 1848 authorized the Commissioner of Public Buildings of the city of Washington to sell so much of Hospital Square not exceeding 6 acres as the vestry might choose to purchase for an addition to the cemetery and provided further that the Government of the United States shall be entitled to purchase from said vestry, and to occupy as a burial ground, for Members of Congress and such other members of the U.S. Government as the President shall deem it expedient and proper to allow, a portion of the land hereinbefore authorized to be sold.

It is not surprising that this cemetery has been known almost from its establishment as Congressional Cemetery and is usually so designated in acts of Congress and by the public generally. It is often referred to as our first national cemetery and is perhaps our only true national cemetery due to the fact that Arlington and all other so-called national cemeteries are dedicated primarily for interment of the remains of those who have served in our Armed Forces, whereas Congressional Cemetery is primarily civilian.

PRESIDENTS INTERRED IN CEMETERY

From the time of its establishment until the close of the War Between the States, the remains of 3 Presidents, at least 2 Vice Presidents, possibly 75 Members of the Senate and House of Representatives were carried to and interred

at Congressional, as well as those of many high-ranking administrative and military officers of the Government.

The three Presidents who died in Washington during this period were William Henry Harrison, Zachary Taylor, and John Quincy Adams, although Adams was a Member of the House at the time of his death in the Capitol February 23, 1848. The remains of these Presidents and of a number of Senators and Representatives were later removed to home cemeteries, as were those of Dolly Madison, but there still remain in Congressional the remains of 14 Senators and 42 Members of the House of Representatives, including those of Vice President Elbridge Gerry (who also served as a Delegate and a Representative from Massachusetts) and Senator James Burrill, Jr., of Rhode Island, great-grandfather of Senator THEODORE FRANCIS GREEN, now representing the same State.

GRAVE MARKINGS

It early became the custom for the Congress to erect on these graves imposing sandstone "cenotaphs" according to a design said to have been created by Federal Architect Latrobe (whose child's remains are in Congressional) and many of these were erected in memory of Senators and Representatives whose remains were not interred at Congressional or were interred there only briefly. This custom terminated pursuant to criticism of these sandstone memorials by Senator Hoar, of Massachusetts, with the act of May 23, 1876 (ch. 103, 19 Stat. 54; 2 U.S.C. 51), directing the Sergeant at Arms of each House to have a monument erected "of granite" only "whenever any deceased Senator or Member * * * shall be actually interred in the Congressional Cemetery." Since that time, there have been only three such interments, Representative Roach, of Maryland, in 1902, Senator Thurston, of Nebraska, in 1916, and Representative Tilman B. Parks, of Arkansas, in 1950. It may eventually be found desirable to remove all of these sandstone memorials and (a) replace those over actual remains with more pleasing granite memorials, and (b) substitute for those that are merely honorary a single suitable memorial of modest proportions in memory of all Senators and Representatives who died in office.

TEXANS INTERRED IN CEMETERY

As a Texan I have been interested to note the following further information about the cemetery.

In January 1851 the remains of Representative David S. Kauffman, one of the original Texas Representatives in the Congress, were interred in Congressional but were removed to Austin in March 1932. In July 1857, upon the death of Senator Thomas Rusk of Texas, a cenataph was erected and still stands at Congressional in his honor; and in June 1858 the remains of Senator James Pinckney Henderson, who served as the first Governor of Texas and succeeded Senator Rusk, were interred in Congressional and removed to Austin in 1930.

LISTING OF CERTAIN GRAVES

I am appending hereto a list of all Senators and Representatives and of a few of the other official personnel whose remains are interred in this historic cemetery, showing in most cases the location of the grave and the date of death:

Range	Sites	Identification	Date of death
24	1-2	Senator Uriah Tracy (Connecticut)	May 24, 1800
	3-4	Representative Ezra Darby (New Jersey)	Jan. 27, 1808
25	1-2	Senator Francis Malbone (Rhode Island)	June 4, 1809
	7-8	Representative Thomas Blount (North Carolina)	Feb. 7, 1812
27	25-26	Maj. William Riley (Maryland)	Mar. 4, 1820
28	14	Col. Tobias Lear, secretary to George Washington	Oct. 11, 1816
	39-41	Vice President Calhoun's child	1820
29	6	Representative Tilman B. Parks (Arkansas)	Feb. 12, 1950
	9-11	Vice President Elbridge Gerry	Nov. 23, 1814
	12-13	Representative Elijah Brigham (Massachusetts)	Feb. 22, 1816
	14-15	Representative Richard Standford (North Carolina)	Apr. 9, 1816
	16-18	Child of Senator Henry Clay (Kentucky)	1816
	19-20	Representative George Mumford (North Carolina)	Dec. 31, 1818
	21-22	Representative David Walker (Kentucky)	Mar. 1, 1820
	23-25	John H. Purviance, State Department Executive	Nov. 7, 1820
	26-27	Capt. Hugh George Campbell, U.S. Navy	Nov. 11, 1820
	28-29	Representative Nathaniel Hazard (Rhode Island)	Dec. 17, 1820
	30-31	Representative Jesse Slocumb (North Carolina)	Dec. 20, 1820
	32-33	Senator James Burrill, Jr. (Rhode Island) (great-grandfather of Senator Theodore Francis Green)	Dec. 25, 1820
	34-35	Senator William A. Trimble (Ohio)	Dec. 13, 1821
	36-37	Senator William Pinkney (Maryland)	Feb. 25, 1822
	38-39	Representative William L. Ball (Virginia)	Feb. 28, 1824
	40-41	Senator John Gaillard (South Carolina)	Feb. 26, 1826
	42-43	Representative Christopher Rankin (Mississippi)	Mar. 14, 182
	44-45	Representative Alexander Smyth (Virginia)	Apr. 17, 1830
	46-47	Senator James Nobel (Indiana)	Feb. 26, 1841
	48-49	Representative Charles Johnston (Maryland)	June 17, 1832
	54-55	Representative George E. Mitchell (Maryland)	June 28, 1832
	56-58	Representative James Jones (Georgia)	Jan. 11, 1801
	59-61	Senator James Jackson (Georgia)	Mar. 19, 1806
	62-64	Representative Levi Casey (South Carolina)	Feb. 3, 1807
	65-67	Representative Phillip Doddridge (Virginia)	Nov. 19, 1862
30	9-10	Representative John Smilie (Pennsylvania)	Dec. 30, 1812
	11-12	Representative John Dawson (Virginia)	Mar. 31, 1814
	13-14	1st Secretary of Senate Samuel A. Otis (Massachusetts)	Apr. 22, 1814
	24-25	Lt. James Morrison (8th Pennsylvania)	Apr. 23, 1823
	28	Lt. William Rose, 4th Artillery	Nov. 22, 1825
	32-33	Commodore Ridgely, U.S. Navy, wife of	Aug. —, 1830
	34-36	Son and daughter of Commodore Isaac Chauncey, U.S. Navy	
	37-38	Representative Thomas Tucker (South Carolina)	May 2, 1828
	39-40	Wife of Representative Daniel D. Barnard (New York)	Mar. —, 1829
	51-53	Representative Thomas Singleton (South Carolina)	Nov. 23, 1833
	54-56	Representative Timothy J. Carter (Maine)	Mar. 14, 1938
	66-68	Representative Warren R. Davis (South Carolina)	Jan. 29, 1835
	72-73	Representatives James Blair (South Carolina)	Apr. 1, 1834
	69-71	Representative Littleton P. Dennis (Maryland)	Apr. 14, 1834
	97	Maj. James Kinney (New Jersey)	July —, 1832
31	24	Children of Senator William E. Purcell (South Dakota)	
	25-27	Wife of Surgeon Edw. Catbush, U.S. Navy	
	32-34	Prussian Minister Frederick Gresham	Dec. 1, 1823
	38-40	Commodore Richard Henry O'Brien, U.S. Navy	Feb. 14, 1824
	41-42	Choctaw Chief Push-Ma-Ta-Ha	Dec. 24, 1824
	43-44	Senator Joseph Anderson (Tennessee)	Apr. 17, 1837
	45-46	Acting Quartermaster General L. C. Pickett et ux	July —, 1872
	47-49	Representative Theodoric Bland (Virginia)	June 1, 1790
	50-52	Representative George Holcombe (New Jersey)	Jan. 14, 1828
	53-55	Representative Joab Lawler (Alabama)	May 8, 1838
	56-58	Delegate Narsworthy Hunter (Mississippi)	Mar. 11, 1802
	62-64	Representative Jeremiah McLene (Ohio)	Mar. 19, 1837
	74	Lt. Henry E. Sill, U.S. Army and children	Dec. —, 1845
33	16	Surgeon Elisha Harrison, 4th Maryland	Aug. 28, 1819
	30	Architect George Hadfield	Feb. —, 1826
	32	Astronomer William Elliott	Dec. —, 1827
	39-41	Dr. William Thornton, Architect; 1st Commissioner of Patents	Mar. 28, 1828
35	111	Robert Mills, 1st Federal Architect	Jan. —, 1856
40	44	Capt. John Looney (Cherokee)	May 16, 1846
50	49-51	Senate Sergeant at Arms Mountjoy Bailly	Mar. —, 1836
	169-170	Attorney General William Wirt and family	—— —, 1853
52	24-25	Gen. Philip Stuart (Virginia)	—— —, 1830
54	104-106	Representative John W. Hornbeck (Pennsylvania)	Jan. 10, 1848
	116-118	Representative Henry Frick (Pennsylvania)	Mar. 1, 1844
	119-121	Representative William Taylor (Virginia)	Jan. 17, 1846
	131-133	Representative Albert G. Harrison (Missouri)	Sept. 7, 1839
	140	Children of Senator Samuel L. Southard (New Jersey)	
	146-147	Children of Capt. Beverly Kennon, U.S. Navy	
	149-152	Surgeon General Joseph Lovell, U.S. Army et ux	Jan. —, 1844
	153-155	Representative Benjamin Thompson (Massachusetts)	Sept. 24, 1852
55	101-103	Representative Francis J. Harper (Pennsylvania)	Mar. 18, 1837
	107-109	Representative Edward Bradley (Michigan)	Aug. 5, 1847
	113-115	Representative Felix G. McConnell (Alabama)	Sept. 10, 1846
	140-142	Senator and Secretary of War Samuel L. Southard (New Jersey)	June 26, 1842
	147-149	Maj. Gen. Alexander McComb, U.S. Marine Corp	June 25, 1844
	150-152	Commodore Patterson, U.S. Navy	Aug. 25, 1839
	162-164	Senator William Upham (Vermont)	Jan. 14, 1853
173	----------	Gen. Archibald Henderson, U.S. Marine Corp Commandant for 39 years	Jan. 6, 1859
56	12	Child of Architect Latrobe	
	96-98	British Minister Henry Stephen Fox	Nov. —1847
	101-103	Representative William A. Burwell (Virginia)	Feb. 16, 1821
	104-106	Representative Daniel Hiester (Pennsylvania)	Mar. 8, 1834
	137-139	Representative Joseph Lawrence (Pennsylvania)	Apr. 17, 1842
	140-141	Major General Gibson	Sept. 30, 1861
	145-152	Secretary of Navy (Commodore) John Rodgers	Aug. 1, 1838
57	1	Capt. Thomas Tingey et ux. (1st commandant Navy Yard)	Feb. 23, 1829
	144-146	Supreme Court Associate Justice Philip P. Barbour	Feb. 24, 1841
	150-152	Maj. Gen. Jacob Brown	Feb. —, 1828
	159-161	Child of Secretary of War Benjamin Stoddert	

Range	Sites	Identification	Date of death
59	82–83	Senator John M. Thurston (Nebraska)	Aug. 9, 1916
	84–86	Senator William N. Roach (Maryland)	Sept. 7, 1902
	87–89	House Page Davidson	Jan. 7, 1896
60	57–59	Senator James Gillespie (North Carolina)	Jan. 11, 1805
	60–62	Representative Lemuel J. Bowden (Virginia)	Jan. 2, 1864
67	82	Lt. Gustav B. von Buchenhagen, Company D, 79th New York Infantry	Jan. —, 1863
	103	Lt. Col. Randolph Knight, 10th New York Heavy Artillery	—— —, 1862
72	119–120	Photographer Matthew Brady et ux	Jan. —, 1896
75–78	162–165	Marine Band leader and composer John Philip Sousa	Mar. 6, 1932
81	55	Gen. Charles F. Henningsen, Confederate Army	June —, 1877
	94	Lt. Col. Gustav von Gerber, 68th New York Infantry	Nov. 19, 1831
	95	Lt. and Adjutant Ludwig Haak, 29th New York Infantry	Jan. 28, 1862
	85	95	Lt. John F. Kleefish, 68th New York Infantry	Sept. 22, 1862
	86	60	Capt. R. S. Farrow, Confederate Army	Apr. 1, 1865
	87	293	Maj. (Choctaw Chief) Peter Paul Pitchlynn	Apr. —, 1881
	95	88	Major Pettigrew	Dec. —, 1862
	96	300	Capt. Lewis A. Livingston	Nov. —, 1882
97–98	142–146	21 young women who died following explosion of U.S. Arsenal in District of Columbia	June 17, 1864
	147	258	Col. E. A. McHenry, U.S. Marine Corps	

Economic Sanctions Can Influence Cuba

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ROGERS of Florida. Mr. Speaker, because South Florida is such a short distance from Cuba, and our people have been friendly to each other throughout our history, the people in our area are particularly concerned by developments in Cuba, and our Government's reaction to these developments.

An editorial in the Pompano Beach Sun-Sentinel June 29, by editor Harvey Call, points up the problem with Cuba clearly and resolutely. The House of Representatives has acted since this editorial appeared, to give the President the authority he says he needs in dealing with Cuba, by authorizing him to set whatever sugar quota he believes should be granted Cuba.

I believe all Members will be interested in reading Mr. Call's remarks on this important matter, and I ask that his editorial be printed at this point in the RECORD:

ECONOMIC SANCTIONS CAN INFLUENCE CUBA
(By Harvey A. Call)

Representative PAUL C. ROGERS, our congressional spokesman from this district, has stepped forward with a demand the United States assume a positive role of leadership in the matter of Communist Cuba.

He views America's prestige as a world leader slipping in Latin American countries as our passive "wait-and-see" attitude produces no results.

Certainly nations throughout the world must be bug-eyed to see communism gaining a foothoold on our doorstep. Many people must wonder why those closest to us find living under communism preferable to democracy.

Truly this challenge will go far to determining our future in world affairs.

Mr. ROGERS believes a call should be issued for the Organization of American States to convene. He maintains the countries of the hemisphere have every right to expect that we will assume positive leadership and take positive action.

The American people have a right to expect the same. We have a right to expect a foreign policy that will put us in a stronger position and guard against enemy threats a few miles from our homes.

Possibly Mr. ROGERS is right in the call for an OAS gathering.

But what can be accomplished unless we have a definite policy to lay before the American States?

There are not too many choices.

We can continue our wait-and-see policy, hoping the Cuban people may rise up and unseat Castro. That, of course, is a negative, ineffective policy.

We can wage a battle of diplomatic notes—none of which would be as pointed nor heated as Castro's tirades.

We could stage repeated shows of military might, parading our warships around and around the island and massing air fleets in the area for maneuvers.

We can mass Armed Forces at our Cuban bases.

We could and probably should pick up the idea of Radio Free Europe and jam Cuban airways with a Radio Free Cuba operation.

We could, but certainly would not, attempt any military operations infringing on Cuba's sovereignty.

We could launch a program of economic sanctions.

Whether our Government will do any of these things remains to be seen. It remains to be seen whether the people are at all interested in positive action.

The people of south Florida are closest to all that Communist Cuba represents. Yet we wonder if many people here would support any specific action—economic sanctions, for example.

Let's see what would be involved.

First, economic sanctions in some degree have been applied already. Cuban tourism has fallen virtually to zero.

This has not come about because of any desire to retaliate financially against Cuba. Rather it has been a desire of prospective tourists to protect their own skins from the bullets of radicals and to avoid possible imprisonment on trumped-up charges.

However, economic sanctions would involve cutting off Cuban sugar imports among other things. Congress is leaning toward this. People of Florida and throughout the United States are contributing more than $150 million in taxes this year to subsidize the Communist workers and Castro's radicals through the sugar prices.

Why should we spend our tax dollars to help Castro and his Red henchmen build up a propaganda organization and a military stronghold against us?

Is this wise even though American money is sunk into Cuba's sugar operations?

Our present situation is very much like that preceding World War II when scrap iron was being shipped out of our ports to Japan where it was made into munitions used later against our Armed Forces.

We could take our sugar trade and all other trade to more friendly nations. Whether this would bring Cuba to its knees and hasten the ouster of Castro and his ilk remains to be seen. At least we would not have an enemy build-up nearby at the expense of American tax dollars and American consumers.

We could go farther and make it clear to other nations that trading with Cuba would be considered unfriendly and might well bring related economic reprisals.

As consumers, we certainly could bring pressure to bear on American companies dealing in Cuban products.

If the American consumers chose to take the initiative, it would not be the first time in our history they led the way rather than followed meekly. The Boston Tea Party will be remembered as the classic example of such action against foreign goods and their related implications.

Bostonians, however, were more concerned over the principles of taxation and representation.

Our concern is the threat to our way of life, the threat of foreign military action, which is a far greater concern—or seemingly it should be. As Mr. ROGERS told Congress, the Cuban situation "now threatens the collective security of the entire hemisphere."

Surely that is impelling enough to move all of us sitting ducks to make up our minds and do what we can to fight back.

Commonwealth Edison's Atomic Power Reactor at Dresden, Ill.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PRICE. Mr. Speaker, under leave ot extend my remarks in the RECORD, I herewith include a statement in regard to America's first large-scale, privately owned, atomic power reactor operated by Commonwealth Edison at Dresden, Ill.:

CHICAGO, ILL., June 30.—Commonwealth Edison's Dresden nuclear power station, the Nation's largest atomic power plant has demonstrated full-power operation sending 180,000 kilowatts of electricity over transmission lines into Chicago and northern Illinois, it was announced today.

At full power the Nation's first full-scale, privately financed station produces enough electricity to supply the needs of a city of more than 200,000 population.

After this demonstration, tests at various power levels will be performed.

Officials of General Electric Co., designer and builder of the $51 million plant, called the first full power operation a milestone which indicates atomic energy has at last assumed its place alongside coal, oil, gas, and hydro electric as an important source of power for peacetime generation of electicity.

The achievement at Dresden, located 50 miles southwest of downtown Chicago, comes almost 18 years after the atomic age was ushered in here when Enrico Fermi achieved the first atomic chain reaction under the stands of Stagg Field at the University of Chicago on December 2, 1942.

Dresden, which was under construction 3 years—and completed within the original

schedule—will be one of the prime sources of information on the operation of large nuclear electric plants for the next 4 years, as it will hold the distinction of being the Nation's largest operating nuclear power reactor for at least that long.

Dresden produced its first electricity in April when it was operated up to the half power levels for 2 weeks as part of the start-up test program for the station.

The station's boiling water reactor achieved its initial atomic chain reaction on October 15, 1959, after the first 28 uranium fuel elements were installed in the reactor core.

Since then the reactor has been loaded to its present 452 fuel elements as testing operations were conducted at various levels of fuel loading.

Extensive reactor fuel development will continue during coming years in connection with power operations. Information gained from these programs is expected to lead to significant improvements in the design of later nuclear power stations and to reduce the cost of nuclear electric power.

Electricity from the Dresden station is the same as that from other powerplants. Steam is produced by the heat from the nuclear fuel rather than from coal, gas, or oil, and is fed to a turbine-generator unit to produce electricity in the usual manner.

The steam is made directly in the reactor, which takes the place of the boiler in the conventional power station.

Commonwealth Edison engineers estimate the 66-ton uranium dioxide fuel supply will provide 3½ years of heat for full capacity operation of the station.

A conventional coal-fired plant of the same capacity would consume 2 million tons of coal during the same period.

While Dresden will not produce electricity as cheaply as a conventional plant, it was felt that construction of large nuclear plants is essential to help develop the technical information necessary to reduce the cost of nuclear plants in the future.

General Electric built Dresden for a fixed contract price of $45 million. Site and overhead costs added an additional $6 million to the cost of the station.

Commonwealth Edison Co. is paying $30 million, plus the site and overhead costs. The $15 million balance of the contract price is being paid by the Nuclear Power Group, Inc., as a research and development expense.

General Electric also is contributing substantial amounts above the contract price for additional research and development expense.

The Nuclear Power Group consists of Commonwealth Edison, American Electric Power Service Corp., Central Illinois Light Co., Illinois Power Co., Kansas City Power & Light Co., Pacific Gas & Electric Co., and Union Electric Co.

"People's Capitalism" Through Stock Ownership

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. JAVITS. Mr. President, the continuing increase in the number of American families who own stock is a welcome indication of the health of our economic system. This is what has often been called "people's capitalism"—evidence of the great stake which all our people have in the private economic system. A recent study by the Survey Research Center of the University of Michigan indicates however, the extent to which individual and family participation in our private economic system can grow through wider stock ownership. Thus, while 14 percent of U.S. families now own publicly traded common stock, as compared to 10 percent in 1955 and 8 percent in 1952, there is still a large, untapped opportunity for our society. The "Own a Share of America" campaign of the New York Stock Exchange and other national security exchanges has contributed greatly to this trend and can continue to do so in the future.

I ask unanimous consent that an article in the New York Times of June 26, 1960, reporting on these common stock ownership trends, may be printed as part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 26, 1960]

STOCKOWNERSHIP BY FAMILIES RISES—SURVEY FINDS 14 PERCENT, MOSTLY IN UPPER-INCOME BRACKET, HOLD COMMON SHARES

ANN ARBOR, MICH., June 25.—The number of families owning publicly traded common stock has increased greatly in the last few years, according to a study by the University of Michigan Survey Research Center. But the ownership of this stock continues to be highly concentrated in upper-income families.

The report, made public recently, compares stock ownership and income on a family-by-family basis. The findings were based on interviews with a representative sample of 4,773 families conducted between last November and February.

Among the study's highlights were these:

Slightly more than 14 percent of U.S. families own publicly traded common stock today, compared with about 10 percent in 1955 and less than 8 percent in 1952.

Of those owning common stock, one-third estimate their total holdings are worth less than $1,000, while another third put the value of their stock at between $1,000 and $5,000.

One family in fifty has holdings worth $25,000 or more.

The 2½ percent of all families who have incomes of more than $15,000 and are stockholders own 42 percent of the value of all privately held stock.

Among all those who own stock, 2 out of 5 have shares in only 1 corporation. An average of less than 1 out of 5 has a diversified portfolio of 7 or more stocks.

Stock ownership, the survey showed, is concentrated among professional and managerial families, and those whose breadwinners have a college education. When viewed by age, stockholders in general—and especially large stockholders—are most frequently found among family heads whose age is between 45 and 65.

Only a small proportion of those families with incomes of less than $5,000 owns stock. Even among families with incomes of more than $15,000, only 55 percent own publicly traded stock.

Prof. George Katona, director of the Survey Research Center's economic behavior program, said that attitudes toward taking risks and inflation tended to explain why some upper-income families owned stock and why some did not.

But he said that the study showed more people with lower incomes were buying stock now than did in the past.

"More and more families," Professor Katona continued, "are interested in diversifying their financial reserves. Yet overwhelmingly, the amount invested in common stock by new shareholders is small."

Panama Canal Zone Citizens Express Concern for U.S. Government

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FLOOD. Mr. Speaker, the growing concern of U.S. citizens in the Panama Canal Zone for the deteriorating condition of American prestige over the sovereignty issue is attested to in two letters I have just received from the Canal Zone in this morning's mail.

The letters follow:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Balboa, Canal Zone, June 30, 1960.

Representative DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: In going through my March issue of the VFW magazine, I came across a couple of photographs, pages 21, 22, respectively; which clearly indicates in more ways than one, that you are a lifelong friend of the veterans organization I represent. More so, you are a boyhood friend and fellow Pennsylvanian of our VFW National Commander in Chief Louis G. Feldmann. It is my sincere desire that you consider me a personal friend you have known for a number of years; that I too am a member of this wonderful organization, the Veterans of Foreign Wars of the United States, always fighting for our human rights which our forefathers fought and died for which is now vested in our Constitution of the United States.

A few days ago, I had occasion to speak to Mr. Frank Wilder, who is a member of the Panama Canal Company's internal security staff, directly in charge of the surveillance of communism in this area. Quite a coincidence, but Mr. Wilder was one of my schoolteachers at the time I attended my former alma mater the Balboa High School.

He is much concerned with the recent developments and the manner in which communism is spreading in the Republic of Panama in recent years, as well as the flag-raising of the Panamian flag in the Canal Zone. He expounded emphatically the legislative resources our organizations and other veterans organizations have resorted too in the past in order to make ourselves heard within our U.S. Congress, in order to make the preventative measures which would help curtail the flag-raising in the Canal Zone. Therefore, it is due to this matter that I am writing you in order to receive some more strong support in the desires of the Veterans of Foreign Wars of the Department of the Panama Canal Zone that the Panamanian flag shall never wave on the Canal Zone's soil.

Another matter of grave concern is that since last November 3, when the U.S. flag was torn from its staff in front of the American Embassy in the Republic of Panama, the Embassy since that time has not flown their flag. However, all other nationalities embassies in the Republic of Panama fly the flags of their respective country daily. Therefore, why is it that the State Department will not compel the American Ambassador to Panama to fly the flag of our country, the United States of America.

Our present, and newly elected VFW department commander for this district will be attending the national convention in Detroit in August, however, being that time is so short before Congress adjourns, he is also forwarding a letter to the national com-

mander also advising him regarding this matter herein mentioned.

We expect to have strong support at the national convention concerning our flag controversy.

I may also add that a resolution is going forward by this department to the national convention in order that the matter will be properly brought before the convention body in session.

We do not want the Panamanian flag flying on the Canal Zone, under no circumstances. Make them have their titular sovereignty without the flag.

I am hoping that this letter reaches you in time, prior to the adjournment of Congress, in order that some action may be taken by the President upon the adjournment of Congress.

I am certain that you will be receiving other letters in the mail soon from other civic and veterans' organizations in this area pleading for your continued effort in backing this flag-raising issue.

Enclosed you will find a page copy of the recent issue of the Panama American, one of our evening dailies within the Republic of Panama, in order that you can appreciate more so the problem I am referring to in my letter.

Thanking you for your patience in this respect, I remain,

Yours truly,

FELIPI CAZOBON.

JUNE 30, 1960.

DEAR SIR: From what I can see the United States is cooperating with its own funeral giving ground every day in every way with the Communist method of seizure day by day anything and everything it can grab. Down here even the colored maid is wise to the game being played and now regards the American with a mixture of contempt and amusement that people of any race could be so stupid. With the courage and confidence that some people get when they know they are on the winning side. Cowardly is the word for us. We disregard warnings, take another sleeping pill when we are faced with a fight, bow and scrape and turn the other cheek. Right now we are practically living on Panamanian food at their prices, sold in the commissaries and the colored girls who work in the stores loot and raid every week or so. Thieves wander the streets in the Canal Zone grabbing anything they see loose, it's a ridiculously one-sided battle. Everyone is afraid to protest—afraid of losing their jobs—afraid one honest outburst of temper will upset the delicately balanced political apple cart and endanger our places in Latin America. By this time our enemies are more confident than ever, so much can be accomplished under the table.

DISGUSTED AMERICAN.

P.S.—Kindly destroy this letter. I don't want my husband to lose his job.

A Plea for Shorter Presidential Campaigns

EXTENSION OF REMARKS

OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. MONAGAN. Mr. Speaker, another powerful voice has been heard from in support of reducing the length of our presidential campaigns, a result which would be effected by the enactment of either House Joint Resolution 547 or H.R. 9584, both of which bills were introduced by me and which would restrict presidential campaigns to 60 days.

The article "Is the Presidential Campaign Too Long?" which appeared in the June 27, 1960, issue of Time is an eloquent plea for this intelligent political reform.

The article follows:

IS THE PRESIDENTIAL CAMPAIGN TOO LONG?—BOTH ALLIES AND CANDIDATES THINK SO

Every 4 years, in just about the length of time it takes to produce a baby hippopotamus, the United States brings forth a President. From the first, frosty preprimary campaigning in February until the last hurrah in November, the Nation becomes increasingly absorbed with its own inner stirrings, increasingly detached from the affairs of the outside world. In happier times, the United States could afford its quadrennial "year of paralysis" while an indulgent world stood by until everything was once more in order in Washington. But in the presidential election year of 1960—the year of the Communists' world propaganda push—the flaws of the long campaign are more and more apparent. Among them:

During lengthy campaigns too many foreign policy pronouncements are designed for domestic consumption, to the confusion of the U.S. allies. "As the date of the American elections grows nearer," said sagacious old Konrad Adenauer last week, "a difficult time in foreign policy begins. Public opinion in the United States will be increasingly preoccupied with domestic affairs. It is not excluded that Khrushchev will take advantage of this period for his designs. It is now all the more necessary to pay closest attention to what Khrushchev does and says."

The 22d amendment, restricting U.S. Presidents to two terms, tempts foreign nations to put less and less trust in a second-term President's policies. Khrushchev, in his airy dismissal of the Eisenhower administration ("Within 6 to 8 months, we shall again meet * * * in a new, more favorable atmosphere"), had not missed the point.

The long campaign is debilitating, tedious, and expensive for the candidates. "Obviously a year of perambulating, incessant exposure is exhausting," says Adlai Stevenson. "You grow weary, frustrated, and bored. Any man who has listened to himself several times daily since February is not likely to inspire his countrymen in October." In the 5 months between New Hampshire and Los Angeles, Front Runner JACK KENNEDY will have traveled an estimated 65,000 air miles, spent at least $700,000, and delivered 350 speeches—an exhausting pace even for a relatively young candidate, and a whopping bankroll even for a millionaire. KENNEDY is not likely to complain, since seven primary campaigns have made him the best-known hopeful. But even if he wins the Democratic nomination, KENNEDY will be no closer to election day than the halfway mark.

Despite democracy's built-in respect for political debate, the public actually gains little enlightenment from prolonged campaigning. Today's candidate carefully parcels out his program over the length of the campaign and understandably saves the best for last. He usually avoids debates like the plague for fear of making an embarrassing slip. Said Woodrow Wilson, from the rear platform of a 1912 campaign train: "I would a great deal rather make your acquaintance than leave a compound fracture of an idea behind me." Adds Vice President RICHARD NIXON: "The longer the candidate is in the field, the greater the hazard to him. No candidate wants to lay out an entire program for 1961 in January 1960."

Even with an extended campaign, the best man is not always selected (Clay, Webster, and Greeley were all defeated by lesser statesmen). Nor is a razzle-dazzle road show a prerequisite to victory on election day: William McKinley, in 1896, and Warren G. Harding, in 1920, won easily with "front-porch" campaigns, letting the groups of voters and the politicians come to them. And Franklin Roosevelt used the pressures of wartime as a reason for limiting his campaign appearances outside Washington to a bare minimum in 1940 and 1944.

National elections in Britain and France are run off in 3 to 6 weeks. Even in such leisurely oriental nations as Burma and Cambodia, where political campaigns are measured off by astrologers, an election is no more time-consuming than 2 months. In an age of jet planes and television, and short-order speeches by ghosts, say the critics, U.S. campaigns are as outmoded as the Stanley Steamer.

While the reformers would all foreshorten the election year, they all disagree on the methods of change. Some would eliminate the State primaries; others would settle for a national primary, or 50 State primaries in the same week. The conventions might be pushed forward to August or September, or election day moved back. There is no universal panacea. Says DICK NIXON, facing the toughest campaign of his life: "The campaigns are certainly too long for the well-being of the candidates. Here is one place where I think our British cousins have a good word. They have a 3-week campaign, and I'd be for it. But I doubt if the American people would ever stand for it." Historian Allan Nevins is not so sure: "There is no ideal solution for something so complicated. Democracies always work in a partially unsatisfactory way and are necessarily clumsy. There is no one highly efficient method for the 180 million people who live in our democratic society. But the need for drastic reform of our political campaigns is obvious."

Keenotes

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a copy of my newsletter released today.

KEENOTES

(By Representative ELIZABETH KEE)

The other day I had the unique experience of voting against a proposal which earlier I had endorsed and fully expected to support.

The legislation in question authorized the United States to invest almost $400 million in the International Development Association—a new international agency designed to make investment capital available to the underdeveloped areas of the world.

In effect, this is a "distressed areas" bill on a world-wide scale. It may be a sound approach to the urgent need for providing capital for new nations to use in building necessary business and industrial facilities.

I voted against it because it is part of a growing trend which seems to establish a "double standard." We seem to be willing to undertake programs abroad which are turned down at home.

The President vetoed economic redevelopment legislation that is urgently needed in West Virginia and other States. But the President put the full influence of his administration behind the new international agency to do the same thing on a world-wide scale.

I felt compelled to vote against IDA as a protest against this "double standard."

VETERANS' HOME LOAN PROGRAM EXTENDED

I voted for legislation to extend for 2 years a program for guaranteed and direct home loans for veterans. The direct loans are urgently needed in small towns and rural areas where guaranteed loans are simply not available.

The legislation makes $300 million available during the 2 years for loans to veterans. This will meet only a part of the anticipated need. The hope is that during the next 2 years mortgage money will become available at interest rates veterans can afford and thus will do away with the need of legislation such as this.

COAL RESEARCH LEGISLATION CLEARS SENATE

The Senate approved legislation setting up a new coal research program in the Department of the Interior. Earlier in the session the House passed similar legislation.

The bill has been rewritten to meet objections raised last year when the President vetoed a research bill along the same lines. There would be absolutely no justification for the President refusing to sign this bill.

We need urgently to develop new uses for coal and to make coal more competitive with other fuels. Research is an indispensable tool in this campaign. The petroleum industry spends about $300 million a year on research. Only $17 million goes into coal research.

It is significant that all segments of the industry carried on a united and determined campaign in favor of this legislation.

RECESS CATCHES EVERYONE BY SURPRISE

The announcement that Congress would recess and reconvene in August, after the conventions, was a big surprise to just about everyone in Washington. We had been making good progress on a large backlog of bills. But the leadership felt some of the bills, highly controversial in nature, should have more deliberate consideration than they could possibly receive in the closing hours of this session. So a recess will be taken. I hope that the people of the country will benefit by this action.

National Defense Cutback in Alaska

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. RIVERS of Alaska. Mr. Speaker, about 6 months ago the Air Force made known its intention to strengthen the 449th Fighter Interceptor Squadron at Ladd Air Force Base, Alaska, which was consistent with Alaska's strategic nearness to Russia and its importance as a bastion of national defense. In May the Air Force declared a plan to deactivate the 449th during the latter part of this year, just before the U–2 incident and the summit collapse. These events intensified the protests from Alaska and other States, and in turn, prompted the Secretary of Defense to state that the Air Force decision would be reviewed by the Joint Chiefs of Staff. Now, without any reference to the study and deliberations if any, of the Joint Chiefs of Staff, the Air Force has announced that it is also going to transfer other activities from Ladd AFB by 1961, leaving 30 military and 25 civilians to operate the Aeromedical Laboratory, which constitutes a virtual close down of Ladd Field. I consider that this would be a shocking cutback in the face of the worsened cold war situation. The following news article from the Anchorage Daily Times of June 30 quoting both Alaska's Gov. William A. Egan, and Lt. Gen. Frank A. Armstrong, head of the Alaskan command, illuminates the issue, and is as follows:

WASHINGTON.—Alaska's congressional delegation and governor joined today in protests against the Air Force plan to shut down its big Ladd base at Fairbanks.

Senators ERNEST GRUENING and E. L. BARTLETT and Representative RALPH J. RIVERS wired President Eisenhower asking for an appointment to discuss the Ladd situation.

Gov. William Egan, attending the national Governor's conference at Glacier National Park, Mont., said the Air Force action is "like calling the sentry in from the main lookout post on a night of danger."

BARTLETT called the Air Force decision "a deplorable step backward when the need is for build up in Alaska defenses.

"Even allowing for transfers from Ladd Air Force Base to other installations in Alaska," BARTLETT said, "the plans announced yesterday call for a net loss to the 49th State of 2,420 trained military personnel and 455 trained civilians.

"It makes no sense to reduce even further all defenses in the most strategic area under the American flag."

In Anchorage, Lt. Gen. Frank A. Armstrong, head of the Alaskan command, said "My feelings and recommendations on this subject remain unchanged. However, the decision having been made, I am confident that it is recognized that it is my duty as commander in chief of Alaska to accomplish the mission of the Alaskan command with the forces made available to me."

The Air Force made public yesterday its plans to deactivate the 449th Interceptor Squadron at Ladd. It hinted of a possibility of the Army taking over the base.

Egan's warning came a day after Gov. Nelson A. Rockefeller told the Governors' conference that the United States is wide open to a nuclear attack, and virtually incapable of retaliating.

"This means we would have nothing in Alaska," Egan said.

In an interview at Glacier, the Governor said:

"The people of the United States generally feel that Alaska is a bastion of defense-offense. Such is not the case, even if Ladd Field would continue functioning as it is now.

"With the deactivation of the 44th Interceptor Squadron it meant that in all of Alaska—based on statements of the Defense Department itself—there will be only 33 interceptor fighter planes.

"This means the weakening of an area that is now strictly defensive at the present time from the standpoint of offensive-defensive weapons.

"I also say that, because last September, General Armstrong, the commander in chief of all Alaskan military, said if Alaska was attacked we would be in one hell of a fix. Those were his words.

"Ever since that time, we in Alaska have been doing everything possible in an attempt to convince the powers that be in the Pentagon that we were not offering proper protection on the firing line for the citizens of the United States.

"In Alaska, we have no intermediate range ballistic missiles or intercontinental ballistic missiles.

"The withdrawal of Ladd Field would mean that everything in the offensive-defensive makeup of our new State would be concentrated at Elmendorf AFB near Anchorage."

"In a conversation with our senatorial delegation—Senators BOB BARTLETT and ERNEST GRUENING—Gen. Curtis LeMay, the vice chief of staff for the Air Force, several weeks ago said any attack by an aggressor would be launched against our west coast.

"It just doesn't make sense to me or to our Senators that with Alaska miles from an area where we know there exists 26 or 27 missile sites of the Russians, that we would leave Alaska wide open and wait for help to come from the lower west coast, regardless of how fast our start of bombers or our fighter squadrons are.

"Valuable time is bound to be lost in our Alaskan area, where they could save valuable minutes or an hour or so.

"I imagine they are planning to move the Army units from Eielson AFB to serve more or less as custodians of the strategic base that has existed at Ladd Field.

"I made a vigorous protest to Defense Secretary Gates. He assured me right at the top level that there would be a total evaluation before any definite decision was made regarding the deactivation of Ladd AFB.

"It is my strong opinion that the Congress of the United States, or the appropriate committees should institute an immediate investigation into the entire thinking of those who are presently charged with our defense."

The Alaska Governor, a Democrat, said when the New York Republican Governor was assailing the national defense setup, he was aware of the peril to Ladd AFB. He added:

"I refrained purposely from the discussions. I felt the situation insofar as Alaska is concerned was receiving sincere consideration. I didn't want to be placed in a position—just prior to the national political conventions—that might be construed to cause the military not to consider our situation in Alaska.

"However, now this has become utterly ridiculous from the view of anyone who is remotely interested with the Alaskan defense, that may mean more than any other single State in the United States."

The Alaskan Governor said earlier talks with the military indicated the high costs of transportation involving Alaska figured importantly.

"I am pleased to know that our Air Force generals are trying to hold down costs," Egan said. "But to have them allow the cost of transportation to be a prime factor in deciding whether they shall allow the United States to have necessary defenses in any place on the globe is completely off base."

What Has Happened to Our Independence?

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FASCELL. Mr. Speaker, on the eve of one of the most glorious events in our Nation's history, I respectfully ask the Members of this body to take note of an editorial which succinctly places in focus what I agree seems to be the motivating philosophy behind the national and international policies and programs of our Government today.

This editorial is from the July 1 issue of the Home News, of Hialeah-Miami Springs, Fla.

I share the writer's hope that on the occasion of the 184th celebration of Independence Day by our citizens, serious thought will be given to the need for refreshing and invigorating our national philosophy and purpose with the spirit of independent leadership, courage, and the kind of positive American thinking which led to July 4, 1776.

The editorial follows:

WHAT HAS HAPPENED TO OUR INDEPENDENCE?

On July 4, 1776, the Colonies that later became the United States of America declared their independence of Britain.

Independence—what pride it gave birth to. What vast energies it unleashed. What dreams it sired into glorious realities.

One hundred and eighty-four years have passed since that magnificent July 4 when our independence as a nation was declared.

Thanks to a kind providence, we are still a sovereign nation, still proud, still strong, still energetic.

No foreign tyrant occupies our shores. No taxes do we pay to an alien government. No arbitrary dictator tells us for whom we shall vote, or what we shall do with our individual lives.

ESSENTIAL INGREDIENT MISSING

Yet it takes no pundit to realize that somewhere along the line we have misplaced an essential ingredient of our national independence—call it the part that is emotional and intellectual.

The truth of the matter, as this writer views it, is that we are reacting to Russia instead of vice versa. It would seem that Russia itches and we scratch. Russia is bilious and we burp. Russia lets out a notch in her belt and we breathe a sigh of relief.

In the spirit of our forefathers' hopes and deeds, we would very much like to see us as a Nation again initiating our own independent thought and action.

We would like us to be free, once and for all, of that national neurosis in which we seem to be playing one angle of a romantic triangle—with Russia at the opposite end and both countries, like jealous rivals, striving to win the favor of the rest of the world.

HANG ON RUSSIA'S WORDS

Through the endless repetitions of radio, television, and the syndicated press, we have been hanging on every word and gesture of Russia and have been tailoring our actions accordingly.

We rushed to improve our educational system—for example, not because it is fundamentally sound to provide the best kind of education for our youth—but because Russia is concentrating on superior education and we became fearful.

We have been giving foreign aid to certain countries—not because it is decent to help countries in need—but because we fear that if we don't, Russia will get there first and win it over through its own aid program.

HASTE TO DESEGREGATE

Much of our headlong haste into desegregation has been engendered by trepidation of how Russia will use facets of our country's internal situation for propaganda purposes.

Thus, without being consciously aware of it, and in a wholly negative way, we have allowed Russia to dominate both our domestic and our foreign policies. We have, in the process, permitted ourselves to fall into neurotic thralldom to a country we neither respect nor admire.

This is not to imply that our feeling is that Russia is to be disregarded as a military threat—quite the reverse. But we yearn for the time when our great country stops behaving like one of the children of Hamelin, with the Red Pied Piper calling the tune.

We yearn for the spirit of independent leadership inspired by such Presidents as Teddy and Franklin Delano Roosevelt. Yes, we yearn for the self-confident, glorious, inspired, stubborn, magnificent spirit of 1776.

U.S. General Raps Montgomery

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FLOOD. Mr. Speaker, Gen. A. C. Wedemeyer, U.S. Army, retired, is widely recognized as a student of the history and evolution of the Communist threat to world peace. His criticism of Field Marshal Viscount Montgomery's statements on Red China is worthy of study by all:

[From the Wilkes-Barre Times-Leader, Evening News, June 30, 1960]

U.S. GENERAL RAPS MONTGOMERY

EDITORS, TIMES-LEADER NEWS:

Field Marshal Viscount Montgomery deservedly won the acclaim and gratitude of the British people and of the Allied nations for his outsanding achievements in World War II. I have been privileged to know the field marshal—not intimately, but sufficiently well to admire his intellectual integrity, exemplary leadership, and sound judgment in military tactics. However, his recent comments concerning Red China convince me that this fine old soldier should relax on his laurels within the soldiers' domain and avoid the pitfalls within the international arena.

I find it difficult to rationalize the fact that the loquacious field marshal is oblivious to the problems created by Communist China and their relation to the future status of the entire Far East, including Hong Kong-Kow-loon. I am reminded of Katherine Mayo who, after a brief visit to India many years ago, became a self-styled expert concerning the diverse problems in "Mother India." Similarly, Lord Montgomery made a 4-day visit to a country extending over 4 million square miles, within whose borders live more than half a billion people, where he was exposed to the archconspirators Mao Tse-tung and Chou En-lai—both sly and shameless, both particularly adept at distorting facts. He expressed the following provocative views concerning his visit:

"China is commonly supposed to be a nation of unhappy and depressed people, downtrodden, and exploited by ruthless leaders and starved into submission, with fear abroad throughout the land. This may be true of the old China, but this is not true of the new China. Such ignorant comment about China does immense harm to the affairs of the Western world * * *; too many people exploit falsehood as truth and imaginaries as realities."

The field marshal continued: "I saw in Communist China everywhere a happy, laughing people—cheerful, friendly, and seemingly contented with their lot."

Obviously he is unaware of ample evidence concerning the massive famines in China of recent date and the official police action required to crush ruthlessly the dissident elements rioting for food. Nor has he heard the testimony of Chinese refugees in Hong Kong and Macao, where over 300 are slipping across the borders daily to leave the land that Lord Montgomery describes so glowingly.

He expressed admiration for the Communist leaders Mao Tse-tung and Chou En-lai. During World War II, I had occasional contacts with these two men, as I had with others of both the Nationalist and Communist Parties. Of course the Red leaders were charming and disarming with the British field marshal. But there is the irrefutable proof, which is available throughout the free world and therefore to Montgomery, that they are crafty, rapacious individuals who operate completely within the discipline of the Communist movement.

The American labor organization AFL–CIO conducted a thorough research and analysis of conditions on mainland China. This revealed that approximately 14 million people have been killed by the Communist regime in the last decade; a congressional committee estimated that 20 million had been killed in the same period; and the Free Chinese Government on Taiwan estimated that upward of 40 million have been murdered by the benevolent regime which so favorably impressed the British Field Marshal.

Naively Lord Montgomery accepted Mao Tse-tung's statement that there is widespread hatred of the United States throughout China and that this had its genesis at the time of the Marshall mission in 1945. Mao Tse-tung expressed Chinese resentment of United States interference in the affairs of the nation. If the British field marshal were knowledgeable concerning the facts, he would have, as a respected representative of the Western World, pointed out that the Americans were in China by invitation of responsible officials of the recognized government. Then he might have properly asked if the Chinese Communists had been likewise invited into Tibet, Indochina, Malaya, India, and Korea—all recent victims of naked Chinese Communist aggression.

Suggesting that the free world has nothing whatever to fear from Red China, the British field marshal stated, "China has far too much on her own plate to want to expand outwardly, either physically or ideologically." Viewed realistically China must expand in some direction, for her arable land is much too limited to provide for an ever-increasing population, already denied sufficient shelter, food, and sources of employment. Furthermore, every avowed Communist is pledged to spread the Marxist doctrine, by fair means or foul, and the Red Chinese are no exception.

Finally, our British friend suggested that Taiwan (Formosa) should be handed over to Red China. I wonder what his reaction would be to a suggestion, which I do not, of course, make seriously, that Hong Kong be handed over to Red China or that North Ireland be handed over to the Republic of Ireland?

To be subjected to Communist Chinese propaganda emanating from Peiping, Moscow, and other Communist centers is a daily experience throughout the free world, but to have it dished up and articulated by a distinguished military leader of the West is indeed difficult to swallow.

A. C. WEDEMEYER.

The President Speaks

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. MONAGAN. Mr. Speaker, I have been disturbed as have been many Americans by the tendency of the Republican

administration to decry any and all criticism of the recent foreign policy disasters including the U–2 incident and the Japanese riots and national upheaval.

I was most interested, therefore, to read in the Waterbury (Conn.) Republican of June 29, 1960, a brilliant and luminous editorial which eloquently states the case for freedom of criticism in these difficult times and excoriates those who would for political reasons equate any questioning of the administration with treason.

I am pleased to append the editorial herewith:

THE PRESIDENT SPEAKS

(Whatever feelings one has for Dwight D. Eisenhower, they are aware that there has developed an attitude that it is un-American to criticize the President or the policies of his administration. This is not un-American and to believe so is undemocratic.)

President Eisenhower addressed the Nation Monday night and told the American people exactly what he was expected to tell them. The theme and tone of his speech was closely akin to his pronouncements after the first sputnik and the abortion of the summit conference. In essence, it was this: Nothing has gone wrong. If our good intentions have been slightly frustrated, it is because of the evils of communism. We are blameless.

President Eisenhower's immense charm, personal popularity and unimpeachable honesty are valuable assets to the United States. But they have, in recent months, shown that too much of a good thing can lead to confusion. It reduces itself to appearance versus reality, to images. Mr. Eisenhower's millions of admirers, both at home and abroad, cannot, without difficulty, resolve their opinions of the programs and policies of his administration without involving their personal liking for "Ike."

Dwight Eisenhower has led a charmed life in the Presidency. Perhaps no other President has gone quite as unscathed. It has reached the point where critics of the administration take pains not to appear critics of President Eisenhower. Democratic leaders have impugned the administration's foreign policy, defense allocations and general management while studiously avoiding mention of the Chief Executive.

One of President Eisenhower's foremost abilities is to inspire people with respect and to reassure them, with incontrovertible sincerity, in times of misgiving. He has done this on numerous occasions, often in the face of dissident clamor from his colleagues and military underlings, but always he has triumphed.

The Far Eastern trip, which the press and many Western diplomats remarked coincided with a plummeting of American prestige, was, Mr. Eisenhower told the Nation Monday, a success. The ratification of the United States-Japanese security treaty was an important victory for the free world and a defeat for international communism. That is the President's word and we sincerely hope he is right. But we would like to see a more specific assessment that includes events prior to the Tokyo demonstrations.

We would like, for example, a detailing of the psychological process that transpired in Japan before a militant minority frustrated the will of the reigning government and denied the President of the United States his invitation to their country. It is deliciously simple to ascribe the ugly incidents in Tokyo to the evil workings of Communists. But Communists must have something to feed on.

Is there no relationship between the U–2 incident, the security treaty and the snubbing of President Eisenhower? Was there no Japanese reaction to Marshal Malinovsky's threat to retaliate against U.S. bases in foreign lands if Soviet territory was again penetrated?

The President, James Reston writes, "is not answering criticism; he is merely brushing it aside as the work of Communists and opposition Democrats."

"He feels no responsibility for anything that went wrong and therefore no need to do anything except carry on as before."

Public Funds for Nursing Education

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. DURHAM. Mr. Speaker, I should like to insert in the RECORD the address of Mrs. Margaret Baggett Dolan, chairman of the Department of Public Health Nursing School of Public Health, University of North Carolina, delivered on May 5, 1960, in Miami Beach, Fla., at a program on "Legislation and Nursing Practice," at the 1960 biennial convention of the American Nurses' Association.

I believe all members of the nursing profession will be interested in Mrs. Dolan's fine and informative statement, which follows:

PUBLIC FUNDS FOR NURSING EDUCATION

(By Mrs. Margaret B. Dolan, R.N., professor and head, Department of Public Health Nursing, University of North Carolina, Chapel Hill)

To locate a point of departure or a take-off point for a presentation on legislation providing public funds for nursing education is a difficult task. In not knowing where to begin, one frequently takes a look at the past in order to gain perspective and to see what has happened to bring us to the present. When we look only at the present we often are discouraged by what we see—the seeming lack of progress, the many obstacles in our way, and the magnitude of the problem as we view the future.

In order that we may view this issue from a common perspective, join me in a brief historical review of nursing education beginning with the Florence Nightingale era. The most striking characteristic about nursing education is that from the beginning it has been outside the domain of our general educational institutions. Although Miss Nightingale had a broad conception of nursing as a community service, she provided for the training of nurses in hospitals. A few of the early schools of nursing in the United States were established independently on the Nightingale principles of nursing education. The primary purpose of these schools was the training of nurses for the public. However, the success of these early schools of nursing in improving the care of the sick stimulated a number of hospitals to organize schools for the primary purpose of securing student nursing service for the care of their patients.

In less than 30 years, by 1900, there were 432 schools of nursing in the United States; but, with very few exceptions, they were completely under the control of hospitals. The financing of the schools was always difficult. Even the ones established independently contracted to provide nursing service and even then had difficulty augmenting such funds. By 1910 there were just under 1,200 schools of nursing, most of which had started for economic reasons—to ensure a low cost supply of nursing service. This rapid increase in number of schools sharpened the awareness of the nursing organizations to the need for standards of education and of practice. The same criticism we hear so often today was leveled at the leaders in nursing in 1910; namely, "leaders in nursing are more interested in the education and advancement of nurses than in the development of nursing services." At the same time it was not uncommon for schools to graduate students who would not be employed by their home institution or even be recommended for employment by another agency.

Although there were affiliations, with educational institutions in a few instances, there were no basic programs in nursing education under the administrative jurisdiction of a publicly supported educational institution until 1909 when the University of Minnesota School of Nursing was established. In 1916 the University of Cincinnati School of Nursing and Health was the first to offer a 5-year program leading to a degree, to be followed in 1923 by collegiate schools at Yale and Western Reserve Universities.

From the publication in 1912 of Miss Adelaide Nutting's study, Educational Status of Nursing, to the report of the President's Commission on the Health Needs of the Nation in 1951 numerous studies of nursing reiterated the need for adequate financing of educational programs in nursing and pointed out the paucity of endowment money in nursing education and the small amounts of public funds in nursing education. The President's Commission stated: "We believe that nursing like other professional education should become a part of the general educational system of the Nation."

The nursing student traditionally and to a great extent today pays for her training through the service she renders. When moves have been made to place nursing schools under the jurisdiction of general educational systems, frequently hospitals were reluctant to agree. The performance of services has often interfered with the nurses' education and under this apprentice-type system the primary objective of the institution must have top priority. Until we break away from this heritage of service for education and nursing education becomes a part of our general educational system will we solve some of the major difficulties facing the nursing profession today.

When income from nursing student services and fees do not cover the cost of the nursing educational program, patient fees frequently make up the deficit. With the rising cost of medical care and hospital costs it is unfair and unjust that one segment of our population, one burdened with illness, must bear a large part of the cost of nursing education.

The problems of financing nursing education in hospital schools presents a dichotomy of purpose that affects nursing education. The development of a profession is dependent upon its educational foundation. When the clinical experience of the student is geared to meet the service needs of the institution, the educational objectives of the student are frequently disregarded. The apprenticeship system will continue in nursing as long as the majority of nurses receive their preparation in institutions whose primary objective is the treatment of the sick and injured. This is not to say that service institutions and hospitals do not have an importan part to play in nursing education, it is that they should not have to bear the cost of nursing education and to administer and support an educational institution.

Education of professional nurses should be placed on a true professional basis. This will

only be accomplished when schools are placed under the jurisdiction of universities and colleges and when both cultural and professional instruction are provided. Students of nursing should have the opportunity for contact with persons whose primary interest is education. They must learn how to engage in the intellectual process, and the best means available is through participation with students and teachers from many areas of learning who are developing ideas and skill in communicating these ideas. "Increasingly it is being realized everywhere that no technical training, however good, is sufficient as preparation for professional personnel. A broad understanding of the physical and social sciences on which professional practice is built and of the society which the professions serve is essential." Only the college or university can provide the money, qualified teaching personnel, and other resources required in present day professional education.

FEDERAL AID TO NURSING EDUCATION

What has happened at the national level in terms of Federal funds for support of nursing education?

In 1941, with war clouds on the horizon and the country emerging from the great depression, nursing could see the first results of the use of Federal funds for nursing education. Approximately 3,000 graduate nurses had received stipends under the Social Security Act while attending colleges and universities for preparation in public health nursing.

There was an increasing demand for graduate nurses as the preparedness program moved forward. Studies revealed that the supply of nurses was not adequate; that nursing schools could not increase their enrollments to any great extent without financial assistance. The National Nursing Council and the Subcommittee on Nursing of the Health and Medical Committee of the Council of National Defense submitted through the USPHS a request to Congress, for Federal funds for nursing education. With the leadership of Congresswoman Frances P. BOLTON and the effective work of the ANA a 2-year Federal-aid program for nursing education was secured. From July 1941 until June 1943, approximately $4.5 million was expended. Schools of nursing increased their enrollment by 13,000; over 4,000 graduate nurses were provided postgraduate study; and 2,000 received refresher courses.

In June 1943 the 78th Congress enacted Public Law No. 74, the Nurse Training Act. Congresswoman BOLTON sponsored this legislation, known as the Bolton Act, which provided for the organization and development of the U.S. Cadet Nurse corp. It also provided for postgraduate preparation for graduate nurses. This 5-year program (1943–48) cost the Federal Government approximately $160 million.

Under the Lanham (National Defense Housing) Act of 1940, the USPHS authorized expenditures of over $25.5 million for new facilities, such as living quarters, classroom and demonstration rooms, and library space for 239 schools of nursing.

Despite this amount of Federal aid to nursing education, nursing schools at the midcentury showed that 65 percent of the cost of nursing education was being borne by hospitals, 24 percent by tuition and fees, 3 percent by gifts and endowments, 4 percent from State and local funds and 4 percent from university and college funds.

The ANA included a strong statement on nursing education in its 1950 platform. ANA approached the U.S. Congress through Congresswoman FRANCES P. BOLTON, and a bill known as the Nursing Education Act of 1951 (H.R. 910) was introduced. The political climate of Congress was unfavorable to aid for professional education, and the bill was tabled. The ANA continued its legislative efforts, and in the fall of 1956 additional Federal funds were provided through enactment of Public Law 911 known as the Health Amendments Act.

The first three titles of the act pertained to education for health professions. Title I was concerned with the preparation of public health workers, including doctors, nurses, engineers, health educators, sanitarians, et cetra. Title II provided for advanced preparation for graduate nurses in teaching, supervision, and administration; and title III provided for the expansion of vocational education programs for the training of practical nurses. This program was for a 3-year period.

The program has served to reverse the downward trend of the number of graduate nurses enrolled for full-time study in advanced nursing programs. From 1951 to 1956 there had been a rather marked decline of full-time students in advanced nursing programs. This was occurring at a time when there was a desperate shortage of teachers in nursing schools and nurses prepared in supervision and administration. It is estimated that about 3,800 nurses received Federal assistance during the first 3 years of the professional nurse traineeship program. This can only be considered a beginning when we estimate the present and future needs for nurse teachers, supervisors, and administrators. In 1959, through new legislation, the program was extended for a period of 5 years.

According to the NLN's "Nurses for a Growing Nation" in 1956, 13 percent of the 430,000 active graduate nurses were in leadership positions. In 1959, the ANA, NLN and Public Health Service released information stating there were 460,000 active graduate nurses in 1958. It was estimated that 59,800 or 13 percent were in administration, supervision, and teaching. To maintain this 13 percent ratio 3,953 additional teachers, supervisors, and administrators were needed. This is more than double the number of full-time students enrolled in 1957 in the 44 advanced nursing programs participating in the professional nursing traineeship program.

The two major programs of Federal aid to nursing education have been the cadet nurse program and titles I and II of the Health Amendments Act of 1956. The first provides scholarships to basic students in nursing, and the latter to graduate nurses for advanced study. Both programs have been in the nature of emergency measures to meet existing situations that were of national concern and both bear definite cutoff dates.

We are still faced with the basic problem of public funds for continuing support of nursing education.

In January 1958 the American Nurses' Association board of directors authorized that the ANA prepare and have introduced in Congress a bill to provide financial aid to baccalaureate programs, and to graduate nurses in supplementary programs leading to the baccalaureate degree.

The American Nurses' Association, with cooperation of its constituent units, promoted this legislation with all the resources at its command. The association was committed to this action by the fourth plank in the 1958–60 ANA platform which states, "Promote legislation which will provide public funds for research, scholarships, and continued improvement in nursing education."

There was excellent response to this legislation from nurses throughout the country as evidenced by the hundreds of letters received by Mrs. GREEN, Senator HUMPHREY, and other Members of Congress urging favorable action on these bills. In fact, the response was much greater and more enthusiastic than had been anticipated. We all know the legislative process is a slow one and that it generally requires continuing effort and repeated attempts to accomplish legislation. We believe much progress has been made although it is extremely doubtful that any action will be taken on this legislation during the current session of Congress. Promotion of this type legislation should be the major concern of the association during the next session of Congress.

There is precedence for this type of legislation. The National Defense Education Act of 1958 was a major step in meeting the needs of higher education. It was a recognition by Congress that higher education is a vital part of the Nation's strength. However, this act emphasized science and mathematics. Nursing and medicine were not considered in the context of this legislation as scientific fields. It is my belief that an adequate supply of professionally educated nurses to meet the health needs of our rapidly expanding population is also essential to the strength and defense of our Nation. Therefore, the Federal Government has some responsibility in this area.

In November 1957 the ANA sent to all State nurses associations "A Discussion Guide on Public Funds for Nursing Education." The board of directors recognized there were many complex issues involved in seeking State and Federal funds for support of nursing education. It is essential that the membership of the ANA study the issues, acquire information and make some important decisions regarding the type of educational programs the profession will ask the public to support with increasing amounts of tax money.

This guide has been used in various ways by State associations and by directors of schools of nursing. Discussion of the questions presented in the guide, and others raised by nurses, need continued exploration until every nurse is informed and has participated in decisionmaking and in the legislative efforts of the American Nurses' Association.

If nursing is to achieve professional status, and accorded this recognition by society and other professions, it must establish its educational foundation in institutions of higher learning. Only in this way can nurses continue to enlarge the body of knowledge of nursing which is initiated within the profession. I believe this body of knowledge includes the science and art of nursing in direct patient care as well as the functional activities of planning, directing, educating, and supervising nursing personnel.

With practically every thoughtful study of nursing and nursing education recommending that the preparation for the profession of nursing belongs in institutions of higher learning, how do we account for the slow progress? Is it because the majority of nurses have not accepted this recommendation?

I believe we have reached the stage in our development as a profession that we must accept the concept of two types of nursing, namely, professional and technical—the basic preparation for professional nursing provided at the baccalaureate level and basic preparation for technical nursing at the associate degree level in community or junior colleges. Both should be and must be supported by public funds and both are essential in providing competent and skilled nursing care for our population.

The majority of professional nurses in practice today have not been educated in institutions that were primarily educational institutions nor was the educational program supported by public funds. Therefore, our background makes it difficult for us to accept this change. Yet, we are the nurses who have accepted the legislative principle which states, "Public funds should be available only to schools which qualify as educational institutions as defined by the National League for Nursing in 'Criteria for the Evaluation of Educational Programs in

Nursing which lead to Baccalaureate or Masters'." We all recognize that change is difficult, and there are ambivalent feelings associated with change. It takes courage, a dedication of purpose and belief in the future of our profession. I believe we must accept this concept and work vigorously for its implementation if nursing is to fulfill its responsibility to society as a profession.

It is also the profession's responsibility to develop way to show the correlation between the preparation of the nurse and the quality of service. The public will assume the cost of nursing education when we are able to demonstrate this correlation and the public has an understanding of the differentiations in levels of nursing ability and functions.

We must at the same time uphold standards of nursing education as defined by the profession and seek public support only for those programs which meet such standards.

Some progress has been made towards this objective. According to the 1959 edition of "Facts About Nursing" there was a 2.6 percent decrease in the number of graduates from diploma schools of nursing in comparing the academic year 1955–56 with 1956–57. More and more hospital administrators are beginning to realize providing the type of education necessary to prepare the nurse to function effectively on today's health team is an expensive undertaking. This fact has facilitated the development of nursing programs in colleges and universities and community colleges. For the same period there was a 9.5 percent increase in graduations from associate degree programs and an 11.9 percent increase in graduations from baccalaureate degree programs. Although the percentages are encouraging, the picture, when we see the actual numbers involved, is not impressive.

There are interesting regional differences in the number of graduations in basic professional programs. In 1956–57 the western region had approximately 3,000 graduations with 23.8 percent from baccalaureate degree programs while the North Atlantic region had over 11,000 graduations with 9.1 percent from baccalaureate degree program (1.73). Can we assume that the West does not have the weight of tradition to retard its progress in moving basic nursing education into educational institutions? For the same period the West also had five times as many graduations from associate degree programs as any other region in the United States.

The quality of education in institutions of higher learning is dependent to a great extent on the quality of public education provided by the elementary and secondary schools of our country. We have become acutely conscious of the staggering needs for skilled teachers, enriched curricula, additional physical facilities, instructional equipment, and continuing financial support for public education. This is important to nursing education, and nurses as citizens have an obligation and responsibility to actively support legislation to meet these needs.

STATE LEGISLATION FOR AID TO NURSING EDUCATION

In 1945 legislation was enacted in Wisconsin permitting the State Department of Nurses to use for scholarships to aid graduate nurses, unemcumbered money in excess of $15,000 in the department's funds on June 30 of each year. Since then 11 other States have enacted legislation to provide scholarship aid to graduate nurses. Many of these scholarships carry commitments to work in a particular field of nursing, such as psychiatry, tuberculosis, or in a teaching or administrative capacity. The total amount appropriated varies from $1,650 to $319,000.

From 1950 to 1958, 14 States made appropriations for scholarships for students in basic professional nursing education. The total amount appropriated during this period varies from $17,000 in one State to $615,000 in another.

Although some progress has been made, the public has as yet made small provision for the support of nursing education. This is in sharp contrast to the financing of the education for physicians, teachers, social workers, lawyers, and engineers. Yet the nurse has been ranked close to the teacher as a social necessity. She is needed many times during the life span of every individual.

According to the 1959 list of State Approved Schools of Professional Nursing, 172, or only 15 percent of the 1,126 schools, are under the administration of a college or university. Where nursing education has developed in institutions of higher learning there has been disparity in the adequacy of financial support in comparison to that of other professional schools in the same institution.

The public, through donations or tax funds, bears approximately half the expense of all other forms of higher education but contributes only 7 percent of the cost of nursing education.

On October 15, 1958, there were 113,518 students enrolled in the 1,126 schools of nursing. Of these, 19,195, 17 percent were enrolled in baccalaureate degree programs. Thus, we have 15 percent of our schools with 17 percent of the total number of students in collegiate schools of nursing. (In January 1946, 1 percent of the 1,214 schools of nursing in existence at that time stated they were independent of hospital control.)

As we look at the standard of nursing education in our basic collegiate schools in 1959, we find 79 of the 172 collegiate schools are fully accredited by the National Nursing Accrediting Service (the 1960 list includes 87 schools accredited).

Two States—Alaska and Delaware—and Puerto Rico have no basic collegiate nursing program. There are 20 States with no fully accredited degree program and 12 States with only one accredited degree program. Thus, only 17 States have more than one fully accredited basic baccalaureate program while a little less than half of the States have no accredited basic collegiate nursing program. In 1959 less than half of all basic collegiate schools were in educational institutions supported by public or tax funds.

This is the situation today. We believe the public has not accepted its responsibility to invest in the preparation of a group giving an essential service. For over 10 years the ANA has had a plank in its platform to promote legislation for this purpose. Shall we as members of the nursing profession be content to continue the present practices of financing nursing education which have no justification except that of tradition? Or will we actively pursue a program of action to see that public support is provided as stated in the ANA platform?

How true today are the words of Miss Annie Goodrich in 1912, when she said: "Our place * * * has been found in the institutions of the sick, but we shall never render our full service to the community until our place is also found in the university." I believe we will find that place when every professional nurse takes collective action as a member of her professional organization in carrying forward the Association's legislative program.

There Is a Lesson for America in Student Riots

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. BOSCH. Mr. Speaker, in recent years there have been many so-called student uprisings and they seem to be on the increase in the United States as well as in other countries. A very interesting analysis of this situation is found in the July 1960 issue of Nation's Business.

Under leave to extend my remarks, I include the aforementioned article:

THERE IS A LESSON FOR AMERICA IN STUDENT RIOTS

(By Felix Morley)

When the dictatorship of Premier Adnan Menderes was recently overthrown in Turkey, the first action of the new regime was to honor the student leaders jailed during the demonstrations which touched off the rebellion. It was the same in South Korea, when senile Syngman Rhee was ousted at the end of April.

University students were also highly instrumental in the Cuban revolution which replaced Batista by Castro 18 months ago. And the role of youth in the herioc attempt to end the Communist tyranny in Hungary in 1957 is not forgotten.

The picture of youth at the barricades is undeniably romantic and emotionally appealing. But these instances, from four widely separated countries, are sufficient to emphasize the always doubtful outcome. On the one hand, the Cuban people have not gained self-government by substituting Castro for Batista. On the other, Hungary is no happier for the immolation of those who vainly battled Russian tanks in the streets of Budapest. As for Korea and Turkey, it is still too early to pass judgment. We know that seemingly intolerable dictatorships have been ousted. We cannot as yet be sure that the change is other than the proverbial fryingpan-to-fire alteration.

Nevertheless, there is something that stimulates optimism in the idealism of these youngsters who stake their lives—and often lose—in the hope of building a better society for their countries. Those whom a government conscripts in its defense are mechanized pawns compared with those who voluntarily combine to overthrow their government. Often the latter are misguided, but they are never lacking in the attribute of courage and seldom in the virtue of self-sacrifice.

Rebellious youth, moreover, has played a large role in our own history, tending to justify Thomas Jefferson's strong assertion that "the tree of liberty is watered by the blood of revolution." Both Alexander Hamilton and James Madison, gratefully remembered as two of our greatest statesmen, began their political careers as student agitators against British rule. Just a century ago, as we now recall with melancholy pride, a whole generation of Southern youth was preparing to turn its ardor into bitter resistance to the Government of the United States.

A few years prior to that, in 1848, French students raised the banner of revolt against absolute monarchy, thereby establishing republican institutions which, in spite of

changes and setbacks, still endure. This constitutionalist movement quickly spread to most of what are now our NATO allies. Its stern repression in Bismarck's Prussia promoted that solid German immigration which had added so greatly to American stability and strength. A current book, "Intellectual Revolution in Modern China," recalls the role of Chinese students, many American educated, in the abortive rising against the Peiping government of 1919. One of the youthful leaders who then was jailed for this activity was Chou En-lai, now the ruthless ruler of Red China.

In view of the recent disastrous events in Japan there is a tendency to discover Communist influence behind every domestic protest against a government allied with us, while regarding such risings as wholly spontaneous when attempted against Red rule. The universality of student restiveness, and its long history, make that interpretation suspect. Communists undoubtedly seek to infiltrate and stimulate any movement that opposes a regime receiving aid from the United States. But to assert that without communism there would be no such opposition to established authority is not demonstrable.

The causes of political agitation in the universities are not identical at all times and in every country. But there is certainly one common characteristic explaining, for instance, why Turkish students broke into demonstrations immediately following the triumph of similar protests in South Korea. This common denominator is the admirable loyalty of youth to the concept of justice. And since justice is most likely to be lacking under dictatorships, it is against these that students are generally most eager to act.

This being the case, one would expect to see the universities of the Communist world, where tyranny is strongest, most active in protest against it. The logic fails for a reason other than the readiness of Red leadership to stamp out any protest before it can gather strength. There is the further fact that where Marxism controls, almost without exception, we find a background of authoritarian rule of an even more primitive nature, against which communism can still be pictured as a liberating force. With the passage of time, the Red dictatorships will probably have much more trouble with their expanding intelligentsia. One cannot stimulate the spirit of scientific inquiry and expect it to remain unquestioning about political dogma.

There is more intellectual ferment in the free world precisely because it is, at least relatively, free. Turkish students marched against Menderes not because of Communist promptings but because they resented a regime that seems to have flattered the Kremlin by imitation. Revolutionary changes, which at first glance may seem a weakness for our side, are more correctly envisaged as evidence of the vitality of freedom. If it were moribund this side of the Iron Curtain, youth would not rise in its defense.

That is a thought to be remembered by American parents as their sons and daughters begin to demonstrate in campus rallies here at home, a trend already apparent and likely to gather force during the coming academic year. We must admit that we have reluctantly gone a long way toward accepting authoritarian principles in this country. Everywhere else, that has eventually produced undergraduate protest. Those with our heritage of freedom are unlikely to be an exception to the rule.

It is to be noted, however, that such demonstrations are likely to take wholly irrational forms, reflecting the lack of critical ability in the participating youngsters.

At my own college, for instance, student picketing erupted this spring, in front of local chain stores whose national management maintains lunch-counter segregation where local opinion favors the practice. In the rhetorical words of the undergraduate newspaper: "If young people are not outspoken on problems of equality, then who shall be?"

If this admirable sentiment were uniformly applied, it would carry more weight. Student pickets would be thrown around the offices of labor unions which insist on membership as a condition of employment. The right to work where one wants is surely as fundamental as the right to eat where one wants. To deny the former to nonunionists is certainly as discriminatory as to deny the latter to nonwhites.

Reasoning power, however, is not highly developed among our college students and is sometimes perceptibly absent among their teachers. In these deficiencies lies the danger of undergraduate demonstrations. As our Government becomes more and more remote, unwieldy, all-embracing, and irresponsible, we may expect such demonstrations to increase. As an outlet for exuberance they are preferable to "panty raids." By the same token they should be more mature.

It is the business of educators to develop that maturity. But it isn't found in statements like that currently made by a professor of government in a highly respected small college. He naively confesses to a sudden discovery of "the enormous importance of local government" as follows:

"Those of us whose eyes are firmly fixed either on Washington or international affairs have so often lost track of town, city, county, and State governments that it comes as quite a shock to realize that democracies really begin by people managing local affairs well on a local level."

Better late than never. If our college boys are beginning to learn that good local government is all-important in this Federal republic, then their political demonstrations could well become something better than mere foolishness and waste of time.

Responsibility

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FASCELL. Mr. Speaker, I should like to insert into the RECORD an address Adm. Arleigh Burke, Chief of Naval Operations, made before the first class midshipmen, U.S. Naval Academy, on April 20, 1960.

Admiral Burke certainly points out very well the importance of accepting responsibility—from ordinary day to day obligations each individual faces, to the responsibility of the United States on other less fortunate countries in our world today. His address follows:

ADDRESS BY ADM. ARLEIGH BURKE, U.S.N., CHIEF OF NAVAL OPERATIONS, BEFORE THE FIRST CLASS MIDSHIPMEN, U.S. NAVAL ACADEMY, ANNAPOLIS, MD., APRIL 20, 1960

Admiral Melson, members of the faculty, midshipmen of the first class, it is always an exhilarating experience to return to the Naval Academy. Every alumnus gets a lift, a feeling of pride from a visit to his alma mater.

Recently, I was asked in a letter, what I considered my most important professional decision. That is a tough question, and frankly, I was unable to single out any specific answer. At the time the decisions were made, each seemed the most important, at least to me. But, in thinking back, in reviewing them, a thought kept repeating itself, again and again. It was the important part that responsibility plays in every decision that you make, major or minor, large or small.

There are a lot of channel markers to help you make decisions, but one of the best, is a well-developed sense of responsibility. It is one of the most important things in your lives. It was important before you came to the Academy, it is important while you are here, it will be even more so after you graduate.

Basically, responsibility means being accountable to someone, for something. It involves an obligation. In battle plans and operations orders, for example, we refer to an area of responsibility. Here we mean that commanders are responsible for certain tasks, and will be held accountable for their execution. It may be to attack something, to perform some special job, or just to stand ready to act when called upon. With every duty, comes responsibility, to the authorities above you, and just as important, to your subordinates. Responsibility is the very heart of all authority.

Another significant thing is that you can never avoid responsibility. Sometimes it can be put off temporarily, but it can never be avoided completely.

We all face multiple responsibilities, to God, to our country, to our fellowmen, and to ourselves.

As a nation, we also face responsibilities, grave ones. Today, the free world is threatened by imperialistic communism. It is a ruthless, godless, form of expansion, dominated by one thought, to impose slavery upon the entire world.

But there is an obstacle, a big obstacle, in communism's path toward world slavery. It is all of the nations of the free world, all those whose people realize their responsibility for freedom. Greece, Turkey, Thailand, and all the others, whether large or small.

The United States is a leader among nations. This leadership was not sought, it was thrust upon us. It was thrust upon us, because we are respected, respected for our principles, and our willingness to live up to them, for our military power, and our economic strength.

Our very freedom has given us the obligation to continue to earn it, to protect it, and to help others attain it. We have the duty to safeguard the freedom of every country, because theirs is inseparable from our own. Unless free men and free nations stand together, then assuredly, one by one, men and nations will lose their freedom.

The Communists hope that we will sit on the sidelines, hope that we will turn away from the problems of others. They hope we will ignore the hunger, ignorance, disease in the world, in short, shirk our responsibility. With every increase in discontent, in poverty, Communist lies, and false promises, would appeal to more people, would be believed by more people. Little by little, the free countries could be lured away from freedom, to disappear into the dark depths of Communist slavery. We would then stand alone, and vulnerable.

That is one reason why we must use our wealth, to aid those less fortunate, and our strength to protect the less strong. It is everybody's job and it is a tough one. All the Armed Forces play a big part in it.

Our wonderful Navy stands, ready to act, swiftly and decisively in any area. It carries tremendous responsibilities for meeting the Communist challenge to freedom, and to freemen everywhere.

By treaties and agreements the United States has obligations to more than 40 na-

tions. We assist in developing their forces, help keep their lifelines open. As our national obligations overseas increase, so do the Navy's responsibilities. They loom large in peace or war, in war, of any temperature.

To deter general nuclear war, our naval forces, partcularly our attack carriers, insure that retaliation is inevitable. Soon, by the end of this year—we will add greatly to this capability. Two fleet ballistic missile submarines, with 32 remarkable Polaris missiles, will be at sea, ready to strike back at any aggressor. No ballistic missile assault can rob these forces of their strength. By dispersal, by concealment, by the mobility that makes them invulnerable to ICBM's, we guarantee our retaliatory power. We guarantee that the awesome power of Polaris, and our attack carriers will remain intact, even after a surprise blow.

In case of limited war, our job is equally significant. The Navy must be ready to act on short notice, ready to bring power to bear, where needed, when needed, and in the exact amount needed. The Navy, and those wonderful fighting Marines, are always ready to bring seagoing capabilities, air, amphibious, full seapower, to the many trouble spots, spots that can be reached only from the seas. No other nation has this capability. It is one of the strongest deterrents to limited aggression.

In the cold war, the forces afloat, carry a full load of responsibilities. Our powerful 6th and 7th Fleets guard the interests of the United States, and underwrite the freedom of our allies. We stand alert in the Far East, in the Mediterranean, ready to be first on the scene. When Lebanon asked for assistance, we landed marines on its beaches. We did so only 7 hours after the orders were given. This kind of readiness keeps situations in hand. We will need it for a long, long time.

And while we stand alert, our fleets promote good will, friendliness, and confidence in the United States. To every country the men in our ships bring hope, and assurance for the continued security of the free world.

This is the picture, your place in it is important. You inherited responsibilities at birth, as citizens of our great country. Your duties are just as real, and vital as when you are assigned a watch. No buddy is going to be able to stand your watch. It is up to you. As members of a democracy, you must make the system work. Self-government requires self-participation.

Millions, in other countries, would give anything to carry out the responsibilities you have. Many, in fact, have given their lives trying to gain the right of self-government.

Hungary is a good example. There the Communists denied this right, and ruthlessly crushed those who tried to do something about it. Throughout the Communist empire, it is the same. The few do the planning, the dictating, for the many, who must do the labor.

The Communists are eager to do the same to us. But they never will be able to, not as long as we keep alert to the peril, and act with determination to meet it. Our freedom, brings with it the need for action.

You all know how little is accomplished when you, "let George do it." George is usually equally determined on getting somebody else to do it. It works the same way, on the international scene. World problems are not solved by the world. They are solved by responsible individuals. That is how any job gets done, winning an E, or establishing justice and progress in the world.

We are engaged in a competition with communism. It is a deadly one. It is no spur-of-the-moment softball game. It is a competition where national survival is at stake, a competition which invades every facet of our lives. Our cultural, political, economic, and military strengths, have all been challenged. Our very way of life is under fire. This is a challenge that can be met only with hard work and personal sacrifice. There is no other way.

Your responsibilities will grow with you, and as our Nation grows. They are part of maturity. Some, those already existing, will be broadened, and new ones will be assumed. As a matter of fact, unless I miss my guess, many of you are already planning to assume new responsibilities in the chapel, right after graduation.

Marriage is a wonderful thing. A wife can be a real source of happiness, and strength, but she will also be an added obligation, and there will be other additions, both large and small.

All this is good for a man. Responsibilities give purpose and meaning to life. Many people devote all their lives to chasing frantically after happiness. It is a tragic thing to see, because they never find it. Some, fail so badly, are so disillusioned, and frustrated, they end up in mental hospitals.

Real happiness comes to those who do their jobs, and do their best. You see this in the fleet. The taut ships, the ones that win the E's, and the competitive exercises, the ones you want with you in battle, are the happy ships.

The people who really put out have the secret to happiness, and to growth. When you put out, when you take on the tough jobs, when you turn the worst division into the best, when you bring your department from unsat to outstanding, you bring yourself up with it. You grow mentally, and you build self-confidence.

As naval officers you will have additional responsibilities. Our Navy is the most powerful in the world, and it is the most capable. But remember, the effectiveness of any organization is based on the reliability of each man, on how well he pulls his oar.

Each of you will share a full measure of your Navy's obligations. On your shoulders will rest the lives and welfare of men, the success of your unit, your ship. The accomplishments of the Navy, the security of our Nation, in turn, rest on each man, unit, and ship.

In a few months, you will be officers. You will be called upon to exercise authority, and to lead. You must be fully aware of your obligations, large and small. You will have to answer for your actions, or lack of action.

Men trust, and follow, those who hold themselves accountable. That is why effective leadership depends on a strong sense, the very strongest sense, of responsibility. It will be your job to develop it. You will need it.

You will need it every single day. There will be many situations where the proper courses of action, cannot be preplanned, or predetermined, for you, or by you. These situations will require many qualifications. Most of all, they will require a willingness to decide, to act, to do, and to stand responsible.

You have heard of that fateful night in June 1944, when Admiral Mitscher turned on the lights of the task force.

Our ships were darkened. We were close to enemy-held islands. The Japanese fleet was still around. We had struck the enemy, and successfully. There was still a very real danger, counterattack by submarines and aircraft.

Our planes, returning home in the darkness, were low on fuel, desperately low. They were not yet home, they needed help. Admiral Mitscher gave it to them. He ordered the lights turned on, to guide them home. Here was a really tough decision. It involved the safety of thousands, the security of the striking force. He knew this. He knew he alone would be accountable. He made the decision. It paid off.

This was a magnificent moment in the life of a great man. Here was responsibility at its peak. This is the sense of responsibility all of you must learn.

Developing this sense is a big job. It is a difficult task, but not an impossible one. At first, you have to work at it consciously, but eventually, it becomes almost second nature.

When you get to your first unit, your first ship, start right in. Extra effort, extra interest, are the marks of the really fine officer, and that is just the kind we need.

Responsibility is displayed in combat, in emergencies. It is displayed in the daily routine, in drills, and training.

One of your first duties will be on deck, in port. You will be responsible for the appearance of every man leaving the ship. Nobody ashore knows whether a man is in your division. But, there are always those, who know he is from your ship. It will be up to you to see he reflects credit on it.

This is the type of obligation each officer faces, because he is an officer. The captain alone is responsible for the ship, but each officer carries a responsibility for it too.

Letting something slide by, overlooking an obvious wrong, a safety violation, particularly when they do not involve your division or your department, may be easier. But responsibility extends beyond your division, or your department, and you must exercise it. That is the way we get better ships, better squadrons, and a better Navy. We all have to work at it, to feel and act personally responsible for improvement. It should be a matter of principle for each of us, and principles are of prime importance.

Man's principles, our principles, the ones our forefathers fought and died to preserve, represent our greatest strength. The Communists realize this only too well. That is why they want us to relax them, let them slide, let them fall away.

Nothing can be more destructive to a nation, or to an individual, than the loss of principles, or the failure to live up to the ones he has.

During the Korean war, for example, there were a few young men, in uniform, who lacked convictions, were confused in their loyalties. As a result, when captured, they fell prey to the fictions handed them by the Communists. The terrible thing is that there were some among them who gave in, and did so without a real struggle. Some become informers. Others gave up their will to fight, even their will to live. They just rolled up in a corner, and died. This could befall any individual, any society, and nation, whose principles become lost.

This applies to those principles, governing our relations with other men, with the Navy, and with our country. It applies just as strongly to those principles, which guide our moral conduct, the way we live with ourselves.

Keep a constant weather eye on your personal conduct, on your morals. We live and work in a world of machines, but morality is man's business, your business, not a machine's. This requires self-discipline and self-control. You will need it, because to control the powerful weapons of warfare, we must first be able to control ourselves.

And there is something else you will have to have to discharge responsibilities properly; that is knowledge.

Before you can plan and direct a course of action, you have to understand the issues. You need a knowledge of details, for it is only after a man has a thorough knowledge of a subject, that he has the self-confidence needed to lead.

You are receiving fine educations. It will be your obligation to further them when you graduate. You can do this by reading, by seizing every chance to broaden your experience, by qualifying in a wide variety of jobs. You can improve your skills by postgraduate work.

The forthcoming competition for acceptance as a Rhodes scholar is a marvelous op-

portunity. The Navy has a great need for line officers with advanced education of this type. That need will be even greater in the future.

Officers who complete graduate studies, who are successful as Rhodes scholars, do not fall behind their contemporaries. Actually they have taken a major step ahead. They have prepared themselves for greater responsibilities.

Responsible men must be able to stick to their guns, to persevere. You are bound to run into difficulties, and you will make mistakes. You will have to stick your neck out, good leaders always do. You will run into criticism.

There will always be some, who will resent your accepting responsibility. But do not let that bother you. Life is no popularity contest. You will find your real rewards in the satisfaction of a job well done, in increased responsibilities, and in greater opportunities. As life becomes more challenging, the mastery of it becomes more rewarding.

This all sounds like a big order; it is. The opportunities are equally big. Measure up to your responsibilities, and you will perform a great service for our Navy, our country, for all mankind. My best wishes to all of you, in the important tasks that lie ahead.

The Deadly Growth

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I want to call to the attention of my colleagues the attached editorial from the Wall Street Journal of June 27, 1960, titled "The Deadly Growth":

THE DEADLY GROWTH

We have lately been in the garden putting fertilizer on our shrubs and poison on our weeds. The fertilizer feeds a growth that's slow and sturdy. And, curiously, our weed spray kills by also stimulating growth. It makes the plant grow so fast they burn themselves out—and die.

So when the politicians start talking about the Nation's economy and how they are going to make it grow we are prone to ask, What kind of growth? The drugged and overstimulated kind? Or a growth that puts down roots deep and solid?

For a good many political candidates these days, ranging from Adlai Stevenson to Governor Rockefeller, tell us our economy isn't growing fast enough. They lament the fact that our growth rate is "only" about 3 percent a year while the Russian economy, depending on what statistics are used, is expanding at the rate of some 7 percent or 8 percent. And then they declare that we "must" expand faster or woe betide us in the race with the Communists.

Now there are a number of phony things about this argument. For one, percentage figures are meaningless without taking into account the base from which each is figured; and the base of the U.S. economy is many times that of Soviet Russia. For another, the argument suggests that Russia is already "closing the gap" with the United States. Yet as Vice President NIXON pointed out recently, 20 years ago Soviet production was about 45 percent of U.S. production—and today it is still only about 45 percent of ours.

But quite aside from the fallacies in measuring the relative growth of the United States and Russia, there is another disturbing thing about this argument. It assumes that growth, any kind of growth, is an absolute good, and then goes on to conclude that therefore anything that stimulates growth is good.

Mr. Stevenson has mentioned 5 percent as the necessary growth rate; Mr. Rockefeller talks of 6 percent; others have their own figures, mysteriously arrived at. But all those of this persuasion are united in insisting that the Government must do something to force the rate higher. And common to the prescription of each is more spending in the Government sector, more direction by the Government of spending in the private sector. All to the feeding of the great god Growth.

Of course, stimulating growth temporarily is not a great trick. The Government can multiply farm production by simply lifting its price supports. It can enlarge our oil production by squeezing tighter the controls against oil imports. It can stimulate the housing industry by easier money for mortgages. It can make many an industry boom by just pouring out enough paper money for roads, hospitals, schools, dams, power projects or whatever captures the planners' fancy. In short, with sufficient doses of inflation it can give the whole American economy the exhilaration of frenetic activity.

But so far among the political candidates, Vice President NIXON alone seems to have given any thought to "what kind" of growth this would be. He too wants more growth and he does not reject Government activity to encourage it. But he spurns the idea of growth for growth's sake only.

"The growthmanship school," he observed, "argues that the Government should plan and manipulate the economy to arrive at an arbitrary, fixed percentage rate of growth. * * * They believe that Government spending regardless of its purpose spells growth and, therefore, is good in and of itself."

But the lesson of nature is that growth is not automatically good, in and of itself. And the lesson of history is that inflationary spending will, in Mr. NIXON's phrase, "wreck the economy, not expand it, because true growth is based on sound money, not phony money."

America will grow, we need have no fear of that. But we had best remember that growth is good only when its roots are deep and lasting. And never forget that a drugged growth can be deadly.

Strength: The Sure Protection

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of June 23, 1960:

ANSWERING THE CHALLENGE—STRENGTH: THE SURE PROTECTION

The international situation can be explained in terms of diplomatic and political maneuvers, pressure points, actions and reactions, etc. But what it all boils down to are two facts:

1. The cold war—the espionage, subversion, the psychological pressures, the political and economic thrusts—will continue indefinitely, or as long as the Communists think they can gain without risk of all-out war.

2. On the present cold war collision course a military clash between communism and the free world is almost inevitable. But this probably will happen only when the Reds decide their cold war tactics are sterile and unproductive, or when they make an error of judgment as to our capabilities.

What we have to remember is that the advance of Communist control has been braked to a stop only when free men have been willing to stand and fight.

The words of Fleet Adm. Chester W. Nimitz sum up the challenge that faces Americans:

"I am concerned about the readiness and willingness of our citizens to face up to the grim possibility—and probability—that only a clash of arms will settle our disputes with the Communists. * * * Our general policy should be 'hope for the best and peace but prepare for the worst and war'—and we should prepare ourselves mentally, morally and spiritually to fighting to support our policies."

The Communists certainly are ready and willing to make any sacrifice that will win the world for them. We cannot afford to let their resolution exceed ours.

Our strength is composed of many things. Missiles, guns, ships, planes and dedicated armed services to man them are but one manifestation of our strength. It goes deeper, for it touches on faith in our country, confidence in our leaders, the unity of our purpose, morality, the understanding of and devotion to the processes of our Republic and the free society it shields.

In times past we have had a word to describe the qualities so necessary to the maintenance of America's strength. And the word is patriotism. Patriotism is not just a word that we trot out on the 4th of July, Armed Forces Day, or Memorial Day. It is the cement that holds our free Nation together. It is the will that enables us to stand up to tyrants, to rebuff defeatists and political crepehangers. It is the unquenchable resolution to stand, fight and die, if necessary, for freedom and all it represents.

If our patriotism comes to the fore—as it has in every time of trouble in our history—then we will have the mental, moral, and spiritual strength so vital to our survival. We live with crisis, but we also live with deep and abiding faith in our country and ourselves. With that faith as a base for our military power we can do anything asked of us.

Break Diplomatic Relations With Castro's Government

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FLOOD. Mr. Speaker, among the more interesting manifestations of the failure of our current Caribbean policies are the positive views of thoughtful Cubans on Cuba.

Among many such expressions is the letter from Rafael Lecuona, of Tallahassee, Fla., published in the June 29, 1960, issue of the Christian Science Monitor:

A CUBAN ON CUBA

To the CHRISTIAN SCIENCE MONITOR:

Please allow me to congratulate you on your editorial of June 9, "Cuba: Restraint but Not Inaction."

It is certainly encouraging to realize the importance your newspaper gives to the tremendous menace a Communist regime in Cuba offers not only to the United States but to all the Latin American countries. However, your answers to your own question—What can be done? (about this serious danger to our democracies) fall short of the right solution.

Have you, or the American people stopped to consider what would happen if Cuba and Russia sign a mutual security treaty? And you can bet that this is in the making. Perhaps some naïve people believe such a treaty will provide the right "excuse" for the United States to use the Monroe Doctrine, which would permit an American intervention in Cuban affairs. However, they better think twice about the consequences of such action after a Russian-Cuban agreement has been signed. There will be no way to break it up, except by risking a third world war.

Let us not forget Russia's grip on Hungary, Poland, and the rest of the Soviet satellite countries. What would happen if we try to liberate any of these countries? The same goes for Cuba, after it has signed a security pact with Russia.

Cuba, as a new "Socialist State of the People" will be the trampoline from which a more direct Communist infiltration in Latin America will bounce off. Russian planes and submarines will be watching our shores, waiting for the right moment to act. Ballistic missiles will not be hard to set up, and at only 90 miles from us. And, worst of all, democratic governments in Latin America will fall one after the other. The end, then, is obvious.

It is because of the above-mentioned premises that the United States must act now, before it is too late.

Among the things the United States should do, as of now, the following are paramount:

1. Break off diplomatic relations with Castro's government. (The rest of Latin America will follow because they know that in this struggle between democracy and communism there is no middle ground, and they know their place is with the United States. After all, for less reasons Colombia has broken up diplomatic relations with the Dominican Republic; and Guatemala with Cuba; and many a Latin American country has broken up diplomatic relations with another Latin American nation for practically no reason.)

2. After this initial step, all Cuban delegations and consulates, and 26 of July clubs in the United States will have to pack up and take their Communist propaganda with them. This, at least, will stop men such as the director of La Graceta—a Spanish newspaper published in Tampa—from saying that the President of Cuba is not a Communist, when it is well known by all of us (Cubans) that the President of Cuba ran for representative to the low chamber of Cienfuegos (Cuba) in the Communist Party in the elections of 1944; and that he was an officer of the Communist Party's local committee of said city of Cienfuegos during 1940–44; and that he was personal secretary of Juan Marinello, No. 1 Communist of Cuba for more than 30 years.

3. It will be very easy then (for the United States) to cut off the tremendous subsidy paid to Cuba's sugar industry, which will be forced to sell its sugar to Russia at the price they are so proud to brag about: little over 2 cents a pound. Certainly, the Cuban people will suffer. But they stand to suffer 10 times more under the Communist regime of Castro.

Then, let Castro bring petroleum from Russia—after the three American and English refining companies have finally pulled out, even if they lose millions of dollars (they are going to lose them anyhow). Eventually, a new and democratic government will take over in Cuba. And with it, and with the rest of the democratic governments of Latin America, the United States can go back to its job of closing the gap between its tremendous high standards of living and the tremendous low standard of living of most, if not all, of the Latin American countries.

RAFAEL LECUONA.

TALLAHASSEE, FLA.

Views on Milk Marketing

EXTENSION OF REMARKS
OF
HON. ROBERT E. COOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. COOK. Mr. Speaker, at an open public meeting on June 10, 1960, a group of milk producers presented their views on Federal milk marketing orders to Congressman ROBERT W. LEVERING, 17th District of Ohio, and myself. The meeting was held at the Ashtabula County Court House at Jefferson, Ohio. There were approximately 120 people in attendance, including milk producers, farm machinery dealers, retailers of dairy products, and contract haulers of milk.

It was the general conclusion of those present that milk marketing orders serve a useful purpose in the dairy industry. However, the view was expressed that certain changes should be made in existing law to better carry out the original intent of the legislation. Some of the suggested changes in the existing law are as follows:

First. Abolition of "block voting" on amendments to the Federal order. The practice of producer cooperatives to vote their total membership for or against an amendment was criticized as being an undemocratic method of voting. Because of this method, the views of nonmembers have little opportunity to prevail.

Second. Abolition of marketwide pool. Producers said this type of marketing allows out-of-State producers to share in a high-class, one-utilization pool, thereby lowering the price to producers within the market area.

Third. Revision of the pricing formula used under milk marketing orders. It was stated the procurer price is arrived at by a complicated manner which he cannot follow or understand. The view was further expressed that the information used by the administration in arriving at the minimum price for milk in a marketing area should be made available to the participating producers upon request.

Fourth. Revision of the milk marketing order to permit farmers to produce milk by class of utilization. It was the consensus of opinion of the farmers present that a new plan be devised whereby the producer would produce milk to be priced and sold by class rather than the present plan of permitting the needs of procurers determine the class of farmers' milk and the subsequent price received by the producer. One producer pointed out that with only one cow he could still be shipping milk classed as surplus or class three. Most producers favor a production quota system which would stabilize supply to processors.

Fifth. Revision of the order to permit rejection of an amendment to the order without rejection of the entire order.

Sixth. Amend or repeal the milk marketing law so that the producer through cooperatives has the right to bargain collectively for fair prices for dairy products. A producer introduced a chart showing that during the period 1952–60 the corporate earning of the processors increased while the prices paid to the producer has decreased.

A retail sales outlet owner who has sold over 2 million quarts of milk stated that, since 1953, the price of milk to him has increased 4 cents per quart and the price paid to producers has decreased 64 cents per hundredweight.

A producer stated that as an operator of a family-type farm, he had doubled the size of his herd, thinking that this was the solution to lower prices. In his words, he stated, "I found out I was wrong in my thinking."

In the opinion of Congressman LEVERING and myself, this meeting was a very worthwhile event in that it gave the individual farmer producer of dairy products an opportunity to give his views to his Congressman and, in addition, to a member of the House of Representatives Agricultural Committee and the Subcommittee on Dairy and Poultry. It is sincerely felt that this type of grassroots opinion will be of assistance to the Members of Congress in enacting future needed farm legislation.

One Hundred and Twenty-fifth Anniversary of Hebron, Ohio

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. LEVERING. Mr. Speaker, the House today approved House Resolution 594, a resolution extending the greetings and felecitations of the Members of this body to the good people of Hebron, Ohio, a fine little village situated in my congressional district. I submitted this resolution to honor the village on the occasion of the celebration of its 125th anniversary on July 4, 1960, the birthday of our freedom.

Mr. Speaker, I extend special congratulations to the Hebron Planning Committee for this celebration, Robert Walters, Stanford Queen, and Rev. Raymond Sturm, and all others who have exhibited a high degree of native pride in arranging for this celebration which serves the good purpose of pointing up to all those who live in this area of Ohio the early history of the village.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include my resolution, as well as a fine article written by Beverly Walker, which appeared in the June 25 edition of the Newark Advocate:

Resolved, That the House of Representatives hereby extends its greetings and felicitations to the village of Hebron, Ohio, on the occasion of the celebration to be held on July 4, 1960, in honor of its one hundred and twenty-fifth anniversary, and extends its best wishes for the continued progress and prosperity of such village and its residents in the future.

[From the Newark Advocate, June 27, 1960]

HEBRON READIES FOR BIG CELEBRATION—125 YEARS TO BE MARKED JULY 4

(By Beverley Walker)

Two direct descendants of one of the founders of Hebron Village; a Licking County history dated 1881, and a group of interested residents are the nucleus of a July 4 program being planned to celebrate Hebron's 125th year as a chartered village.

Since the village of Hebron came into being largely because of the Ohio Canal and the Cumberland Road which crossed at right angles in the village, the July 4 activities will be held at the site of the Hebron firehouse, which at one time was the old canal basin.

The raising of the 50-star flag at 1 p.m. will begin the celebration. Judge Henry Ashcraft will be the guest speaker. The activities will continue throughout the day with dramatic skits and contests.

Hebron historians recall proudly many of the early-day happenings of their village. Probably the most frequently told story is how at one time shortly after Hebron's charter was issued in 1835, the town nearly became the county seat. It lost to Newark by only one vote.

Licking County's first canal boat was also a product of Hebron, built in 1827. It was destined to remain in Hebron. The boat, too large to navigate the locks, was laid up in the Hebron turning basin. It was left there and later converted into a saloon.

FIRE RECALLED

Another event frequently recalled, but none too pleasantly, was the great fire of 1901. The entire business block on the south side of Main Street was destroyed as were some of the buildings on the north side.

The fire occurred the night before the Ohio Electric Co. opened the interurban line from Columbus to Newark and Zanesville through Hebron. The line opened as scheduled and the interurban made its first run through the ruins.

There has always been a mill in Hebron, oldtime residents will tell you. During the days when whisky was the common medium of exchange, there were two distilleries in Hebron, one for corn whisky and one for rye. Workmen digging the canal received 30¾ cents per day and four "jiggers" of whisky for working from sunrise to sunset.

Old photos reveal that harnessmakers, shopkeepers and hatters were also operating in Hebron. Thomas Cully an early settler and one of the founders of the village made his living as a hatter.

His great granddaughters, Miss Mary Rosebraugh and Mrs. Clarence Henry, who live in Hebron today, still have Cully's apprentice release dated 1803. At that time, young men learning a trade were bound to their employer for a certain period, then given an apprentice release enabling them to go out on their own.

Hebron, during its prosperous years, was most famous as a pork, beef, turkey, and grain market, historians relate. In 1835 the Atlantic and Lake Erie Railroad was constructed through the village. Although it circled the development of Hebron, at the same time, it contributed to the demise of the Ohio Canal.

This decline had some adverse effects on the business life of the village. One early historian wrote: "Hebron * * * situated at the crossing of the canal and National Road was once a fine business point and in the days of its glory the largest and best grain and pork market in the county, if not in the Licking Valley. But since the men that made it such have passed away and railroad facilities have attracted the commerce to other points, Hebron has lost its prestige as a commercial point and with it, much of its moral and religious enterprise."

Present-day residents do not share this historian's pessimism. "We feel we're still pretty important," one resident said. According to the latest census figures the village's population is 1,255, an increase of about 395 in the last 10 years.

Armed Services Day Address, Lubbock, Tex., by Lt. Gen. Ben A. Schriever

EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MAHON. Mr. Speaker, Lt. Gen. Ben A. Schriever on May 20, 1960, under the auspices of the chamber of commerce of Lubbock, Tex., made an Armed Services Day address in that city.

General Schriever is the distinguished commander of the Air Research and Development Command. He guided our ballistic missile development programs until he was promoted to his present position where, of course, he still supervises these programs. No one in the military services or otherwise has been more vitally concerned with our missile and military space programs. I speak from firsthand knowledge when I say that General Schriever has made a tremendous contribution to the security of the United States.

I wish to insert in the RECORD a copy of General Schriever's speech at Lubbock. His opening remarks are omitted.

U.S. AIR FORCE—AEROSPACE POWER FOR PEACE

I feel at home when I come back to Texas for as you know Texas is where I grew up and received most of my education. I find it especially gratifying that so many representatives of Reese Air Force Base, military Reserve units, and the Texas National Guard are assembled here, along with faculty members and students of Texas Tech, and citizens of Lubbock.

The purpose of Armed Forces Day is to bring military and civilian groups together, for a clearer understanding of our common interests and problems. My subject tonight is the basic one of our time, and it concerns all of us equally—that is, national security in the space age.

My own interest and concern in space activities, quite naturally, is that which is seen from the eyes of the military man whose first responsibility is the development of an aerospace force sufficient to deter any armed assault on our Nation.

It is axiomatic that there is no longer safety in distance on earth. We are literally next door neighbors to all peoples—and to their governments—whether they choose to live with us in hostility or in friendship. With the advent of megaton-yield nuclear weapons, supersonic airplanes, and ballistic missiles, the space age has caused the world to shrink in terms of time to a mere fraction of its former size. Thus the development of the ballistic missile which has made it possible for us to operate in space has concurrently made it necessary for us to develop military space vehicles for reconnaissance, surveillance, warning, and communications. Accordingly, in discussing national security in the space age, I shall discuss briefly the Air Force ballistic missile program and then I will cover our military space requirements.

The missile, as a forerunner of space vehicles, encompasses a part of history that at least dates back to A.D. 300 when Hero of Alexandria used the opposite reaction principle to propel an experimental device. Nine hundred years later in about A.D. 1200 the Chinese used gunpowder to propel arrows of flying fire equivalent to present day skyrockets. Our own Dr. Robert H. Goddard fired the first successful liquid-fuel rocket in 1926; however, it was not until 1954 that the United States initiated its all-out ICBM program at Inglewood, Calif. The decision to embark upon so broad and extensive a missile program was based on the judgment of a group of scientists drawn from colleges, universities, industry, and the military establishments. Their judgment was that such a system was technically feasible despite the fact that none of the elements of the ICBM program existed in 1954. We had no lightweight, high-yield warhead—we had no suitable nose cone that could withstand the intense 12,000° F. heat generated by its reentry into the atmosphere—we had no adequate guidance systems—we had no proper or suitable powerplant, nor any of the many facilities necessary to make the missile work as a complete weapon.

All of this has been accomplished since 1954 by a compression of time, employing the concept of concurrency—for it was a race against time—the most difficult race that can be undertaken. I will not belabor you with the details of what may be termed as recent ancient history—rather, I prefer to speak of the missile miracle which transposed an idea into a reality in 5½ short years. This was a miracle that was wrought by tens of thousands of dedicated, talented and devoted men and women throughout the length and breadth of the Nation, great numbers of whom came from this State. This has been a maximum effort in the Nation's most urgent business of perfecting American defenses and insuring our security. Many of these men and women may perhaps be found in the audience today. It is to them, in science, industry, in the universities, in the research laboratories and in the military services, to whom high praise and great credit must go for without them the reality of operational ICBM's and IRBM's could not have taken place in such a very short period.

In the few short years since our ballistic missile program was accelerated, the Atlas has progressed from a concept to an operational weapon system. It performance exceeds that which was thought possible at that time and just this morning, an Atlas flew 9,000 miles from Florida to the southern tip of Africa in 50 minutes. The Titan also was conceived, designed, produced and tested during this period. All elements of the Titan missile have successfully demonstrated their capability for operational use.

As these ICBM's enter the operational inventory, we already have more advanced systems underway. The Minuteman, which is a solid propellant ICBM, is in test now. This system will provide a more economical ICBM and is planned to be built in quantity. The Minuteman system will be operational in mid-1962—and by 1963 quantities of Min-

uteman, both hardened and dispersed, and mobile, using our vast railroad network will be added to the deterrent strength of the free world.

Intermediate range ballistic missiles have been developed and deployed during this same time interval. Thors have been turned over to the Britain's Royal Air Force and are operational now. In addition, the Thor has been used as the booster for most of our satellite launchings. Recently a Thor-Able placed Pioneer V in orbit around the sun; another Thor provided the booster for Tiros, the weather satellite, pictures which you have seen; and on April 13 of this year, the navigation satellite, Transit, was placed into orbit by still another Thor. As you can see this Air Force missile has been serving as the workhorse of the American space effort in addition to its military role.

What has been the impact of the development of these ballistic missiles? I have already stated that the advent of these weapons has caused the world to shrink in terms of time. This compression of the time factor has given a new and ominous definition to the element of surprise. For the first time in the history of our Nation, the United States is open to a destructive surprise nuclear attack. This change has had a revolutionary effect on every aspect of our national life—on our thoughts and behavior habits, on our trade, our political activities, and most of all on our basic feeling of security.

For example, an aggressor nation having complete target information and military forces armed with nuclear ballistic missiles, will enjoy a new and decided advantage. Under these conditions, our own deterrent posture must be one in which, first, the vulnerability of our offensive force is reduced to the maximum extent possible; second, our warning and surveillance systems must greatly reduce the possibility of a surprise attack; and third, our communications or command and control systems must provide the capability of making decisions in a matter of minutes.

These are cold, hard facts that must be acted upon and not just theories to be contemplated.

Now, what must be done? There are things that can and are being done to reduce the vulnerability of our retaliatory forces. There is hardening of our bases and facilities, dispersal of our forces and equipment, and mobility which is being built into our missile forces as well as the capability of an air alert for our bomber forces.

We must have these forces in sufficient quantity to enable those surviving an attack to counterattack and win. These are actions generally understood by the American people.

Not so well understood, however, is the importance of surveillance and warning in eliminating the possibility of surprise attack. Nor is there a clear understanding of the need and nature of the command and control systems required to speed our national decision making. Even less appreciated is the significant contribution which can be made by space vehicles toward the attainment of these objectives.

Now, why are these capabilities, namely, for surveillance, warning, and communication—of such great importance to the United States, and of little relative value to the U.S.S.R.? As I have already said, an aggressor nation, with superior target information, has a tremendous advantage in our nuclear-rocket world of today. Our national policy, which has been supported by our actions, firmly establishes the United States as a nonaggressor Nation.

This is not necessarily true for the U.S.S.R. Certainly then it is obvious that the nation which requires warning against attack is the United States—not the U.S.S.R., and, here, space vehicles can play a most vital role.

One such system under development is the Midas satellite program to detect missile firings by the use of heat sensors. Midas will double the warning time we can get from ground-based systems. However, our command and control systems must permit immediate dissemination of such a warning. Our present communication systems are not quite good enough.

Here again, the potential improvement inherent in space systems—namely, communication satellites—can be expressed in as many times as that which we have today. In short, adequate and reliable communication between globally dispersed land, sea, and air forces is possible—through space vehicles. This will permit us to exploit our warning to the fullest, even if the time is only 15 to 30 minutes in length. An enemy, knowing that he could not achieve surprise, would certainly be reluctant to attack. Thus, warning and communications satellites would greatly enhance the deterrent posture of the United States and the free world, while they would be of little military value to the U.S.S.R.

Now in the field of military intelligence, the U.S.S.R. has no problem. It can easily assess the strengths, weaknesses, and intentions of the United States and the free world. In peacetime, because of our democratic principles, only our most vital technical information can be kept secure. And even here, we have not always fully succeeded. On the other hand, the Iron Curtain has been extremely effective.

The advantage of reducing this gap in intelligence is obvious. Again, space vehicles—in the form of surveillance satellites—possess the greatest potential to accomplish this objective.

All of these satellite systems are entirely passive in nature. They represent no threat to any other nation. They will indeed be servants of world peace and security.

To make these systems truly effective will require that our command and control systems permit immediate dissemination of warning information. These systems must also provide us with the capability of making decisions in a matter of minutes since the drastic reduction of available time in the space age lends an irrevocable nature to our decisions. Thus we can see that the development of ballistic missiles has generated requirements for military space vehicles and for modern command and control systems.

The impact of these developments has created requirements for new industry and new technology. In a short period of time, a multibillion dollar missile and space industry has been created. Today, over 100,000 people are working full time in the Air Force Ballistic Missile and Space program. Tens of thousands of people are also working in other missile programs.

I do not need to tell you that Texas takes an active part in these developments. This State already has an established group of companies manufacturing aerospace components. It also has a rapidly growing list of firms in the important electronics field.

Texas consistently has ranked third among the States in prime military contracts. During the last fiscal year, new contract awards of this kind in Texas amounted to $1½ billion. In addition, military personnel and civilian employees of the Defense Department in Texas number about 225,000 people. They bring the State an annual payroll of nearly $1 billion.

Here in the West Plains and in the Panhandle, you have made tremendous strides industrially in the past two decades. This growth has been based largely on the great oil and gas production just south of Lubbock, and the area to the north, above Amarillo. As is always the case, the expansion of basic production facilities has been followed by a substantial influx of new manufacturing establishments of many different kinds.

In the past 22 months, military contracts totaling more than $57 million have been awarded for work in west Texas and the Panhandle. These contracts cover a wide variety of products and services, ranging from engine fuel in Big Spring, Wichita Falls, and in Borger to the construction of guided missile training facilities of Sheppard Air Force Base, Wichita Falls. Just across the New Mexico line, at Roswell, an underground launching site for Atlas intercontinental missiles is to be constructed.

All these military and industrial activities are reflected in the remarkable growth of Lubbock—and the other modern cities of west Texas. The spacious auditorium in which we are now gathered is a fitting symbol of the industry and of the progress being made here.

As our American missile and space technology moves forward, we will find that we have an ever-increasing capability for flight beyond the borders of our atmosphere. To take every advantage of that capability, and to realize our full space potential, we must understand that space is a medium in which vehicles can travel on missions, for both peaceful and military purposes. We must also recognize that many military missions—and civilian services too—can be performed more efficiently, and more economically, using space vehicles than by any other systems available today.

In closing, let me summarize briefly. The primary responsibility of the military is the defense and security of the United States. Space is a medium which we can and must use in carrying out our primary task of maintaining the peace. It is hoped that this peace, which is the dream of mankind, can be achieved and become a reality. I personally believe that this will be accomplished by the continued dedication of the people here and those throughout the entire Nation.

The Most Significant Date in the 20th Century

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, two Washington journalists, Fletcher Knebel and Charles W. Bailey II, have written a remarkable book about the events surrounding the first use of atomic bombs. Under unanimous consent, I include a review of their book, "No High Ground," published by Harper's, by Orville Prescott in the New York Times:

BOOKS OF THE TIMES
(By Orville Prescott)

If civilized men still study history in the 21st century it seems probable that they will agree that August 6, 1945, was the most significant date in the 20th century. It was on that day that an American B–29 bombing plane flew over a Japanese city called Hiroshima and dropped a new kind of bomb. A new age was opened with the first use in war of the destructive power of atomic energy. Since then in less than 15 years gigantic stockpiles of unimaginably more destructive bombs have ben accumulated and the peoples of the world have learned to live without shuddering for more than a few minutes a day. And also since then atomic energy has been put to many useful and peaceful purposes. But even today, after the publication of dozens of books and millions of words in papers and magazines, most

of us know very little about the decisions and debates that preceded the epochal flight of the Enola Gay. In their "No High Ground," Fletcher Knebel and Charles W. Bailey 2d have assembled quantities of facts about the dramatic debut of the bomb, many of them hitherto unpublished.

RELIVING OF DRAMATIC DAYS

This is reportorial, informal, popular history written by two reporters. Mr. Knebel is the author of a syndicated daily political column, "Potomac Fever." Mr. Bailey is a member of the Washington bureau of the Cowles Publications. The two men have studied every available documentary source and have personally interviewed scores of men who played parts in the tremendous drama—scientists, statesmen, soldiers, diplomats. They have quoted copiously from verbatim transcripts of once top-secret memorandums and coded dispatches.

The result of their joint efforts is a clear and lively narrative that seems to cover everything important and certainly includes many less important matters, adding piquant details and suggesting the high-tension atmosphere in which everyone who shared in the fateful project lived. But too many characters are introduced too briefly. It is easy to remember who's who among the major personages sitting in the seats of the mighty; it is impossible to keep track of many of the minor figures.

The authors call their book "the full and controversial story of the first atomic bomb." "No High Ground" may not be so comprehensive as this suggests; but it does cover a lot of ground the tentative, halfhearted peace proposals of the Japanese; American plans for the invasion of Japan; a description of Hiroshima and of the lives led there by a half dozen individual Japanese; a review of the history of the secret and gigantic project called Manhattan Engineer District, "the most prodigious scientific-industrial-military enterprise ever conceived by man"; an account of the organization and training of the special Air Force unit assigned to deliver the first bombs; a collation of the divided opinions among scientists and Government officials about the use of the bomb, whether there should be a warning or demonstration first, etc.; the reasons why President Truman and the majority of his advisers decided for a surprise attack; a blow-by-blow narrative of the raids on Hiroshima and Nagasaki, and a quick look at the horrors unleashed in Hiroshima.

ETHICAL IMPLICATIONS HAZY

Mr. Knebel and Mr. Bailey have not tried to explain the scientific mysteries of nuclear fission or the methods by which atomic bombs are manufactured, which is understandable and just as well. They have devoted a generous amount of their attention to the debate among scientists and among soldiers and statesmen on the use of the bomb. Even now after 15 years the moral and military rights and wrongs are by no means clear. Undoubtedly the lives of many American and Japanese soldiers were saved when an invasion of Japan was made unnecessary. Undoubtedly also the killing of many civilians with two atomic bombs profoundly shocked millions of people who had not been particularly shocked by the killing of as many civilians with many ordinary bombs.

Nevertheless, the following excerpt from a report submitted by seven atomic scientists under the chairmanship of James Franck still seems prophetically cogent:

"If the United States were to be the first to release this new means of indiscriminate destruction upon mankind, she would sacrifice public support throughout the world, precipitate the race for armaments, and prejudice the possibility of reaching an international agreement on the future control of such weapons.

"Much more favorable conditions for the eventual achievement of such an agreement could be created if nuclear bombs were first revealed to the world by a demonstration in an appropriately selected uninhabited area."

This book gets its title from an old military maxim recommending ground forces to seize the high ground. Since the coming of atomic bombs there has been no high ground.

Congressman Feighan Honored by American Friends of the Anti-Bolshevik Bloc of Nations

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. O'HARA of Illinois. Mr. Speaker, it will be of interest to the House to learn that the American Friends of the Anti-Bolshevik Bloc of Nations held a testimonial dinner in Cleveland, at which our colleague, Honorable MICHAEL A. FEIGHAN, was the honored guest, and delivered an address before the members and friends of this organization.

On this occasion the American Friends of the Anti-Bolshevik Bloc of Nations presented our colleague, Congressman FEIGHAN, with a plaque which carries an inspiring accolade for his many years of hard work in behalf of the cause of justice among all nations and all people, which reads as follows:

In recognition of his firm stand and staunch efforts on the liberation and sovereignty of all enslaved nations as well as against communism and Russian colonial imperialism.

By unanimous consent I am extending my remarks to include the full text of Congressman MICHAEL A. FEIGHAN'S address:

This occasion has significant meaning because I attach great importance to the work carried on by the ABN and associated organizations in support of a peace with justice and to keep the American people informed of the dangers of Russian imperialism and Communist imperialism to our free American way of life.

This occasion provides me an opportunity to discuss some of the major problems confronting our country as a consequence of the Russian effort to dominate the world.

There is the Berlin crisis. The Russians have been attempting to take over complete control of all Berlin since 1947. They attempted to drive us out in 1948 by cutting off our lines of supply and communication. President Truman responded with a firm determination to remain in Berlin—the Berlin airlift—the Russians backed down when they saw we meant business.

In 1955 the first summit conference was held. The Russians agreed with the Western leaders that Germany should be united by means of free elections—this was played up as the big accomplishment of the conference. A reading of the communique released at the end of that meeting makes this fact startlingly apparent. Yet, nothing was done to implement this agreement. A dangerous drift set in, the Russians took advantage of this vacuum. Having serious internal troubles with the captive non-Russian nations in their slave empire, fearing a repeat of the Hungarian freedom revolution on a much broader scale, they began to call for a status quo in the affairs of nations.

Khrushchev was the spokesman on this new demand—he made no less than 10 major addresses in the empire on this theme. The United States did not look with favor on a status quo arrangement and told the Russians so.

Therefore, Khrushchev provoked a political crisis on Berlin—his demand that the United States, France, and Great Britain get out of Berlin by a set date or be driven out by Russian military force. President Eisenhower's first reaction was, we would stand fast on Berlin—the Russians have to take full responsibility for their actions on Berlin. In this he received complete support of Congress and the acclaim of the American people. It was then clear that our people had become sick and tired of being pushed around by the Russians and the time had come to take a stand.

Khruchchev recognized this and quickly claimed he had been misunderstood—that he wanted to negotiate on Berlin—that he was ready to meet with the Western leaders to negotiate. Here is where the Eisenhower administration weakened. The offer was made to the Russians that if Khrushchev would remove his deadline threat, we would be willing to negotiate. Now imagine this. We said we were willing to negotiate something on which no negotiation was legally possible because our legal right to be in Berlin was clearly established. By accepting Khrushchev's demand that we negotiate on our legal right to be in Berlin, we thereby admitted our right to be there was not clear; that it was something subject to negotiation. This, in my opinion, was a blunder; an admission of weakness. We let Khrushchev get off the hook after we called his bluff and he had backed down. It seems our leaders lack the political sense to know when we have won a victory and how to exploit such a victory.

It is now clear that Khrushchev used the Berlin crisis as a political blackjack to force the leaders of the West into a second summit conference. He must have needed this meeting very badly to take the risks he did on this crisis.

And now it is clear that Khrushchev so desperately needed a recognition by the free world of a status quo that he was prepared to take grave risks to win this goal.

Now let us look at the meaning of status quo—its significance to the Russians in their plot to conquer the world.

To the Russians status quo means that the United States recognizes the finality of the captivity of all the non-Russian nations within the empire. It gives a permanency to the Iron Curtain—at least a permanency so far as the emancipation of the captive nations is concerned. It does not mean, however, that the Russians would give up their ideas of extending their Iron Curtain to all the still free countries of the world. For the Russians it means the right to do as they please with the people held in bondage behind the Iron Curtain—to continue on with genocide and their other crimes against humanity, to ruthlessly crush all opposition, to kill off more millions of non-Russian people. It would give the Russians the right to be above the conscience of all humanity.

To the enslaved non-Russian nations it means the United States has deserted their cause—has turned its back upon their legitimate aspirations for liberty, freedom, and national independence. It is cold water thrown upon the torch of human freedom which they hold up in a sea of tyranny and despotism. It is a denial of the cause of those millions of martyrs of all faiths who gave their lives in the cause of justice and all humanity.

It is a temptation for those who may grow weary of the struggle for freedom to take the easy way out—to compromise their conscience and their moral convictions—to be opportunists—to make their peace with the tyrant, it is in fact an invitation to accept communism as the wave of the future—and this is the key to war—a war in which the United States would be deprived of its proven allies behind the Iron Curtain—the non-Russian people of the empire.

For the United States recognition of a status quo would mean that we have surrendered our heritage as the citadel of human freedom—that we fear the power of our political ideals—that we consider our political ideals as theories reserved for after dinner talks and fillers for history books. Worse still, that the United States had lost its faith in the power of the common man and his aspirations for peace with justice. It would signal the beginning of a new era in power politics, an era in which the United States would turn back to the 9th century, to indulge in the immoral peace of empires. And finally, it would deprive the United States of its most potent weapon for peace-moral leadership in a world which is crying out for a return to fundamental morality in the affairs of nations and peoples.

With this background we can see the hidden importance of the conference which will open in Paris on May 16. The great challenge to American leadership in Paris next month is whether we will take advantage of a golden opportunity to strike a blow for peace—that is—a just and lasting peace. We will fail in this opportunity if our leaders sit back and wait for the Russians to take the initiative. We must seize the initiative and state our case for all the world to hear it—and to understand beyond any doubt that we reject any and all proposals which could lead to recognition of a political status quo with the Russian slave empire.

On March 21, 1960, I introduced a resolution in Congress—calling upon the President to do just this. It is House Concurrent Resolution 636—copies of which some of you have had an opportunity to study. In my judgment, the terms of this resolution state our case for the Paris summit conference.

I call to your attention the fact that my resolution includes all the nations occupied by the Russian Communists—not just a few—but all of them. It is my judgment that none will be free until all are free. That is the nature of the struggle for the world.

* * * * *

It is my fervent hope that the "spirit of the Paris conference" will be based upon these foundations of international justice.

The "spirit of Camp David" needs an airing, it needs the clean airing of just what did take place between President Eisenhower and Khrushchev. Only the Russian version has been made public. The American version has been withheld from everyone—particularly the American people. We shall judge the meaning of this strange silence by the results obtained at the second summit conference—not in terms of platitudes and slogans, but, specifically, in terms of what the American delegation did on the question of status quo and the future emancipation of all the captive nations.

The American Legion

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MOULDER. Mr. Speaker, several weeks ago on Friday, June 11, a young man, 17-year-old Stephen Bayne, president of Westbury High School student organization, told an audience of almost 1,000 classmates, parents, and school officials at Senior Awards night that he could not accept a citizenship award from the local American Legion Post because he did not respect the American Legion. As the award was about to be made to him, he jumped up and shouted, "Wait. I refuse to accept an award from an organization I can't respect." Someone cried, "I demand the boy be ejected." The audience was stunned but the proceedings—in which Stephen Bayne was awarded other prizes—went on.

I wonder if this young man fully realized the significance of his remark. What incited this young high school student leader to take such drastic action to express his lack of respect for one of the most patriotic organizations in our country. Several weeks ago in San Francisco, we witnessed a shameful organization of students led by well-known expertly trained Communist agents in their riotous demonstration against the functioning of a Committee of the U.S. Congress, the Committee on Un-American Activities. The American Legion has always been vigilant on the issue of communism and loyally supports the work of the Committee on Un-American Activities in its work in opposition to the Communist tyranny.

Does the young man Stephen Bayne have disrespect for the American Legion because it is an organization "for God and country"? Or is his disrespect the result of Communist teachings?

Mr. Maurice Stember, department adjutant of the American Legion, Department of New York, made an address on this subject wherein he said:

There is a segment of our society, including a few columnists and teenagers, who, because they are uninformed, or do not care to learn the true character and purposes of the American Legion, occasionally break into print attacking the policies of our organization, as best illustrated by the recent incident that took place in Westbury, here in Nassau County. It is most unfortunate that a few columnists who have a great affinity for defending people and organizations that we regard as leftists seize upon the action of an immature youth to make a Roman holiday of it. They should be reminded that the American Legion is an organization of men who fought in three wars to maintain the kind of country in which a youngster can speak his own mind without fear of the Gestapo. The American system which guarantees the right to speak up also gives the same right to other people to speak their own mind and, if anyone has earned this right, the members of the American Legion have done so. They certainly deserve a tolerant attitude on the part of others, and good manners. That is not too much to expect.

In contrast to this group there are a great majority of people, maybe not honor students, but people with much more honor, who gave thanks that there were and still are men who believe in their God and their country and have joined together under the name of the American Legion.

The Legion has never been prone to compromise or evasion, whether in time of war or uneasy peace. There is no question as to where our organization's first allegiance lies or where its devotion centers. Its loyalty is not subject to debate for it is attested in the soil of 100 battlefields and pledged in the blood of thousands who died on them. We have as members the President and Vice President of the United States, 61 U.S. Senators, 241 Members of the House of Representatives, and 31 Governors of States.

The American Legion includes in its ranks more disabled veterans, more holders of the Congressional Medal of Honor and other decorations than all other organizations combined. Yet, we are not old soldiers reminiscing and recalling empty shades of past glories. There does, however, exist among us an unspoken testament that we shall keep faith with the comrades we have known; those men who through pain and bitter sacrifice have learned a hard lesson that perhaps can be taught in no other way, and the lesson is this: The great battle of our age is not waged on land or on sea or in the air, but in the souls of men and the time of battle is not fixed, but is of continuing urgency.

It follows then that the defense of our homeland is basically anchored in the moral strength of the Nation, and it is for this reason that the Legion marshals its energies in the promotion of a sound patriotism. We have laid down a direct, hard-hitting diagnosis of the critical problem of our time and our country and this problem briefly is the gap which exists between the free world and communism, not in terms of armament and material achievement, but in terms of a spiritual dedication to a cause. Communism is a faith, a godless one. It has its own zeal and its own spirit of sacrifice and the question that the American Legion constantly poses is this: Can we counter their faith with one of our own? A faith must have an objective, it must be built upon convictions. If the object of our faith is material, then our faith differs little from the faith which has already gripped half the world in chains of tyranny. If, on the contrary, our faith is pointed to the God-given dignity which lifts man above beast, then there exists a barricade which can never be yielded to the enemy.

It is the American Legion's task to build that faith or rather to rebuild. For we had it once. It is woven through a national tradition which remembers the ragged Colonial Army praying in the snow and a somber Lincoln proclaiming this to be a Nation under God.

Of that tradition, the American Legion is the heir and trustee and we have the moral courage to herald that tradition, to give it continued voice and to pledge to it an unashamed loyalty and devotion.

For taking strong positions, for emphasizing the value and virtue of loyalty and patriotism we have been called unkind names and otherwise attacked. But neither the violence of the language nor the source from which it emanates shall deter us from our belief. The American Legion will continue to focus attention on the blessings of our Nation's constitutional form of government. We shall continue our nationwide oratorical program in which more than 5 million boys and girls have participated in competition, in which knowledge of the Nation's Constitution is the requirement. We shall continue our all-inclusive magnificent child welfare program wherein last year we spent alone over $8 million.

We shall continue to raise our voice in strong opposition to any traffic with communism, with its denial of God's existence and its complete disregard for human dignity. We will continue and enlarge our great Boy's State program wherein each summer we send thousands of outstanding high school boys to college campuses and other facilities to receive an intensive training in the operation of our form of government. We will always concern ourselves with the problem of veterans' rehabilitation, feeling that a soldier is a special person, and despite the sporadic attacks and incidents, we shall, as members of the American Legion, strive to keep alive the spirit of patriotism, of love of God and country. This is our pur-

pose. This is our challenge. No one, but no one, shall swerve us from it.

On March 15–17, 1919, 463 officers and men of the AEF met in Paris, France. They represented the combat divisions and major units of the Service of Supply of the American Forces then in France. The announced purpose of the meeting was to form a veterans' organization.

Bennett Champ Clark, later Senator from Missouri, was elected as the first chairman of the meeting. Theodore Roosevelt, Jr., one of the original group, was appointed to set up the first meeting in the United States. On May 8, 1919, in a theater in St. Louis, Mo., 1,100 delegates, representing all of the Armed Forces and other veterans' organizations met.

It was in St. Louis that the immortalized preamble was put into final form:

PREAMBLE TO THE CONSTITUTION OF THE AMERICAN LEGION

For God and country, we associate ourselves together for the following purposes: To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a 100-percent Amercanism; to preserve the memories and incidents of our associations in the great wars; to inculcate a sense of individual obligation to the community, State and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

The American Legion is a great patriotic organization, dedicated and devoted to advancing the ideals of America—justice, freedom, democracy, and loyalty—and to exalting, under the motto "For God and Country," the sacredness of human personality and the inestimable gift of American citizenship.

Numbering its members in the millions, the American Legion has become a great and influential organization. In just one of its many programs—child welfare—the Legion last year spent $8 million. It has marshaled its resources on behalf of retarded children. It has used its facilities and its influence to relieve the loneliness and the financial distress of the aged.

Since its beginning, the American Legion has sought to raise the standard of patriotism, of respect for the flag, of reverence for men who fell in battle; and it has tried to enkindle in each man's heart a love for his country.

Because the American Legion must always speak with the strong voice of patriotism, of knowledge, and of creative thinking, it needs and wants the membership of all war veterans who believe in individual freedom in the days of dark peril. It also needs their active and thoughtful participation.

I salute and thank God for the American Legion and the VFW. Our country would be morally stronger, safe and secure, if all Americans would dedicate themselves to the preamble to the constitution of the American Legion.

It is my belief that the overwhelming majority of the American people have deep respect and gratitude for the American Legion. The deeds and records of this great and patriotic organization speaks for itself.

Western Interstate Commission for Higher Education

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mrs. GREEN of Oregon. Mr. Speaker, the Western Interstate Commission for Higher Education—WICHE—is an organization which has been a source of real pride to the Western States. Recognizing the interstate nature of the problems of education, our 13 Western States have attempted to meet their mutual problems by consulting frequently in order to make possible the most effective and efficient use of their total educational resources.

Recently, a report was issued jointly by WICHE and the Council of State Governments, poining to the necessity of increasing the supply of trained personnel to help curb juvenile delinquency. On the basis of this report, the Western Governor's Conference established a Committee on Juvenile Delinquency.

Mr. Speaker, the Committee on Education and Labor has recently reported a bill, H.R. 12108, which would make available Federal assistance in the training of these professional people so urgently needed in the fight against juvenile crime. The bill has not yet been acted upon by the Committee on Rules, although a substantively identical bill has been approved by the other body. I ask unanimous consent that an article from Higher Education in the West, a WICHE publication, pointing up the need for the passage of such legislation, be printed in the RECORD at the conclusion of these remarks:

GOVERNORS URGE REGIONAL TRAINING FOR JD WORKERS

The Western Governors' Conference has established a committee on juvenile delinquency, after hearing a WICHE-Council of State Governments report on western needs for expanded training and exchange of professional personnel in the juvenile corrections field. The committee will recommend specific programs of action to the western States, and will attempt to "marshal all public and private efforts to combat juvenile delinquency" in the region.

The Governors in setting up the committee noted "shortages of professional skills available to the Western States" in the juvenile corrections field. They urged that the Western States, with CSG and WICHE help, establish cooperative training programs and exchanges of information and expert personnel in this specialty.

The WICHE-CSG report was presented by Dr. Garrett Heyns, a member of the WICHE mental health council, and dealt with ways of improving facilities for "special problem" juvenile delinquents who are emotionally disturbed or mentally defective. It was developed at the western Governors request, with the help of U.S. Public Health Service officials and heads of Western State mental hospitals, correctional schools, and schools for the mentally retarded.

Strengthening of overcrowded, understaffed western institutions with more highly trained professional personnel is the basic need in dealing better with special problem juvenile delinquents in those institutions, the report said. Community-based agencies to combat juvenile delinquency should also be given more emphasis, it noted, and State institutions should work within a network of agencies concerned with the problem.

Correction of delinquents in State institutions is only one part of a larger problem close to all of us, Dr. Heyns noted; prevention is just as important. "Too many people are concerned momentarily—particularly if some act of vandalism occurs in the neighborhood—but they forget as soon as the police have taken over," he said. Specially trained police officers, juvenile court judges, and probation staffs are needed, with better public financial support, he stated.

High-level inservice training programs for staffs of juvenile correction institutions in the region would help greatly, the report continued. It recommended interstate cooperation in the establishment of several types of training programs for professional personnel, along with better staff recruitment methods for these institutions. New ways must be found for training clinical personnel to apply psychiatric and social work knowledge in juvenile correction, the report said, since "there is likely to be a shortage of psychiatrists for a long time."

McCulloch's Schedule of Conferences in the Fourth District of Ohio

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. McCULLOCH. Mr. Speaker, I believe that a Congressman should be in his district to confer and visit with his constituents whenever official duties do not require him to be in Washington.

When Congress recesses, I expect to return home and to be available for conferences and visits with residents of the Fourth District in the courthouse of each county seat between 8 a.m. and 4 p.m., in accordance with the following schedule:

Allen County, Lima: Tuesday, July 19, and Wednesday, July 20.

Auglaize County, Wapakoneta: Thursday, July 21.

Darke County, Greenville: Monday, August 1.

Mercer County, Celina: Tuesday, August 2.

Miami County, Troy: Wednesday, August 3.

Preble County, Eaton: Thursday, August 4.

Shelby County, Sidney: Thursday, August 11.

No appointments will be necessary. Any problem with, or opinion concerning, the Federal Government will be proper subject for conference.

Of course, I will be glad to see residents of the district, in my Piqua office, any time that Congress is not in session, except on the days scheduled above.

Masterpiece of Patriotism

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HIESTAND. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I am including a series of three articles on patriotism. They were written by Mr. George Todt, a columnist for the Valley Times, published in North Hollywood, Calif., and circulated in the district I represent.

Mr. Todt's editorial views would seem of importance not only to his readers but other Americans as well:

(By George Todt)

"When all else is lost, the future still remains"—Bovee.

What was probably the greatest ideological and moral message this writer has listened to in recent years was delivered in the Los Angeles Biltmore Bowl last Tuesday by Attorney Martin B. McKneally, national commander of the American Legion.

The occasion was the annual civic luncheon sponsored by the Los Angeles American Legion Luncheon Club. Attending were more than 1,000 of the outstanding leaders of the southern California community. It was "a really big show."

The chairman and master of ceremonies for this worthwhile event was a World War I veteran and member of my own Hollywood Post 43, Robert Mitchell, president of Consolidated Rock Products Co. His able assistants included such Legion standouts as Leon V. McCardle, Harry Engelund, Robert Berry, Leo Hubbard, William B. McKesson, Steve Foote, Harry Meyers and Al Weinberg.

On November 2-3 I reported in this space a magnificent local address made by Commander McKneally, a New Yorker, which I thought at the time would be difficult to top. But he did it at the Bowl last week. He was, in fact, even better than before. And this is the most interesting feature of all: McKneally employs no ghost writers—he wrote this particular speech by himself the night before.

His delivery was excellent, reminding me somewhat of a young Douglas MacArthur, to whom McKneally bears a striking resemblance.

Let me bring to my readers some of the excerpts from the address which impressed me most by their correct patriotism and morality—which is the best kind of American ideology. Consider these words:

"One who visits this great community," said McKneally speaking of our own City of Angels, "full of industry and prosperity, blessed by great beauty and natural resources, unexcelled in its rise to eminence as one of the great cities of the world, and dedicated in its origin to the Mother of God, cannot but ask himself what lies ahead for Los Angeles and what lies ahead for the society and system which produced it?

"Will men here continue prosperous and free in an age in which personal liberty is dying all over the world? Will men's prosperity endure in an age in which enslaved men with enslaved minds have performed technological and engineering feats of incredible dimensions? Will men remain loyal to the values and virtues which alone guarantee life, liberty, and the pursuit of happiness? Or will they be betrayed into a series of modifications and alterations of their basic thinking which will involve them in a full scale acceptance of a new philosophy of life based upon materialism alone?

"Communism proposes that life is material and that man is a product of nature with no purpose, no will and no soul. This is a harsh doctrine but Communists believe it to be true—and they are ardent in their faith and faithful to their cause. Their cause is not a relative superiority in ballistics or space satellites, or trade or productivity, or even military power.

"This is not what they seek. It is nothing less than the domination of the Earth and all of its peoples that Communists demand of themselves, and they are capable of great sacrifices. Are we? Can we counter their faith with one of our own?

"If we cannot, then the city of Los Angeles is lost and so are all the people within it—for one can only fight the intensity of religious fervor by more religious fervor—and unless we believe that man was created by God in his image and likeness then we cannot fight communism, for that is the basic idea on which the conflict with Marxism exists. If we shall triumph in this struggle for men's minds, we must redevelop among us a doctrine of belief.

"And that, my dear friends, is what the American Legion is seeking to do. We have sought since the beginning to raise the standards of patriotism of respect for the flag, of reverence for men who fell in battle—and we have tried to rekindle in each man's heart a love for his country.

"We have felt that this is necessary: for history is strewn with the wreckage of great nations whose citizens lost their regard for their country. And history also discloses that the most easily lost of man's possessions is his freedom.

"Our history, with all its sacrifices, means one thing to Legionnaires—and that is freedom."

LEGION'S VOICE STRONG

(By George Todt)

"Sink or swim, live or die, survive or perish with my country was my unalterable determination," John Adams—Works.

"For taking strong positions," said American Legion National Commander Martin McKneally to more than 1,000 civic leaders in the Los Angeles Biltmore Bowl last week, "for emphasizing the value and virtue of patriotism, we of the Legion have been denounced and insulted by certain people.

"We have been called superpatriots, flag wavers and many unkind names—but neither the violence of the language nor the place from which it issues shall dissuade us from our doctrine of belief • • •

"We are not without pride in our record, and we are confident that everyone in this room approves of our pride.

"The American Legion has been vigilant on the issue of communism. In 1933, the American Legion, through its national commander, raised its voice in strong opposition to any traffic with Communist tyranny. For it discerned too clearly that the Marxist philosophy with its denial of God's existence, its proposals of egalitarianism and its disregard of human dignity, would lead to the abasement and slavery of men.

"For this position, it has drawn the fire of some as being an abridger of freedom, an enemy of advancement, anti-intellectual, and of following a philosophy suited to another age. In short, of not knowing what it was all about.

"We submit to you that the positions taken by the American Legion in its conventions have been based upon its doctrine of belief—belief in individual freedom—and the conviction that communism is its relentless enemy.

"We have supported the principle that congressional committees are not only right, but are in duty bound to investigate influences inimical to the best interests of American freedom.

We have watched with mounting dismay the demeaning uses to which, in the last several years, the fifth amendment has been put by witnesses before congressional committees.

For their brazen and successful attempts at evasion, hundreds of witnesses who have availed themselves of the protection of the fifth amendment have been hailed across the land.

And what of the men who asked the questions to which the Nation deserved answers? No one needs to elaborate on that.

Ladies and gentlemen, only minds calcified by prejudice, vanity, and error can operate as if the freedom of the United States was in peril. We live in a highly confused world.

The fifth amendment has become, in the words of a professor at Harvard, not a protection for the innocent but a shield for the guilty—and a refuge for those who seek to avoid telling the truth. Flight from truth will serve neither man nor society.

We have seen recently a strange spectacle of television programs whose stars were sunk deep in deception. We have been witness to high tolerance on the part of too many of our people of this failure to serve truth. This constitutes a grave indictment of our schools and universities to teach the fundamental that truth is what man must live by.

Far from being conditioned by compulsion to tell the truth, the university student in recent years has been conditioned by a compulsion to evade the truth.

My friends, the crisis in which our country finds itself is essentially moral. It is a crisis of our own making. It is the blighted harvest of three decades of drift and detachment from our historically moral moorings.

The voice of the American Legion will always be raised in defense of, and in behalf of, eternal verities. We have dared to stand on the ground of objective truth—and we stand there unmoved and uncompromised by those who criticize and would convert us in the name of modern materialism and relativism.

When we have said that we object to the participation of Communists in the great communications arts, it is because we feel that a Communist is dedicated to a cause that does not serve the cause of truth and will, where he can, serve the lie.

For this position, we have been accused of seeking to destroy an industry, of operating beyond the field of our competence and of proceeding in ways that are not truly American. These criticisms we do not take too seriously—for we know that what we stand for is right and embraces the thinking of the millions of Americans whom we represent.

In all these matters, which touch close to the very essence of American beliefs, we shall be heard.

PATRIOTISM NEEDS ORGANIZATION

(By George Todt)

"Liberty's in every blow; let us do or die," Burns—Bruce to his men at Bannockburn.

"I call to your attention as proof positive that the soul of America is in great danger," said the American Legion national commander, Martin McKneally, as he addressed a large and distinguished civic audience in Los Angeles last week, "to a book of recent publication, written by Eugene Kinkead, entitled 'In Every War But One.'

"This book is a treatment of the collapse of morale among prisoners of war in Korea. One out of three technically collaborated with the enemy. One out of seven did the business of the enemy, 21 elected to remain with the enemy and 75 returned home as espionage agents of the enemy. Some 38 percent died in captivity. No one escaped.

"For the first time in America's long record of military exertions, Americans were found to have lost the bond that unites free men together.

"For the first time the inevitable kinship among men, which is the result of service to a great ideal, was broken and Americans were at war with one another—a war in many of its aspects more cruel and more distressing than the one they fought with the enemy.

"In this war, Americans fought Americans, Americans betrayed Americans, and Americans murdered Americans.

"I suppose that unmatched in the whole catalog of human infamy will be the crime of one Gallagher who cast two of his fellow prisoners, sick with dysentery and fatigued to the bone, out into the night where they died of the cold in shock and in disbelief of their fate.

"Where, I ask you, do you fit these statistics into a nation with an exalted mission—a mission which has never been matched in the history of mankind?

"For the great burden of our country, ladies and gentlemen, is to keep the fires of individual freedom burning brightly in the hearts of all Americans—and to keep this America of ours clean and sure of its purpose as the continuing hope of all free men and women everywhere.

"Not only must our sense of mission be strong but the policies of our country, in this duel with communism, must be courageous and responsive to the will of the people.

"The Korean experience must never be allowed to happen again. In the home, in the school and in the church our youth must be taught that the principle of morality is alone for them. They must learn to direct responsibly their individual freedom and the way of life which produced it for them.

"We, as members of the American Legion, strive to keep alive the spirit of patriotism and love of country. This is our challenge.

"To those who have grown listless in their appreciation of individual freedom and the great gift of citizenship in our Nation, let us constantly recount for them their blessings. They are neatly summed up in a passage written by a refugee—one who came to these shores from Adolf Hitler's concentration camps and eventually became a citizen of these United States. He wrote:

"'I am an American citizen * * * a member of the greatest fraternity on earth * * * the brotherhood of free men because a million Americans have died and millions more have suffered in the wars of our Republic. I have greater freedom than any other citizen of any other nation in any other period of mankind. I have greater freedom to work, to worship, to love, to learn and to play. Mine is the freedom to compete, to invent, to save, to invest, to create, to promote and to own. I have freedom to choose, to join, to vote, to speak, to travel, and to walk erect with head held high. I am to be my own self as a individual human soul. I am free to glorify God'."

It was on this note that Martin McKneally ended his address and one might have heard a pin drop in the Biltmore Bowl most of the time he was speaking—so rapt was the attention of his distinguished audience which comprised more than 1,000 of the leading citizens of the Los Angeles area. The applause at the conclusion was deafening.

In this and the preceding two articles I have brought my readers excerpts of the timely ideological message—based on morality and the spiritual heritage of America's noble historical past—from an admirable and dedicated patriot who counsels us to take action now before it may be too late to save our God-inspired Republic.

Since the precepts of the Founding Fathers of our country were based originally upon the moral principles of God, we may be sure that they are presently the principal targets for destruction by anti-God forces among us today. What can we do to fight against such wicked and evil erosion?

One practical step which could be of significant worth would be to beef up the membership of the American Legion and other pro-American patriotic societies without delay. Why not?

Isn't it something of a national disgrace that only one out of every six eligibles in the United States have seen fit to team up with the Legion to resist Communist inroads in our threatened land?

And, specifically, how about the much-publicized Golden State—meaning California, Bub—where less than 1 out of 20 eligibles have cared to share in responsibilities of citizenship?

Let's think it over in the critical days ahead of us.

How about that?

Four Ways To Reduce Administrative Delay—Address by Stuart Rothman, General Counsel, National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an informative address delivered by Mr. Stuart Rothman, General Counsel, National Labor Relations Board, which was delivered before the labor law section of the Tennessee Bar Association at Gatlinburg, Tenn., on June 9, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOUR WAYS TO REDUCE ADMINISTRATIVE DELAY

(Remarks of Stuart Rothman, General Counsel of the National Labor Relations Board, before the labor law section, Tennessee Bar Associations at Gatlinburg, Tenn., June 9, 1960)

Mr. Chairman, members and guests of the labor law section of the Tennessee Bar Association, I consider the call to talk to the labor law section of the Tennessee Bar Association a very high honor. It is a wonderful feeling to be here in this inspiring mountain retreat of Gatlinburg and in a room with fellow lawyers who meet without their briefs but who come in the spirit of doing what they can to raise the standards of justice.

As an agency having a prime impact upon the welfare of employers and employees in America, we at the National Labor Relations Board are also interested in improving the administrative justice dispensed by our agency.

The saying "justice delayed is justice denied" has perhaps become a cliche, but I believe it can now be fairly said that justice is no longer denied by delay in the procedures of the Office of the General Counsel.

I believe too that there has been a sincere willingness by practitioners before the agency to consider constructive changes objectively and to help to make them effective if they will tend to give better service to the public.

It is a matter of common knowledge that until recently large backlogs in the Office of the General Counsel were considered commonplace, chronic, and practically insurmountable. This does not need to be the case in an administrative agency. Today these backlogs are gone, and what was considered most difficult or almost impossible is accepted as commonplace and routine today. When a workload of more than 25,000 case situations a year—each of which must be processed as a case of unique importance to the individuals affected—is fairly and quickly dispatched, as the Office of General Counsel has been trying to do, there continues to be high hope for the administrative process as a way of achieving justice effectively in the modern society.

But to discharge its mission an administrative agency must have the confidence of the public it serves, and the first step toward earning such confidence again lies in the expeditious dispatch of the business entrusted to it effectively and with integrity; with such detachment from any extraneous influences relating to the cases before it as to assure an impartial judgment.

Time and performance improvements have not been made by the introduction of mass production methods which are an abomination to the adjudicative process, but by more precise work and increased expertise on the part of the staff and by a more realistic use of statistical reporting as a tool. I can say from observation that it has not been done so as to cause a hardship to any of the staff.

Early investigation of charges and precise decision making do not result in a speedup at the expense of quality. On the basis of investigation of any specific criticism in this respect, I am convinced to the contrary. And, as a matter of fact, quality evaluation techniques which the office has developed bear out this conclusion. An investigation started quickly, when the evidence is fresh and the factual situation needs a minimum of reconstruction, is a more rounded investigation. Precise decision making, based upon a better knowledge of the law and its application to the fuller facts, assures a more just result.

With a little more time, a little more effort, and a limited number of additional management and procedural improvements, the National Labor Relations Board will be recognized by the public as being among the best, if not the best, of Government regulatory agencies, with its regional offices carrying out their functions fairly, expeditiously, and in the public interest.

But the few additional procedural changes which should be made will require much understanding between regional offices and private practitioners. I shall have more to say about the need for the regional offices and those in private practice to focus attention upon common problems in the functioning of the administrative machinery.

Much has already been learned about dealing with the time factor in overcoming administrative backlogs and delay, and if you will allow me, I should like to review some parts of the work with you, because it becomes important in considering what the office ought to do next to improve its service and its performance as an arm of government. The problem, of course, is one of doing things in a way which gets a hammerlock on both the time and performance standards together. That is, as we isolate factors in the time problem and wrestle them down, it must be done with machinery which simultaneously identifies quality control problems and feeds back improved quality in regional and Washington performance.

Four broad areas or categories for concentration in eliminating delay in the Office of the General Counsel have emerged from our experience and perhaps others may find some interest in what we have learned. These four principles relate to (1) work, (2) modern management procedures, (3) juristic science, and (4) communication. Very often the simplest solutions for improving the administrative process are missed or disregarded.

The first principle for eliminating backlogs in the administrative process is for every member of the work force to devote a full day each workingday to the job.

I have come to the belief that there probably isn't any backlog problem in the Office which cannot, with the additional manpower which the Congress has given us, be eliminated through plain hard work. When hard, consistent work is applied to such problems, many troubles that appeared insurmountable just seem to go away.

The second principle in eliminating backlogs and overcoming delay is the inculcation of a positive attitude, if such a change is necessary, toward modern management improvements and a willingness to accept such improvements if they will serve the public interest without sacrificing any procedural or substantive safeguards.

Of course, management improvement may take many forms. You in Tennessee are undoubtedly aware of some of them. For example, the Memphis subregional office has been elevated to the status of a regional office. This has expedited case handling between the field and Washington. Task forces from other offices have been and are presently being used at Memphis to put the office on a current basis.

I do not think that we as an agency need to worry, as some bureaucrats are alleged to do, that if we reduce all backlogs within the agency we shall not have enough to keep us busy. Many improvements in this respect have already been accomplished and more are underway.

In April 1959, 49 unfair labor practice hearings were closed, with a median age of 139 days from the filing of the charge to close of hearing. In April 1960, 71 hearings were closed with a median age of 91.5 days. Stated differently, this means that in April 1960, it was taking the average case only 91½ days to be processed from the filing of the charge to the close of the hearing before a trial examiner. This is significant, too, in that the goal established for this phase of case handling, 90 days, has been all but achieved.

On April 30, 1959, there were 1,838 unfair labor practice cases pending under preliminary investigation with a median age of 38 days. Today in this category there are pending 960 cases with a median age of 20.5 days. This means that the backlog of cases in this phase of casehandling has been eliminated, and the regional offices are operating on a current basis because about 1,000 unfair labor practice cases are filed each month.

The important thing, we have learned, is that once the regions and Washington overcome their backlogs we are then in a position to avoid their recurrence and the task of operating on a current basis seems to be easier.

In April 1959, 95 unfair labor practice complaints issued within a median time of 78 days from filing of the charge to the issuance of complaint. In April 1960, 126 complaints issued within a median time of 44 days. This means that the time required to process a case in this phase of casehandling has been reduced by more than a month, with a reduction of more than 40 percent within the past year.

The months of April 1959 and April 1960 have been selected because they are typical and comparative. The office has been operating on these new time schedules for several months, in some cases since the first of the year.

But aside from median or average statistics, which do not mean too much to the individual litigant or to me because what happens in specific cases is what really counts, this agency had a backlog of 700 unfair labor practice cases in July of 1959 that had not been investigated in 30 days. It is a rare case today when complete investigation and regional office disposition on the merits has not been made within 20 days from the date of filing of the charge, and 30 days is now the outside or overage limit for the investigation and disposition of an unfair labor practice charge on its merits.

Today with regional offices on a current basis, 88 percent of all unfair labor practice cases brought before the agency are finally disposed of within a month of the time they are filed.

Management improvements in the administration of the National Labor Relations Act were included in two programs known as Operation 60 and Operation Challenge. We think that, allowing for certain things that had to be done anyway, there has been a direct causal relationship between these programs and the improvements which have taken place.

In essence, Operation 60 was a training program in the 60-day period between the enactment and effective date of the 1959 amendments to the Taft-Hartley Act. Operation Challenge started, and continues, as a long-range sustained effort in two parts; the first, to defeat delay through management improvements, taking into consideration what can be learned from modern business management and judicial administration, and second, to insure precision and increased expertise in the judgment factor of administrative decision in the Office of the General Counsel by careful selection and training of personnel and other internal personnel actions. Emphasis on the quality of the staff is especially important in an administrative agency for many reasons, but one is that to deserve public confidence, each member of the staff must conduct himself so as to maintain detachment from alliances which in any way may give the semblance of partiality.

It is said that the trial of any civil case, generally speaking, should take place not later than 6 months after the filing of the case. It goes without saying that an administrative trial without a jury should take place more quickly. But I submit that the recent performance in this respect of the Office of the General Council and the Division of Trial Examiners is most creditable. At the present time, generally speaking, less than 30 days elapse from the issuance of the complaint in an unfair labor practice case to a trial on the merits. For this I must salute the Division of Trial Examiners who, with the Office of General Council, have reduced the trial calendar from a 14-week period to a 5-week period in the short time between February and June of this year.

Representation cases have not, of course, been overlooked in this program to reduce backlog and expedite case handling. On December 1, 1959, 29 percent of all representation cases in the pre-election stage were overage. Less than 3.9 percent are in this category today. On December 1, 1959, more than 61 percent of the postelection cases in which objections or challenges to the election had been filed were overage. Today there are no overage cases in this category.

Of course, backlogs have a way of accumulating unexpectedly and to prevent them, regions must be constantly on the alert. But even beyond that, we must ever be on the lookout for new methods for administrative improvements.

Let us turn now to the third principle for eliminating delay in the administrative process, and that is by applied juristic science as distinguished from internal management improvements along administrative lines.

I have had occasion in another talk to liken the several regions of the National Labor Relations Board to an administrative judicial circuit of its own, consisting of some 30 administrative judicial districts; that the territorial areas of the various regional and subregional offices.

It seems that in some of these districts, office personnel and practitioners, generally spaking, have apparently operated on that theory that the only way to dispose of pending cases is to try them; at least, that is what appears from certain statistical studies we have completed as a part of Operation Challenge. Large parts of regional efforts and facilities as well as the time of regional personnel and private practitioners, are devoted to trials.

For example, a statistical study based on the period July 1 through March 31, 1960, shows that only 21.7 percent of all meritorious unfair labor practice cases were settled in two of our largest regional officers. Two others, one in the South and one in the Midwest, had only slightly better records. On the other hand, 80 percent of the meritorious cases were settled without the necessity for litigation in the Memphis office. One of our northeastern offices and one on the west coast follow close behind. The national average for meritorious cases settled without litigation was 47.6 percent during this period. There seems to be no geographical connection between offices where a majority of the cases are settled and those where most of the cases go to a hearing. Therefore, our efforts to increase the number of cases that are settled must be nationwide.

The NLRB administrative process insofar as it pertains to the trial of cases, exhaustion of appeals, and possible judicial review, will probably continue to be a slow process or appear to be a slow process even with the improved management procedures we all seek. This is because the trial of any case is slow work. Modern judicial administration indicates that trial processes are hard pressed to lick backlogs alone, and this seems to be as true for the administrative as well as the judicial process. Trial litigation can take a long time, and the ultimate resolution of the legal question may leave the parties without real satisfaction as to the outcome, or may even leave in question whether substantial justice has been done.

But our democratic processes, it is said, must demonstrate their efficiency. We in the administrative process must solve our problems not only efficiently, but to the satisfaction of the people. A case which takes a long time to try and to resolve on appeal may not satisfy the expectations of the people directly affected.

Since the practice of law is a public service, from time to time we need to look beyond the mechanistic application of the statute and try to discern its true meaning in terms of the legislatively intended objectives for the individual men and women who are the employees and employers subject to the act. When these persons have troubles that may be resolved quickly and justly, are they concerned with long-drawn-out trial litigation, looking toward long-range interpretations for the benefit of the business community as a whole, or to remedies which in the end may not reduce the disturbance, or are they interested in ending their own troubles and getting back to an amicable employer-employee relationship?

It is submitted that if our regional studies in this area mean anything, and given the confidence in the workings of the National Labor Relations Board I have mentioned, there are situations where the individuals interested in an unfair labor practice charge could seek to avoid the necessity for the trial of issues and consider the increasing use of voluntary informal avenues of settlement.

I suggest that tendencies toward informal settlement should be encouraged in those

regions where experience reveals that the media of amicable informal settlement have not been used nearly as extensively as in other regions. Informal disposition is a particularly honorable method of ending a dispute in the field of labor-management relations because in so many instances it is not feasible for the contesting parties to sever their relationship and it is often desirable for the disputants to agree to make up quickly.

Of course, there will be many situations under the new act which raise novel questions of law that may not be subject to amicable and informal settlement, or the parties just cannot agree with the region on its factual analysis. But after a thorough study of our regional experience under Operation Challenge, the Office of the General Counsel is now proposing that more effort be made in a number of regions to encourage settlements of disputes that ought to be settled.

In each region all cases that, after investigation, have been found to have merit will go in an informal fashion before a settlement officer who will usually be the regional director himself.

In other words, after a determination that an unfair labor practice charge has merit, the parties should go almost immediately into conference with the regional director or his representative. This unquestionably is the practice in many regions and it will become the practice in many more regions. Regional officers will know that they cannot force settlement, nor can this Agency mediate disputes arising out of economic questions. We shall seek, however, to offer litigants practical methods for obtaining more speedy justice in cases arising under the act.

It is not necessary to give this conference a special name. It is an informal procedure through which the issues in a dispute may be truly joined. In the process, unquestionably the relative wisdom of settlement over any other course of action will be considered and encouraged. If settlement is not reached, the conference will at least have the desirable effect of sharpening the issues and eliminating matters that could be taken care of in a pretrial conference.

We are all aware that the most litigated statute on the books is the Taft-Hartley Act. As a result there is a continuous outpouring of cases which find their way into the judicial processes and add to the burdens of the judicial system. We have a duty, I believe, to do what we can fairly and equitably to minimize the number of cases which must enter the judicial stream. That, as I understand it, is one of the purposes of the administrative process.

There is no magical formula for avoiding controversy and litigation or encouraging informal disposition of disputes. If there were, there would be no problem. For success, each regional office must have the confidence of the public it serves. The aim of projects such as Operation 60 and Operation Challenge has been to improve regional office quality and operating proficiency so as to merit this confidence.

If we are to be accorded the special recognition due an administrative organization because of its expertise in its particular field, then it is our duty to act as experts and to be experts. The avoidance of unnecessary litigation which taxes the facilities of the organization and of the courts as well, is, and should be, a part of that expertise.

Improvement in techniques and facilities for the informal resolution of disputes arising under the Taft-Hartley Act should result in derivative administrative benefits. Experience has taught us that there is less tendency to file the frivolous or strategic unfair labor practice charge when it is known that it will be investigated immediately. With the clearing up of the trial calendars, it is not unreasonable to expect that if there are fewer cases to be tried, cases can be eliminated earlier which are strategic only and are not settled until "high on the courthouse steps."

* * * * *

In addressing the American Bar Association in 1958, the Chief Justice of the United States concluded his remarks on the need for improvements in judicial administration by saying:

"Finally, I urge all of you—in every jurisdiction—to fight court congestion as you would a plague, and to eliminate stoppages and delays from whatever cause, regardless of the effort called for or the personal feelings involved."

We may well ask whether this appeal is not equally applicable to the interrelated administrative process. With this question I shall leave this subject, but not without first thanking you for the opportunity of assessing the general situation of the place of procedural improvements in the regional performance of the NLRB; one of our basic current problems.

I shall be pleased to answer any questions you may have, if I can, concerning the office's procedures, or any developments in the substantive law arising under the new act.

The Lowell, Mass., Fire

SPEECH
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mrs. ROGERS of Massachusetts. Mr. Speaker, I spoke on Monday of the tremendously spectacular fire that took place just two buildings from my office in Lowell, Mass. I spoke of the heroism of the chief of the fire department, Mr. Fracis Kelleher, who directed the firefighting. In the beginning the fire was completely out of hand. It was a roaring, raging fire. It did not seem possible that anyone could survive. The picture which I have in my hand shows the fire when it was raging at its worst, but the firemen, with the help of other cooperating firemen from other towns in my district got it under control and eventually put it out. They performed herculean service.

I spoke of certain persons the other day who showed great heroism and great executive ability. I would like to speak again of the head of the fire department at Lowell, who directed all the firefighting activities, and of the firefighters from other towns in my district and from the U.S. Air Force firefighters from Bedford in my district who volunteered their services. I would like to speak also of the action by the police department in Lowell that worked tirelessly, getting people out of the way who had been overcome by the fire, by the fumes, by the smoke. And I would like to tell the people here that nobody was seriously injured and nobody was killed. It is almost beyond belief that that could have happened in such a raging fire. It was a miracle. But the firemen put a moat of water around the building.

I would like to speak of the very great and efficient action of our postmaster at Lowell, Mr. James Gallagher, who sent away his disabled veterans who worked there, those who had any difficulty with their lungs. Then he put one of the post office custodians, Mr. Kenneth Earle, and Arthur Garrabedian on the roof with hose and fire-protection apparatus. Nothing happened to the post office building. That would have gone also if it had not been that they had got the fire under control or if the wind had changed.

Then there was the auditorium beyond, the Lowell Auditorium. That would have gone, too, if they had not had the fire under control.

I am so sincerely grateful to the Lowell people for their wonderful self-sacrifice and their real heroism and for the way in which they adjusted themselves to the demands of this terribly spectacular fire.

The Lowell Sun Newspaper Building where I have my office, was so very near the fire and the people in it, like the owners, Mr. John and Mr. Clement Costello, behaved remarkably when they had burning sticks coming over on their window ledges. But still they kept the fire away, and remained calm.

I have such pride, Mr. Speaker, in my Lowell people. I wish you all knew them. They are modest and great Americans.

Colorful "First" for Greater Portland

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. OLIVER. Mr. Speaker, on July 1 of this year, there appeared in the Portland, Maine, Press Herald an article describing a picturesque and colorful telephone book cover, depicting many aspects of Maine's economy. The occasion for this "first" in the area served by the New England Telephone & Telegraph Co. is the 200th anniversary of Cumberland County. I commend the progressive officials of the phone company for this excellent example of participation in the ceremony of the area they represent. The article follows:

GREATER PORTLAND PHONE SUBSCRIBERS TO GET COLORFUL DIRECTORIES NEXT WEEK

(By Charles C. Sutton)

Greater Portland telephone subscribers are in for a colorful "first."

New directories, to be issued next week, will have a full color cover instead of the traditional pale green.

Dana A. Jordan, Portland manager of the New England Telephone & Telegraph Co., said Thursday the colorfully designed covers are the first ones ever printed for the New England Telephone & Telegraph system.

"Actually they are an outgrowth of the 1959 directories which featured black and white designs," Jordan said.

In addition to a multitude of colors, the covers give a plug to the 200th anniversary of Cumberland County by displaying the celebration's seal in a prominent place.

Joseph A. Kilbride, chairman of the Cumberland County anniversary, told Jordan his

committee was very pleased the telephone company dedicated the full-color cover to the county's bicentennial.

William A. Hatch, assistant executive manager of the Maine Publicity Bureau, congratulated Jordan on the "spanking" new cover.

He wrote Jordan:

"This year, Portland, Cumberland County, and the State will get an even greater boost from this beautiful, full color, layout featuring many phases of Maine's economy."

Hatch referred to the numerous sketches showing Maine products, vacational attributes, and industries.

He also noted the book was printed on Maine-made paper. New England Telephone & Telegraph Co. spends $5 million a year for Maine papers.)

Hatch also said the book would be of great promotional value to the State.

According to Jordan 100,000 new telephone books are being published. He said 5,000 will be sent out of State to libraries, industries, hotels, chambers of commerce, and others.

Aside from the cover, Jordan said the book would be slightly larger—some 1,500 new customers will be listed.

"It will have 133 pages of numbers instead of the present 127," he added.

The front section will also have more information on dialing, telephone procedures, and so forth, and a larger area for writing down emergency numbers.

Others to get an early glimpse of the cover were Charles O. Spear, Jr., chairman of the county commissioners; Mitchell Cope, chairman of the Portland City Council; and William S. Linnell, president of the Greater Portland Chamber of Commerce.

Spear said the commissioners were "pleased and proud" of the new cover. Cope found it "very attractive" and a good advertisement for Portland and the surrounding area.

Linnel termed it a rare incident when a public utility puts so much effort and consideration into publicizing the area it serves.

The new directories will arrive in Portland Tuesday by truck. Distribution will start Wednesday morning.

Price Bill Strengthens Relationships Between United States and Ryukyu Islands

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. INOUYE. Mr. Speaker, H.R. 1157, the Price bill, a bill to assist in the economic development of the Ryukyu Islands, is now the law of the land. The author of this bill is the most distinguished Congressman from the State of Illinois, the Honorable MELVIN PRICE. Many Members of this body have had the opportunity of visiting the Ryukyu Islands in the recent years. I am most certain that all of such Members will agree that of all the legislation relating to the Ryukyus that we have considered in the body, the Price bill has generated the greatest interest and concern among the Ryukyuans. The news of the enactment of the Price bill has been received in the Ryukyus with great joy and favor. The Price bill will undoubtedly foster better and friendlier American-Ryukyuan relationship. The Congress of the United States owes a great debt of gratitude to the Honorable MELVIN PRICE for his deep understanding of and the forward looking approach to the problems of the Ryukyuans. Recently, the gentleman from Illinois received two telegrams from the Ryukyus. One, from the Honorable Seisaku Ota, the chief executive of the government of the Ryukyu Islands; and the other from General Booth, U.S. High Commissioner. These telegrams very clearly express the great gratitude of the Ryukyuans. I am taking leave to insert these two telegrams into the RECORD for consideration by the Members of this body.

The telegram to Congressman PRICE from the High Commissioner, General Booth, follows:

Deeply appreciate your sustained interest in the Ryukyu Islands. Passage of the Price bill is being interpreted locally as a reflection of your personal interest in the welfare and well-being of the Ryukyuan people and this strengthens the relationships between the United States and the Ryukyus. I have transmitted your message to the Chief Executive and he has asked me to express his gratitude. You will be hearing soon from him personally.

Subsequently, Congressman PRICE received the following message from the chief executive, Seisako Ota:

We are highly gratified that H.R. 1157 was finally approved by the Congress, thanks to your continued efforts. This legislation is sure to promote greatly economic and social development of the Ryukyus. Your accomplishments for the Ryukyus Islands will long live in the mind of the Ryukyuan people. On behalf of all the Ryukyuan people I hereby express our hearty gratitude for your distinguished services.

Problems of Safety in the Electric Utility Industry

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ASHLEY. Mr. Speaker, the matter of industrial safety is one which affects the livelihood, well-being and happiness of most American families. It is a matter to which this Congress has directed considerable attention in the past and it is a matter which requires our continued concern and consideration. Nothing could be more clear than that safety standards and regulations which may be adequate today will be rendered obsolete by the technology of tomorrow.

Mr. Speaker, this is particularly true in the electric utility field. The responsibility for safety in this area is extraordinary in that accident hazard is inherent in the duties and service performed by utility workers. An employee of an electric utility company must be concerned not only for his own life, but for the safety of his coworkers and the general public as well. Making this triple responsibility even more demanding is the serious handicap under which the utility worker must perform his work as a result of inadequate safety measures and out dated safety equipment.

In the electric utility industry, it is essential that limitations be placed on the number of consecutive hours worked, that certain procedures be established and followed in deenergizing electrical conductors or equipment for maintenance purposes, and that safety requirements be established for work within contact distance or for equipment energized at a high voltage. This giant industry, while striving to satisfy the increasing demands of its consumers by expanding the systems of distribution and modernizing the techniques of generating power, has failed for budgetary or other reasons to demonstrate a proportionate concern for the safety of its employees. Thus, voltage limitations are designed for the lower primary voltages of a bygone era and enclosures of modern high speed generators and turbines do not provide adequate protection from moving parts.

The neglect of the electric utility industry in this area becomes clear from a study of safety records—which, when available, are far from complete. For example, the Accident Prevention Committee of the Edison Electric Institute published a summary report of fatalities which listed 136 fatalities for 1955. This figure, while alarmingly high, includes only members of the Edison Electric Institute. What about the fatalities of the nonmembers—independents, municipalities, REA and other cooperatives? Figures for these utility companies are not readily available but one can easily imagine the impact their statistics would have on the overall picture.

The number of fatal injuries reflects only a part of the disturbing accident figures. Included in this grim picture must be the accidents which leave victims either totally or partially disabled. In 1958, 7.1 percent of the disabling injuries in the private electric light and power utility industry resulted in permanent impairment. This was a higher permanent impairment ratio than occurred in any other section of the transportation and public utility industry, the contract construction industry and, with few exceptions, the mining industry. The average time length of disability per injury was 226 days.

In my opinion, the accident rate itself is compelling reason for consideration of legislation to establish a uniform code of safety regulations for the electric utility industry. But the tragic accident record has equally discouraging collateral aspects which must also be considered. Economic loss to the worker, his family, the company and the community is staggering. The accident record of one Ohio company—the Columbus & Southern Ohio Electric Co.—affords an example of how great this wage-time loss is in terms of lost purchasing power and diminished consumer demand.

Statistics for the Columbus district for 1955 show a loss of 6,263 days, based on an average hourly wage rate of $2.09, amounting to a total wage loss to injured

employees of $104,717.36. In 1956, the wage loss rose to $153,410.32 when injured employees lost 8,837 workdays. Again, these are only one company's figures. And, of course, there are no statistics, figures, reports or records by which we can measure the discomfort and insecurity of a worker and his family during the days lost, nor is there any way to ease the pain when a family loses its breadwinner completely.

Several recommendations have been put forth for remedial legislation by Congress which would improve safety requirements and conditions in the utility industry. At this point, it might be well to recall that it was not too many years ago that mine workers were urgently pleading for better safety regulations and that the 77th Congress saw fit to enact legislation resulting in vastly improved working conditions.

As a first step, uniform minimum safety standards should be established. The present safety record and the miserable failure of many companies to follow adequate safety procedures are evidence enough of the need for industrywide safety regulations. Such regulations could be either statutory requirements or regulations prescribed by a Government agency. The statutory requirements might be used for certain basic rules, such as limitation on the number of consecutive hours worked, materials used for protection of wires, and so forth, but the establishment of a safety agency would appear to offer several advantages. Such an agency, composed of persons familiar with the field of industrial safety and in particular with the problems of the electric utility industry would be competent to establish effective safety regulations and because of its continuing responsibility in the field would be able to modify and streamline safety requirements to keep pace with technical innovations.

Closely related to the establishment of a code of minimum safety regulations is the necessity for adequate inspection. Inspection of safety equipment to determine whether it meets standards established by the safety agency, and appropriate approval stamps issued to the equipment manufacturer should be required. Inspections should be made of electric utility plants to determine existence and degree of danger. In cases of immediate hazard the agency should be empowered to order the removal of workers from the area as well as require corrective action. Inspection would be an essential tool in the enforcement of minimum safety regulations.

Accident reporting would be a third arm of the projected safety program for electric utility industry. Included within the statutory framework of the safety agency should be authority to require that all accidents be immediately reported and a uniform method of accident recording should be established for this purpose. Although most States require a report of accidents and fatalities, the time lapse between occurrence of the accident and filing of the report varies with each jurisdiction. In addition, the accident records of the State utility commissions are often incomplete and not readily available.

The effectiveness of any safety program depends in large measure upon the expertness with which accident and other investigations are conducted. Far too many accidents are now attributed simply to that nebulous cause—human error. The challenge is to determine what factors cause or contribute to this human error and to define areas of accident potential. Investigation of every fatal mishap and spot checks of other less serious accidents by trained personnel are needed to track down accident causes and furnish vital accident prevention information.

These, then, are a few of the possible approaches to improving the safety record of electric utility companies. Perhaps the most serious problem in initiating a safety program is to determine just where the responsibility lies. Voluntary action by individual companies has, to date, been inadequate and unsatisfactory. Employee-company safety committees are desirable but hardly the answer to a nationwide problem. It would appear, therefore, that the existing accident record in the electric utility industry calls for responsible Government action. In the absence of an effective industry program, it is only at the Government level that safety standards can be instituted and enforced. Creation of a new Government regulatory agency or additional authority delegated to an existing agency is necessary for the performance of the functions which I have suggested. Provision could thus be made for both a safety agency and for a board of review to be staffed by company and worker representatives.

There is ample precedent for authority to regulate within the utility industry. The Federal Coal Mine Inspection Act of 1941 and the 1952 Federal Coal Mine Safety Act are similar legislative actions which have been taken in another industry. Although the electric utility worker is not faced with the kind of accident that reach the catastrophic proportions of the major mine disasters, the overall record of deaths and disabling accidents is great enough to warrant consideration of the advisability of legislation in this important field.

Senator Kennedy and Civil Rights

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. BRADEMAS. Mr. Speaker, I am pleased to insert in the RECORD an excellent editorial from the June 29, 1960, issue of the La Porte (Ind.) Herald-Argus, a first-class newspaper published in my district, concerning the views of the distinguished Senator from Massachusetts, the Honorable JOHN F. KENNEDY, on the important issue of civil rights.

As the La Porte Herald-Argus says, Senator KENNEDY's recent speech in Washington in the presence of African diplomats "added to his stature as a politician who speaks out bluntly and courageously on basic principles to which he adheres."

The editorial follows:

KENNEDY AND INTEGRATION

At a recent Washington luncheon and in the presence of African diplomats from both established and newly independent nations of that continent, Senator KENNEDY added to his stature as a politician who speaks out bluntly and courageously on basic principles to which he adheres. His forthright pronouncement of his antipathy to segregation was certain to arouse heightened anger among the Dixiecrats and other Deep South traditionalists who bitterly insist there will be no change in the racial situation—ever.

The Senator might be accused by his political foes in the Democratic Party of shooting down a strawman inasmuch as the Deep South Democratic politicians consistently oppose him for the presidential nomination and want either Senator JOHNSON or some completely unreconstructed rebel like Senator EASTLAND, but at least the Massachusetts candidate made it crystal clear he favors a more aggressive program by the Federal Government to help bring about integration and equal rights.

This Nation's efforts, he said at the luncheon, "must increase to achieve equal access to the voting booth, to the schoolroom, to jobs, to housing and the public facilities, including lunch counters." The Senator continued by endorsing the sit-in as a legitimate, peaceful way to win equality. "It's a good sign—a sign of increased responsibility, of good citizenship, of the American spirit come alive again," he declared in referring further to Negro students and their sit-in demonstrations in eating places.

The Senator also aimed a dart at the Union of South Africa's apartheid policy of separateness for Negroes, and told the African diplomats that the U.S. must have a threefold role in Africa, to aid in education there, to help Africans to have more food and to aid with development capital for young African nations.

In trying to assess the political advantages, and those are always a factor when a man seeks the Presidency as ardently as does KENNEDY, his luncheon remarks place him solidly in that segment of his party which is liberal in its race relations attitude and believes the United States is lagging badly in its attention to human rights and material development where races of color are concerned. His attitude should further strengthen his already considerable strength in northern urban Democratic ranks, it also represents an effort to broaden the image of the candidate as a man well aware of his Nation's global tasks and responsibilities.

Why an Apology?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HIESTAND. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I would include a timely and important editorial viewpoint by Mr. George Todt, columnist

for the Valley Times, published in North Hollywood, Calif., and circulated in my district.

The U–2 incident has been viciously attacked by the press. Here is a newspaperman's refreshing view:

WHY AN APOLOGY?

(By George Todt)

"What's sauce for the goose is sauce for the gander."—American proverb.

The asinine nonsense that this Nation ought to bow its collective head in shame and mortification over the much-discussed Lockheed U–2 reconnaissance plane incident is almost too idiotic to comment upon. Almost, but not quite.

Why should we apologize for "getting thar fustest with the mostest," as capable old General Forrest used to say? The Reds, particularly the Soviet Union, have been giving us the business for years. They had their spies here even during World War II, while we were busy feeding and saving them from Adolf Hitler.

Ever hear the old saw about "biting the hand that feeds you"? Ask the Soviets how this is done. They are past masters of the game. Their treachery is only matched by their ingratitude.

I was merely one of many millions of Americans who fought for our country in the last war, but I would like to have the privilege of saying just one word to Mr. K. now as he berates President Eisenhower over the U–2 incident. And that one word is: Phooey. Maybe an even better word choice would be: Phony.

Either way is all right with me. As Khrushchev and his many heroes of the Soviet Union scream like wounded eagles because our planes have demonstrated their capability to penetrate the aerial defenses of the U.S.S.R., we can afford to be happy about it.

I think we have a better chance for peace now that the "Butcher of the Ukraine" has the picture of U.S. airpower in better perspective. Our planes have been going too high for Mr. K.'s vaunted rockets to knock down in the past. How could he stop a mass attack by SAC in the near future? (Provided he asks for it.)

What right has Mr. K. to protest our gaining intelligence of his installations? Hasn't he been doing the same to us? What about our stolen atom secrets? The spy rings operating out of Red consulates and embassies?

The quisling "Communist Party of the United States," an information-gathering apparatus for the massive war machine housed in the Kremlin?

What has now been revealed, to Mr. K.'s vast chagrin, is that modern American technology housed in a high-flying U–2 can take as many pictures as thousands of Communist spies operating on the ground in the United States. We have simply beaten them at their own intelligence game.

It is all very well for Khrushchev to insist that we should not penetrate the skies over Russia to take pictures of his military installations. But what about the numerous land-based Red spies here? Is it right to ask that one of us give up his advantage, and not the other one? I, for one, do not think so.

Now is the time for us to put the old Mosiac Code into practice: an eye for an eye, a tooth for a tooth. If the Reds want us to withdraw aerial reconnaissance flights—let them withdraw their quisling party espionage apparatus from our soil.

It can be done whenever Moscow gives the nod to its flunkies in the United States. The later invariably do whatever instructed by their Kremlin masters. So why not bargain together?

Let's permanently withdraw our U–2 flights only on condition that the Kremlin make concessions to us, too. Let the Soviets give the order to the comrades in the United States to cease and desist their fifth column activities forthwith. Otherwise more flights from our side over the U.S.S.R.

Need for Coodinated Defense of the Free World

EXTENSION OF REMARKS

OF

HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mrs. WEIS. Mr. Speaker, I wish to draw the attention of this body to a most timely and significant address prepared for delivery by my predecessor in the House, Senator KENNETH B. KEATING before the New York State Convention of the Italian-American War Veterans, at Rochester, N.Y., on June 18. Senator KEATING was unable to attend this convention in person, because of the extended sessions of the Senate. In his absence, the Senator's speech was read by Judge John J. Lomenzo, an eminent Rochester jurist who has long been an outstanding leader in the Italian-American Veterans organization.

The theme of Senator KEATING's address is the need for the coordinated defense of the free world in the face of the massive and single-minded Communist plan of global conquest.

Mr. Speaker, under leave previously granted, I ask that this address by Senator KEATING be printed in the Appendix of the RECORD.

ADDRESS BY SENATOR KENNETH B. KEATING, PREPARED FOR DELIVERY AT THE DEPARTMENT OF NEW YORK CONVENTION OF THE ITALIAN-AMERICAN WAR VETERANS OF THE UNITED STATES, HOTEL POWERS, ROCHESTER, N.Y., JUNE 18, 1960

I am always happy to talk to a group of veterans. You men have fought for our freedom. For that reason you have a sharpened sense of what it means to defend something you hold dear. That is why you have organized—because you know that freedom is not something you lock up in a vault—not something you can forget about once you have won it. And it is about winning it and holding it that I want to talk to you tonight.

In these times we live in, defense is no longer a purely military term. The man with a gun—the man who fires a missile—the man who commands a submarine—each of them is only a cog in the total machinery of defense—and that machinery is so expanded, so complex, that every American citizen, whether he realizes it or not, is a part of the defense posture that we maintain against the potential enemy.

We must realize this new concept of defense. We must act as though it existed—because it does. The battlefield we used to know were specific areas of terrain or of ocean. There is only one battle area today, and it is the globe.

There are only two opposing forces, only two types of fighter—on the one hand the man who is battling to overrun the free world, on the other the man who stands defending the ramparts of freedom, and says, "They shall not pass." It is that simple. It is that tremendous—that fateful—and don't think it isn't a war because you can't hear the whine of bullets, or see men die around you. Men are dying—but it is a death of the spirit—the death of those who were once free, but who have been overrun by the advance patrols of tyranny.

The great challlenge to men like yourselves—to men who have known war—is to alert those about you to the tremendous fact of the reality of the silent struggle in which our lives, our futures, the futures of all humanity, are involved this hour, this day. And if they don't think freedom is at war, that freedom must defend itself—tell them to read the casualty list—give them the names of the battle losses—Hungary, Poland, Rumania, China, Lithuania—and all the rest of the fallen. And show them Cuba, mortally wounded, struggling before our very eyes. This is not a dry run.

Freedom is being shot dead—and because the weapons are lies and promises, and trade concessions and duplicity doesn't make the killing any less brutal, any less final.

In our early history we could see the enemy we fought. They marched abreast against us, and it was their markmanship and courage against ours. Today, we face a ghost army across the world—an unseen enemy whose battle plan is precise, intensive, and devastating. They know what they want—a Communist world—and all the fire of their energy, all the scheming of their intellect are directed toward the accomplishment of that mission.

That is what I meant by the new concept of defense. It must be new—must be retooled—to cope with this new kind of menace. And that defense doesn't begin in an arms factory—or on a launching site. It begins in the minds and in the hearts of the American people. It begins when we burn into those minds and hearts the sense of danger that exists, and the critical and compelling need to face up to the life-and-death implications of that danger.

The first thing many Americans must do is to wash their minds clean of outmoded ideas of what war is, what danger is. Victory is no longer something that can be turned out of factories operating on round-the-clock shifts. War today has a new dimension, and that new dimension has changed everything. The tree of freedom isn't blasted by a bomb. It is infiltrated by thousands of termites—and, if left unchecked, they do the work of a bomb, silently but no less thoroughly. And these termites fatten on each freedom tree that falls—and are the stronger to attack new trees—to lay waste the entire orchard of human freedom.

If we want a more recent, more striking example of the Communist technique of subversion—of their termite activities—we have only to consider the current situation in Japan. Red China and Moscow set up these demonstrations, planned their strategy well in advance, and financed this spectacular—and rehearsed it—with all the skill and cunning at their command. When I say financed, I mean financed. Don't think for a minute that the funds for this supercolossal manifestation of hatred came from the coffers of the Japanese Communist Party. It's not that big, not that strong.

A report I have received from the most reliable source says that the hard core of Communist demonstrators were paid $1.65 a day—a fantastically high labor wage by Asian standards—simply to light the fires of revolt and keep them burning until the Communist objective was achieved. This is how the Kremlin and Peiping operate. This is how they keep boring into freedom like worms into an apple. This is the raw technique of conquest—the use of the mob—the trained and well rehearsed mob—as a bludgeon to beat down the forces of duly constituted government, to create the anarchy in which communism thrives and gains power.

Because communism is a massive aggression, it must be met by a massive defense. We must see this drama on the wide screen of global perspective. We must not think of freedom as an American family jewel locked safe within our borders. Freedom is bigger than that, bigger than any nation, than any individual. Wherever it is threatened, we are threatened. Wherever communism gains ground, we inevitably lose ground.

The trouble with many of us is that while we concede that a shooting war is expensive, we have a feeling that peace ought to be available at bargain rates. The error, of course, is clear. We're not buying ships and tanks and rifles.

We're buying freedom—we're buying national security. And in the world we live in right now freedom and security have a price tag on them—a big price tag—but a price tag we must pay.

In this connection, let me say a word about our mutual security program—because this strikes at the heart of the matter. The popular cry of "giveaway" has been directed at this program. It is referred to by its opponents as "foreign aid." Indeed, I doubt if any program in our history has been so maligned, so misunderstood. Actually, this whole program, is a part—a vital indispensable part—of our defense posture.

To call it a gift is like trucking a load of live ammo up to your buddies in the line, and saying, "This is a little gift, boys, in case things start to get hot." The simple truth, of course, is that when you face a worldwide enemy, you use a worldwide strategy of defense. If you don't, you get boxed in—and by then your line of defense has shriveled to your own doorstep. When that happens you've lost your chance to buy defense. You're in the market for survival.

The recent summit conference didn't actually happen. It exploded on the launching pad—because Khrushchev wanted it to explode.

But this very failure drove home to us a lesson that we cannot learn too well—the fact that the Kremlin grand strategy is to split the free world alliance. And the reason they seek to split it is because a solid NATO mass of power is the prime roadblock to Communist ambitions for world conquest.

That is precisely why we must seek an ever closer relationship with the nations that stand beside us in opposition to the Soviet grand strategy. That is why mutual security is not a slogan, not a catchword. It's the life insurance policy of the free world.

The closer identification of ourselves with other free nations—this welding together of our common energies and purposes into our shield of freedom must not remain a wistful dream. It must be made a hard reality—a policy, not just a proposal. To this end we must think big if we are going to be big. We must welcome every opportunity—indeed, we must create opportunities to strengthen the sense of oneness, of solidarity that is the basic source of free world strength.

Barriers must be broken down, bridges must be built to bring us ever nearer to our friends—in a world where freedom needs all the friends it can find.

The history of America is the history of the transfusion of vitality, of energy, of talent, yes, of genius, that we have received from foreign lands through immigration. No other land, surely, has excelled Italy as a source of these gifts and those qualities that have contributed so much to the development and prosperity of our Nation. Indeed, your own fine veterans organization is a living and dynamic symbol of the historic blood brotherhood that exists between America and the great Italian Nation. It is this spirit of brotherhood, of solidarity that must be extended throughout the entire free world—if we are to present the massive and impregnable shield that fends off the driving blows of communism.

Let us be thankful, each of us in his own heart, that we meet here tonight as free men. Let us feel, too, what we have a right to feel—the pride of men who have fought in freedom's name—of men who have fought to preserve the things we hold dearer than life: the right of free man to his personal beliefs, to his sense of dignity, to the shaping and control of his own destiny.

The freedom we fought for—that Americans have fought for on all the battlefields of our history—cost many lives, many sacrifices, many sorrows. Let us pledge ourselves, therefore, to protect and defend it. It is the most precious heritage we possess. It is the most precious legacy we can leave our children.

The New Price Inflation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I want to call to the attention of my colleagues the below editorial from the New York Times of June 28, 1960, entitled "The New Price Inflation":

THE NEW PRICE INFLATION

The Consumer Price Index of the U.S. Bureau of Labor Statistics moved into all-time high ground again in May. Contrasted with the jump of a full half of a percentage point in April, the May increase of one-tenth of a point was nominal. However, it represents the fourth consecutive monthly advance this year and the 11th in the past 14 months. It leaves the composite index at 126.3, a rise compared with its 124 of May a year ago of 2.3 points, or roughly 1.9 percent.

During the approximately 6½ years since the third quarter of 1953 there have been two periods of sideways movement in consumer prices and two periods of rising trends. Prices were stable for 2½ years between late 1953 and the late spring of 1956; for the next 2 years they rose almost uninterruptedly, the extreme advance for this second period amounting to about 8 points. The second period of sideways price movements lasted about a year, or from the spring of 1958 to the spring of 1959. A resumption of the advance then set in and is now in the beginning of its second year. The rate of this second advance has been about half that of its most recent predecessor.

This pattern of behavior of the consumer price emphasizes the distinguishing characteristics of postwar price inflation—namely, what is appropriately described as its ratchet effect. While prices have been advancing only about half of the time over this span of more than 6 years, all that advance represents a net advance. While the index has held steady the other half of the time, at no point has there been any perceptible decline. If this postwar pattern (and it is not a pattern that has by any means been confined to the United States) is here to stay it is obvious that it not only makes anti-inflationary policies more urgent today than ever before; it also means that the task of combating price inflation is more difficult than it was in times past.

To the old familiar cause of excessive overall demand two others have in recent years taken on new importance. The first of these is the autonomous wage push that goes beyond the average rate of increase in productivity; the second is the concentration of demand in one sector, such as, let us say, durable consumer goods, which may be able to increase wages without raising prices. The secondary effect of such concentrated demand may be an increased demand for basic materials such as steel, where costs are high and where a comparable wage increase can be justified only if accompanied by an increase in prices.

Auto U.S.A.

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. BECKER. Mr. Speaker, I am inserting in the RECORD the following article entitled "Auto U.S.A." Everyone in America is vitally concerned about the number of deaths and fatal accidents on our highways today. This article tells about a film which proves that many communities can help with the traffic congestion and elimination of accidents.

The toll of deaths on the Nation's highways over the Fourth of July weekend, and the fantastic traffic jams in which motorists found themselves trapped brings home with dramatic impact our fast growing urban traffic problems. A method by which communities throughout the country can decrease its accident and traffic statistics and increase its safety quotient was demonstrated here recently:

On June 15, a group of some 125 experts in traffic safety, Government and automotive fields met to watch the premiere of a new motion picture on traffic and safety. The film "Auto U.S.A." was premiered under the auspices of the Automotive Safety Foundation and the Institute of Traffic Engineers. Its purpose—to demonstrate to individuals and community groups how they could initiate action to develop their own traffic control systems. The film dramatically points out the demoralizing effect traffic congestion has on the economic and social life of many communities and, at the same time, shows how many communities, faced with such a problem, have effectively solved these traffic and safety problems.

At the end of the film the experts, some of the Nation's leading industrial and Government experts on traffic, safety and the auto in general, gave the producer of the film, Dynamic Films, of New York a resounding burst of applause and an equal round of applause for the Perfect Circle Corp. of Hagerstown, Ind., which provided a special public service grant for the production of the film. The public service effort these organizations have made is indeed a worthy one.

The message this film gives is important. Its story I think should be made available to every community in the country faced with the problem of constricting traffic congestion. It should

bring home to communities the fact that they have a stake in their own cities and towns and this film gives them the information necessary to help them help themselves.

We are continually faced with the bugaboo of traffic congestion and accidents and our communities are constantly on the lookout for methods that will help solve these problems before they become too drastic. I think this film will be of interest to all these communities and will help simplify the planning of traffic programs for future years to come.

Traffic is nobody's fault but it should be everybody's business.

Responsibility for the free flow of goods and services and the pleasurable use of the auto rests with all of us, with every individual and corporate citizen. Solutions for traffic problems which often threaten business, industrial and civic growth can be and have been found.

That is why "Auto U.S.A." is such an important film. It is a how-to-do-it package. And Americans who are almost congenitally inclined toward finding practical ways to solve problems will respond once they see it. In 28 minutes, this film proves that many communities already started dissolving traffic congestion through the serious application of existant know-how.

Proceedings of the 43d Annual Convention of the National Association of Leather Glove Manufacturers, Hotel Kingsborough, Gloversville, N.Y., June 23, 1960

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. STRATTON. Mr. Speaker, last week in my district in New York State, at Gloversville, the heart of the glove-making industry of the Nation, was held the 43d annual convention of the National Association of Leather Glove Manufacturers. The business sessions of this great group of businessmen, who are engaged in directing an important and critical defense industry that has been traditional in my district, were held in the Hotel Kingsborough, with the principal session on June 23, 1960.

Because the deliberations of this association are of especial interest to all Members of the House who are concerned with the growing problem of foreign imports and their effect on our own domestic economy and employment, I include herewith three articles from the Gloversville Leader-Herald of June 24, detailing some of the most recent thinking of this organization in meeting this problem in their particular field. The articles follow:

BACHNER NAMED PRESIDENT OF NATIONAL GLOVE GROUP—CASEY AGAIN ELECTED EXECUTIVE SECRETARY; DIRECTORS ARE CHOSEN

Joseph Bachner, vice president of C. J. Bachner & Sons Glove Co., of Gloversville, was elected and installed as president of the National Association of Leather Glove Manufacturers, Inc., last night at the 43d annual business session at the Hotel Kingsborough.

Other officers elected and installed were Roscoe Stanyon, Jr., president-treasurer of the Imperial Glove Co. of his city, vice president; Carl Ross of the Ross Glove Co. of Sheboygan, Wis., vice president; Joseph Perrella, owner of Joseph Perrella Glove Co. of this city, treasurer; and James H. Casey, Jr. of Gloversville, executive secretary. Casey was reelected.

The membership adopted a memorial resolution in honor of nine members who died during the past year. Copies of the resolution were ordered sent to the families of the late members.

Those honored were Ellery Willard, Ted A. Lindfelt, Bernard J. Shields, Clarence Shutts, Russell B. Barter, Wilbur Snyder, Francis T. Sutton, Gordon Hyde and Bert Zimmer.

DIRECTORS NAMED

Members of the association elected to serve 3-year terms on the Board of Directors were: Milton Gluckman of Fownes Bros. & Co. of New York City; Julius Higier, president of Superb Glove Co. and Crescendo Gloves, Inc.; Walter Scherf of Northern Glove & Mitten Co. of Green Bay, Wis.; Dominic Papa, treasurer of Mario Papa & Sons Glove Co. of Gloversville, and Carleton B. Adams of Eisendrath Glove Co. of Marinette, Wis.

TWO-YEAR MEN

Those named to the Board of Directors for a term of 2 years were:

John Burnham of Frederic Burnham Co. of Michigan City, Ind.; John D. Widdemer, president of Hilts-Willard Glove Corp., Gloversville; James Green, president of Daniel Hays Co., Inc., Gloversville; Elmer E. Little, president-treasurer of the Elmer Little & Sons Co. Johnstown, and Theron Serfis of Serfis Glove Co., Northville.

ONE-YEAR MEMBERS

Named directors for a term of 1 year were: Forrest P. Gates, treasurer of Gates-Mills, Inc., Johnstown; Louis Rubin of J. M. Rubin & Sons, Gloversville; Jerome Fox, president-secretary of Louis Meyers & Son, Inc., Gloversville; Joseph Conroy, president-treasurer of Joseph Conroy, Inc., Johnstown, and Joseph Lazarus of Boyce-Lazarus Co., Johnstown.

NEW PRESIDENT CALLS FOR RENEWAL OF FORMER 'BUY AMERICAN' THEME

"We should revitalize our former 'Buy American campaign.'" Joseph Bachner, vice president of C. J. Bachner & Sons Glove Co., said last night in accepting the presidency of the National Association of Leather Glove Manufacturers, Inc.

The 43d annual business meeting of the association was conducted at the Hotel Kingsborough with approximately 75 persons in attendance.

He said that in the light of events which have transpired in the past years, in relation to the glove industry, it is apparent that the manufacturers should make every effort to foster manufacturing right here in America. "We should revive the 'Buy American Theme.'"

Bachner went on to say "it is true that we were denied aid by the Tariff Commission. However, all of our efforts were not wasted in Washington. I believe that largely through James Casey's efforts, gloves have been excluded from the list of items on which concessions will be granted. The tariff on gloves will not be lowered in the immediate future.

"Let us also look at the problems of European manufacturers. In France, Germany and Italy, they are confronted with rising costs of labor. They are also experiencing a shortage in better grades of leather, and therefore must pay more. We all know that we can make gloves better than our European competition. With costs rising in Europe the difference in price between American made goods and European goods appears to be narrowing. Last year more ladies' dress gloves were imported than were made here. I believe that this trend has seen its limit. I believe many retailers realize that they need domestic manufacturers."

The president said that "many manufacturers present here, import gloves from many countries, including Japan, governments, particularly in the Far East, are unstable. Look at what transpired in Japan recently. Already there is a definite feeling among the buying public to boycott Japanese goods. The same thing could happen in the Philippines or in Hong Kong.

"I myself have learned that it is not easy to do business 12,000 miles from home.

"For these reasons I believe that we should all try to keep as much manufacturing as possible right here in the United States. We should impress upon retailers that they need domestic resources. We should revitalize our former 'Buy American campaign.'"

GLOVE BUSINESS IS ASSURED OF 2 YEARS WITHOUT TARIFF REDUCTIONS, HIGIER REPORTS

While the request for escape clause relief was rejected by the U.S. Tariff Commission leather glove manufacturers were fortunate to have leather glove items left off the GATT bargaining list, Julius Higier, chairman of the Foreign Trade Committee, reported last night.

Speaking at the annual business meeting of the National Association of Leather Glove Manufacturers at the Hotel Kingsborough, Higier noted that only two inconsequential fabric items were listed, together with wool glove linings.

Being off the bargaining list, he said, means that the industry will not be subject to further reductions for a period of at least 2 years.

NEW NEGOTIATIONS

He pointed out that since the hearing on the escape clause relief application by the association, negotiations have been undertaken under the General Agreement on Tariffs and Trade to reduce all listed commodities 20 percent.

This, he pointed out, the President has a right to do under authorization given him by the Congress. He said that 2,400 items had been listed for reductions but that no leather glove items were found on the list.

Taking up the escape clause proceedings, Higier said that at last year's annual session of the association the membership discussed the advisability of bringing an escape clause action before the U.S. Tariff Commission, and, after careful consideration, it was unanimously voted to proceed with the matter.

WOOL GLOVES EXCLUDED

The original application filed, he said, covered the importation of women's leather dress gloves, men's leather dress gloves, both of which are classified under tariff paragraph 1532(a), and, in addition, gloves of horsehide in which the leather is the component of chief value, classified under paragraph 1532(b). This, he pointed out, automatically excluded wool gloves.

He said that after preliminary conferences in Washington, the association was asked to withdraw this application, the Commission being of the opinion that such a case would be too cumbersome to handle and that the association would be better off giving them an opportunity to hear each case separately.

The application, Higier reported, was withdrawn in its entirety and a second action filed, covering women's leather dress gloves. This item was selected first because it was here that the industry felt the impact of imports most severely.

ASKED TRUE COMPARISON

In the second application, he said, the association specifically requested that imported gloves be compared to domestic production of fine dress gloves only. The association, he said, felt that, by doing this, it would show a true comparison and the actual portion of the domestic market now controlled by imports.

At the hearings, he said, the Commissioners refused to accept this, and all comparisons were then considered on an industrywide basis, regardless of the type of manufacture.

In spite of the fact that imports have taken such a large portion of the domestic market, Higier declared, the Commission refused to consider relief for the industry, and in its findings, stated that the evidence they were able to accumulate was not sufficient to warrant a favorable recommendation to the President.

Annual Official Tour of the Fourth Indiana District

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ADAIR. Mr. Speaker, during the recess of this session of the 86th Congress, I plan to conduct my annual official tour of the Fourth Indiana District. This will enable me to meet personally with constituents and discuss the legislative actions of this Congress. Furthermore, we can take a look at the issues they feel will be important when the new Congress convenes, following the elections this fall.

In looking back over the many problems which were before the 86th Congress, I believe that the greatest were related to maintaining peace, and preserving the Nation's strength and security. It is significant that at the same time, however, the Nation has continued to prosper and now enjoys its highest level of employment and income in our history.

During both sessions of this Congress, I supported legislation which would curb excessive Government spending and help to keep the budget in balance as requested by the President.

Along with a number of other Members, I introduced a bill providing for long-range tax reform, as I believe that the taxpayers and the economy ultimately must have tax relief and a reappraisal of our present tax policies. This bill did not pass, but some such measure must be considered in the future. We must encourage thrift and at the same time eliminate burdensome taxes to permit more money to be channeled into the development and expansion of our economy. Such a program of incentive would stimulate national growth and increased employment rather than putting tax dollars into the Washington bureaucracy and needless Federal projects.

I also introduced a bill which would have raised the present limitation on earnings of those who are receiving social security, but this likewise did not come to a vote in the House.

In voting against foreign aid, as I have in the past, I felt that our Nation could better our relationships and help the free world and our own people, by using a substantial portion of such funds for domestic purposes. The gigantic expenditures we have made for foreign aid in the past have not won and retained for us friends throughout the world, as we had hoped. Person to person contacts are most helpful in maintaining world friendships.

I have supported all efforts to ease world tensions and halt the Communist conspiracy in its tracks. It is now apparent that we must speak up most firmly to the Communist leaders. Never will we stop the evil menace of communism by failing to recognize it for the atheistic menace it is. We must be tough on Communists and expose their every effort to take over the world.

As we are entering an entirely new era of space exploration, which calls upon us to further our scientific knowledge and research, I have favored proper action and expenditures in this field. We need to keep ahead of the world in utilizing our ingenuity and experience in this space age to see that we advance in the direction of peaceful and constructive uses of these new developments rather than letting some other nation pervert them to weapons of destruction and fear.

I have also worked for a strong national defense program with concentration of modern weapons and military supremacy for our protection from any would-be aggressor.

In fact, I feel that the general conservative approach to our national problems has been sound and one which merits the confidence and approval of our people generally and particularly of those in the Fourth District of Indiana whom I am privileged to represent.

This official tour which I make annually through the eight counties of the district—Allen, Adams, Whitley, Noble, De Kalb, Steuben, Lagrange, and Wells—has always afforded an excellent opportunity of talking over our national problems. It enables us to get firsthand views and information from the folks in the district as to their attitude on these matters and how I may best serve them and contribute to good government through congressional action.

The tour will not be held until after the national political conventions, and I have set up the following dates and places to meet with my constituents. I invite all to meet with me and to feel free to discuss their problems, whether it be on legislation, issues, my voting record, or personal governmental business that they may have on matters of pensions, military service, veterans' affairs, or whatever.

Following the final adjournment of Congress, I will open my district office to serve constituents at 925 Lincoln Tower, Fort Wayne, Ind., and my Washington office, room 1511, House Office Building, will, of course, be open.

The tour dates and places where I will be and the hours are:

Monday, August 1, 9:30 a.m., post office, Ossian.

Monday, August 1, 11 a.m., post office, Bluffton.

Monday, August 1, 2 p.m., post office, Decatur.

Monday, August 1, 4 p.m., post office, Berne.

Tuesday, August 2, 10 a.m., post office, Garrett.

Tuesday, August 2, 11:30 a.m., post office, Auburn.

Tuesday, August 2, 2:30 p.m., post office, Butler.

Tuesday, August 2, 4:30 p.m., post office, Waterloo.

Wednesday, August 3, 10 a.m., post office, Angola.

Wednesday, August 3, 1:30 p.m., post office, Fremont.

Wednesday, August 3, 4 p.m., post office, Lagrange.

Thursday, August 4, 10 a.m., post office, Albion.

Thursday, August 4, 1:30 p.m., post office, Kendallville.

Thursday, August 4, 4 p.m., post office, Ligonier.

Friday, August 5, 9:30 a.m., post office, Columbia City.

Friday, August 5, 1:30 p.m., post office, South Whitley.

Friday, August 5, 4 p.m., post office, Churubusco.

A Great Book by a Great Author

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. GEORGE. Mr. Speaker, recently I read a brief, but excellent and well-written review of CHESTER BOWLES' "The Coming Political Breakthrough." This review written by Mrs. Tempa Watson of Oklahoma, now residing temporarily in Hawaii, should be read by every Member. Mrs. Watson's remarks will probably induce a reading of the book.

Mr. Speaker, under previous consent, I include this review in the extension of my remarks:

"THE COMING POLITICAL BREAKTHROUGH," BY CHESTER BOWLES

(Review by Mrs. Tempa Watson)

CHESTER BOWLES is Congressman and ex-Governor of Connecticut and former Ambassador to India. He has been a Connecticut delegate to four Democratic National Conventions, and recently selected as platform committee chairman of this year's Democratic National Convention. He is a member of the Foreign Affairs Committee, and has served in various capacities in the United Nations. He has drawn on his experiences in business and public affairs in writing this book.

"The Coming Political Breakthrough" shows concretely the nature of our national

problems, foreign, domestic, and military, that we must now face up to. He suggests a detailed course of action that the political parties could well consider. According to Senator Kennedy, ex-President Truman, and Governor Stevenson, it is a book for all of us to read—Democrats, Republicans, and Independents alike.

CHESTER BOWLES tells us that we are confronted with a new set of problems which are "breathtaking in their variety and explosiveness." In Asia, Africa, and Latin America 800 million newly free, or soon to be free people are straining to create new societies or improve the old which cannot be done with existing technical and capital resources. The economic gap between the rich minority, living largely in North America and Western Europe, and the poor majority, living largely in Africa, Asia, and Latin America, continues to grow. Mr. BOWLES points out that the Soviet Union has suddenly emerged from a peasant society into an industrial power that challenged the economic and political position of the United States. That the opposing power blocs are as old as history but now there is a difference in that each side is armed with nuclear weapons that could destroy most of civilization. A failure of communications or a human error on either side could lead to nuclear catastrophe.

The author states that the "new China," the Communist dictatorship in Peiping, which is allied with Moscow and antagonistic to the United States, is forcing 650 million able, hard-working human beings into a new center of Communist strength; that the inadequacy of natural resources in relation to her vast population suggests that at some future time she may attempt to occupy areas to the south.

Since 1953 our domestic economy has been growing at the slowest rate in generations, inadequate to meet our increasing population needs; that our educational needs are urgent, and that housing, medical research and improvement of transportation systems and industrial plants all require immediate attention. Our civil rights are behind times. Nearly a hundred years after the Emancipation Proclamation Negro Americans are still denied the right to vote and to obtain equal education. In almost every State the Negro is denied equal rights in housing and employment. I agree with Cochairman Camile F. Gravel (a newly created office of the National Democratic Committee) a moderate southerner, that "segregation is morally wrong, but that it would be socially and economically disastrous to impose integration on the South by force at this time."

The author states that all these domestic and international realities have not been adequately recognized; that the slow rate of economic growth has been to revert to the scarcity view, that inflation can only be completely checked by leaving idle a big portion of our men, machines and capital, and that more schools, housing and hospitals remain beyond our means. Mr. BOWLES believes we can have full employment, reasonable prices without harmful inflation and recessions, that it is possible for us to have adequate defense, to provide foreign economic assistance, to expand our construction programs in housing, schools, research, urban renewal, dams (hydroelectric and flood control), highways, to balance the budget, and to either reduce our national debt or reduce taxes without impairment of the national economy.

Mr. BOWLES states that the world yearns for us to apply the force of our tested democratic values to the solution of these new problems. He further sets out that from the birth of our political parties to the present, three great eras of consensus are discernible (Jefferson-Jackson, Lincoln, and F.D.R.) each in response to public insistence on a broader interpretation of human freedom to meet new conditions. The public demonstrated the strength of the third consensus by electing a Democratic President in five successive elections.

According to the author we are now moving into a fourth period of political consensus which will reaffirm and broaden our commitment to full employment without inflation and without sharp recessions. It will call for a more realistic, nationwide approach to civil rights, will encourage an improvement in the quality of our day-to-day living, and will bring world relationships into a fresh perspective. He believes that the political leadership of America in 1960 will be entrusted to the party which most boldly and effectively identifies itself with the fourth consensus, and the leaders and programs of action consistent with it. If one or the other of our two political parties succeeds in making itself the action instrument, the public interest will be the gainer and the party itself will be the winner.

CHESTER BOWLES states that the political breakthrough may depend upon ability to clarify our national purpose in terms of developments both at home and abroad. He is very explicit in establishing a course of action which would enable us to regain the initiative in our dealings with the Communist nations and place our relations with the two-thirds non-Communist people of the world on a more enduring basis. Required is coordinated political action, economic action, military readiness, and a cohesive American view of the world that reflects our national purpose. It is important to note that it will require that we rethink the whole nature of the present world crisis and to bring our objectives into closer harmony with those of the non-Communist peoples everywhere. It will require us to rally the two-thirds non-Communist people in the common defense of certain principles of human conduct which are deeply rooted in most religions and which have provided the driving force for human freedom and betterment. He sets out five points of an international policy which are more than an American policy and more than an anti-Communist policy. These principles in practical terms must be spelled out.

The author reminds us that the Presidency is the central office of action in our national life. It is the one focal point which gives unity, direction, and purpose to the American people as a whole. This fact must be uppermost in our minds when we choose a President in 1960. Our sights are raised beyond the here and now.

CHESTER BOWLES emphasizes that it is necessary to look for a man who will not only recognize our national domestic needs, but who also advocates our highest aspirations to live and grow in peace and friendship with the family of nations. For this reason foreign policy since 1940 has been the dominant element in the selection of America's Presidents. The growing and already primary importance of foreign policy in selecting our presidential candidates is almost certain to lessen the traditional eligibility of Governors, and to increase that of Senators who deal regularly with foreign policy matters. Exceptions are Stevenson and Rockefeller, whose reputations were largely made in foreign affairs. This knowledge is a decisive influence in determining the outcome of presidential elections and is now shared by all the leading candidates for Presidential office.

CHESTER BOWLES believes the Democratic Party is by all odds the best equipped to carry out the fourth consensus struggling to come into existence; and that the liberal heritage of the Democratic Party "Rights of Man" slogan used by the founders of the Democratic Party of 1796 enables us to communicate with all people in every corner of the earth. The political record of 1960 will certainly depend upon the choice of candidates and the choice of issues.

After reading this book, one can readily understand why CHESTER BOWLES was recently elected chairman of the platform committee of the Democratic National Convention to oversee what issues the Democrats will stress in the fall campaign.

Mrs. Flora Whitehill Put Her 11 Children Through School Without Federal Aid

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a very interesting story from the Nonpareil, Council Bluffs, Iowa, about an Iowa mother who did not ask for or receive Federal aid to put her 11 children through school. With honest toil and God's blessing Mrs. Whitehill, of Tabor, Iowa, has proven there is no substitute for hard work and right living.

The news article follows:

HARD WORK "OLD HAT" TO TABOR MOTHER

(By Don Patton)

TABOR.—Any contest to name the outstanding mother in Tabor would be a cut-and-dried affair.

The honor would go to Mrs. Flora Whitehill without any campaigning at all.

Mrs. Whitehill operates a ladies' ready-to-wear store here. While doing this—and many other jobs on the side—she has raised 11 children and put them all through high school and all but one through college.

In 1939, Mrs. Whitehill was shouldered with the enormous task of caring for her brood of nine daughters and two sons. Her husband Frank died suddenly of a heart attack while watching their two oldest daughters play basketball at Strahan.

She sold their farming equipment and with her late husband's insurance money, purchased a large house in Tabor.

The road was mighty rough for several years, Mrs. Whitehill recalls. "I did all sorts of jobs to keep the family together. I hung wallpaper, painted, sold cosmetics door to door—anything to bring in grocery money."

In 1941, she entered business for herself "on a shoestring." But she continued her outside work, too.

"Many nights I left the store, went out and hung wallpaper until 5 o'clock in the morning, then home for a couple hours sleep and back to the store," she said.

The pace finally began to tell on her, especially after she suffered an injured knee in a fall. The injury is now causing her pain and is "sort of slowing me down," she admitted.

After World War II, Mrs. Whitehill said, it looked as if things were going a little better. But on July 4, 1946, new tragedy struck.

The family home was nearly destroyed by fire. All the children's clothing and most of their personal belongings were burned.

Tabor and the surrounding community came to their aid and soon the family was outfitted again, Mrs. Whitehill rebuilt their home with the insurance money.

Since that time, things have gone along pretty smooth, although she still works hard.

"As I look back on the past 21 years, I know that God was with me," Mrs. Whitehill said

humbly. "Without His help, I don't think I could have done it."

Her children gave her a lot of help, too, she proudly added. "They did all sorts of jobs to bring in money and the older ones took care of the younger ones so I could operate the store."

Mrs. Whitehill is very proud of the accomplishments of her family. Seven of her nine daughters either have or are now teaching school. All but one of the 11 attended college.

All but two of the family are married and "they all had big weddings, too," the mother boasted.

At home with her is her oldest daughter Irma who taught school at Thurman last year. She will teach in the area again this coming year.

In order of age the other children are:

Joyce—Mrs. Ellsworth Schilling, Columbus, Nebr., a teacher there; Helen—Mrs. Raymond Morical, a former teacher, now a farm wife near Tabor; Jean—Mrs. Newell Lorimor, Bartlett, former teacher, now a farm wife; Frank Jr., employed with Iowa Power & Light Co., in Tabor; Arlene—Mrs. Bob Ewaldt, a farm wife near Randolph.

Phyllis—a teacher in Council Bluffs, now attending the University of Omaha, working on her master's degree; Jeannette—Mrs. Millard Plum, a farm wife near Hastings; Richard—farming land he and his brother purchased on the river bottom near Tabor.

Vida and Verda, twins, are both teachers. Vida is Mrs. Richard Flint of Council Bluffs and Verda is Mrs. Leo Stabas, Omaha. Vida will teach in Council Bluffs next fall and Verda, now in Colorado Spirngs, Colo., where her husband is in the service, will return to Omaha to teach.

Mrs. Whitehill has 12 grandchildren and "when the kids bring their kids and come home for Sunday dinner, it looks like a convention around the place," she mused.

What does a person who has worked hard all her life do for relaxation? "I go home and work in my yard and garden," she said. "It's the most enjoyable part of the day for me."

Captive Nations Week

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. DANIELS. Mr. Speaker, the Soviet Union's rise to the status of a great world power is the most striking phenomenon in contemporary world history, and its treacherous acts, committed in the name of world communism, constitutes one of the blackest pages in all history. One of these acts was the capture and enslavement of nearly 100 million innocent and helpless people in Eastern Europe. Since the end of the last war, under the guise of people's democracies, the Soviet Union has made captives all peoples between the Baltic and Black Seas. They have been sealed off from the free world by the Iron Curtain imposed upon them. And all efforts on the part of the West to see these peoples freed from Communist dictatorship have been of no avail. No government in the West will relinquish the hope of seeing these peoples freed. The people of this country will continue their efforts to that end, and the observance of the Captive Nations Week, as enacted by Congress and proclaimed by the President, is an eloquent testimony of their desire to see justice done to these millions of innocent and helpless people.

Let's Get Tough

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HIESTAND. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I am including an article of interest to those watching the domestic and international scene. It was written by Mr. George Todt, columnist for the Valley Times, published in North Hollywood, Calif., and circulated in my district.

Mr. Todt brings us up to what he calls the "moment of truth":

"To do my duty in that state of life unto which it shall please God to call me"—Book of Common Prayer.

The spectacle of 10,000 leftwing demonstrators besieging the automobile of Press Secretary Jim Hagerty in Tokyo recently is one which ought to go a long way in awakening apathetic Americans.

Even Adlai Stevenson and Senator JOHN KENNEDY, for that matter. Wonder if these gentlemen will recommend that the United States apologize now for this latest outbreak in diplomatic relations—this time with one of our stanchest allies in the Pacific area.

Let Adlai and JACK—and Eleanor, too—moan and groan to their hearts' delight about the "ugly Americans." But I, for one, invite them to take their appeasement-minded apologies in hand, and you know just where they can take them. We all should be sick to death of such decadent weaknesses by now.

The most incredible thing which comes to my mind at this time is this: Never before in history has a nation been so strong as we are now and yet permitted every pipsqueak on the world stage to slap us in the face—even Castro of Cuba. I have too much respect for canines in general to call this airedale what his overripe personality deserves.

But why do we take it? The truth, if it must be known, is that we are able to annihilate the Soviet Union and Red China this year or next—with only trifling losses to the United States. The Reds cannot stop our overwhelming Sunday punch, the U.S. Strategic Air Command (SAC). It provides "the moment of truth" for our enemies.

What has happened to us is simply this: The Reds, playing a careful hand of international poker, nuclear blackmail type, have been making noises like they were superior to us in military power. They have gotten away with this monstrous piece of nonsense because we have made it something of a national policy not to call their bluff.

Instead, we have permitted these blusterers unwanted margin and full leeway to conduct their atrocious noises by proclaiming needlessly that we would "never, never strike the first blow" in modern warfare.

This is a silly policy. For it has permitted our bellicose opponents full opportunity to take every aggressive measure against us short of nuclear war. Failing to take that final step, the Reds are safe from retaliation of any kind that is effective. Why continue?

Under this strange—and ineffective—policy we have been placed in a near-untenable position. Our Vice President has been stoned by Communist mobs in South America. Our President was insulted in Europe. And now Hagerty, the President's secretary, has been threatened by Communist-directed mobs in Asia.

I think it is time for the United States to get tough for its own good. We need the spirit of Teddy Roosevelt throughout our country again. We should always be just and honorable—but we must permit none to disgrace our flag wherever it may be shown. If we have to go to war to protect our just rights, we ought not to fear.

The truth is that in 1960 we have more power than all the rest of the world combined, friend and foe together.

If we want peace, we must be fully prepared to go to war, if necessary. And we must relieve our opponents in the world jungle of the notion that we do not possess the intestinal fortitude to use our superb arms unless and until the time comes when they first unleash a nuclear blitzkrieg against us.

Re Cuban Situation

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ALEXANDER. Mr. Speaker, it is my belief that the United States, through our State Department, should take a new look at Cuba.

Only 90 miles from our shores we find this small country with less than 6 million people who not only figuratively, but literally, through its dictator, Fidel Castro, thumbs its nose at us.

America has shed blood to win freedom for Cuba, and throughout history has played the role of big brother, giving bountifully of friendship and aid. At the expense of the American taxpayer we have consistently stabilized the price of their sugar, paying more for it than any other country.

While I am of the opinion that the Cuban people generally, are still friendly toward the United States, the diplomatic sins of its leaders are legion. In my judgment it is foolish to declare Castro a mere tool of the Communists, and not recognize him as a practicing Communist.

Without any compensation at all he has taken over properties belonging to the United States, his warships in peacetime have fired against American ships, and he has physically mistreated and deported U.S. citizens, including members of our foreign service. He has endangered the security of the entire hemisphere by entering into pacts with the Communists states, thereby establishing a beachhead for Russia in Latin America. Red dictatorship is now in full control in Cuba, making it criminal to make statements unfavorable to communism or to the Government.

Russia has appointed Sergei M. Kudryavtsev as Ambassador to Cuba. This is the Communist who headed a Soviet espionage ring in Canada early in the 1940's. Premier Khrushchev, has of course, already accepted an invitation to visit Cuba. It is likely that he may be followed by Communist Chinese Premier Chou En-lai. And worse still, it has been reported that Cuba is preparing to establish diplomatic relations with Peiping. This would be a bitter blow to the United States.

Among Castro's closest advisers is Maj. Ernesto "Che" Guevara, who is Communist trained. He has written a book telling Latin Americans how to overthrow their governments and take power. Another who is very close to Castro is his brother, Raul, who is first in line of succession, and also Communist trained. And there is also Antonio Junez Jimenez who heads the National Institute of Agrarian Reform, and is known as a Communist.

These men and others are waging a vicious hate-America campaign on our very doorsteps. Day after day they hurl vitriolic tirades against us and employ calumny in order to degrade the United States.

Castro is not content to turn only Cuba against the United States, as alarming and distressing as that is. His ambition is to extend the Red dominance to include all of Latin America, converting to communism a group of countries that traditionally have been friendly to us. Therefore, his fellow Communists are active in Cuban embassies all through Latin America.

And so while Soviet influence increases in Cuba, our position there is greatly deteriorating, economically as well as diplomatically. Just the other day Cuba confiscated the Texaco Oil Co. there because the crude oil is not bought from the Communists.

I firmly believe that it is imperative that this must be stopped. We must not sit idly by and vainly hope that Castro will hang himself if given enough time and rope.

The State Department has failed to follow through with its protests. Our security is at stake. The influence of our administrative leaders is already being questioned through the world. Their ability to cope with the situation is doubted. A change in policy should be adopted. We must let Castro and his henchmen know in no uncertain terms just where we stand and exactly what our policy is. Then, if necessary, take action to protect our sovereignty, guard our prestige and maintain our good name.

The hour is late.

Veteran and Armed Forces Affairs

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following platform pertaining to veteran and Armed Forces affairs adopted at the 1960 American Veterans Committee convention held at Atlantic City, N.J., on June 12, 13, and 14:

VETERAN AND ARMED FORCES AFFAIRS

I. VETERANS' BENEFITS

The American Veterans Committee has constantly reiterated, since its founding its fundamental belief that rehabilitation and integration of veterans into the community is the proper scope and purpose of a veterans program. The achievement of economic security for veterans through sound economic planning, for all citizens rather than through special grants or favors to veterans is basic AVC policy.

For many years, AVC has pointed out the need for a thorough review and reappraisal of this Nation's policies on veterans. AVC's current position on veterans policies is as follows:

1. We oppose bonuses and general pensions as being class legislation and unrelated to the real needs of individual veterans and tending to set veterans apart from their fellow citizens.

2. Two basic standards should be applied in evaluating veterans' benefits. They are:

(a) For death or disability incurred in military service: Are the benefits sufficient to provide a decent standard of living for the veteran, his family or survivors, taking account of the veteran's ability and opportunity for gainful employment?

(b) For all veterans who did not incur disability: Are the benefits so designed as to enable the veterans to readjust from military service to civilian life with minimum economic loss?

3. Veterans' benefits should be administered without regard to race, creed, color, sex, or national origin. Since benefits are a Federal responsibility, uniform standards of administration and compensation should be applied throughout the Nation.

4. The present scale of compensation for disability, and for compensation to survivors, provides amounts which we believe are not commensurate with an adequate standard of living.

5. Provision should be made to maintain automatically the purchasing power of the benefit dollar. Monetary benefits should be adjusted annually on the basis of the year-to-year change in the Bureau of Labor Statistics, Consumer Price Index.

6. We endorse the proposal of the Bradley Commission that special consideration should be given to disabilities rated at 10 and 20 percent to determine whether significant economic impairment exists. Consideration should be given to discharge of the Government's obligation in static cases rated at 10 and 20 percent by an appropriate lump-sum or short-term settlement.

7. We believe in some veterans' preference for positions in the Federal civil service. However, this consideration should be limited in three major respects:

(a) No veteran should receive a position unless he is fully qualified to perform duties entailed.

(b) Preference for nonhandicapped veterans should be limited to initial appointment only.

(c) Absolute preference for nonhandicapped veterans should not be granted in any event, nor should any job be reserved for such veterans exclusively.

8. We endorse the provision for mustering-out pay as necessary to bridge the gap between military service and civilian life.

9. We urge equalization of benefits, aimed at eliminating differences in the present treatment of veterans, widows, and orphans of World War I, World War II, and Korea.

II. VETERANS' HOUSING

AVC believes that steps must be taken to discourage the practice of discounting, and adding special charges on GI mortgages, during a tight money market. AVC urges that the Secretary of the Treasury invest up to 25 percent of national service life insurance premium reserves in VA guaranteed GI mortgages to provide, if needed, supplementary financing in this field.

At the same time, proper steps must be taken to insure that the administration of such financing by the purchases of GI mortgages with VA and Treasury funds will not serve to perpetuate discrimination against Negro home buyers under the FHA program.

AVC proposes the eventual integration of the veterans' housing program into the Federal Housing Administration to eliminate the duplication of administrative costs for both programs.

III. PEACETIME GI BILL OF RIGHTS

Experience with the World War GI bill of rights has given ample evidence of the value in increased productivity to the Nation and to the increased taxes to the Government of that law's education and training provisions.

AVC endorses a modified GI bill of rights for peacetime draftees and volunteers who have been on extended active duty. It is our belief that such men who enable our country to maintain peace and meet its commitments and responsibilities to our allies are entitled to basic readjustment benefits to enable them to return without distress to civilian life at the end of their service and become useful and productive members of their communities.

AVC is mindful of the concern of the Bradley Commission that the enactment of (too liberal postservice) benefits could serve as an inducement to men to leave the armed services and discourage enlistments for longer periods of time. We call for enactment of legislation entitled "Peacetime Ex-servicemen's Readjustment Benefits" modeled on the provisions of chapter 14 of title 38 of the United States Code (the Korean GI bill) with the major change that the ratio of educational credits earned for months in service at the rate of 1½ months' education to 1 of service. Thus, a peacetime ex-serviceman enrolled in a typical institution having a school year of 9 months could obtain 4 years of training and education by serving a minimum of 24 months. The benefits should not accrue to 6-month trainees or to anyone serving less than 12 months, unless separated at an earlier period for a service-connected disability. The provisions of such a law would apply retroactively to all servicemen on extended active service subsequent to January 31, 1955, and discharged under honorable conditions.

IV. GENERAL PENSIONS FOR NON-SERVICE-CONNECTED DISABILITIES

We believe that general pension benefits should be eliminated entirely for World War II and Korean veterans due to the greatly expanded social security, public assistance, and veterans' benefits programs, to which World War I veterans and their dependents were not entitled. We endorse the recommendations of the Bradley Commission, to continue the general pension program for World War I veterans as the reserve line of economic defense.

AVC believes that the Government should rely on the social security program to the greatest possible extent in providing income-maintenance benefits for veterans and nonveterans against some of the economic and medical hazards of life.

The VA non-service-connected pension program should be essentially a reserve line of economic defense for veterans and their dependents until such time as their minimum income requirements are met under OASI or through their own sources of income. Benefit and eligibility provisions of this program and OASI should be coordinated to eliminate overlapping and duplication of payments with pensions being reduced by

OASI benefits rather than the present reversed situation.

V. UNIFICATION OF THE ARMED FORCES

AVC believes that the Department of Defense has not sufficiently exercised its authorization to reduce, if not completely eradicate, the continuing public rivalry between the several branches of our Armed Forces.

AVC urges that the authority of the Department of Defense be strengthened and that the command structure be reorganized so as to eliminate duplication and waste, permit cross-utilization of ideas, inventions, procedures and research, and to reduce the opportunities for interservice disagreements.

VI. SEGREGATION IN THE ARMED FORCES

We maintain that no assignments of any personnel should be made to oversea posts on the basis of segregation by host nations.

VII. ARMED FORCES TRAINING

We owe the men of our armed services the best possible training to equip them for the rigors of combat under the most adverse conditions of weather, terrain, supply, and enemy action. While we support a training program which is rugged, disciplined, and challenging, we decry brutality, sadism, or lack of judgment in training.

VIII. MILITARY MANPOWER, RESERVE FORCES AND NATIONAL SECURITY

The world we live in, despite recent changes in the climate of international hostilities, with its emphasis on speed of operation and technical superiority, demands standing Armed Forces of sufficient size, training and equipment and organization to be immediately effective for defense and counterattack. No matter how effective the Reserve program of the future may be, it is apparent that the Regular Armed Forces must remain our first line of defense. They must be of sufficient size and mobility for deployment anywhere on the globe within a minimum of time so that we may continue to provide, when necessary, those forces needed for collective security under our international obligations in peripheral conflicts occurring in the strategic localities of the world. Reliance on strategic airpower and massive retaliation alone is not only insufficient in the long run, but may weaken our military security and increase international tensions.

AVC believes that any Reserve program, present and future, which does not completely revoke segregation in the Armed Forces is incompatible with democratic ideals and frustrates the moral fiber of our society. It is essential for the future security of this Nation that our manpower resources be used for the defense of our way of life without regard to regional prejudices. We urge therefore, that an antisegregation amendment be added to the Reserve law, and the Congress prohibit racial segregation in any federally recognized and/or federally aided National Guard units.

We believe that reservists and National Guardsmen should not suffer loss of job rights and privileges and employment opportunities because of their participation in Reserve or National Guard training.

AVC is opposed to any policy whereby the Armed Forces award discharges other than honorable to Reserve personnel based upon the political or other activities in which these individuals may participate following separation from active service under the draft law.

We believe that the conditions of discharge should be based solely upon the military activity and efficiency of the reservist.

IX. UNIFORM CODE OF MILITARY JUSTICE

The Supreme Court has invalidated the provision of the Uniform Code of Military Justice with regard to the trial after discharge of ex-servicemen for offenses committed in service. We believe that ex-servicemen should not escape punishment for serious offenses committed while in service, but should be tried before civilian courts; and we urge Congress to enact legislation covering these situations. The legislation should be limited to crimes of the same degree of seriousness as felonies at common law. It should also grant such ex-servicemen the same rights to a preliminary hearing before removal from the Federal district of apprehension as persons apprehended under other law.

The Supreme Court has also invalidated the provision of the Uniform Code of Military Justice which extends jurisdiction over civilians accompanying the Armed Forces. We believe such civilians should not be allowed to escape punishment entirely. We urge Congress to enact legislation which will provide a constitutional means of dealing with this problem.

South Carolina Industrial Growth Breaks Record

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a newsletter from the South Carolina State Development Board entitled "South Carolina Industrial Growth Breaks Record":

SOUTH CAROLINA INDUSTRIAL GROWTH BREAKS RECORD

The amount of industrial building commitments announced in South Carolina during the fiscal year just completed reached an alltime high of $245,410,000.

State Development Board Director Francis M. Hipp hailed the results of the 12-month period as evidence of the success which can be gained through cooperation and hard work.

Significantly, facilities for the manufacture of such diversified items as glass and related products, chemicals and metal products accounted for a major portion of the recordbreaking total.

James C. Self, chairman of the board's industrial committee, pointed out that expansion in South Carolina in the glass products category alone resulted in the awarding of contracts amounting to $50,149,000.

Confidence in the future was also expressed by the State's textile industry which poured $51,246,000 into new and expanded facilities, and by the paper industry's huge contribution to South Carolina's fiscal year total.

During the past 10 years the amount invested by industry in the State during calendar year periods has averaged about $117 million. For the 12-month period ending last December 31, the value of new and expanded industrial building was $207 million.

"Our first objective is the creation of jobs in South Carolina for South Carolinians," Gov. Ernest F. Hollings said. "The work of the board, Director Walter W. Harper, his staff and the many cooperating groups resulted in 12,129 new jobs during the past 12 months. This result is one of which we can all be proud."

Developments during the past 12 months included the announcement that plans called for the expansion of Chemstrand Corp.'s new nylon plant at Greenwood prior to its completion. Bowater Corp. also announced a huge expansion program less than a year after its original plant opened near Rock Hill.

Owens-Corning Fiberglas plant at Aiken went into production as did Florence's new electronics plant, Electro Motive Manufacturing Co. Draper Corp. announced a second plant for the State to be located between Marion and Mullins.

American Lava Corp., a subsidiary of Minnesota Mining & Manufacturing Co., and the Dunlop Tire & Rubber Co. were added to South Carolina's growing industrial list with plants at Laurens and Westminster respectively.

South Carolina's own industrial leaders such as Greenwood Mills and the Springs Cotton Mills began extensive expansion programs. "Such confidence shown by industry that has always made its home in South Carolina is truly gratifying," Mr. Harper said.

In addition, the 1960 general assembly provided a new tool for long-range economic development by approval of legislation creating the State Organization for Associated Research.

Officials of the new organization will work with advisers and faculties at the University of South Carolina and Clemson College expanding economic and technical-scientific research at University of South Carolina and scientific and agricultural research at Clemson. The general assembly also appropriated $250,000 to implement the program.

"With continued cooperation such as South Carolinians have shown during the past year," Mr. Harper said, "we look forward confidently to the future."

Our Espionage: We Must Improve It

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call attention today to an excellent article by Rear Adm. Ellis M. Zacharias, which recently appeared in the Chicago Sun-Tribune magazine section. I believe this article is self-explanatory and deserves the widest attention of all Americans.

The article follows:

OUR ESPIONAGE: WE MUST IMPROVE IT

(By Rear Adm. Ellis M. Zacharias)

When Genghis Khan's nomad horsemen galloped over Asia and Eastern Europe in the 13th century, there was a curious sameness about their approach to each city that lay in their path.

Trained spies always were sent ahead to search out the city's defense secrets and to spread confusion and fear among its citizens. The techniques of Genghis Khan and his Mongol tribesmen succeeded so well that the Russians, in whose veins runs a strain of Mongol blood, employ them still—with improvements.

But the espionage was not invented on the Mongolian steppes. It must date back to the dawn of time, to the first raid made by one tribe upon another. It is mentioned in the Bible. Nowadays it is practiced in one form or another by every nation of stature, because the warped mentality of man makes it necessary for a nation's security.

Yet no nation—at least until recently—would admit that it engaged in spying on an

international scale. The cardinal rule had been: Espionage is never admitted. Most Americans just didn't like the implications of espionage at all; they considered it somehow unsporting.

It is a pity that we cannot afford to indulge ourselves in such idealism. Actually, espionage is not a subject for the idealistic to delve into very deeply. Since it is illegal, its methods are often immoral and sometimes criminal. Not infrequently it involves bribery, blackmail, seduction, forgery, and sometimes murder.

Even the most successful agent has little hope of reward. The unsuccessful agent goes into oblivion. Sometimes he chooses suicide to preserve the secrets that torturers know only too well how to extract from him. The delicate art of bamboo-slivers-under-the-fingernails is many centuries old. It has been expanded and refined by Communist counterintelligence operatives.

Such things being true, we might as well face up to the fact that espionage is no field for amateurs. It is a skilled profession, requiring abilities far beyond those of most men. Today, with the advent of intercontinental missiles and the relative ineffectiveness of early warning systems, the profession has outgrown its old back-alley, cloak-and-dagger days and has assumed status as essential to our national survival.

That is why it is eminently fair for an American to ask: How are we doing in the field of espionage? Are changes needed in our methods? Can we do better?

To appreciate the problems involved, we must contemplate what the opposition is doing. Russia maintains the largest espionage operation in the world's history, with trawlers off our coast to watch our Polaris submarine tests, with submarines off our coast to record data on our missile firings at Cape Canaveral, Fla., with spy networks invading every country of the world.

In my first book, "Secret Missions," I pointed out that:

"The sudden arrival of enemy operatives in a peaceful country is a sign, only too often disregarded, that the country has been singled out as a military objective in the plans of aggressor nations. Spies precede invading armies and air fleets, and their appearance should reveal to the watchful observer the plans made behind closed doors by operations sections of busy general staffs."

Fortunately, we have been able to uncover some—perhaps most—of the Soviet espionage networks in the United States. But the Communist Party itself remains a well organized and hidden danger, much more so than it is presently fashionable to admit, already penetrating our economic life to help the Soviet Union in its drive to "bury us" by flooding the world markets with slave labor goods. Let us remember that Khrushchev has said: "We desire trade less for economic reasons and more for political reasons."

The Soviet leaders have maintained both open and secret organizations in the United States since the end of World War I. The Communist Party membership gave their allegiance to Soviet Russia, and openly conducted espionage activities against the interests of the United States. But the more effective professional work was carried on by American traitors, as a Communist underground working directly with Soviet agents in this country. When exposed, some of these traitors saved their necks by becoming informers, not because of love for the United States but for reasons never disclosed. We do know that some of their information planted with ambitious individuals created chaos in the U.S. Government at a time when Soviet Russia was making it greatest strides. The effects of that era are still with us.

It will be pleasing to the American people and to our allies to know that our intelligence estimates of the Soviet military posture have been based upon reliable data collected during a period of 4 years by overflights of the Soviet land area, while they were flying over our Alaska, Canada, Britain, Japan, Pakistan, Turkey, and other land areas of our allies. We had given orders not to shoot at these intruders, while at the same time our planes had been subjected to no fewer than 15 attacks by Russian MIG's between 1950 and 1959, often with the loss of both plane and crew.

The effectiveness of our Central Intelligence Agency in the world espionage field is difficult to judge, because its work must be secret. But doubts have been raised in the minds of the well informed. I feel there is grave need of some reform, especially in the field of organization.

In order to prevent surprises, and to make certain that we have security both external and internal, it is necessary to have a complete reorganization of the Central Intelligence Agency, and to give it complete control of all intelligence, counterintelligence, and security.

It must be headed by a civilian in order to prevent any fears of a military Gestapo.

However, to obtain the necessary cooperation and coordination which we do not have today, and to eliminate needless duplication, inefficiency, and amateurish handling, the Deputy Directors of the Central Intelligence Agency should be ex officio the Directors of Navy, Army, and Air Intelligence.

Under these conditions, those Government investigative agencies which desire to assist the CIA in investigations relating to counter-espionage and countersabotage will be free to do so as so many of them did effectively in the past when naval intelligence was carrying the full load.

There is a misapprehension regarding our internal security today. Actually, we do not have much, for to obtain the security that would be necessary in an emergency a complete military operation would be required. Because of the extensive personnel required, only the Army would be able to perform this mission. A detailed plan would be necessary to safeguard all the areas necessary to defense, the railway facilities, and especially the mountain tunnels to the west coast.

Arresting a few top Communists is not going to solve this problem. The next echelon is always ready to take over. In view of the complacency that has grown up lately about the internal Communist threat, it may be hard to eliminate disbelief that the Communists have not penetrated our labor unions, all phases of our economy, and other areas which will assist the Soviet leaders in their program to bury us.

Countermeasures on our part will have to be supplemented by a full-fledged campaign to inform the peoples of the world and our own people what is being done to them. By this, I mean an effective psychological warfare, political warfare, or propaganda campaign—by whichever name it is called. The most effective campaign is the constant repetition of the truth, together with appropriate comment.

Firm Leadership Best Policy

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. RIEHLMAN. Mr. Speaker, there has been some criticism of the approach taken by President Eisenhower in reporting to the American people on his trip to the Far East. Under leave to extend my remarks in the RECORD, I am including, in the form of an editorial from the Syracuse, N.Y., Post-Standard of June 29, 1960, a particularly effective answer to this criticism:

IKE OUTSMARTS CRITICS: FIRM LEADERSHIP BEST POLICY

When the President of the United States addresses the Nation, he is also addressing the world.

He speaks not only to his fellow Americans but to all the peoples of free nations who look to him for leadership and to the United States for protection in the cause of freedom.

He also speaks to as many men and women in Communist-dominated lands as may have access to factual news reports by press or radio.

When President Eisenhower makes a major report such as he delivered Monday evening, he must perforce weigh his entire approach carefully for its effect around the world, and he must consider every word and every point which might be distorted for propaganda purposes by Communist leaders.

Many are those who scan every sentence the President utters for a possible slip which might work to the advantage of the Soviet bloc.

Mr. Eisenhower Monday night chose to answer the bullying tactics of the Communists by taking a calm approach, by emphasizing the continued desire of the American people for world peace, by pledging complete cooperation by the United States with its friendly allies, and by stressing the positive gains of his trip to the far Pacific.

He made this essential point, and all good Americans should ponder it seriously:

"We in the United States must not fall into the error of blaming ourselves for what the Communists do; after all, Communists will act like Communists."

In other words, we should not blame ourselves for Khrushchev's frenzy at the summit, for the Soviet walkout at Geneva, for the Communists-inspired riots in Tokyo. Those who claim the United States lost face as a result of these demonstrations play directly into Soviet hands.

If the President had indulged himself the opportunity to answer his critics on American foreign policy and on personal diplomacy, his most delighted listeners would have been Premier Khrushchev and his gang at the Kremlin.

At last they would have had the American President on the defensive before his own Nation and before the world.

Mr. Eisenhower would have been lowered off the pedestal he has created for himself as the symbol and the hope of uncounted millions around the globe to the status of a political leader trying to justify himself before critics at home and enemies abroad.

His personal prestige would have been shattered, and the positive leadership of the United States against the evils of communism would have suffered a body blow.

That is why it is distressing to read yesterday's news analysis of the Eisenhower speech by such a perceptive writer as James Reston, of the New York Times, usually is.

"President Eisenhower has devised a simple procedure for dealing with his critics and his defeats," wrote Scotty Reston. "He simply ignores the critics and claims victories.

"The effect of this is serious in a democracy, for it confuses the public, infuriates the political opposition, and leaves mistakes unexplained and uncorrected," commented the Times' man.

We have great admiration for Mr. Reston as a reporter, but we submit that in this instance the President accomplished far more good than he could have done by airing the faultfinding of political opportunists and second-guessers.

Building Bridges of Understanding—by Dr. Ramon Villeda Morales, President of the Republic of Honduras, at the Tenth Annual Meeting of the Chamber Commerce of the Americas, Miami, Fla.

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FASCELL. Mr. Speaker, recently in Miami, Fla., we were privileged to hold the 10th annual meeting of the Chamber of Commerce of the Americas. This growing vigorous organization is making a most significant contribution to inter-American cooperation and understanding. Its interests are very broad and are not limited solely to economic considerations.

There was an exciting address by Costa Rica's ex-President Senor Otilio Ulate. Also present and participating was Senor Alfonso Rochac, Minister of Economy, El Salvador, who is also an Executive Director of the Inter-American Development Bank. There was presented a resolution by the President of El Salvador, Jose Maria Lemus, through his Minister of Economy.

The keynoter was the President of the Republic of Honduras, Dr. Ramon Villeda Morales, who brought most of his cabinet with him. There were also present Senor Rafael Durand, head of Puerto Rico's Transportation Authority, Dr. Enrique Paez del Rio of Bogotá, Colombia, and our own Government was represented by Mr. George Wythe, Director, American Republics Division Office Economic Affairs, U.S. Department of Commerce, and Mr. Peyton Kerr of the State Department.

There were many other important people who participated and who were delegates who came from all over Latin America. Chamber President Levy, of Jamaica, is to be congratulated for a most successful annual meeting. All who attended were tremendously impressed by the principal address of the President of the Republic of Honduras, Dr. Ramon Villeda Morales. His presence and attendance was a great honor to the people of Florida and the United States. He brushed aside formalities and protocol to deliver a hard-hitting, straight-from-the-shoulder speech which deserves the reading and the consideration of all my colleagues.

Mr. Speaker, I am honored to present the clear-cut analysis of the problems, suggestions, and inspiration of the President of the Republic of Honduras, Dr. Ramon Villeda Morales—"Building Bridges of Understanding":

Perhaps this is the first time that the president of a free republic, not traveling incognito, has visited a friendly country without being embroiled in official formalities, heeding exclusively the cordial invitation of a group of businessmen.

If so, I am delighted, because in the world of today each of us is rated according to the social function he performs, rather than in regard to his rank, or title; and being either an ordinary citizen or chief of state, if each is conscientious, means assuming equal responsibility, albeit on different levels, with regard to the national welfare and the welfare of the peoples of the world.

On the other hand, today's world demands of anyone who would understand current events, that he keep abreast of what is going on throughout the world, here or elsewhere, and that he visit the United States of America as a citizen or simply as president of a republic.

The Chamber of Commerce of the Americas, setting a precedent among the countries of this continent, has expressed the wish that I, the President of the Republic of Honduras, should attend the inauguration of this assembly, as guest of honor, and thereby, together, build a bridge of understanding among our countries.

This precedent initiates a tradition which, like everything we must do in this America of ours, breaks the established molds, and the prejudices of outmoded customs. Like Emerson, I believe that the America of the New World, beyond being a geographic concept, has always meant a new way of life and human relations.

If this is so, my presence at the Chamber of Commerce of the Americas should surprise no one, because here is exemplified the vital strength of American enterprise, which serves as a model for the Western World.

The pan-American idea is now many years old. Honduras, my little country located in the heart of America, is honored to have been the birthplace of one of the great thinkers who foresaw our high and common destiny. From 1822 onwards José Cecilio del Valle visualized the future of our hemisphere as a permanent sanctuary of justice, a mighty fortress of liberty to assure to all the enjoyment of individual dignity, economic well-being, and a just and lasting peace.

Perhaps no one understands the full greatness of the meaning of union as well as the citizens of the United States, for this country awoke to independent political life as a federation constructed on the pattern of a democratic republic, and then, as a consequence of its solid institutional structure, developed a sense of national unity and integrity which raised the United States to the stature of a world power; to paraphrase what once was said of Washington: first in peace, first in war, first in responsibility to assure the survival of democratic institutions in a free world.

We Central Americans also awoke to independent political life as a federation, but then, as a result of a feudal situation only partially destroyed, we broke up into five pieces which form the small republic of today. So we Central Americans are aware of the misfortune of separatism and we preach the gospel of our unity, and even more, the gospel of continental solidarity, because the union of the American republics is for us, so to speak, a promised land, since the Central American is a citizen of a divided nation, just as any citizen of any country in our hemisphere is only a fragment of our great American family.

And so, gentlemen, I visit you as the citizen, the President, the Central Americanist, and the pan Americanist; bearing in my spirit the full meaning of the words spoken by our great forebears; interpreting them in the light of our social, political, and economic reality; and I have come to build with you, my northern neighbors, bridges of understanding.

I know I am talking to businessmen. I know our Central American countries have been almost unknown. I know that the words "Central America" have meant, to some people, a handful of poor countries in the middle of the continent, entirely lacking in investment appeal. On the other hand, it is well known that our countries have poured forth their wealth of resources to those who have attempted the technical cultivation of bananas, or the reasonable exploitation of our mines.

Ignorance about a country is usually related to its inability to advertise its wealth. In this time of extravagant advertising it isn't enough for countries to possess open or hidden resources. We must also create a security which safeguards capital investments lest they be frightened away by our Spanish-American temperament.

The stories of our countries with their many internal revolutions, and the fact that governmental changes have at times been accompanied by a failure to fulfill contractual obligations of former regimes have justly awakened the apprehension of foreign investors. These unfortunate facts of our history have seldom been analyzed from the sociological point of view which, even though it might not justify them, at least would explain them to ourselves and to others. The truth is that the feudal regime inherited from the colonial period and the low level of agricultural and other productive activities which resulted from this regime caused an unequal distribution of wealth which, in itself, was enough to cause outbreaks of revolutions and counterrevolutions among us which prevented us from keeping abreast of the developing countries of the Western World.

Nevertheless, we are making progress now, and we are determined to construct effective bridges of understanding. The drive for political stability is characteristic of Latin America during the present century, its purpose being to attract capital for the reasonable exploitation of our natural resources. In our legislative chambers we have attempted to organize a system of progressive laws which will prevent a return to that period of insecurity for invested capital.

But political stability is often the result of the prevailing economic situation at a given moment. A sound, well-oriented economy in Spanish America will have to exist as an indispensable foundation for a solution of the politico-social ills which have plagued us since the beginnings of our life as independent nations. Our backwardness in many respects is the consequence solely of economic underdevelopment, but, in turn, this institutional and cultural stagnation acts as an impediment upon our efforts to develop our productive resources. So most of the Latin American Republics are victims of a vicious circle from which they can be rescued only by joint action of all the nations of the hemisphere, as called for by the Charter of the Organization of American States, which points to cooperation as the irreplaceable instrument for promoting the economic, social, and cultural development of America.

Our struggle for economic development must unfold along two parallel lines: First, as an internal or national activity; and second, as an international or inter-American movement. We are, at one and the same time, men of America and citizens of our respective nations; toward both continent and country we have clear and well-defined individual and collective obligations. I, therefore, believe that there is a constructive nationalism which is not incompatible with hemispheric integration. Nationalism, properly understood, is justice applied to the internal life of each country. Cooperative action among nations is justice in the field of international relations.

But there is an exaggerated nationalism against which stand the political leaders of America who believe, as I do, in democracy as the rule of Christian life among men in a free world. History counsels us to link our interests from Alaska to Tierra del Fuego. This is not a question of fostering continental isolationism through artificial means, but rather of giving life and reality

to a whole gamut of ideas and concepts which have already proved effective in lessening or removing the effects of the painful convulsions that have so often shaken humanity.

Our forefathers understood American solidarity in a fundamentally institutional sense, free of any idea of conquest or of submission by one country to the force of another. They looked upon the integration of the American nations in a supranational entity as a deliberate, conscious act of goodwill, and even accompanied their thought by the clarion call of burning idealism characteristic of the emotions of founders of nations. Said Bolivar: "For us, the fatherland is America." And José Cecilio de Valle exclaimed: "America from this day forth, shall be my one, exclusive business: America by day, when I write, America by night, when I think. The proper study of an American is America."

I am convinced that the American nations, without losing their universal aspirations, must bind themselves in a cultural and economic bloc, in which democracy may be assured as the permanent norm of life, and the joint strength of the 21 Republics of the continent may guarantee the preservations of free institutions and the irrepressible advance of the men of the New World to heights of dignity, well-being, wisdom compatible with the possibilities and aspirations of mankind.

We are making an experiment in Central America, in a regional area. We are integrating the Isthmus economically. We have already achieved concrete steps between Honduras, El Salvador, and Guatemala, and the day is not far distant when Costa Risa, Nicaragua, and Panama will enter this economic alliance which will set in motion vast natural resources and huge reserves of capital.

Central America includes a half a million square kilometers, with a population estimated at 12 million. This means that together we are larger territorially than Sweden, Germany, Norway, Italy, England, Greece, Portugal, Denmark, Switzerland, Holland, or Belgium, and that the Central American population is greater than any of these European countries with only three exceptions.

The Central American rate of population growth is one of the highest of the continent. If our demographic increase keeps up at the present rate, under normal conditions, by 1980 we shall have 20 million inhabitants in the Central American Isthmus, settled on a fertile land where a long list of natural resources are practically inexhaustible, if properly exploited, where immense potential wealth is accumulating awaiting capital to exploit it, where the variety of climates favors agricultural diversification, where there are first-class natural harbors and bays on both oceans, and a highway network, anchored on the pan-American highway, whose rapid improvement guarantees widespread circulation of people and goods.

Our problem at the moment is whether we shall continue living in an economically backward Central America, or whether, on the contrary, we shall achieve better standards of living for our inhabitants by every means within our reach. The statesmen of Central America see clearly that a population increase like ours demands a larger economic framework. I am one of the Central American Presidents who has been most interested in breaking down the barrier of isolationism and stressing the benefits of economic cooperation. And it is against this background that I have described, that we combat the fallacy that foreign capital, public or private, when applied to the development of industry, agriculture and commerce, must, of necessity, constitute imperialist penetration.

It is interesting to talk of these things with businessmen because our countries are a great American business opportunity, now that we have undertaken a systematic struggle against inferior development, or economic underdevelopment, as it is often called. Our peoples have been struggling for a better life ever since their beginnings as free countries. They would like to be removed from the position they now occupy in the geopolitics of hunger, and only if they are can they assume the civil tranquillity of a national life dedicated to progress.

The Hondurans, in particular, are situated at this crossroads. Our geography and the state of our resources are such that capital is more necessary for us, but we have less of it. Attracting foreign capital and protecting its investments is for us a necessity of vital importance. The more so as we are engaged in diversifying our production as much as possible in order to escape at last from the straitjacket of a one-crop economy.

The present Government took office with a fundamental constitutional reform in tune with the economic tendencies generally observed in less-developed countries. This new constitution has been supported by secondary laws to stimulate and protect the establishment and operation of agricultural and industrial enterprises. This, the first legislative reform to be put into effect in our country, depends for its fulfillment entirely upon honest government, for our basic interest lies in fostering with all possible measures and facilities the raising of our standard of living. Actually, we make no difference between national private capital and foreign private capital, so far as privileges or responsibilities go, because we believe that there is wealth enough in our territory to establish a republic where men of good will of the free world may wish to come and make their living.

Honduras and the United States have had close relations for a long time, and everyone knows that this country in the North is the principal market for our exports and our first source of supplies of all kinds. We sincerely believe that these already mutually convenient relations can improve and multiply if we learn to know one another better, to speak to one another with frankness as we are trying to do today.

Though the world in our time is cleft in two by two opposite systems of life which together throw a clear light and shadow upon its history, it is no less true that the second half of the 20th century is marked by the efforts of the underdeveloped countries to achive the standard of living today made possible by industry and techniques placed at the service of man—the whole man, with his inalienable right to be respected by his fellowmen and by the state, respected in his political and religious belief and in his freedom to obtain for himself the highest standard of living, material, cultural, and spiritual.

I salute you cordially with the motto which should be that of the entire Western Hemisphere: "Everything units us, nothing separates us."

God will light our way. Miami with its feverish spirit of progress and the natural beauty that surrounds us in this marvelous city is a fitting frame for our hopes of improvement. There is no time to lose. We are living the solemn and propitious hour, the more solemn because it is the most propitious: Let us build our bridges of understanding now.

RAYMON VILLEDA MORALES,
President of the Republic of Honduras.

Is It Too Late To Win Against Communism?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a deep and penetrating address, both philosophical and practical, about the conditions that exist in the world today, made by Dr. Charles Malik, former president of the United Nations General Assembly at Williamsburg, Va., on June 11, 1960, appearing in the U.S. News & World Report of July 4, 1960. The entire life of Dr. Malik has shown a great dedication to the progress of mankind. There is no man who understands the evil minds of the Communists and particularly those in the Kremlin than Dr. Malik. The address he rendered at Williamsburg should be read as widely as possible. In his address, he not only effectively exposes the inherent evilness of international communism and its destructive intent, but he presents an affirmative program to meet, combat, and ultimately defeat the evil intents and efforts of international communism. It is a pleasure for me to insert in my remarks this address of Dr. Malik which I consider to be one of the greatest in connection with the present world tension that I have ever read.

IS IT TOO LATE TO WIN AGAINST COMMUNISM?

Communism started from zero 43 years ago, and today it rigidly controls one-third of mankind and has penetrated and softened up in varying degrees the remaining two-thirds. Was this phenomenal development inevitable?

The victory of communism in the late forties in China means that the largest compacity homogeneous mas of humanity, numbering some 600 million people, are now sworn enemies of everything free and western. Was this development inevitable?

The Korean was, despite all its heroic exertions, ended in a draw. Was this outcome inevitable?

In southeast Asia there has occurred during the last 10 years an advance of communism and a retreat of freedom. Was this advance and retreat inevitable?

Whereas international communism was effectively absent from the Middle East 10 or 15 years ago, and in the consideration of Middle Eastern problems communism was treated as though it did not exist, international communism enters decisively today into the determination of every Middle Eastern problem. Was this development inevitable?

Whereas 10 or 15 years ago communism was effectively absent from Latin America, today it is visibly present. Was this development inevitable?

The Communist Party, receiving orders directly from Moscow, is certainly more active and influential today in Asia and Africa than 10 years ago, and several responsible United States officials said recently that the Communists have markedly intensified their

activity in the United States. Was this penetration inevitable?

Backing international communism as its embodiment and vehicle is the most superbly organized international political party in history, the Communist Party, with the most advanced techniques of intellectual, social, economic, and political penetration and subversion ever devised. Was the impotence of the West in developing any comparable counterforce inevitable?

Backing international communism materially is the second most industrially advanced state in the world, the Soviet Union, which might at the present rate of development surpass the United States in two decades. Was this discrepancy in the rate of growth, and in the rates of change of the rates of growth between East and West inevitable?

This supporting industrial base appears to command atomic and nuclear weapons in abundance, whereas 10 or 15 years ago the United States had a monopoly of these weapons. Was this decline in western relative strength inevitable?

We are today more than 2 years and 8 months since Sputnik I and, while the West has made enormous advances in rocketry, it is not clear that, in this revolutionary technological field, it has caught up with the Soviet so far as thrust power is concerned. Is this persistent lag inevitable?

In the matter of economic international competition, there is no comparison between the economic status of the Communist world today and its status 10 years ago. Was this decline in Western relative economic strength inevitable?

The visible struggle appears to occur all on this side of the Iron and Bamboo Curtains: in Europe, in the Middle East, in Southeast Asia, in the Far East, in Latin America; and when people expect a crisis to break out tomorrow, they do not expect it in Albania or Rumania or Russia or China, but in the home of freedom. Freedom, then, is on the defensive, and not communism. Is it fated that the West should be always on the defensive, always reacting?

The West today appears gladly to welcome neutralism in areas in which it would not have countenanced this phenomenon a decade ago. Was this constant retreat of Western influence inevitable?

In the nascent nationalism of Asia and Africa, which is otherwise a natural and good thing, there is an admixture in varying degrees of antiwesternism, if not procommunism that leads to antiwesternism. Was this spread of antiwesternism as a concomitant of the growth of nationalism inevitable?

In the very nations that have attained the dignity of political freedom and independence, other dimensions of freedom have been severely curtailed; namely, personal freedom, intellectual freedom, social freedom, spiritual freedom. Was this contraction of the domain of freedom inevitable?

Communist literature has during this decade inundated Asia, Africa, and Latin America in relation to non-Communist literature. Was this advance in the relative abundance of Communist literature inevitable?

Communism has been more persistent and effective in presenting to the Asian and African mind a well-thought-out interpretation of existence—the Marxist-Leninist ideology—than any outlook that has been forthcoming from the West. Was this timidity in the articulation of the ideology of freedom inevitable?

The apparent unity of purpose and action among the international Communists impresses the Asian and African mind, whereas the squambbles among the members of the Western family produce an air of internal division and weakness. Were these squabbles and divisions inevitable?

The simple fact that the free world has not succeeded in 40 years in pushing back the tide of communism by 1 inch from where it really got political control leaves the strong impression that we are here dealing with an irresistible and irreversible thrust which will inevitably inherit and transform in its own image all the kingdoms and cultures of the earth. Is this creeping tide of communism completely irreversible?

IN THE WEST: SOFTNESS, LAXITY

Perhaps the most distressing fact is the self-satisfaction and self-congratulation that prevails in the West; the softness, the laxity, the lack of determination and decisiveness, the general decadence, the uncritical readiness to settle for peaceful coexistence. Are we then face to face with some ineluctable judgement of fate or God?

In terms of the ultimate world struggle, how are we to assess the net performance of the immediate past from the comparison of the two sides of the balance sheet which I have just drawn up?

I can draw the provisional conclusion that, while things could have been much worse, in my opinion they could have decidedly been much better. International communism is today on an overall basis relatively stronger than 10 or 15 years ago, and the free world is relatively weaker; there is a marked overall advance by the one and a corresponding overall retreat by the other.

In history it is impossible at any moment to work out a neat, final balance sheet, for at no moment in history does history come to an end. It all depends then on the future. The future could redeem the past or it could confirm it. But it will redeem nothing unless the question of the inevitability or otherwise of the developments of the immediate past is first squarely and honestly faced. For either you believe that these things were inevitable or you believe that they could have been helped.

If you believe that they were inevitable; namely, that the outcome of the struggle in China, in Korea, in Indochina; that the Communist penetration of Asia, Africa, the Middle East, and Latin America; that the absence of any effective counteracting force to the Communist Party; that the relative decline in Western influence and Western economic and military strength, etc.—if you believe that all these developments of the fifties of the 20th century could not have been helped, then you are already a Marxist.

For Marx, Lenin, and Khrushchev hold firmly—and Khrushchev repeats it every day—that the iron laws of history are precisely such that, whatever happens, communism will come out on top. Therefore to them—and to you, if you believe in the inevitability of these developments, namely, if you refuse to assume moral responsibility for them—the Communist advance and the Western retreat did not come about by accident: The universe was such, history was such, the nature of human society and its development was such, the economic, social, and political situation in Asia, Africa, Europe, and America was such, that the advance and the retreat had to take place.

I warn you therefore against declining to assume full moral historical responsibility for what happened during the last two decades, for, if you do so, you are already a Marxist, and Marxian communism will have already won in your soul.

The only hope, therefore, is to believe, on a basis of truth and not of darkness or sentiment or dogmatism, that nothing of what transpired was inevitable, and that everything could have been prevented or reversed. Only on the basis of radical moral responsibility can you overcome the fatalism of the cosmologists and the determinism of the dialectical materialists.

The future will never redeem the past, and we will only pass from one fiasco to another, from one pathetic drift to another, unless in contemplating the past we can put our finger with certainty on such and such an act and such and such a decision and such and such a person, and honestly say that this act or decision or person could have been different and therewith the course of events would have taken a radically different turn.

If only people rose to the occasion, if only they were not overwhelmed by their softness and apathy, if only they overcame their greed, if only they were morally strong, if only they were not selfish and narrow, if only they were not petty and spiteful and stupid, if only they were big, if only they knew what was at stake, if only they were not hypocritical, if only they trampled under foot the wide and easy way.

I know of more than one instance in which precisely and only because people lacked some of these moral perfections we are where we are today.

I shall not go into any detailed moral-historical-political evaluation of the past. Taking upon ourselves the whole moral guilt of the past, believing that the present would have been entirely different if only people measured up to the historic requirements of the moment, and therefore determining that the future which will be the responsibility of this generation shall redeem the past, let us now quietly inquire into what must be done in the immediate future to reverse the trend of the immediate past.

HOW THE WEST CAN SAVE ITSELF

Four conditions are absolutely sine qua non (indispensable): unity among the Western Allies, deeper understanding and statesmanlike assistance toward the peoples of Asia and Africa, winning the technological competition, especially in the matter of armaments, and winning the economic competition in productivity.

If the Atlantic World breaks up, whether from internal friction or external pressure, there will be complete disarray in the free world and little will be left to oppose effectively the onward march of communism anywhere.

If the Asians and Africans are not understood on the deepest possible plane and if the Communists prove that they are more friendly and helpful to them, then Asia and Africa will gradually fall to their wiles.

If the Communists do better in the technological revolution, especially with respect to weapons, then all will be lost. If the West does not outproduce them, both quantitatively and qualitatively, then the rest of the world will be socked into their system.

On the subject of Western unity, the question is whether the Western nations can morally rise above their narrow nationalisms into a realization that it is their whole civilization that is once more today at stake. I believe they can. Nothing is half as important today as that the spiritual unity of Europe, American, and the Mediterranean world be understood and affirmed.

Putting aside the question of vision, will, softness of living, and unity of effort among the diverse factors involved, there is no doubt whatsoever that, by any standards of measurement, the material and human resources of North and South America, of Western Europe, of Japan, of Australasia, and of as much of Africa—and there is no reason why all of Africa should not be included—and Asia as may be persuaded to cooperate, can be so marshaled and coordinated as to outdo the Communist domain, in any field of human endeavor, by a ratio of at least five to one.

It is all, therefore, a question of vision, will, overcoming the softness of life, and

inducing the necessary unified efforts. The free world has nobody and nothing to blame but itself if it cannot so order its house as to beat the Communists decisively in every realm.

STAND FIRM AGAINST RED EXPANSION

The West should stand firm at all costs against any further expansion of communism, including above all the test case of Berlin. In a possible showdown, the obvious strategic handicaps notwithstanding, there should be no question in anybody's mind that the West would not accept a weakening of its position in Berlin. Some Western commenators have darkly hinted that the West would not fight over Berlin.

It is fair then to ask, Over what would the West fight?

But merely holding the line is patently not enough. This was the error of the doctrine of containment. It is a passive, defensive, unchallenging policy—and such a policy, except as a necessary first step, is doomed to failure: first, because this is a dynamic universe; second, because you are dealing with the most aggressive enemy who will always swirl around and underneath and above all your containing devices; third because a merely defensive or containing attitude means that you are so fat and satisfied yourself that all you wish to achieve is to get away with your own skin—and thus you have no vision, no concern for the rest of the world, and he who has no concern for others will sooner or later find that others, including his erstwhile friends, have no concern for him—and, fourth, because you cannot be true to your own freedom if you do not wish and work for freedom for others.

It is interesting to note the sort of qualifications that responsible leaders sometimes use for peace.

The Communist spokesmen employ peace without qualification, by which they mean that they should be allowed to carry out their internatoinal proletarian revolution in peace. But the spokesmen of the West speak of peace with justice and freedom. This is a correct qualification from the Western point of view: Peace without justice and freedom is no peace. But what interests me most is which of the two qualifications do they drop when they wish to use only one?

You will find they usually drop freedom and leave justice. This is to me wrong. It could betray an unconscious readiness to sacrifice freedoom for what is sentimentally called justice. Both are certainly necessary, but freedom is more fundamental. Freedom creates justice, but not conversely; for justice could be something mechanical without the ultimate freedom of the spirit which demands and creates and recognizes and enforces justice.

The West can only be true to itself if it says, "I am prepared to settle for peace with freedom and justice"; and if it wants to use only one of the two, "I am prepared to settle for peace with freedom."

It follows that an active policy of liberation is of the essence of any sound Western program for the coming years.

When the late John Foster Dulles spoke of liberation shortly after he became Secretary of State, was there a Communist or fellow-traveling or Olympian or softheaded or pacifist or appeasing voice in the world that did not attack him? This synchronization of all these voices against anyone who would dare stand up and actively challenge communism is one of the strange phenomena of this age. It measures the success of international communism in intimidating and softening up the free world.

But only a believing, active, sustained, and bold-looking forward to a free Eastern Europe, a free Russia, and a free China is worthy of the magnitude of the gigantic world struggle. A radical distinction must be made between the great peoples of these countries and their Communist governments. Policies should be devised and pursued in conformity with this distinction.

KEEP FLAME OF FREEDOM BURNING

The flame of freedom must be kept burning in the soul of the oppressed. The hope of liberation must never be allowed to fade away from their hearts. As free peoples, they have an honorable and equal place in the company of the free. Their energies will be given the freest scope. Their spiritual and cultural contributions to the whole world are awaited and welcomed.

With vision and leadership, the West should be able to promise them greater material benefits than they have been able to achieve under communism, benefits which they themselves would acquire by their own free exertions. But they should be promised much more. They should be assured of the freedom to criticize, the freedom to think, the freedom to create, the freedom to live, the freedom to work, the freedom to choose and turn out their own governments, the freedom to lead on the basis of merit in a world freed of the poison of mistrust, subversion, and intrigue.

The Russians should be loved for their great spiritual heroes, such as Pushkin and Dostoevski, and should be constantly reminded of them. The wonderful spiritual genius of Russia should be separated from the alien Marxism with which the Russians are now afflicted.

The promise of freedom with equal material benefits to the oppressed should be far more potent than the allurement of a material revolution coupled with enslavement to the free.

The Communists never tire of assuring the rest of the world that peaceful coexistence only means that they will realize their unalterable aim of communizing the world without war, and that, where they do not succeed in this, they will keep in mind the possibility of nonpeaceful means.

They are therefore absolutely determined to dominate the world with or without war. This was explicitly stated by the international Communist congress. They therefore speak of the "doomed classes" and of "burying" you and me.

We should not be misled by the terms they use, such as "capitalism," "imperialism," "American imperialism," "Anglo-Saxon or Anglo-American imperialism," "bourgeois society," etc. These are only revolutionary slogans employed by them to excite and enlist people in their international proletarian revolution.

What they are saying behind all this jargon is that the international Communist movement wants to overthrow every existing government, regime, system, outlook, religion, and philosophy and bring the whole world—all human thought, aspiration, action, and organization—under its absolute control. This is their declared, unchanged, and unchanging objective.

I am yet to hear one Western leader who, assured to his face that he is doomed and will be buried, can muster enough courage and conviction, if not to use the vulgar phrase "bury" with respect to communism itself, at least to use some such civilized expression as that the days of communism are numbered and that communism will one day be completely forgotten.

When Mr. Khrushchev assures Western leaders that their children or at most their grandchildren will all be Communist, I am yet to hear one Western leader who assures Mr. Khrushchev with the same gusto that his children or at least his grandchildren will live to regret and be thoroughly ashamed of the fact that their fathers are grandfathers were ever Communists.

And whereas international communism believes and acts on the belief that the days of everything non-Communist are numbered, my deepest fear is that Western leadership believes no such thing with respect to communism. My fear is that the softening-up process has reached such an advanced state that all now believe that communism is here to stay and that therefore the utmost they can do is to manage somehow to coexist with it.

The deepest crisis of the West is the crisis of faith in its own values. Whereas communism believes that non-Communist values must be eliminated from the face of the earth, and acts on this belief, the West no longer believes that Communist values themselves are doomed to utter destruction and oblivion, and therefore no longer acts on this belief.

I am yet to meet or know of one important Western leader who entertains a dynamic vision for the Communist realm which includes the certainty that the children of present-day Communists will have completely repudiated communism and will have adopted the fundamental values of freedom.

LET WEST FACE DECAY IN ITS OWN SOUL

Let the West face up to this advanced state of decay in its own soul.

But what is pre-eminently at stake in Mediterranean-Western civilization today is its human and universal elements.

It is man who is denied, it is the affirmation that there is nothing that binds and cements all men into one family that is the prime danger, it is the fragmentation of humanity into endless exclusiisms, whether national or cultural or racial or economic, that poses the deepest challenge.

Western civilization is doomed until, jolted out of its complacency, self-satisfaction and sense of apartness, it rediscovers and reaffirms what is genuinely human and universal in its own soul. This means not only economic and technical sharing with Asia and Africa, but intellectual, moral, and spiritual sharing.

What is supremely good must be good for all. Those who keep on repeating as though they discovered a transcendental wisdom, that their ideas, their way of life, their civilization are "not for export," but only their industrial products, do not know that they are thereby digging the grave of their civilization and the grave of their way of life.

Those who come to Asia and Africa and tell them, "You stay where and what you are and we stay where and what we are; we have nothing to give save our goods and gadgets," little know that the day will come, and perhaps is already here, when Asia and Africa will turn upon them and spit in their faces. Man can live without goods and gadgets but he cannot live without something human and universal that joins him to his fellow men.

A civilization in which the human and universal has atrophied can relate itself to others only through force; and force is not an enduring mode of relation, and it can always be broken by force.

I am not speaking of diplomacy and propaganda; I am thinking of a whole philosophy of history. I am saying that a civilization is doomed if it is not creatively conscious of something universal and human it can and must give; and I am saying that Western civilization need not be doomed because no civilization conceived and developed the human and universal more than it did.

Most certainly it is not a question of "imposing" anything on anybody. What is genuinely human and universal is never imposed; it is awaited, welcomed and embraced.

What is nonuniversal in your civilization you keep to yourselves: Nobody wants it. Not until the businessman from Manchester or Detroit and the peasant from Iran or India can come together on a much deeper basis than the exchange of goods and money can the West really begin to have a chance in the ferocious competition going on at present for the heart and soul of Asia and Africa.

Asia and Africa do not want to deal only with businessmen. They crave for human and spiritual fellowship. There is no exchange of soul, there is no sharing of life and ideas, there is no community of spirit, there is no fellowship of man with man. This is Asia's and Africa's deepest challenge of the West: What have you to give me, not of your trinkets, but of your mind; not of the external husks of your life, but of the substance and marrow of your soul?

Again, I am not speaking of the requirements of any immediate emergency: I am thinking of a whole philosophy of history.

COMMUNISTS BELIEVE IN SOMETHING

The Communists bring in a message. It affects the whole of human life. It provides a total interpretation. They are not afraid to be revolutionary; to say, "This is good and that is bad." They are not afraid to shock and challenge the received customs and habits and ideals. They believe in something.

The West does not want to be revolutionary. It is afraid of being revolutionary. It does not want to shock and challenge. It is civilized; it is afraid lest it offend. Its trouble, therefore, may lie precisely in the fact that the content of its belief is very thin.

For that which you really believe to be true and human and universal you will want to share with others, you cannot keep under a bushel. The question is whether there is a profound part of your being that you honestly feel you must share with others. The question is whether you honestly feel that you are not complete or happy so long as others are humanly incomplete; that you are not self-sufficient so long as others are miserable or subhuman, a prey to every superstition and every dark fear.

The self-sufficiency of the Anglo-Saxon world, its age-old protectedness by seas and oceans, is its greatest present spiritual trial. It has not needed the rest of humanity. But the world has suddenly become physically one, and minds and ideas are much more critically and instanteously and perpetually interacting with one another.

Only he, therefore, who feels with humanity, who is at one with all conditions of men, who is insufficient and incomplete without them, who is not protected and separated from them, can help them and lead them and love them and be loved by them.

The incompleteness of the Communist until he completes himself in others is what gives him the dynamism, the vision, the appeal in the eyes of Asia or Africa.

WHAT THE FREE WORLD HAS TO OFFER

If there were no universal and human elements in Western civilization the thing would be hopeless. But it happens that the deposit of humanity and universality in this civilization is the richest in the world.

The civilization at whose heart pulsate Aristotle and Augustine and Aquinas and Dante and Newton and Shakespeare and Pascal and Kant and Lincoln, the civilization which has been blessed and transformed by Christ, needs only a mighty hand to shake it out of its slumber. And, once shaken, once really awakened to the world responsibilities which it and it alone can shoulder, there is nothing it cannot dare and do.

The Americans forsook the Old World and their one desire was to forget all about it; the Russians stayed in the Old World and never ceased to interact with it, east and west and north and south.

In this simple difference in fundamental existential orientation, the whole secret of the present and the future may be hid. Can the Americans quickly recover the intimacy of relationship with the Old World which the Russians never lost?

Negotiations and contacts must never be broken. The United Nations must never be abandoned or weakened. Cultural exchanges must be deepened and enlarged. The Russian people must be brought into intimate spiritual community with the West.

Nationalism is not enough, and the new nations must be afforded the opportunity of belonging to larger worlds with wider horizons.

The universal declaration of human rights, which is one of the greatest documents of this age and which owes so much to the Virginia Bill of Rights, must be vigorously held up as a standard of achievement for all nations and all peoples. The West must know its ultimate values and believe in them. The field of struggle must be transported to the intellectual and spiritual plane. The prevalent softness and complacency must be overcome.

The area of decision must not be left to the initiative of the Communists. The West must itself choose it. And, so long as the head of international communism in Moscow remains unchanged, there is no hope.

Can the future redeem the past? I believe it can.

Will the future redeem the past? That depends on four things; on depth, on wisdom, on daring, and on leadership. I believe, without high leadership, daring to act in wisdom and depth, the future will not learn from the past.

These are things for which we should yearn and work. But in our own effort we may not achieve them. It is only as God wills that depth, wisdom, daring, and leadership be granted the free world at this crucial hour in history that the future will redeem the past.

Payment of Relocation Allowances by Federal Aviation Agency

SPEECH

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2467) to amend the act of September 7, 1950, to authorize the Secretary of Commerce to reimburse owners and tenants of lands acquired for Chantilly Airport for their moving expenses.

(Mr. GROSS asked and was given permission to revise and extend his remarks.)

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do not know that there is anything I can contribute to the discussion on this bill that has not already been said. As far as I am concerned, this is a bad bill and I am opposed to it. I would be constrained to offer a motion to strike the enacting clause, but I think the thing to do is to let the proponents down as easily as possible, but nevertheless let them down. If we are going to enact this type of legislation it should be made government-wide. There are some farmers out in Iowa that are being dislocated by virtue of the road-building program, and I am not going to be a party to passing a bill here today that does not take them into consideration.

Mr. WILLIAMS. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I will be happy to yield.

Mr. WILLIAMS. Would the gentleman also be in favor of repealing the act granting authority to the Secretary of the Interior and the Department of Defense to do the very same thing?

Mr. GROSS. I do not know anything about that, but I would prefer repeal to enactment of this bill.

Mr. WILLIAMS. Until general legislation is passed?

Mr. GROSS. I am dealing with the bill I have before me now. But, I am not in favor of singling out any group for preferential treatment. You know, we are doing a pretty good job of building bridges for Virginia and Maryland. It seems to me they are doing pretty well as it is. I am opposed to this legislation.

What a Doctor Says About the Problems of the Aged

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ANFUSO. Mr. Speaker, a very interesting talk by a noted doctor on the problems of the aged has come to my attention. It was delivered recently by Dr. William D. Miller, president of the Osteopathic Society of the City of New York, over radio station WMGM on the program "Listen Here, New York."

In the course of his talk, Dr. Miller announced the launching of a very interesting study in New York City on the problems of our aged citizens, particularly the emotional, economic, and social factors. In the light of current interest in the aged and their needs for medical care, I commend this talk to my colleagues:

Good evening. Medical care for the aged has become a most vocal cry these past few months. Few would deny that the great mass of these people do not have the savings and resources to adequately pay hospitals, nursing homes, drugs, and professional care. The annual income of persons over the age of 65 in the United States is $6 to $10 billion below what it should be for this segment of our population. All agree it is essential that complete medical care be available to our older people. It is estimated now that there are approximately 15,500,000 persons in the United States at or beyond the age of 65. By 1970 this will have grown by more than 5 million. A sizable group by anyone's standards. How and why has this occurred? Our population has grown tremendously in the last two decades, despite a devastating war, because of the advances made in medicine and the improvement in our general economic stature. A scant 50 years ago man's lifespan was measured in four or five decades, while today it has been extended to seven and beyond.

All of this has produced certain problems. Fortunately in our land of abundance, the basic needs have been met through Federal, State, municipal, and private sources, but we still have much ground to cover. The question of care to our rapidly expanding

older population is not one that can be solved through funds for medical care alone. We recognize that this problem exists, but we feel the question is even more basic.

No study of geriatrics, which is that branch of medicine dealing with the diseases of old age, will admit we have reached a utopia. However, now that this question has been brought to the fore, let us examine it in some detail.

The issue of rising medical costs has been one that has revealed many conflicting results. The average family spent, last year, $324 for medical care, while spending $304 for tobacco and alcohol. In terms of value received, I don't believe anyone would question which has produced the better bargain. Our rapidly rising population is proof that medical care is now at its highest level. As more knowledge is obtained on the ills that befall man, our population will continue to grow.

We in the osteopathic profession have long been cognizant of the problems of aging. The osteopathic physician of today is trained in all branches of medicine and surgery. Some doctors of osteopathy upon graduation from professional school chose to enter a specialty practice such as surgery, obstetrics, pediatrics, or internal medicine. The majority of doctors of osteopathy are general physicians; family doctors who know their patients well. They are prepared to employ all acceptable agents in the prevention, diagnosis, and treatment of disease. In addition, osteopathy as a school of medicine emphasizes the importance of the musculoskeletal system. It is this musculo-skeletal system (under the direction of the nervous system) through which man, like other mammals, expresses his life. By this approach the osteopathic physician has and will continue to offer his contribution in the way of research and study, of man's ills. Toward this end, the Osteopathic Society of this city of New York has announced the initiation of a study on the problems of aging. This is to be an all-inclusive study, not only concerned with the organic ills that befall man from the sixth decade and beyond, but also how our surroundings, those under which we have some control and those we cannot contain, will influence the aging process and contribute toward disease. Specifically we refer to the emotional, economic, and social factors. We know that in many business organizations it is standard practice to retire an employee once he has reached the age of 65. How this can affect the emotional and physical health of the individual, will be studied.

Basically we are a youth-oriented society. Emphasis has always been placed on keeping young and fit. Yet very few have spoken of keeping fit in old age. The pursuits of youth have been advocated over the vocations of the aged. We have lacked full utilization of the full potentials of our older people because we have chosen to concentrate in developing the full potentials of our youth.

In following this philosophy what has happened to one-sixth of our population? We hope to be able to find the answers in our study. A recent survey conducted at Cornell University has shown that those employees voluntarily staying on the job after the age of 65, had a performance record that was astounding, 99 percent had given a satisfactory service. This is an amazing record—one that deserves and needs further study. In industry, what the older worker lacks in speed he may make up in efficiency. Chronologic age is no longer as important as the capacity of the individuals to handle work. In addition to the question of the employability of the older person there is the question on how he fits into the life of the community. He should, with his experience, play an important role in this sphere. Too often, however, the older person is either rejected or lacks the initiative to join with others in the community. This we plan to study and try to ascertain if these community and personal problems within the home, itself, are factors in predisposing to disease.

Mention must also be made of emotional, psychiatric and neurological problems as they affect the oldsters' outlook. Thus, it can be seen, that the Osteopathic Society is undertaking a survey of fairly comprehensive means. We do this as a service to the citizens of the city of New York.

Through the facilities of the Osteopathic Hospital and Clinic of New York we shall be able to conduct this study. Since 1914 this institution has been rendering care to the indigent sick of our community. It has been done without the aid of municipal, State or Federal funds, but with the contributions generously given by friends and patients of osteopathy.

The problems presented by the aged are vast and evergrowing. We can only expect that our older population, will within several decades, make up almost 25 percent of our population. In truth then, as is said in the Book of Genesis "and the Lord said, my spirit shall not always strive with man, for that he also is flesh, yet his days shall be 120 years."

Thank you and good night.

Interstate Road Program Endangered—Opponents Wage Propaganda War To Discredit It

---

SPEECH

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1960

Mr. SCHERER. Mr. Speaker, the highway program has been under attack from many quarters in the past few months.

Since writers, newspapers, and magazines generally feel that stories of waste, inefficiency and corruption make better copy than do success and accomplishments, we have had from all over the country a series of intemperate articles dealing with mistakes and shortcomings of the highway program. Little if anything has been said about its fine and tremendous accomplishments in the face of many almost insurmountable roadblocks.

As a result, many people, including Members of Congress, are getting the impression that this entire, vitally needed road program is riddled with inefficiency and fraud.

As I have said many times, when you have a program of this magnitude, the biggest public works project in the history of the world, one that is 35 times as big as the St. Lawrence Seaway, the Panama Canal and the Grand Coulee Dam combined—a program involving the expenditure of billions of dollars and millions of people both in and out of government at all levels—you are bound to attract the chiselers and the grafters.

If this highway program is to survive and public confidence in it be maintained, we must keep its shortcomings in proper perspective with the magnitude of the undertaking and its thousands of fine accomplishments.

Mr. Speaker, I am pleased to report that the Cincinnati Enquirer and its outstanding publisher, Mr. Roger Ferger, and Mr. Phillip Swatek, its capable, informed and discerning Washington correspondent, have rendered a great public service by devoting a full page of the July 3 edition to the fairest and most objective analysis of the current highway problems and controversies.

Every Member of the Congress and all those interested in the continuance and successful completion of this vitally needed program should read and study this article and have the benefit of Mr. Swatek's presentation of the various issues:

INTERSTATE ROAD PROGRAM ENDANGERED—OPPONENTS WAGE PROPAGANDA WAR TO DISCREDIT IT

(By Philip M. Swatek)

WASHINGTON, July 2.—A swelling propaganda barrage of distortions, half-truths, and plainly dishonest generalizations is threatening to sink the biggest and most important public works project ever attempted in this or any other country—the Interstate Highway System.

The interstate project, launched with great hope in 1956, is intended to link the Nation's cities with a 41,000-mile network of fast, safe superhighways. It will also breathe new life into traffic-choked urban areas, where two-thirds of our population lives.

Now critics are proclaiming it "our great big highway bungle," a "nightmare," a "rat hole" of waste, and extravagance, and a scandal of such potential that Teapot Dome will be peanuts by comparison. More responsible and restrained critics intone that the program is "in trouble."

The interstate project is in trouble. But it is the relentless effort to discredit the program that has it tottering. Some of the criticism is justified, but fair criticism often is not weighed against accomplishment and progress, and a distorted picture emerges.

Actually, the program, measured in any objective way, is going extraordinarily well, but this side of the story is lost in the storm of abuse.

"No charge has been too thin or too ridiculous to exploit," Bertram Tallamy, Administrator, Bureau of Public roads, said, "Old reports were exhumed and mined for whatever negative comments they might yield."

MANY HAVE AX TO GRIND

"Historic opponents of the highway program welcomed new members, recruited from the disgruntled, the misinformed, and those having some personal ax to grind. A good many of them are vicious and their motivation must certainly raise questions in the minds of neutral observers," Tallamy said.

Forces behind this campaign spring from both industrial and political life, boosted along by some doubtful judgment in the newspaper and magazine business. Those fighting to save the program—on Capitol Hill and within the administration—have searched evidence of a conspiracy in view of the remarkable cohesiveness and cumulative effectiveness of the propaganda, but none has turned up.

"It may not be a conspiracy, but as far as the Interstate System is concerned, it's academic," Representative GORDON H. SCHERER, Republican, of Cincinnati, says. "If this keeps up, they're going to kill it."

SCHERER, ranking Republican of the House Subcommittee on Roads, a part of the Public Works Committee, is one of the most conservative and tight-fisted Members of Congress. So his concern over the program's

fate is not the routine response of a big spender. He is anything but that and still is convinced the Nation cannot afford to lose the $40 billion interstate program.

MONEY IS ONE OF ISSUES

While SCHERER is a Republican, the political forces at work are not necessarily organized along party lines. Representative GEORGE FALLON, Democrat, of Maryland, ranking Democrat on the Roads Subcommittee, shares this concern. Nor for that matter, is everyone within the Eisenhower administration as determined to keep this program going in its original and bold concept as the two Congressmen.

An explanation of why the interstate program, which promises so much to a nation on wheels, should be the target of abuse must start with money—in this case, the taxes which finance the program. But there are some other issues involved, as well. The winds of controversy were blowing even before the program was implemented by law in 1956, although they didn't reach gale force until last year when the financing bogged down.

Basis for most of the early squabbling was the "needs" formula for apportionment of Federal funds, which replaced the old formula favoring rural States and the political seniority system in Congress. The Interstate System was to be built to answer the needs of the Nation and demands of automotive traffic.

This meant getting people in, out, or through cities, where highway construction is very expensive, as well as between cities, where right-of-way costs are lower. As the Federal Government was going to provide 90 percent of the cost of this interstate construction, the "needs" concept of distributing the money did not arouse much enthusiasm among legislators from sparsely populated areas.

ARGUMENT OVER URBAN AID

There are still many who object to the fact that 42 percent of the Federal moneys will go toward building only 11 percent of the interstate mileage which happens to be in congested urban areas. They are not moved by arguments that nearly everybody driving on the highways is heading for some city or town and a system which just dumps them on the outskirts isn't going to be much help.

Nor are they swayed by arguments that, on the basis of traffic volume and mileage, urban projects are more economically justified than rural miles, and that nearly half of the pay-as-you-go money financing the program comes from automobile use on urban expressways, the volume more than making up for the shorter distances.

There also were objections to the pay-as-you-go financing concept of the program, largely from the manufacturers of automotive supplies—tires and other equipment—and the petroleum industry. New taxes were added to their products to go into the highway trust fund, from which Federal aid was to be disbursed to the States on a cash-in-hand basis.

But it wasn't until last year, when the trust fund nearly ran dry and the administration asked for another 1½-cent Federal tax on gasoline to keep the program going, that the propaganda storm broke.

"Immediately some began to look for a scapegoat and whipping boy," SCHERER said. "Some of the people who were responsible at least in part for the financial dilemma yelled the loudest."

ADDED TAX FINALLY VOTED

During the struggle to keep this program solvent and moving ahead by means of an additional tax, most of the charges dwelt on over-design, waste and extravagance. This apparently was meant to make it politically hazardous for lawmakers to add a further burden on highway users, since it was claimed the money was going down a rat hole. However, an additional 1-cent tax finally was passed, after a prolonged struggle.

During the fight the interstate champions did explain—at least to the satisfaction of a majority in Congress—why the original cost estimates were low and why a program barely under way needed additional financing. Congressman SCHERER, who led the battle on Capitol Hill, gave these five reasons:

The trust fund absorbed about $1.5 billion owing from older highway programs. That was never contemplated when the financing provisions were set up.

Because of the recession in 1958, Congress accelerated the program by $1.6 billion, without facing up to the problem of providing increased revenue.

An additional 1,000 miles was tacked on the original 40,000-mile network—on which the financing was used—to placate legislators who felt their areas were being discriminated against. Again, no additional revenue was considered.

In a number of localities the estimated requirements or standards had to be raised almost immediately because of the increasing number of motor vehicles. Just like the Nation's population, the number of automobiles is growing far beyond what anybody expected just a few years ago, and the Interstate System is being built for traffic in 1975. At that time the Nation will have 110 million motor vehicles, compared to about 70½ million today.

ESTIMATES ONLY A FIRST BASIS

The original estimates were made rather hurriedly by all the States' highway departments in 1954 and there were some miscalculations. More importantly there was a lack of understanding of what building highways to interstate standards means, even in the cost of small things, such as signs and lighting.

In any case, the estimates were only used as a basis for figuring out the financing system, and a miscalculated estimate does not mean the erring State will be stuck with a low figure or rewarded with a high one. Each mile of road has to be approved by the Federal Bureau of Roads before any reimbursement is made, and this includes the cost.

In addition to that, inflation was a problem. Cost of construction and of right-of-way increased about 12 percent in the period 1954–57—the interval between the two estimates.

Despite logical explanations of what happened to the program is financing, one of the most frequent indictments during this period was that the interstate highways were extravagantly overdesigned.

This indictment covered the number and width of lanes, the number of interchanges, the sharpness of curves and grades, and frills, all of which were part of the expensive extravagance.

This indictment usually was accompanied by one or two explanations. The first was that the States were indifferent to expense as long as the Federal Government was going to reimburse them 90 percent of the cost.

IMPORTANT FACT IGNORED

In fact, the more it cost the better; it was worth every dollar to bring $9 in from outside the State. This, of course, ignored the fact that every project must be approved by the Federal Bureau—including its cost—before the State became eligible for reimbursement.

"It also ignores the fact that maintenance of the new highways is entirely a State function and, as a rule of thumb, the more elaborate a highway, the more expensive is the maintenance bill," SCHERER added.

The other explanation was that private consulting engineers, which virtually every State employs to augment its righway department staff while the program is getting underway, and for highly specialized work, are paid on the basis of a percentage of the cost of the projects which they design, so they deliberately made them expensive.

The real answer to these charges was not—and still is not—heard very clearly. In the Highway Act it is clearly stated that the Interstate System shall be built to meet the requirements of traffic in 1975. This was to be the first real attempt to look ahead in highway construction, rather than just catch up, as tradition had it.

Some people, perhaps honestly, just could not visualize American automobile traffic in 1975, even though there have been some pretty good hints. The New Jersey Turnpike, for example, was up to the estimated 1980 traffic level a few years after it opened in 1952.

"We need to build permanence into the new superhighways to protect the multi-billion-dollar investment being made in the Interstate System," warns Charles Noble, chief engineer on the New Jersey superroad and until recently head of Ohio's Highway Department.

STORIES TOLD AND RETOLD

"Probably our most crucial failure in highway construction has been in underestimating traffic," he said. "We have failed to recognize the potential of the automobile and the urgent need for sufficient highway capacity."

But these overdesign and financial issues never really caught the fancy of the more flamboyant critics, and it has been only recently, with the discovery of some scandal, corruption, and boondoggling that the campaign against the Interstate has really heated up.

Some of these cases, which were real failures in the program, are being retold with such regularity that they may eventually become as familiar as "The Little Red Hen."

First among these is the Indiana case, in which members of the highway department improperly used their knowledge of future highway locations to make a profit on land acquisition.

In this scandal, indictments were returned by an Indiana grand jury, and of the $78,802.80 involved in the worst instance, all but $786.51 has been returned to the State.

The other popular favorite is the Skelly bypass case at Tulsa, Okla. Actually, this scandal, involving an estimated $524,000 worth of materials which were never put in the road, was discovered and prosecuted in Tulsa some time before it became part of the big drive against the Interstate.

A new scandal, developing in Massachusetts, involves appraisal of property for rights-of-way.

After these clear-cut cases of wrongdoing, charges against the Interstate program get a little fuzzy. There are the Nevada situations, for example. One involves three interchanges along an isolated section of the road, the other involves the Interstate route at Reno.

FOUND LESS EXPENSIVE

In the case of the interchanges, the Interstate route in question runs parallel to an old highway and a railroad in the Truckee River Valley. Some access to the new Interstate Highway in the area was necessary, and it was found that because of the cramped and rough valley floor it was cheaper to build three interchanges than build a feeder road which would bring the traffic to a single interchange. At that, total cost of these three interchanges is $221,000.

In the Reno case, the issue is whether the Interstate route should go through the downtown area, or along a northern bypass. Because Representative WALTER S. BARING, Democrat of Nevada, wrote to the President declaring the selection of the downtown

route would be "the biggest swindle ever perpetrated in the State of Nevada," a special House Government Operations Subcommittee was appointed to investigate the problem.

The subcommittee decided, along with the Bureau and the State highway department, that while the downtown route would be more expensive initially, it was the only one which answered the need. This decision was based partly on the fact that most traffic in the region is bound for the center of Reno, a major tourist attraction. In this Reno presents a different problem from other cities of that size.

While Reno is a special situation, the argument for running the Interstate System around cities, rather than through them, is heard again and again. Examples are cited in Omaha, Macon, Ga., and Wilmington, Del., among others, and it is always the same—building the system into the city is a terrible waste, because bypass routes are so much cheaper.

DON'T ERASE CONGESTION

"But the point is that these bypass routes do not eliminate the traffic congestion, which is the objective of the program," Scherer said.

"And charges that cutting these rights-of-way through the heart of industrial areas result in tax loss for the community are without foundation.

"The evidence is conclusive that these superhighways so increase property values in the entire area that actually considerably more dollars go into the tax coffers."

Another popular approach in the sabotage of the Interstate System involves the height of bridges. In this, the recurring waste theme is livened up with charges of bureaucratic boondoggling so blatant, in view of one magazine writer, that a single telephone call between the Pentagon and the Bureau of Public Roads could have prevented construction of 2,000 undersized bridges and underpasses. There also is the suggestion that this bureaucratic failure is damaging to our national defense.

As a matter of fact, this problem was handled honestly but not particularly adroitly by either the Bureau or the Department of Defense. But the trouble was that nobody knew the size and shape of weapons to come—weapons, such as missiles, which might be moved on the Interstate System—and they still don't know. Charges that the two organizations just weren't in touch on the problem are preposterous.

DECIDED ON 14-FOOT CLEARANCE

The military and the Bureau have been jockeying back and forth on the matter of bridge and overpass heights since 1922, almost from the beginning of the Federal-aid program. There was regular liaison on the matter from 1949 through 1956, when a minimum of 14 feet was decided upon. As late as October 1, 1957, the Army, Navy and Air Force all said the 14-foot clearance was adequate for anticipated equipment.

With the coming of the space age and its oversized vehicles, another look soon was in order and the Bureau determined on January 27, 1960, that the minimum height was to be 16 feet, rather than 14. Critics claim this tardy decision will cost the taxpayers $730 million, but the Bureau can't see where that figure comes from.

On the basis of official Bureau figures, if all the bridges authorized from the start of the interstate program until January 27, 1960, were reconstructed or reengineered, it would cost about $176 million. But the total is not expected to come to that because alternate routes around many of the overpasses will eliminate the need to change the height.

When the military was put under fire about this waste, Perkins McGuire, Assistant Secretary of Defense, wrote that when the decision was made in 1957 to accept 14 feet, "it was clearly understood by the military departments, the States, and the Bureau of Public Roads that some of the military items of equipment exceed 14 feet when loaded on available highway vehicles.

"But no one believed there was sufficient justification to request changing the vertical clearance standard and increasing further the cost of the Interstate System," McGuire said.

MOSTLY ABOUT ATLAS TRANSIT

Actually, most of this controversy involves the Atlas intercontinental ballistic missile, which is made in San Diego, Calif., but has been fired mostly from Cape Canaveral, Fla. Moving the big missile across the country by highway does create a number of clearance problems, and there is no question about that.

When the trucker who has this moving contract appeared before the special House subcommittee investigating the program, he testified that it took 9 days and cost $12,000 for him to deliver one Atlas missile to Canaveral.

But when the subcommittee got Lt. Gen. Ben Schriever of the USAF Research and Development Command, to testify on this problem, he said the size of military missiles will be getting smaller than the Atlas from now on, as rocketry advances, and future space exploration vehicles will be far too big to move overland at all.

He agreed with the general proposition that it is possible to move a bigger load under a higher bridge, but he could offer no definite figure as the minimum practical height of all bridges on the Interstate System. This has been the difficulty all along—guessing a practical minimum without knowing the shape of things to come—and there is no assurance that someone won't want to move 17-foot military loads across the country right after the 16-foot bridge level is established in concrete.

While the decision to go to 16 feet might have been made earlier, there is little justification in this case for the wild charges made against the entire program and the Bureau, any more than there was in the other cases.

ALL PART OF BROAD ATTACK

But they all seem to be part of the broad attack to discredit the program, to make the public suspicious because of the bungling, resentful of the taxes already imposed because of the waste, and, most important, unwilling to bear any further taxes on highway users or the products they buy.

The billboard business, railroads, or various individuals—such as the disgruntled or publicity minded politicians or clever writers—may have their own reasons for sniping at the program, but the big push springs from the taxation issue.

"Some of the groups and industries who want these highways and who will benefit perhaps more than anyone else contributed to the throttling of the program right at the height of the crisis," Scherer said.

"The American Automobile Association, the trucking and oil industries have always contended that they contribute in user taxes mores than their just share of the cost of the program. Further, AAA and the truckers have had a little private fight of their own, each accusing the other of coughing up disproportionate amounts," he said.

"These three beneficiaries made an all-out campaign against the additional tax when the President asked for the 1½-cent increase. The petroleum industry felt so strongly that it cut off its nose to spite its face by joining with those who for political and other reasons charged that the entire program was permeated with waste, inefficiency and fraud," the Congressman declared.

REMARKABLY FREE OF WASTE

Despite the outcry, the interstate program is remarkably free of waste and irregularities, particularly in view of its historic size and the traditional, double-jointed Federal-State arrangement. Further, it is coming along well. Some 8,800 miles or one-fifth of the system now is open to traffic, roughly one-half of it new construction since the program started 4 years ago. The other half is toll roads and expressways already built, which are on designated interstate routes and are up to interstate standards, such as the New York Thruway and most of the Ohio Turnpike. These roads simply were incorporated into the system.

Authors of the 1956 act expected difficulties would arise in such an enormous undertaking and they ordered two comprehensive studies to be made at the time legislation was passed. These reports will be made to Congress next year. They should provide unbiased, solid information on every controversial question plaguing the program. Answers are expected on these issues:

What will be the ultimate cost of the Interstate System, now that State highway departments have had time, and the experience, to come up with careful estimates?

Are ordinary motorists paying too much or too little of the cost?

Are commercial users too much or too little?

Should the tax base be broadened to include more than users, such as owners of land adjoining the system who stand to benefit greatly?

Should the standards—number and width of lanes and number of access points, as examples—be increased or cut back?

Should the 90–10 reimbursement formula be changed?

ANSWERS TO COME IN 1961

Answers to these questions certainly should resolve most of the honest controversy battering the interstate program. They should be available next year, though it may not be that every interest will agree with them.

What the defenders want to do is keep the program from being forced onto the rocks and fatally damaged in the public eye before knowledgeable and fair corrective action can be taken.

They do not claim there is no waste in the world's biggest public works program, nor that it is free of fraud.

"What seems only fair is that the failures of the program be measured against what success there has been, so the people of the Nation will have a basis to judge its progress and worth, as well as a basis for understanding what must be done to improve it," Tallamy said. "In view of the importance of the interstate program to the Nation, it seems little enough to ask."

My True Security

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. HECHLER. Mr. Speaker, West Virginia is proud of Miss Marjorie Meldon of Ravenswood, W. Va., whose essay on the subject of "My True Security," won the statewide contest and also the honor of representing West Virginia in the national contest. I was very honored to join Miss Meldon at the awards banquet held at the Hotel Statler-Hilton along with the winners of the other 49 States and the District of Columbia. A 1960 graduate of Ravenswood High

School, Miss Meldon is a credit to the State of West Virginia. Her essay is written in a direct and cogent fashion:

MY TRUE SECURITY

(By Miss Marjorie Meldon)

In this hectic era of tension, doubt, and suspicion, security has becomme the Mecca of the herd. Such a solid, definite word, security. All their lives men stumble along the trail of the Great Star of security, seeking an uncertain goal. Do they crave shelter or protection, safety, or freedom from worry? They want, again, "security." I find myself examining this word with cynicism; a word with numerous meanings, none of them applying to me. My security is my brain and my soul, the confidence I have in my own ability.

Every meaning of security hinges on the state of affairs existing today. These can change at the drop of a few hydrogen bombs. Faith in myself will not end with the destruction of my home or a new mode of existence. To me, I am the only definite quantum in a world of unknowns. A person must have a religion or an ideal to keep faith in; even an atheist believes in his unbelief.

Today a person enjoys "security" if he commands a good job, has a nice home and happy family, and has put aside a small nest egg for the future. The multitude is so dazzled by this visible spectacle of security they fail to recognize or simply ignore the more important aspects. These tangibles of daily existence depend upon the ability of an intellect and the determination to succeed. I am not satisfied with existing situations; I am and shall continue to strive for something better than what I now have.

Too many people blindly accept traditional ideas of happiness and security, never pausing long enough to decide if they are patterned after true values. If all of us would stop just for a moment to take stock of ourselves, realizing we are individuals and have particular needs, we would stop acting like a herd of cattle, placidly chewing our cuds of blissful ignorance. Our Nation was not envisioned, conceived, and carved from this fertile land by complacent acquiescence. It took foresight, knowledge, patience, and a zealous determination to achieve this land of opportunity we take for granted. We cannot expect our country to remain a respected, secure world power if corporal possessions are uppermost in the minds of all. The continued existence of America depends upon our mental attitude toward security; an issue of tangible versus spiritual.

As long as I have the initiative and self-reliance necessary to succeed in this world, I shall do so, confident in my own abilities and accomplishments, secure in the world of tomorrow. It is up to me to develop, nourish, and prune my intellect and my soul; my true security.

We Can't Afford To Waste a Good Defense Plant

EXTENSION OF REMARKS

OF

HON. WILLIAM J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. RANDALL. Mr. Speaker, to present certain facts which I think are material to the further consideration of locations or plant availability for the Department of Defense, I think it is important that something be inserted in the RECORD to pinpoint or document a situation which calls for immediate attention before it becomes too late.

Last February, at Kansas City, Mo., the Navy Department canceled their contract with Westinghouse Electric Corp. for the production of J–34–WE–48 jet engines. Shortly thereafter, the Bureau of Naval Weapons stated they had no requirements for this Naval Industrial Reserve Aircraft plant in connection with any other Bureau program, and that they would not continue the operation of the plant. They further stated that it was possible there would be a move to declare these facilities as excess as soon as the contractor—Westinghouse—released them. It is announced that if there was no defense requirement for the plant, it would be reported to General Services Administration for disposal after congressional approval had been obtained.

Now it is my understanding that the General Services Administration has the authority to make the determination as to whether or not other Government departments or agencies might have a requirement for the facilities.

Mr. Speaker, the purpose of my appearance on the floor of the House today is to again bring into focus or perspective the great value of this plant as well as its trained personnel which may soon be lost and scattered away from the area. Here is a plant in a perfect state of maintenance with an estimated value, including land, building, and equipment, of $90 million. The contract recently provided employment for more than 2,000 men and women civilians, with a payroll of close to $18 million a year. I have asked the Navy Department for an itemization of this equipment, which was necessary only to be completely accurate, because I have visited this plant and gone through every corner of it. I have seen these huge machines in operation and also the very fine laboratories and testing units. I shall not take your time to make a detailed inventory, but there are nearly 200 boring machines, about 350 huge lathes, 200 milling machines, 400 grinders, about 400 shapers and polishing machines, a large number of bending and forming machines, 20 drop hammers, over 100 hydraulic or mechanical punches, including presses, shears, and hammers.

It is a plant which is fully equipped with cranes, furnaces, and every type of testing apparatus. Here is a plant that is fitted up, tooled up and, with only a minimum of modification, ready to go into the production of almost any defense item. You can realize it must have a large space area because it was large enough to accommodate all this equipment and over 3,000 employees. Here is a plant that is ready made and ready for immediate use. It is a plant of which any area would be proud.

The real issue here is whether this plant should be, in effect, wasted or whether it should be put to good use in the manufacture of other items of defense. Another collateral, but an important consideration, is that at present there is trained personnel which may soon be dispersed and scattered over wide areas. At the present time they remain in the Kansas City area, and if some new defense use could be determined, this trained personnel would stand by to be available.

As of now, it appears there will be, for some considerable time, large defense requirements. This is not the way that many of us would wish it, but these are the hard facts. The cold war is not now so cold as it was before the collapse of the summit.

Accordingly, I feel immediate attention should be given in determining the feasibility of continuing production in this modern plant, equipped with modern tooling machines.

The theme of my remarks here today, Mr. Speaker, is that proper officials in the Navy Department, or the Department of Defense, as well as those Members on the Armed Services Committee of this House, should conduct a most thorough survey of this valuable and expensive equipment, and carefully check this fine plant, worth $90 million, which is now—or soon can be, available for use. I am confident they will reach the conclusion that it could—and should be—utilized at once in order to regain the valuable services of these already trained personnel, and to save the taxpayers millions of dollars by avoiding the enormous expense of constructing a new building elsewhere and purchasing all new equipment.

On Adjournment

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. SCHWENGEL. Mr. Speaker, it seems advisable for some one to speak about a situation that prevails here in Congress this year. It is distressing to note the obvious admission on the part of the leadership of majority in the Congress that it has done a poor job with respect to handling the business before us during this session.

On Wednesday it was announced that the session would be recessed and reconvened in August. This means that we will just have time to get home and it will be necessary to come back to complete work on legislation which should have been completed a long time ago.

It is especially distressing when you thumb through the pages in the CONGRESSIONAL RECORD and note the number of legislative days which have been lost through the operation of the "Tuesday Through Thursday" club and for other reasons when the leadership did not program any business even though the club members were here.

When you check the activity of the other body, you wonder if the business of legislating in the national interest has been relegated to a position of secondary importance while the matter of politics occupies the attention of the leadership. With so many aspirants for President in the other body, the establishment of na-

tional images and the writing of personal platforms has made the Senate little more than a launching pad for personal ambition.

We Representatives from the great breadbasket of the world are particularly upset about the fact that we have had no legislation dealing with one of the most pressing domestic problems of our time—the enactment of legislation which will provide for a sound farm program.

At the very outset of this session, the President made it clear that he would approve any "constructive solution which the Congress wishes to develop."

We have had some weak attempts to come forward with legislation in this area, but they certainly did not qualify according to the President's definition of "constructive." This failure is understandable when we come face to face with the fact that our Committees on Agriculture in the Senate and House are dominated by Members from the South where cotton, peanuts, and tobacco receive the most attention.

Certainly, Mr. Speaker, there is sufficient cause for wonder about the purposes for which the Congress is convened when we go through 6 months of a session and come up with so little to justify our being here. Suddenly it is realized that all of the necessary work cannot be done, even though the first national political convention is more than 10 days away. So, we recess and arrange to come back in August.

That means "we ain't seen nothin' yet." If politics has been the malady which has prevented us from buckling down to the task at hand, we are in for a relapse when we come back here after the conventions and head into that supercharged atmosphere where politics will have reached epidemic proportions.

I feel that we should stay on the job—work day and night if necessary; get out the necessary legislation and then adjourn for the conventions. Then, we will be fulfilling our major responsibility of serving in the public interest.

The Honorable William H. Hill

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960
